From 1918 to 1926 he was in private life. In 1927 he went to Nicaragua as the special envoy of Pres. Calvin Coolidge to help end the civil war, and succeeded in restoring peace. He was governor general of the Philippine Islands, 1927-29, and took office as secretary of state March 28, 1929. He headed the U.S. delegation to the London naval conference of 1930.

On the outbreak of Japanese aggression in Manchuria in 1931, Stimson authored the policy of nonrecognition of conquests made by aggression. Many historians later believed that if other western nations had backed Stimson's firm stand against Japan the Japanese might have retreated, and perhaps the course of events toward World War II might have been changed. However, the other western powers declined to join the U.S. in a firm stand against Japan.

Stimson served as liaison man between retiring President Hoover and President-elect Roosevelt during the final days of the Hoover administration. At the onset of World War II, President Roosevelt (June 20, 1940) invited Stimson to become his secretary of war, and Stimson became civilian leader of the largest army—more than 10,000,000 men—ever to serve the U.S.

In the fall of 1941 President Roosevelt appointed Stimson to a committee to advise on nuclear fission policy, and in his advisory capacity it was he who finally recommended to President Truman that atomic bombs be dropped on Japan.

Stimson retired from active life in Sept. 1945. (See also *Encyclopædia Britannica*.)

**Stoddard, Theodore Lothrop**, U.S. author and editorial writer (b. Brookline, Mass., June 29, 1883—d. Washington, D.C., May 1, 1950).

**Strange, Michael** (pseudonym of BLANCHE MARIE LOUISE OELRICHS TWEED), U.S. author, actress and lecturer (b. New York, N.Y., 1890—d. Boston, Mass., Nov. 5, 1950), adopted the pen name of Michael Strange when her first book, *Poems*, was published in 1919. She was married three times, each marriage ending in divorce. Her second husband was John Barrymore, the actor, whom she married in 1920 and from whom she was divorced in 1928. Barrymore and his sister, Ethel Barrymore, had leading roles in her play *Clair de Lune* in 1921, the same year her second book, *Resurrecting Life*, was published. She had the lead in the play *L'Aiglon* by Edmond Rostand on Broadway in 1927. She was well known for her political interests, having been an early feminist and becoming a member of the Socialist party in 1932.

**Straube, Karl**, German organist (b. Berlin, Ger., Jan. 6, 1873—d. Leipzig, Ger., April 28, 1950).

**Straus, Ralph**, British novelist and biographer (b. Manchester, Lancs., Eng., Sept. 5, 1882—d. London, Eng., June 5, 1950).

**Stringer, Arthur (John Arbuthnot)**, Canadian-born writer (b. Chatham, Ont., Can., Feb. 26, 1874—d. Mountain Lakes, N.J., Sept. 14, 1950), studied at the University of Toronto and at Oxford university in England. He produced several studies of Shakespeare while in England, then began the study of Gaelic poetry, of which he later published several examples. During his writing career he produced more than 100 serialized adventure novels and short stories that appeared in popular magazines. He also wrote serial motion-picture scripts. His poetry included *Lonely O'Malley*, popular verse, published in 1901, and *Out of Erin*, a volume of Gaelic verse published in 1930. Romantic novels included *The Wolf Woman*, *The Dark Wing* and *Intruders in Eden*. A collection of his one-act plays was published in 1939 under the title *The Cleverest Woman in the World*. One of his last works was a biography of Rupert Brooke, *Red Wine of Youth*, based on his own research and on material collected by Richard Halliburton.

**Strom, Sverre Andreas**, Norwegian-born explorer (b. Norway, 1894?—d. Camp Carson, Colorado Springs, Colo., June 15, 1950).

1950 OBITUARIES: Robert E. Ringling, U.S. circus impresario; George Bernard Shaw, Irish dramatist; Jan Christiaan Smuts, South African statesman; Henry L. Stimson, U.S. secretary of war; Lord Wavell, British soldier

**Suggia, Guilhermina**, Portuguese cellist (b. Oporto, Port., June 27, 1888—d. Oporto, July 31, 1950), played from an early age with the Oporto City orchestra, becoming principal cellist at the age of 12. In 1904 she began to study at Leipzig, Ger., under Paul Klengel, and made her debut as a soloist there at a Gewandhaus concert in 1905. She studied further with Pablo Casals, to whom she was married 1906-12, and then began the long tours which established her international reputation.

**Sugimoto, Mme. Etsu**, Japanese author (b. Echigo province, Honshu Island, Jap., 1874?—d. Tokyo, Jap., June 20, 1950).

**Tairov, Alexander Y.**, Russian stage director (b. 1885—d. announced in Moscow, U.S.S.R., Sept. 27, 1950).

**Tajudin, Sir Ahmed**, sultan of Brunei (b. 1913—d. Singapore, Singapore, June 3, 1950).

**Talbot, Mignon**, U.S. geologist (b. Iowa City, Ia., Aug. 16, 1869—d. Holyoke, Mass., July 18, 1950).

**Tarr, Edgar Jordan**, Canadian banker and leader in international relations (b. Ottawa, Ont., Can., Nov. 6, 1881—d. Winnipeg, Man., Can., Nov. 7, 1950).

**Tate, John Torrence**, U.S. physicist (b. Lenox, Ia., July 28, 1889—d. Minneapolis, Minn., May 27, 1950).

**Taub, Israel Zangwill**, U.S. psychologist (b. Butler, N.J., Feb. 6, 1893—d. New York, N.Y., Sept. 3, 1950).

**Taylor, Frederick Chase** ("COLONEL STOOPNAGLE"), U.S. radio comedian and author (b. Buffalo, N.Y., Oct. 4, 1897—d. Boston, Mass., May 29, 1950), studied at the University of Rochester and served in the U.S. naval reserve in World War I. He began to work in his father's lumber business, but left to become vice-president of a brokerage firm. However, his avocation was theatrical work, and he joined the Buffalo Broadcasting corporation as actor, writer and announcer. It was to fill in an unexpected time gap that he teamed, in 1930, with Wilbur ("Budd") Hulick, an announcer, in an impromptu program that was so successful they formed the comedy team of "Colonel Stoopnagle and Budd." The team was a major attraction of the CBS network until the mid-1930s when they separated. Taylor subsequently devoted himself more to writing than to radio work, his comical essays being assembled in various books. He was also noted for his elaborate daffy inventions and magazine humour pieces. His books included *You Wouldn't Know Me from Adam* (1944), *My Tale Is Twisted!* (1946) and *My Back to the Soil* (1947).

**Thacher, Thomas Day**, U.S. jurist (b. Tenafly, N.J., Sept. 10, 1881—d. New York, N.Y., Nov. 12, 1950).

**Theophilus** (THEODORE NICHOLAS POSHKOVSKY), primate of the Russian Orthodox Greek Catholic Church of North America (b. Kiev province, Russia, Feb. 19, 1874—d. San Francisco, Calif., June 27, 1950), was ordained in San Francisco in 1897, and there founded the Orthodox cathedral in 1909 to replace a church destroyed in the San Francisco earthquake. He was transferred to Warsaw, Pol., in 1913, and served as a chaplain with the Russian imperial army during World War I. He returned to the United States when he was appointed bishop of Chicago in 1922. In 1931 he was transferred to San Francisco, was made presiding bishop of the Pacific coast in 1934, and later was elected metropolitan archbishop of the United States and Canada. As late as 1948 it was reported by the soviet news agency that he was to be tried (*in absentia*) by the Russian Orthodox Church in the U.S.S.R. for "attempts to split the church," after he had announced the final decision of the American Orthodox bishops against reunion with Moscow.

**Thomas, Bertram Sidney**, British explorer and soldier (b. June 13, 1892—d. Bristol, Glos., Eng., Dec. 29, 1950).

**Thomas, Eugene Peoples**, U.S. expert on international trade (b. Atlanta, Ga., 1878?—d. New York, N.Y., Aug. 23, 1950).

**Thunderwater, Chief** (OGHEMA NIAGARA), American Indian, titular head of the supreme council of Indian tribes of the U.S. and Canada (b. 1865?—d. Cleveland, O., June 10, 1950).

**Tichenor, Frank A.**, U.S. editor and publisher (b. Gettysburg, Ky., May 22, 1880—d. Greenwich, Conn., May 4, 1950), joined the motion-picture industry early in the 1900s, and became president of the General Film company, a pioneer distributor of educational films, later reorganized as the Eastern Film corporation. He was credited with inviting Will H. Hays, who was postmaster general in the cabinet of Pres. Warren G. Harding, to become "tsar" of the motion-picture industry and to enforce its self-created code of morals. Tichenor became greatly interested in aviation. He organized the Aeronautical Digest Publishing company, issuing *Aero Digest*, and also published a number of other journals, including the *Sportsman Pilot*, *Revista Aerea* (Spanish edition of *Aero Digest*) and the weekly *Letter to Airmen*, as well as the *Plumbing and Heating Journal* and *Spur*. He made Alfred E. Smith editor of the magazine the *New Outlook*, formerly the *Outlook*, which he purchased in 1929. Tichenor was a friend of many of aviation's pioneers, including Gen. "Billy" Mitchell, Gen. H. H. Arnold and Col. Charles A. Lindbergh.

**Togo, Shigenori**, Japanese political leader (b. Kagoshima prefecture, Kyushu Island, Jap., Dec. 1882—d. Sugamo prison, Tokyo, Jap., July 23, 1950), was one of the Japanese wartime leaders sentenced to prison by an international military tribunal at the end of World War II. He was a graduate (1908) of the Tokyo Imperial university. He entered foreign service, and was stationed successively in Hankow, Mukden and Switzerland. In 1918 he was named embassy second secretary, and stationed in Berlin. For two years beginning in 1921 he was in Tokyo as chief of the first section of the European and American bureau of affairs. Later he went to Washington, D.C., as first secretary of the embassy, and to Berlin as embassy councillor. He was named ambassador in 1937, serving in Berlin for a year, and then in Moscow until Sept. 1940. On Oct. 18, 1941, he was named foreign minister in the government of Premier Hideki Tojo, and was in that post at the time of the Pearl Harbor attack. He also held the position of foreign minister in the Baron Kantaro Suzuki cabinet just before Japan's surrender. In 1948 he was sentenced to 20 years' imprisonment by an international war crimes tribunal.

**Tommasini, Vincenzo**, Italian composer of operas and ballets (b. Rome, It., Sept. 17, 1880—d. Rome, It., Dec. 24, 1950).

**Travis, Robert Falligant**, U.S. air force general (b. Savannah, Ga., Dec. 26, 1904—d. in a B-29 bomber crash at Fairfield-Suisun Air base, Calif., Aug. 5, 1950).

**Trentinaglia, Erardo Nobile**, Italian orchestral director and composer (b. Venice, It., April 1, 1889—d. Venice, June 3, 1950).

**Trilussa** (pseudonym of CARLO ALBERTO SALUSTRI), leading Italian poet (b. Rome, It., Sept. 26, 1873—d. Rome, Dec. 21, 1950).

**Tschirky, Oscar Michel** ("OSCAR OF THE WALDORF"), U.S. hotel manager and maitre d'hôtel (b. Locle, Switz., Sept. 28, 1866—d. New Paltz, N.Y., Nov. 6, 1950), was a world-renowned host at the Waldorf hotel and the Waldorf-Astoria in New York city for 50 years until his retirement in 1943. He studied in Europe and went to the U.S. in 1883, working first as a bus boy and then waiter at the Hoffman House and at Delmonico's restaurant, later obtaining a job at the "old" Waldorf by listing on a sheet of references many prominent New Yorkers whom he had served. During his career he was host to many of the great of his generation—presidents, kings, princes and leaders of wealth and society.

**Twort, Frederick William**, British bacteriologist (b. Camberley, Sur., Eng., Oct. 22, 1877—d. Camberley, March 20, 1950).

**Ungar, Arthur**, U.S. editor (b. Chicago, Ill., 1886?—d. Delmar, Calif., July 24, 1950).

**Urrutia, Francisco José**, Colombian lawyer and diplomat (b. 1870—d. Bogotá, Colom., Aug. 6, 1950).

**Vaida-Voevod, Alexandre**, Rumanian statesman (b. Olpret, Transylvania, 1871—d. Bucharest, Rum., March 19, 1950). (See also *Encyclopaedia Britannica*.)

**Van Doren, Carl Clinton**, U.S. author, editor and critic (b. near Hope, Ill., Sept. 10, 1885—d. Torrington, Conn., July 18, 1950), was one of the best-known figures in American literary criticism and, in addition, was awarded a Pulitzer prize as an author for his biography of Benjamin Franklin. A graduate of the University of Illinois, Urbana (1907), he received his Ph.D. degree from Columbia university in 1911. From that year he taught English at Columbia until 1930. From 1917 to 1921 he was also managing editor of the *Cambridge History of American Literature*. From 1919 to 1922 he was literary editor of the *Nation*, and from 1922 to 1925 literary editor of *Century Magazine*.

His writings ranged through surveys of literature to novels, biography and criticism. He was a leader in the 20th-century renaissance of American literature. His works in this field included *The American Novel* (1921; revised 1940); *Contemporary American Novelists* (1922); *American and British Literature since 1890* (1925), produced with his brother, Mark Van Doren, and revised in 1939; *American Literature: An Introduction* (1933), reissued as *What Is American Literature?* (1935). He also wrote biographies of James Branch Cabell, Thomas Love Peacock and Jane Mecom, Franklin's sister (published after his death), besides the Franklin biography. His autobiography was entitled *Three Worlds*.

**Van Ophuysen, Johan Hendrik Wijndand**, Sumatran-born psychiatrist (b. Pedang Sidempuan, Sumatra, 1882—d. New York, N.Y., May 31, 1950).

**Victoria Jaen, Nicholas**, Panaman writer, educator and government official (b. Aguadulce, Pan., 1862?—d. Panama, Pan., Sept. 16, 1950).

**Vincent, Jean-Hyacinthe**, French bacteriologist (b. Bordeaux, Fr., Dec. 22, 1862—d. Paris, Fr., Nov. 23, 1950).

**Volini, Italo Frederick**, U.S. physician (b. Chicago, Ill., May 24, 1893—d. San Francisco, Calif., June 24, 1950).

**Walker, Walton Harris**, U.S. army field commander in Korea (b. Belton, Tex., Dec. 3, 1889—d. near Seoul, South Korea, Dec. 23, 1950), attended Wedemeyer Military academy in Belton, Virginia Military institute, Lexington, Va., and the U.S. Military academy at West Point, N.Y. He served with the Veracruz expedition that intervened in the Mexican revolution of 1914, fought in France during World War I, during which he was twice cited for gallantry under fire, and remained in Germany with the U.S. army of occupation until 1919. He spent almost three years (1930-33) in China with the international railway patrol.

During World War II General Walker won distinction as commander of the 20th corps, the so-called "Ghost corps" of Gen. George S. Patton's 3rd U.S. army. His corps reduced the fortresses of Metz in 1944, penetrated the Siegfried line in Feb. 1945, liberated the concentration camp at Buchenwald and, crossing the Danube into Austria, penetrated to Linz. After World War II General Walker commanded the 5th army area in the United States, and in 1947 was given the permanent rank of major general.

In 1948 he became commanding general of the far east command's 8th army, and on July 13, 1950, he was named commander of all ground forces in Korea, which he led in combat under the ov-r-all command of Gen. Douglas MacArthur. When the U.S. and South Korean forces had been pushed into a beachhead around Pusan, it was General Walker's skill in shifting his troops, and his "stand or die" order to them, that enabled them to hold their line until sufficient strength had been built up for their own offensive.

General Walker was also given much of the credit for the successful retreat of the 8th army when in November and December it was rolled back from near the Manchurian border by the Chinese Communist offensive. He was killed in the crash of a jeep and a truck.

**Wardington, John W. B. Pease**, 1ST BARON, British economist and banker (b. Newcastle-upon-Tyne, Northumb., Eng., July 4, 1869—d. Banbury, Wilts., Eng., Aug. 7, 1950).

**Wavell, Archibald Percival Wavell**, 1ST EARL OF CYRENAICA AND OF WINCHESTER, British soldier (b. Colchester, Essex, Eng., May 5, 1883—d. London, Eng., May 24, 1950), was educated at Winchester and at Sandhurst. He was gazetted to the Black Watch in 1901 and served in the South African War and later in India. He graduated from the staff college in 1910. In World War I he served first on the western front where he lost

his left eye, then in Russia as an attaché to the army of Grand Duke Nicholas, and later in Palestine under Gen. Sir Edmund (later Viscount) Allenby. In 1930 he was given his first independent command—the 6th infantry brigade—and in 1935 he took over the 2nd infantry division. In 1937 Wavell became commander in Palestine; in 1938 he was promoted lieutenant general and returned to Great Britain to take over southern command; in July 1939 he went back to the middle east as commander in chief with headquarters at Cairo, Egy. After the entry of Italy into the war he launched an attack against the Italians in North Africa on Dec. 9, 1940, and by Feb. 7, 1941, had all but annihilated their forces. At the same time he opened a successful campaign against the Italians in east Africa. In April 1941, however, his troops in North Africa were compelled by newly arrived German forces to retreat to the Egyptian border; in July he changed posts with Gen. Sir Claude Auchinleck, who had been commander in chief in India. On Dec. 28, 1941, he assumed command of the defense of Burma, and a week later was appointed supreme commander in the southwest Pacific, with headquarters in Java. However, in March 1942, by which time the Japanese, who held the initiative throughout the short campaign, had obtained control of the whole of southeast Asia, Wavell returned to India. On June 19, 1943, he was appointed to succeed the marquess of Linlithgow as viceroy of India, where for four years he undertook the preparatory work for a settlement of the Indian political problem. In Feb. 1947 he was succeeded by Viscount (later Earl) Mountbatten of Burma. Lord Wavell's writings included *The Palestine Campaigns* (1928) and two volumes on his former commander, *Allenby* (1940) and *Allenby in Egypt* (1943). A series of essays, *Generals and Generalship*, appeared in 1941. He also wrote an anthology, *Other Men's Flowers* (1944); *Speaking Generally* (1946); and *The Good Soldier* (1947).

**Weber, Jacob (JAKE)**, U.S. sports trainer (b. New York, N.Y.—d. New York, N.Y., Nov. 11, 1950).

**Wecter, Dixon**, U.S. educator and author (b. Houston, Tex., Jan. 12, 1906—d. Sacramento, Calif., June 24, 1950).

**Wedgwood, Kennard Laurence**, British-born pottery manufacturer (b. Barlston, Staffs., Eng., 1873?—d. Dummerston, Vt., Jan. 20, 1950).

**Weill, Kurt**, U.S. composer (b. Dessau, Ger., March 2, 1900—d. New York, N.Y., April 3, 1950), began to compose music while still in elementary school, prompted by his father, a cantor. At the age of 18 he began studying composition in Berlin with Engelbert Humperdinck. He moved to Lüdenschied in Westphalia, as operatic conductor, but shortly returned to Berlin to study with the pianist and composer Ferruccio Busoni until 1924. Meantime he composed a variety of works, including symphonies and chamber music. He first adapted his composition to the theatre in the mid-1920s when he was commissioned to do a children's ballet for a Russian company visiting Berlin. In 1926 he collaborated with Georg Kaiser on the opera *The Protagonist*, and subsequently also collaborated with Kaiser, Ivan Goll and Bertolt Brecht on various operas, including *Royal Palace*, *The Tsar Has Himself Photographed*, *The Three-Penny Opera* and *The Silver Lake*. The latter production's antinazi overtones resulted in the banning of his works in Germany, and he went (1933) to Paris, where he composed the ballet *The Seven Deadly Sins*. In 1935 he went to the United States, where he was commissioned by producer Max Reinhardt to write the music for *The Eternal Road*. He also composed music for *Knickerbocker Holiday*, *Lady in the Dark*, *One Touch of Venus*, *A Flag Is Born*, *Street Scene* and *Lost In The Stars*.

**Weiss, Louis Stix**, U.S. lawyer (b. New York, N.Y., Feb. 7, 1894—d. New York, N.Y., Nov. 13, 1950).

**Westergaard, Harald Malcolm**, Danish-born civil engineer and educator (b. Copenhagen, Den., Oct. 9, 1888—d. Cambridge, Mass., June 22, 1950).

**Wetter, Herman de**, Estonian-born engineer (b. Estonia, 1878?—d. Westfield, N.J., June 25, 1950).

**Whitaker, Sir Cuthbert Wilfrid**, British editor (b. May, 26, 1873—d. London, Eng., April 4, 1950).

**White, Wilbur W.**, U.S. educator (b. Topeka, Kan., June 4, 1903—d. Houston, Tex., Nov. 14, 1950).

**Whittemore, Thomas**, U.S. archaeologist (b. Cambridge, Mass., Jan. 2, 1871—d. Washington, D.C., June 8, 1950).

**Wiechert, Ernst Emil**, German poet and novelist (b. Kleinort, Ger., May 1887—d. Stäfa, Switz., Sept. 24, 1950).

**Wieniawski, Tadeusz Adam**, Polish composer and music teacher (b. Warsaw, Pol., Nov. 27, 1879—d. Bydgoszcz [Bromberg], Pol., April 27, 1950).

**Wiklund, Adolf**, Swedish pianist, composer and conductor (b. Langserud, Swed., June 5, 1879—d. Sweden, April 1950).

**Willeke, Willem**, Dutch-born musician (b. The Hague, Neth., 1879?—d. Pittsfield, Mass., Nov. 26, 1950).

**Williams, (Arthur Frederic) Basil**, British historian (b. London, Eng., April 4, 1867—d. London, Jan. 5, 1950).

**Williams, Michael**, U.S. author and editor (b. Halifax, N.S., Can., Feb. 5, 1877—d. Hartford, Conn., Oct. 12, 1950), attended St. Joseph college in New Brunswick, then moved to the U.S. as a newspaper reporter. He was an early Socialist and companion of Upton Sinclair with whom he wrote (1909) *Good Health and How We Won It*. After 1915, when he rejoined the Roman Catholic Church, his writings were mainly on Catholic subjects. He founded the Catholic journal of opinion, the *Commonweal*, in 1924 and served as its editor until 1938.

**Wilson, Ira B.**, U.S. composer and music publisher (b. Bedford, Ia., Sept. 6, 1880—d. Los Angeles, Calif., April 3, 1950).

**Winlock, Herbert Eustis**, U.S. archaeologist (b. Washington, D.C., Feb. 1, 1884—d. Venice, Fla., Jan. 26, 1950).

**Wise, Fred**, Austrian-born dermatologist (b. Austria, 1881—d. New York, N.Y., July 26, 1950).

**Wise, Marion Johnson**, U.S. railway executive (b. St. Louis county, Mo., Aug. 16, 1883—d. Point Clear, Ala., April 26, 1950).

**Witmark, Jay**, U.S. music publisher (b. New York, N.Y., 1873?—d. New York, N.Y., Feb. 16, 1950), founded the publishing firm of M. Witmark and Sons in 1883. For the next half-century he was prominent in music publishing. His house published more than 30 of Victor Herbert's operettas, the leading works of Sigmund Romberg, songs by George M. Cohan and such additional works as Chauncey Olcott's "My Wild Irish Rose," Ernest R. Ball's "Mother Machree" and Harry Armstrong's "Sweet Adeline." In 1914 he, with Victor Herbert and others, founded the American Society of Composers, Authors and Publishers (A.S.C.A.P.) as a performing rights society, and he served as a director of the society for almost 20 years. In 1929 the Witmark company became part of Warner Brothers Pictures, Inc., and two years afterward Witmark retired.

**Wittels, Fritz**, Austrian-born psychiatrist and author (b. Vienna, Aus., 1880—d. New York, N.Y., Oct. 16, 1950).

**Wood, Clement**, U.S. poet and author (b. Tuscaloosa, Ala., Sept. 1, 1888—d. Schenectady, N.Y., Oct. 26, 1950).

**Wood, Thomas**, British musician and composer (b. Chorley, Lancs., Eng., Nov. 28, 1892—d. Bures, Ess., Eng., Nov. 19, 1950).

**Woodrum, Clifton Alexander**, U.S. legislator (b. Roanoke, Va., April 27, 1887—d. Washington, D.C., Oct. 6, 1950), received his law degree from Washington and Lee university, Lexington, Va., in 1908 and practised law in Roanoke until 1917 when he began his political career. He served in the U.S. house of representatives from 1923 until his retirement in 1945. During World War II he was ranking majority member and acting chairman of the house appropriations committee, and as such steered through congress some of the largest appropriations measures in the nation's history.

**Woods, Rufus**, U.S. newspaper editor and publisher (b. Surprise, Neb., May 17, 1878—d. Toronto, Ont., Can., May 29, 1950).

**Woodson, Carter Godwin**, U.S. Negro author and educator (b. New Canton, Va., Dec. 19, 1875—d. Washington, D.C., April 3, 1950), studied at Berea college, Berea, Ky.; the Sorbonne, Paris; The University of Chicago; and Harvard. He taught in the District of Columbia public schools and later became dean of the school of liberal arts at Howard university, Washington, D.C., and West Virginia State college. He wrote several books on the history of the Negro in the U.S.

**Woodward, Dewing**, U.S. painter, founder of art colony (b. Williamsport, Pa., June 6, 1856—d. Miami, Fla., July 12, 1950).

**Woodward, William Edward**, U.S. author (b. Ridge Spring, S.C., Oct. 2, 1874—d. Augusta, Ga., Sept. 27, 1950), graduated from the South Carolina Military academy, later named The Citadel, and began his newspaper career in 1893. After 12 years he opened his own advertising and book review agency, with Sinclair Lewis as his editor. In 1916 he became promotion manager for the Hearst newspapers. His first novel, *Bunk* appeared in 1923, and added to the American language a new word with the connotations of a satirical exposé. His policy of "debunking" historical idols made him many literary enemies. His biography *George Washington: The Image and the Man* was especially attacked. Others of his nonfiction works included *Meet General Grant*; *A New American History*; *Money for Tomorrow*, an economic treatise inspired by the depression of the 1930s; *The Crowded Years*, memoirs of William Gibbs McAdoo, on which he collaborated; *Tom Paine—America's Godfather*; and *The Gift of Life*, his autobiography. He was at work on another study of the U.S. Civil War at the time of his death, tentatively entitled *When We Went Crazy* and dealing especially with Andrew Johnson's part in the war.

**Wright, Warren**, U.S. industrialist and sportsman (b. Springfield, O., Sept. 25, 1875—d. Miami Beach, Fla., Dec. 28, 1950), was the son of William Monroe Wright who owned the Calumet Baking Powder company in Chicago, Ill. He spent the first 25 years of his business career with his father's company. The firm was sold to General Foods corporation in 1928, for a reputed \$35,000,000. Warren Wright inherited a fortune and a stud farm and racing stable on his father's death in 1931.

He spent the next ten years developing the Calumet Farm stable to a point where it was operated as an efficient business enterprise. After 1941 his stable was the top money-maker in the nation. He owned some of the most famous horses in the history of American racing, including Whirlaway, Citation, Coaltown, Bull Lea, Pensive and Armed.

**Yard, James Maxon**, U.S. educator and religious leader (b. Farmingdale, N.J., July 19, 1880—d. Danbury, Conn., Aug. 3, 1950).

**Yen, W. W. (YEN HUI-CHING)**, Chinese diplomat (b. Shanghai, China, 1877—d. Shanghai, May 23, 1950), studied at St. John's university and at the Anglo-Chinese college, both in Shanghai, and in the Tung Wen college in Peiping. He went to the U.S. in 1895, studied at the University of Virginia, Charlottesville, and received a bachelor's degree in 1900. He returned to China to become professor of English at St. John's university. In 1906 he was named chief English editor of the *Commercial Press* in Shanghai, and later that year was appointed to the imperial ministry of education.

In 1908 he became second secretary of the Chinese legation in Washington, D.C., but returned to China to establish a government press bureau the next year. He became vice-minister of foreign affairs in the government of the Chinese republic, then minister of foreign affairs (1920) after terms as minister to Germany, Sweden and Denmark. He was prime minister from 1924 to 1926, during part of which time he also held the portfolios of interior, agriculture, commerce and foreign affairs. During his subsequent diplomatic career he also served as envoy to London, Washington and Moscow. In 1933, as chief Chinese delegate at the League of Nations in Geneva, Switz., he initiated the charge of aggression against Japan that resulted in League censure and Japan's withdrawal from the League. He spent his later years in educational, health and charitable activities in China. In 1949 he headed an unofficial delegation that sought without success to form a coalition Chinese government which would incorporate the Communists.

**Yensen, Trygve (Dewey)**, Norwegian-born scientist, authority on magnetics

(b. Drammen, Nor., Jan. 30, 1884—d. Prestwick, Ayrshire, Scot., July 2, 1950).

**Youssef Bey, Amine**, Egyptian diplomat and nationalist leader (b. 1888—d. London, Eng., Aug. 23, 1950).

**Yule, Joe**, Scottish-born comedian (b. Scotland, April 30, 1894—d. Hollywood, Calif., March 30, 1950).

**Ziegenbein, Leopold**, German sea captain (b. Celle, Ger., Nov. 16, 1874—d. Nordholz, Ger., June 21, 1950).

**Ziegler, Charles E.**, U.S. obstetrician and inventor (b. near Carlisle, Pa., 1870?—d. Pittsburgh, Pa., April 26, 1950).

**Obstetrics:** see GYNAECOLOGY AND OBSTETRICS.

**Occupational Diseases:** see INDUSTRIAL HEALTH.

**Occupational Therapy:** see MEDICAL REHABILITATION OF THE DISABLED.

**Oceanography.** Single-ship Gulf Stream surveys made during recent years showed that the stream meanders conspicuously between Cape Hatteras and the Grand Banks off Newfoundland. A multiple-ship survey made during June 1950 confirmed the meandering and made it possible to show for the first time a synoptic picture of the Gulf Stream in this area. Six large waves or meanders were found, averaging about 200 mi. between crests.

During the 16-day period of the survey, called Operation "Cabot," the first two waves eastward from Cape Hatteras moved toward the east at a rate of approximately 11 mi. per day. A large loop between the third and fourth waves, extending 250 mi. from north to south, broke off and became a cyclonic eddy, the equivalent of a low-pressure area in meteorology. Such eddies had been frequently encountered, but their formation had never before been observed.

A striking resemblance was found between the wave pattern formed in the Gulf Stream and that in the atmospheric jet streams (see METEOROLOGY). Confirming previous observations, the highest velocities in the Gulf Stream were confined to a relatively narrow band over the entire 1,200-mi. extent of the survey.

One Canadian and five United States research vessels took part in the survey under the direction of the United States navy hydrographic office. At the close of the year, the data were being processed at the Woods Hole Oceanographic institution.

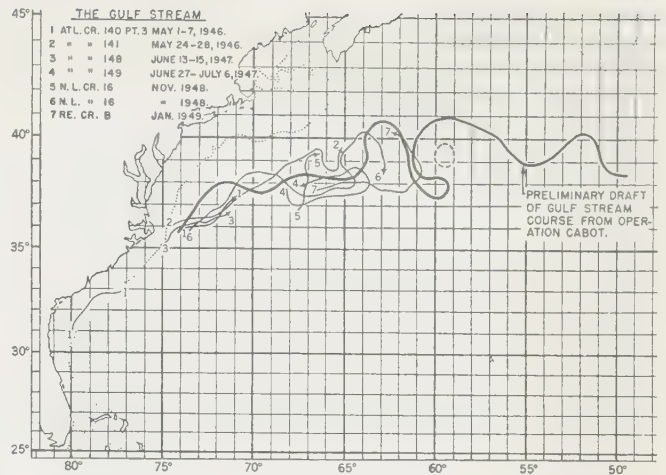

Large variations in the Kuroshio current off Japan were found to appear in 1936, and remained until 1943, when observations were discontinued. The variations had disappeared when observations were resumed in 1946. A failure of the rice crop in some areas of Japan was attributed to an influx of cold water which temporarily displaced the course of the Kuroshio.

A single, comprehensive theory of the wind-driven ocean circulation was published and showed that wind stream, acting upon the water, is sufficient cause to produce the major surface features of the North Atlantic circulation.

Pollution of tidal waters stimulated extensive studies in Canada and the United States. Using the river water as a tracer, the exchanges with the sea were evaluated. A theory was developed to predict the distribution of fresh and salt water in an estuary from the topography of the basin, river flow and the tidal range.

A submerged narrow mountain ridge was discovered west and south of the Hawaiian chain by the mid-Pacific expedition of the Scripps Institution of Oceanography, La Jolla, Calif., and the United States navy electronics laboratory. Bottom cores showed that many centres of vulcanism had existed in the Pacific in relatively recent time. Seismic explorations made by the British weather ship "Weather Explorer," showed a thickness of 7,700 ft. of unconsolidated sediment in the northeast Atlantic ocean.

The British research vessels, "Discovery II" and "William Scoresby," left London to continue the pre-World War II work

GULF STREAM MEANDERINGS (dark line) between Cape Hatteras, N.C., and the tail of the Grand Banks of Newfoundland, as recorded at the Woods Hole Oceanographic institution, Mass., after the multiple ship survey, Operation "Cabot" (Notations at top left indicate research vessel and cruise, as: "Atlantis" cruise No. 140, part 3; "New Liskeard," cruise No. 16; "Rehoboth," cruise No. 8.)

of the "Discovery Investigations." Formerly under the colonial office, the work was transferred to the admiralty as a part of the National Institute of Oceanography. The Danish research vessel, "Galathea," left Copenhagen in October for a two-year round-the-world cruise, chiefly to obtain marine biological and hydrographic data.

A review of the deepest soundings known in the ocean indicated that the greatest depth that had been found was the "Cape Johnson Deep," 34,440 ft., in the Mindanao trench off the Philippine Islands. Greater values for some depths in the same area were thought to be incorrect. Depths to 24,420 ft. were found in the vicinity of the Aleutian trench, and many new sea-mounts were discovered, especially in the northeast Pacific. (See also COAST AND GEODETIC SURVEY, U.S.; MARINE BIOLOGY.)

**Ohio.** A north central state of the United States, popularly known as the "Buckeye state," Ohio officially became a state of the union on Feb. 19, 1803. Area: 41,222 sq.mi., including 100 sq.mi. of water; pop. (1950 census): 7,946,627. Capital: Columbus. The principal cities with 1950 preliminary census population figures are: Cleveland 909,546, Cincinnati 500,510, Columbus, 374,770, Toledo 301,358, Akron 273,189, Dayton, 243,108, Youngstown 167,643, Canton 116,312.

**History.**—After an election campaign which was watched closely by the whole country because of the efforts of labour unions to defeat Senator Robert A. Taft (Republican), Ohio voters gave him a plurality of 431,184 votes over the Democratic candidate, State Auditor Joseph T. Ferguson in the Nov. 7, 1950, election. The official totals were: Taft 1,645,643 and Ferguson 1,214,459. Gov. Frank J. Lausche (D.) also was re-elected, defeating State Treasurer Don H. Ebricht (R.), 1,522,249 to 1,370,570. Others elected were: George D. Nye (D.) as lieutenant governor; Ted W. Brown (R.) as secretary of state; Roger W. Tracy (R.) as treasurer; C. William O'Neill (R.) as attorney

general; and George H. Bender (R.) as congressman-at-large. Elected to the Ohio supreme court were: Carl V. Weygandt (chief justice), Edward S. Matthias, William L. Hart and Henry A. Middleton. Shortly after his re-election Gov. Lausche announced that he had offered all members of his cabinet reappointments and all had indicated that they would continue in their posts. Republicans won control of both houses of the Ohio general assembly.

State officers in 1950 were: governor, Frank J. Lausche (D.); lieutenant governor, George D. Nye (D.); secretary of state, Charles F. Sweeney (D.); auditor, Joseph T. Ferguson (D.); treasurer, Don H. Ebright (R.).

There was no session of the Ohio general assembly in 1950. In May Gov. Lausche ordered the state highway department to proceed with a survey for the proposed Ohio turnpike which would link up with the Pennsylvania turnpike and a route was chosen across northern Ohio.

**Education.**—In 1950 the state had 3,074 elementary schools with a total enrolment of 817,380 and a teaching staff of 24,268; 1,211 secondary schools with an enrolment of 399,054 and a teaching staff of 15,416. State expenditures on education in 1950 were \$224,902,747. The state director of education in 1950 was Clyde Hissong.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The average number of recipients of general relief in Ohio in 1950 was 31,663 and the total assistance extended (December estimated in each case) was \$16,672,037. The average number receiving aid for the aged was 125,648 and they received \$69,588,857; aid to dependent children 14,432 cases, received a total of \$11,387,756; aid to the blind 3,854 cases, received a total of \$2,087,299. Benefits paid by the Ohio bureau of unemployment compensation totalled \$82,186,000 in compensation for 3,610,000 weeks of unemployment. Nearly 1,000 members of the bureau's staff were laid off in 1950 as the declining number of claims resulted in a reduction of federal funds. About 10,000 persons were taken off the state poor relief rolls late in the year as a federal law went into effect covering permanently and totally disabled indigents.

Ohio had four penal institutions with an average daily population in 1950 of 9,058; and two industrial schools with an average daily population of 950. Two conservation work camps were in operation during the year and four more were under construction. Started as an experiment, these camps proved very successful and ultimately it was expected that close to 10% of the men in crowded Ohio penitentiary would be permitted to work in such camps in the state forests. The men maintain the roads in the state forests, plant trees and thin the underbrush. The total operating cost of all welfare department institutions in the fiscal year 1950 was \$27,257,000.

**Communications.**—Ohio had 86,582 mi. of highways in 1950 outside of municipalities. Of this total, 16,073 mi. were classified as rural, 28,919 mi. as county and 41,589 mi. as township. Total state expenditures on highways in 1950 was \$72,000,000.

The state had 8,400 mi. of railroads, more than 300 airports and landing fields, 3,500 mi. of certificated air line routes within its boundaries and an estimated 2,525,000 telephones in 1950.

**Banking and Finance.**—There were 419 state and private banks in Ohio with deposits (June 30, 1950) of \$3,965,090,499 and resources of \$4,311,282,011. There were 241 national banks in the state with deposits (June 30, 1950) of \$3,426,878,000 and resources of \$3,685,771,000. State chartered savings and loan institutions numbered 477 with total resources (June 30, 1950) of \$1,305,042,872, an all-time high. There were 132 federal savings and loan associations with total assets (estimated as of Dec. 31, 1950) of \$759,913,853.

The state budget for the 1949-51 biennium was \$629,180,804. There was a net cash balance of \$68,769,035 at the end of the fiscal year 1950. It is unconstitutional for the state to have a debt except for \$200,000,000 for a soldiers' bonus for which special provision was made by a constitutional amendment.

**Agriculture.**—The large total harvested acreage of principal crops in

Table I.—Leading Agricultural Products of Ohio

Crop	1950	1949	Average, 1939-48
Corn, bu. . . . .	174,928,000	202,552,000	166,283,000
Wheat, bu. . . . .	46,596,000	60,002,000	44,400,000

Truck Crops, commercial, for processing, tons . . . .	217,500	232,200	260,000

Ohio in 1950 was 10,674,000; in 1949 it was a record 10,851,000 ac. Total cash receipts from farm marketings in Ohio in 1950 through October were \$765,055,000, as compared with \$802,660,000 in the same period of 1949, according to the United States department of agriculture. The 1950 marketing receipts consisted of \$531,235,000 from livestock and products and \$233,820,000 from crops.

**Manufacturing.**—The number of Ohio manufacturing establishments rose from 9,543 in 1939 to 12,303 in 1949. Total value added by manufacture in Ohio in 1947 was \$6,359,006,000 compared with \$2,116,434,000 in 1939, according to the census of manufactures made by the bureau of the census of the United States department of commerce. The average number of production workers in 1947 was 988,446 and they were paid wages totalling \$2,727,481,000.

Table II.—Principal Industries of Ohio

	Value added by manufacture 1947	1939
Food and kindred products . . . . .	\$413,216,000	\$182,183,000
Tobacco manufactures . . . . .	14,504,000	5,804,000

Paper and allied products . . . . .	199,107,000	61,057,000
Printing and publishing industries . . . . .	322,283,000	147,174,000
Chemicals and allied products . . . . .	347,226,000	110,516,000
Petroleum and coal products . . . . .	95,811,000	30,369,000
Rubber products . . . . .	381,215,000	141,067,000
Leather and leather products . . . . .	68,293,000	33,972,000
Stone, clay and glass products . . . . .	293,881,000	112,442,000
Primary metal industries . . . . .	852,772,000	331,973,000
Fabricated metal products . . . . .	634,746,000	192,628,000
Machinery (except electrical) . . . . .	1,251,011,000	351,070,000
Electrical machinery . . . . .	471,593,000	116,775,000
Transportation equipment . . . . .	483,421,000	125,225,000
Instruments and related products . . . . .	41,381,000	10,219,000
Miscellaneous manufactures . . . . .	136,796,000	43,357,000

**Mineral Production.**—According to the U.S. bureau of mines, the value of mineral production in Ohio in 1949 was \$244,444,000, as compared with \$284,816,000 in 1948 and \$243,391,000 in 1947. These figures do not include pig iron, coke and other manufactured products derived from minerals, which are included in Table III below.

Table III.—Principal Mineral Products of Ohio

Mineral	Value, 1949	Value, 1948	Value, 1947
Pig iron . . . . .	\$430,627,906	\$469,653,906	\$380,383,106
Bituminous coal . . . . .	123,053,152	155,129,035	131,344,763
Coke . . . . .	111,443,394	128,843,686	98,973,704
Clay . . . . .	7,697,492	8,307,821	7,704,329
Stone . . . . .	27,419,158	27,552,017	23,633,433
Ferroc alloys . . . . .	18,725,301	21,852,890	15,976,882
Lime . . . . .	20,321,387	21,473,401	17,685,220
Cement . . . . .	22,388,726	20,496,930	16,611,421
Sand and gravel . . . . .	14,955,657	15,149,848	14,195,288
Petroleum . . . . .	10,060,000	15,190,000	10,440,000
Natural gas . . . . .	10,432,000	12,901,000	13,548,000
Salt . . . . .	5,134,923	5,884,343	6,815,639

Other minerals . . . . .	2,081,719	2,214,080	1,976,666

(P. By.; X.)

**Oil:** see PETROLEUM.

**Oils and Fats, Vegetable and Animal:** see VEGETABLE OILS AND ANIMAL FATS.

**Oklahoma.** A west south central state of the United States, admitted as the 46th state on Nov. 16, 1907. The name "Oklahoma" is from the Choctaw Indian words meaning "red people," and was first applied to the Indian territory in 1866. The popular name "Sooner state" was from the term "sooner" used in referring to a person who entered and staked a claim sooner than the law stipulated when the first public lands in the Indian territory were opened to white settlement by the run for homesteads, April 22, 1889. Area: 69,283 sq.mi., including 387 sq.mi. of water surface. Pop. (1950 census): 2,233,351, a loss of 103,083 or 4.4% since the 1940 census. The two largest cities with 1950 preliminary census population are Oklahoma City, the capital, 242,450; and Tulsa, 180,586. Other cities are: Muskogee, 37,255; Enid, 35,976; Lawton, 34,527; Norman, 26,972; Shawnee, 24,457; Ponca City, 20,185; Stillwater, 20,155; Bartlesville, 19,262; Okmulgee, 18,298; Ardmore, 17,831; McAlester, 17,809; Ada, 15,935; Chickasha, 15,753.

**History.**—In the state election, Nov. 1950, the total vote cast for three gubernatorial candidates was 644,276, the Democratic candidate winning by a vote of 392,308 to the Republican candidate's vote of 313,205. Two Republicans out

JOHNSTON MURRAY, Democrat, elected governor of Oklahoma, Nov. 7, 1950

of Oklahoma's eight representatives in the U.S. congress were elected. Mike Monroney, Democrat, was elected United States senator, having won the Democratic nomination in the primary election over the incumbent, United States Senator Elmer Thomas from Oklahoma. The chief state officers, all Democrats, elected in Nov. 1950 were: Johnston Murray, governor; James E. Berry, lieutenant governor; John D. Connor, secretary of state; Wilburn Cartwright, state auditor; Mac Q. Williamson, attorney general; A. S. J. Shaw, state treasurer; Oliver Hodge, superintendent

of public instruction; Charles G. Morris, state examiner and inspector; Jim Hughes, commissioner of labour; Buck Cook, commissioner of charities; Donald F. Dickery, commissioner of insurance; Andy Payne, clerk of supreme court; John M. Malloy, chief mine inspector. The question of U.S. participation in a world government, submitted in the Nov. 1950 election by action of the 22nd state legislature, was defeated by a large vote of the people. The 23d state legislature, which was to convene in Jan. 1951, would have 118 members: 99 Democrats and 19 Republicans.

**Education.**—The total enrolment in Oklahoma public schools for the term 1949-50 was 499,311 pupils (elementary and high school), with 18,256 teaching positions. The total cost of maintaining the elementary and high schools in the state was approximately \$72,000,000. State institutions of higher learning included the University of Oklahoma (Norman) and the Oklahoma Agricultural and Mechanical college (Stillwater), both graduate schools; and Oklahoma College for Women (Chickasha), Panhandle Agricultural and Mechanical college (Goodwell), Langston university (Negro, at Langston), and six colleges primarily for teacher training (Ada, Alva, Durant, Edmond, Tahlequah, Weatherford), all state-owned senior colleges. There were 16 two-year junior colleges, of which 7 were state-owned (including the Oklahoma Military academy at Claremore), 4 were independent with church affiliations and 5 were municipal. There were also 6 independent senior colleges with church affiliations.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—On Dec. 1, 1950, the Oklahoma department of public welfare reported 124,084 active assistance cases. Of these, 99,892 were old-age assistance cases, each receiving an average of \$45.24 per month (a total of \$4,518,982); 21,483 dependent children families, each receiving an average of \$51.56 per month in the care of 55,102 children (a total of \$1,107,731); and 2,709 blind cases, each receiving an average of \$47.39 per month (a total of \$128,381). On Dec. 31, 1950, the state department of health reported that 47 counties in Oklahoma, representing 79.3% of the state's population, were covered by full-time local health departments. State supported institutions included two tuberculosis sanatoriums, eight hospitals (six mental hospitals, one school for mental defectives, and one hospital for epileptics), two orphanages, three schools for deaf and blind, four schools of correction, one reformatory and one penitentiary.

**Communications.**—The Oklahoma department of highways spent on contract construction during the period from Jan. 1, 1950, to Dec. 31, 1950, a total of \$28,948,044.56, and was responsible for a highway system of 10,143 mi. The total public open road mileage in Oklahoma was approximately 95,000 mi. Railroad and electric mileage approximated 6,000 mi., not including sidings.

**Agriculture.**—The Oklahoma national stockyards (Oklahoma City) reported receipts of cattle and calves in Nov. 1950, at 57,179 head compared with 80,992 head in Nov. 1949. The U.S. department of agriculture (Oklahoma City office co-operating with the state board of agriculture) reported that the 1950 value of 25 principal crops and commercial truck crops was \$291,496,000 compared with \$396,456,000 in 1949. The decline of about \$105,000,000 was the result of a decline in crop production caused by insects, dry weather, fewer acres planted and other factors.

**Manufacturing.**—The Oklahoma employment security commission reported that the total nonagricultural employment was 463,000 persons, from Jan. 1 to June 30, 1950; and the total wages paid the state's

manufacturing group, in the same period, was \$90,000,000, with a monthly average of 64,000 persons employed. In addition to the manufacture of petroleum by-products, the manufacture of lumber, cement, products from glass sands and from clays and the printing business were important industries in Oklahoma.

**Mineral Production.**—Minerals produced in Oklahoma included petroleum, natural gas, natural gasoline, liquefied petroleum gases, asphalt, zinc, lead, stone, sand and gravel, clay, salt, volcanic ash, wool rock, gypsum, and natural crystallized calcium. The State Corporation commission reported that 161,034,529 bbl. of petroleum were produced in the state in the period Dec. 1, 1949 to Nov. 1, 1950. The report made in Feb. 1950, by the bureau of business research, University of Oklahoma, gave the annual mineral production in Oklahoma for 1949: crude oil, 191,700,000 bbl.; natural gas 401,727,000,000 cu.ft.; lead, 27,397 tons; zinc, 84,289 tons; coal, 2,312,000 tons; the total value of these and other minerals was \$691,270,500.

**Ontario.** Second largest Canadian province, Ontario joined the confederation in 1867. Area: 412,582 sq.mi. Pop.: (1941) 3,787,655; (1950 est.) 4,512,500. Capital: Toronto, (1948 pop.) 747,671.

**History.**—During a session of the 1950 legislature, the Progressive-Conservative government made civil marriages legal in Ontario, and gave municipal councils power to authorize commercial sports (excepting horse racing) on Sunday afternoons if approval of electors was obtained through plebiscites. Several important tax laws were passed: a 15% to 20% tax on gross admissions to places of amusement and entertainment; a 9% tax on logging operations' profits; a 5% personal income tax (collectible by the federal government).

The Ontario Liberal party elected Walter C. Thomson as its leader, and adopted a 97-point political policy, including: use of liquor profits to reduce taxation, a full-time minister of education and co-operation with other provinces to secure more uniform standards, transfer of municipal relief responsibilities to the province, a public health plan, standardization of municipal building codes and creation of a provincial housing corporation, and extension of suffrage to 18-year-olds. Considerable public interest was evoked by a stillborn secession movement in western Ontario to create an 11th province called Aurora.

**Education.**—Provincial 1950-51 education grants to municipalities totalled \$42,420,000, up \$6,136,000 from 1949-50; grant to six universities totalled \$4,342,000, an increase of \$810,000 over the previous year. The latest revised statistics available in 1950 for provincially controlled schools were for 1947: total enrolment, 678,053; daily attendance, 597,400; teachers, 23,004; total revenues, \$78,021,255.

**Finance.**—The government estimated 1950-51 ordinary revenue at \$238,260,790, highest in history, and expenditures at \$237,256,790, including a \$20,626,000 payment into a sinking fund for debt retirement. Gross public debt stood at \$698,124,174 on March 31, 1950.

**Agriculture.**—Preliminary estimates of Ontario's 1950 grain crop ran to 208,000,000 bu., the greatest since 1920. Significant 1949 statistics included: aggregate grain production, 166,713,000 bu.; cash farm income, \$653,500,000; value of field crops, \$369,349,000; livestock, \$266,100,000; dairy products, \$142,000,000; poultry and eggs, \$79,600,000.

**Industry.**—The 1950 session of the legislature passed a labour relations act which gave the labour relations board powers formerly held by the minister of labor and made it mandatory for the board to order a representation vote where a union has 45% of the employees as members. Workers exposed to silica dust were required to hold health certificates. Industrial expansion during 1950 drew heavily on power facilities, and the Ontario hydroelectric commission spent \$12,000,000 per month and brought in 536,000 new horsepower during the year. Employment and industrial activity was at a high level, indicated by the \$1,300,000,000 private and public investment in new capital in 1950.

**Minerals.**—Mineral development during the year included discovery of important iron ore and vermiculite deposits in eastern Ontario. The 1949-discovered asbestos mine in northern Ontario went into production, and yielded a type of fibre never before found in Canada. Total mineral output of 1949 was worth \$315,000,000, about \$20,000,000 more than that of 1948. (C. C.)

**Oranges:** see FRUIT.

**Oregon.** A state of the United States, located in the Pacific northwest, Oregon was admitted Feb. 14, 1859, as the 33rd state. Area: 96,981 sq.mi., including 631 sq.mi. of water. Pop.: (1950 census, preliminary figure) 1,521,341, an increase of 39.6% from 1940. Capital: Salem (43,064); chief city: Portland (371,011).

Elective state officials (administrative) in 1950 included: governor, Douglas McKay; secretary of state, Earl T. Newbry; treasurer, Walter J. Pearson; attorney general, George Neuner; labour commissioner, W. E. Kimsey; superintendent of public instruction, Rex Putnam. Re-elected in 1950 for four-year terms were Governor McKay, Kimsey and Putnam.

**History.**—In 1950 the majority in voter registration shifted from Republican to Democratic for the first time. Despite this shift, the Republican party in the 1950 general election re-elected its candidates for United States senator, for four congressional seats and for state offices and retained control of the legislative assembly. Voters at the election rejected a constitutional amendment revising the legislative apportionment, also a bill to ban the sale of liquors "promotively" advertised. They adopted amendments to increase the compensation of legislators to \$600 per annum and to finance the payment of a veterans' bonus. Also approved were bills to increase the amount of state aid for schools, to establish uniform standard time and to fix new standards for old-age assistance.

**Education.**—Enrolment in public schools during the school year 1949-50 was 281,309, including 69,020 in high schools. For the school year 1948-49 the number of teachers was 10,568 and the average annual salary received was \$3,130. The total cost of operating the public schools was \$58,161,039, and the total value of public school property was \$120,553,326.

Enrolment at seven state institutions of higher learning, 1949-50, was 19,269, not including 16,716 enrolled in extension courses. Operating costs of the state system of higher education were \$15,406,246.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Payments for unemployment compensation during the year ending June 30, 1950, totalled \$25,893,895. Expenditures for public-welfare programs (old-age and general assistance, aid to dependent children and to the blind) totalled \$25,687,637.

The number of inmates in state health, corrective and eleemosynary institutions on June 30, 1950, and operating costs for the fiscal year 1949-50 were as follows: two mental hospitals 4,375, \$2,861,657; penitentiary 1,452, \$694,776; Fairview home for feeble-minded 1,242, \$984,203; boys' training school 193, \$369,833; Hillcrest girls' training school 56, \$174,610; three tuberculosis hospitals 419, \$1,085,359; school for deaf 151, \$235,555; school for blind 71, \$122,446. Expenditures of the commission for the blind were \$115,618.

**Communications.**—Steam railway mileage Dec. 31, 1949, was 3,539.42, exclusive of second main track and sidings. Electric railway mileage was 105.6.

As of Dec. 31, 1949, there were 7,320 mi. in the state system of highways, of which 6,824 mi. were surfaced, and 32,566 mi. of county roads, of which 16,889 mi. were surfaced. A total of \$34,974,459 was expended by the state highway department during the fiscal year 1949-50.

The number of motor vehicles registered in the year ending June 30, 1950, was 733,168. The number of telephones reported in service Dec. 31, 1949, was 409,324.

**Finance.**—The state bonded debt as of July 1, 1950, was: gross \$29,427,820; net \$2,741,533. The gross debt of municipal subdivisions July 1, 1950, was \$152,318,995; net \$140,425,326. Total state revenues for the year ending June 30, 1950, were \$288,392,748. The assessed valuation for 1950 was \$1,607,876,262.

Total bank deposits as of Oct. 4, 1950, were \$1,478,647,190. Bank debits reported for the first nine months of 1950 were \$8,725,612,000.

**Agriculture.**—Estimated cash receipts from marketings for the year 1949 totalled \$366,113,000, including \$2,450,000 in government payments. Receipts from livestock and animal products were estimated at \$164,269,000 and from all crops \$199,294,000.

**Manufacturing.**—Lumbering is the major manufacturing activity in the

state. The amount of timber cut in 1949 was 6,874,953,000 bd.ft., with a value reported at \$309,000,000, green rough basis. The amount of plywood manufactured in 1949 was 709,148,000 sq.ft., three-eighths inch ply. Oregon ranks first among the states in volume of lumber manufactured.

The bureau of the census report on manufactures for 1947 showed 3,075 establishments which employed 92,114 production workers. Total wage rolls were \$265,834,000 and value added by manufacture was \$675,017,000.

**Mining.**—The U.S. bureau of mines reported the value of all mineral production in Oregon in 1949 as \$22,479,000, of which metallic production amounted to \$676,000.

**Organization for European Economic Cooperation:**  
see EUROPEAN RECOVERY PROGRAM.

## Organization of American States.

During 1950 the Organization of American States (O.A.S.), in addition to considering political, economic and legal problems affecting the nations of the western hemisphere, began to feel repercussions of events in other parts of the world.

On Jan. 3, 1950, the government of Haiti charged the government of the Dominican Republic with acts affecting its sovereignty, independence and territorial integrity. In a communication addressed to the Council of the Organization of American States, the Haitian government invoked the inter-American Treaty of Reciprocal Assistance, which provides for collective action of all the American republics in the event of threats to the security of any one of them.

The Dominican Republic immediately contested the charges, and itself invoked the 1947 treaty, alleging that events in Haiti, Cuba and Guatemala were affecting its sovereignty and independence and endangering the peace of America.

To determine the facts in the situation, the Council of the Organization appointed a commission composed of representatives of Uruguay, Bolivia, Colombia, Ecuador and the United States, which visited the four countries and submitted its report on March 13.

On the basis of the reports of its fact-finding committee, the council found that the acts charged against the Dominican Republic were contrary to norms contained in inter-American agreements; that the events might have disturbed American solidarity and, if repeated, would give occasion for the application of the provisions of the Rio treaty. The Dominican government was requested to take immediate measures to prevent government officials from co-operating with subversive movements against other governments, and not to permit in its territory activities likely to disturb the peace of Haiti.

With reference to the complaint of the Dominican Republic, the Council of the Organization declared that Guatemala and Cuba had permitted to exist within their respective territories subversive armed groups which intended the overthrow of the Dominican government. The council requested Cuba and Guatemala to adopt measures to prevent the existence in their territories of groups organized on a military basis for the purpose of conspiring against the security of other countries, and asked these governments as well as that of the Dominican Republic to take measures to ensure respect for the principle of nonintervention.

Following the action of the United Nations in the case of Korea in June, the Council of the Organization on June 28 approved a resolution declaring its firm adherence to the decisions of the United Nations. In December, as the general international situation took a turn for the worse following Chinese Communist intervention in Korea, the United States requested that a meeting of foreign ministers of the American republics be held to consider questions relating to the defense of the Americas. This request was unanimously approved by the Council of the Organization, and March 26, 1951, was fixed as the opening date of the meeting to be held in Washington, D.C.

### Principal Agricultural Products of Oregon

Crop	1950	1949	Average 1939-48
All wheat, bu. . . . .	23,693,000	23,203,000	21,906,000
Oats, bu. . . . .	8,992,000	11,088,000	9,655,000
Barley, bu. . . . .	12,210,000	9,933,000	8,774,000
Corn, bu. . . . .	1,036,000	1,095,000	1,502,000
Potatoes, bu. . . . .	13,200,000	11,890,000	10,164,000
Hay, tons. . . . .	1,904,000	1,710,000	1,942,000
Apples, bu. . . . .	2,720,000	2,953,000	2,783,000
Pears, bu. . . . .	5,660,000	6,166,000	4,592,000

Hops, 1,000 lb. . . . .	16,279	14,718	17,040

A special meeting of the Inter-American Economic and Social council was held at the Pan American Union headquarters in Washington, D.C., from March 20 to April 10, 1950. The council decided to sponsor an Organization of American States technical assistance program, utilizing the facilities of the Pan American Union and inter-American specialized agencies able to contribute effectively to the execution of the program. A coordinating committee on technical assistance on which the co-operating agencies were represented drew up a program comprising 46 projects which was presented to the council for action. Jan. 1, 1951, was fixed as the date for the initiation of the program.

The Inter-American Council of Jurists held its first meeting in Rio de Janeiro, Braz., from May 22 to June 15, 1950. Preparations were also made for the first meeting of the Inter-American Cultural council to be held at Mexico City, Mex., in 1951. By the end of the year the following agencies had been declared specialized organizations under the terms of the charter signed at Bogotá, Colom., in 1948: The Pan American Institute of Geography and History; the American International Institute for the Protection of Childhood; the Inter-American Institute of Agricultural Sciences; the Inter-American Commission of Women; and the Pan American Sanitary bureau. On July 1 the secretariat of the Inter-American Statistical institute was incorporated into the Pan American Union. The council also declared that the Inter-American Defense board should continue to function until the American governments by a two-thirds majority should consider its labour terminated.

Agencies abolished as a result of studies undertaken by the council pursuant to a resolution of the ninth International Conference of American States included the Emergency Advisory Committee for Political Defense, the Inter-American Trade Mark bureau, the Permanent American Aeronautical commission, the Inter-American Coffee commission, the Inter-American Development commission, the Central Pan American Bureau of Eugenics and Homiculture, the Pan American Railway committee and a number of international law agencies which had functioned prior to the establishment of the Council of Jurists.

On July 26, 1950, an agreement was signed between the Council of the Organization and the International Labour organization (*q.v.*) providing for close co-operation and co-ordination between the two organizations. A similar agreement with the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.) was approved by the council on Oct. 4, 1950, and was subsequently signed in Havana, Cuba, by the secretary-general of the Organization of American States and the director-general of U.N.E.S.C.O. at a regional meeting of the latter held in the Cuban capital. A further agreement between the O.A.S. and U.N.E.S.C.O. was signed in July 1950 providing for the establishment of a fundamental education centre in Mexico City and at the Pan American Union in Washington.

Inter-American specialized conferences held during 1950 included the 2nd Inter-American Statistical congress which met at Bogotá, Colom., from Jan. 16 to 27; the 13th Pan American Sanitary conference in Ciudad Trujillo, Dom. Rep., from Oct. 2 to 10; the 5th general assembly of the Pan American Institute of Geography and History at Santiago, Chile, from Oct. 16 to 20; and the 4th Inter-American Conference on Agriculture at Montevideo, Urug., from Dec. 1 to 12.

On Nov. 15, 1950, Ambassador Hildebrando Accioly, representative of Brazil, was elected chairman of the Council of the Organization of American States for the coming year, succeeding Ambassador Luis Quintanilla of Mexico. At the same time Ambassador René Lepervanche Parparcén of Venezuela was elected vice-chairman to succeed Ambassador Héctor David

Castro of El Salvador.

(W. MR.)

**Osteopathy.** Osteopathy is a complete school of medicine (the art and science of prevention, diagnosis and treatment of disease and injury) founded by Andrew Taylor Still in 1874. Its emphasis on normal body mechanics as being essential to health distinguishes it from other schools of practice. The practice of osteopathy is licensed in all states of the U.S.

Enrolment in the six accredited osteopathic colleges in the United States, located in Chicago, Ill., Des Moines, Ia., Kansas City, Mo., Kirksville, Mo., Los Angeles, Calif., and Philadelphia, Pa., numbered approximately 1,900 students in 1950. The colleges admitted 504 freshmen chosen from more than 2,600 qualified applicants.

Expansion of the teaching facilities of the colleges and their associated clinical hospitals received new impetus in 1950. The five-year \$7,500,000 Osteopathic Progress Fund campaign was successfully terminated during the year. The campaign was re-activated to embrace lay contributions as well as those from the profession, with an over-all goal of \$22,500,000.

The research project in neurophysiology, begun in 1947 at the Kirksville College of Osteopathy and Surgery, Kirksville, Mo., was further expanded in 1950 by additional grants from the U.S. public health service. Other research projects were instituted or expanded by funds derived from the sale of special Christmas seals.

The board of trustees approved for registration 195 osteopathic hospitals as meeting the standards and qualifications of the association's bureau of hospitals and the American College of Osteopathic Surgeons. Of these, 63 were approved for interne training and 33 for graduate training in the specialties. There was a total of 8,439 beds available in osteopathic hospitals in the United States in 1950.

The 54th annual convention of the American Osteopathic association was held in Chicago, Ill., in July 1950. Vincent P. Carroll, Laguna Beach, Calif., succeeded H. Dale Pearson, Erie, Pa., as president, and R. C. McCaughan, Chicago, was re-elected executive secretary of the association.

On Oct. 1, 1950, there were 11,490 practising osteopathic physicians and surgeons in the United States, Canada and other countries, 8,190 of them being members of the association.

(J. R. Fo.)

**Ottawa.** The capital of Canada, at the confluence of the Ottawa and Rideau rivers, in the province of Ontario, covers 28,134 ac. Pop.: (1941) 154,951; (1949) 191,442.

During 1950 considerable progress was made on the construction of the \$721,000 Mackenzie King bridge over the downtown section of the Rideau canal to relieve traffic congestion. Grading and groundwork progressed on the \$2,500,000 job of moving the Canadian National railways freight yards from the centre of town two and a half miles south. The federal government granted the city \$962,392 in lieu of taxes, compared with \$500,000 in 1949. The city council rejected a plea to put Sunday afternoon commercial sport to a plebiscite. The financial position of the corporation of the city of Ottawa on Jan. 1, 1950 was as follows: taxable assessment for general purposes, \$189,267,082; gross debenture debt, \$15,291,625; sinking fund, \$2,639,732; assets, \$74,909,980; liabilities, \$19,339,521. The taxes for 1949 amounted to \$8,824,625. In Sept. 1950 the employment index was 134.8 (Sept. 1949, 134.5); the Sept. 1950 aggregate pay roll index was 228.6 (Sept. 1949, 221.1). Bank clearings in 1950 amounted to \$5,833,050,703, compared with \$5,824,784,094 in 1949.

**Pace, Frank, Jr.** (1912– ), U.S. government official, was born in Little Rock, Ark., on July 5. He received his bachelor's degree from Princeton university in 1933 and his law degree from Harvard university in 1936. In that year he became assistant district attorney in the 12th judicial district in Arkansas. From 1938 to 1940 he was general counsel of the Arkansas state department of revenue. In 1942 he was commissioned a second lieutenant in the army air corps, and served for four years in the air transport command, reaching the rank of major.

Early in 1946 he was made a special assistant to the U.S. department of justice dealing with tax matters, and in May of that year he became executive assistant to the postmaster general. In Jan. 1948 he was appointed assistant director of the bureau of the budget, and a year later Pres. Harry S. Truman nominated him to the position of director of the budget. Late in March 1950 the president nominated him to become secretary of the army. He participated in the emergency planning involved in the defense of South Korea against North Korean Communist invaders, and in the defense mobilization planning. It was under his authority, delegated from the president, that the U.S. army seized the railroads of the nation on Aug. 27 to avert a nationwide strike of trainmen and conductors.

**Pacific Islands, British.** Under this heading are grouped the crown colonies and protectorates administered by the governor of Fiji and high commissioner for the western Pacific. Included are the colony of Fiji, the Gilbert and Ellice Islands colony, the British Solomon Islands protectorate, the protected state of Tonga and the Anglo-French condominium of the New Hebrides (*q.v.*). Areas: Fiji 7,040 sq.mi.; Gilbert and Ellice Islands 375 sq.mi.; Solomon Islands 12,400 sq.mi.; Tonga 250 sq.mi. Populations: Fiji (1946 census) 259,638, (1949 est.) 276,000; Gilbert and Ellice Islands (1949 est.) 36,000; Solomon Islands (1949 est.) 95,000; Tonga (1949 est.) 46,000. Chief town: Suva (capital of Fiji), pop. (European only, 1946) 2,266. Governor of Fiji and high commissioner for the western Pacific, Sir Leslie Brian Freeston.

**History.**—In Feb. 1950 in Fiji the legislative council considered the report of a constitution revision committee and decided against any important changes. The people of Fiji subscribed more than £57,000 for a war memorial antituberculosis fund, to which the government added £20,000. A colonial development and welfare grant of £25,800 was also available for this work, and the campaign had already started in 1948; there had been 486 cases in 1947 and 120 deaths in 1948. A ten-year development plan was approved costing £4,500,000 with emphasis on hydroelectric power and road development.

On March 13, 1950, the ruler of Tonga, Queen Salote Tupou, who had reigned for 32 years, celebrated her 50th birthday and the festivities were marked by the receipt of a personal message of congratulation from King George VI.

In the Solomon Islands the nativistic movement known as "marching rule" continued to lose ground during the year in consequence of firm handling by the government and of an acceleration in the development of social services, including education and the co-operative movement.

The native copra trade, helped by high prices, continued to prosper during 1950, recovery from destruction of the war being particularly marked in the Solomons. Progress was made in the Solomons with the building of the new capital at Honiara and the opening of the first government boarding school at Auki.

**South Pacific Conference.**—For all the islands the most significant event of the year was undoubtedly the visit of their

representatives to the South Pacific conference in Suva.

The South Pacific commission, an advisory body set up by agreement in 1947, was designed to develop, by international co-operation, the economic and social welfare of the inhabitants of the territories administered by its members in the South Pacific. Its members were Australia, France, the Netherlands, New Zealand, the United Kingdom and the United States. The permanent headquarters of the commission were at Nouméa in New Caledonia and it had two auxiliary bodies, the research council and the South Pacific conference. In 1949 the research council drew up a program of 28 research projects, of which 13 were concerned with economics, 10 with social development and 5 with health. During 1950 work was started on several of these projects, including a mass education experiment and a tuberculosis survey.

On April 24, 1950, the first meeting of the South Pacific conference was opened at Suva under the chairmanship of the high commissioner for the western Pacific, Sir Leslie Brian Freeston. The purpose of this conference was to enable native representatives from all the islands included in the sphere of the South Pacific commission to meet together periodically to discuss and promote all matters concerned with their common welfare. The conference lasted two weeks. Discussions ranged over a wide field, including economic, social and health conditions, the diversification of crops, fishing methods, handicrafts and the co-operative movement.

**Finance and Trade.**—Currency: in the Solomons, Gilbert and Ellice Islands and Tonga, British and Australian currency are legal tender, though Tonga issues its own notes (Tonga pound=\$2.24 U.S.) and in all these territories the exchange standard system is based on Australian currency; in the New Hebrides sterling and French currency are both legal tender; the Fijian pound was valued at \$2.52 U.S. in Oct. 1950.

\*Including re-exports. †Including grant-in-aid, £A204,588. ‡Including grant-in-aid, £A101,610. §1949–50 est. ||Condominium only; British and French administrations have separate budgets.

Principal exports: copra, phosphates (Ocean Island), sugar and gold (Fiji).

See G. K. Roth, "Fiji: Seventy-Five Years of Native Administration," *Corona* (London, Sept. 1950). (K. G. B.)

**Pacific Islands, French.** Under this heading are grouped two French overseas territories and the Anglo-French condominium of New Hebrides (*q.v.*).

New Caledonia and its dependencies have an area of 7,654 sq.mi.; pop. (1949 est.) 50,000. The native population is Melanesian with Polynesian admixtures. The area of New Caledonia proper is 6,533 sq.mi. Nouméa, pop. (1946) 10,466, is the seat of the commissioner general for the Pacific ocean, Pierre Cournaire.

The French Settlements in Oceania, consisting of the Society Islands (the largest of which is Tahiti), the Marquesas, Tuamotu and other smaller islands, have an area of 1,545 sq.mi. and a population (1949 est.) of 59,000. The native population is Polynesian, mainly Christian. Papeete, on Tahiti Island, pop. (1946) 12,428, is the seat of the governor, René Petitbon.

**History.**—Debates by the assembly of the French union at Versailles concerned the composition and competence of a representative territorial assembly for New Caledonia. By 103 votes to 19 the assembly decided in favour of a single electoral college and universal suffrage. In January the fourth session of the South Pacific commission at Nouméa was attended by 21 representatives of Australia, France, the Netherlands, New Zealand, the United Kingdom and the United States.

The other French settlements in Oceania are, like New Cale-

donia, agricultural lands largely devoted to raising copra and vanilla which represent 72% of the exports. Nevertheless 60% of the food requirements were covered by imports. The government therefore concentrated on developing food cultivation and fruit crops for export. The building industry, long paralyzed by lack of materials, made a vigorous start in 1950, notably at Papeete. For the ten-year plan for the economic equipment of the territory, a sum of 1,277,500,000 fr. C. F. P. was allocated. (See also FRENCH UNION.)

**New Caledonia.—Finance.**—Budget (1950 est.) balanced at 334,900,000 fr. C. F. P. The franc C. F. P. (Colonies Françaises du Pacifique) = 5.5 M. fr. (metropolitan francs). Exchange rate (Dec. 1950): U.S. \$1 = 349.85 M. fr.

**Foreign Trade.**—(1949): Imports 711,300,000 fr. C. F. P.; exports 426,100,000 fr. C. F. P.

**Transport and Communications.**—Roads (1946): 4,021 km. Ships entered (1949): 602; cargo (metric tons): unloaded 279,600; loaded 229,700; passengers carried: arrivals 1,803; departures 1,969.

**Agriculture.**—Main crops (1949, metric tons): rice 700; maize 1,000; cassava 2,500; sweet potatoes 4,000; potatoes 1,100; peanuts 1,200; copra 1,900; coffee 800. Livestock (1949): cattle 94,000; sheep 6,000; goats 7,000; pigs 11,000.

**Mineral Production.**—(1949, metric tons): nickel ore 93,900; nickel mattes 4,000; chrome 88,800; gypsum 17,100.

**French Settlements in Oceania.—Finance.**—Budget (1949 actual) balanced at 159,500,000 fr. C. F. P.

**Foreign Trade.**—(1949): Imports 589,600,000 fr. C. F. P.; exports 472,300,000 fr. C. F. P. Main exports (1949, metric tons): phosphate rock 239,532; copra 25,123; vanilla 294.

**Transport and Communications.**—Shipping, cargo carried (1949, Tahiti and Makatea, metric tons): unloaded 55,800; loaded 218,500.

**Agriculture.**—Main crops (1949 est., metric tons): maize 300; cassava 400; taros 10,000; copra 28,600.

**Mineral Production.**—Phosphate rock (1949) 265,000 metric tons. (C. A. J.)

**Pacific Islands under Trusteeship:** see TRUST TERRITORIES.

**Painting.** In the year 1950 confusion with respect to criteria of value and directions for the future dominated exhibitions and criticism. In Europe the issues could not easily avoid the division of political allegiances between communism and capitalist democracy. In France and Italy the "cold war" was continued in the field of painting, with the left wing supporting an optimistic social realism and the right a near or pure abstract art.

Italian painting still appeared to be the most vital in Europe, but nowhere had an important young artist yet arisen to take a sure place among the old masters of modern art. Younger French painters were numerous, their work tasteful, but unexciting; English painting remained dominantly derivative of 20th-century French art. Modern styles were being revived in western Germany and Austria and were frequently supported by occupation authorities. In spite of Franco, Spain could boast of artists who worked in the near-abstract, international style of the west, along with artists whose fascist style approximated that of the U.S.S.R., Yugoslavia and other east European countries. Israel continued to support the art of painting with emphasis on French and German expressionism.

The major European exhibition of the year was the 25th Venice Biennial, the first since 1942 and hence since the defeat of fascism. There were about 4,000 works from 22 countries. The Italians, who were thus reintroduced to modes of expression they had not seen for years, seemed most taken by the Mexican contribution of one-man shows by four major artists, David Siqueiros, José Orozco, Diego Rivera and Rufino Tamayo. The United States contribution stressed John Marin; the German, Max Beckmann; the French, Henri Matisse.

In the United States, the year 1950 was marked by the rapid spread of abstraction to the extent of a virtual inundation. This was apparent in art schools, in most regional exhibitions, and in such national shows as the Whitney in New York city, the Carnegie in Pittsburgh, Pa. (first postwar International), the Walker in Minneapolis, Minn., the Virginia museum in Rich-

HENRY MATTSON'S "Self Portrait," awarded the Carol H. Beck gold medal for the best portrait in oil submitted to the 145th annual exhibit of painting and sculpture at the Pennsylvania Academy of the Fine Arts in Jan. 1950

mond, the Art Institute of Chicago and the Pennsylvania academy in Philadelphia. The Metropolitan museum in New York city inaugurated a new policy of showing modern art annually. The choice of the jury for the first exhibition seemed to threaten the cause of abstraction, and was boycotted by a group of leading *avant-garde* painters. When the exhibition opened, however, the abstract trend was again dominant. The issue in mid-century seemed no longer between abstract and representational idioms, but rather how to distinguish work of high quality from "academic" abstractions or superficial daubing. The usual criteria seemed increasingly inadequate, and Europe no longer seemed able to provide guidance.

Controversy centred around such artists as Jackson Pollock, Arshile Gorky, William De Kooning and Robert Motherwell, who were strongly supported by the Museum of Modern Art in New York city. The agitation generated the previous year by an announcement of the Boston Institute of Contemporary Art, which was interpreted in some quarters as a "reactionary" move, was calmed by a new and dignified manifesto encouraging freedom of expression, signed by representatives not only of the Boston institute but also of the Museum of Modern Art and the Whitney museum. Later in the year the International Association of Art Critics, meeting in Venice, passed a similar resolution condemning restraints upon the rights of the artist to free expression and exhibition.

Another controversy during the year, regarding the genuineness of a supposed Van Gogh self-portrait owned by William Goetz of Los Angeles, was settled by a precedent-making decision of the U.S. treasury department's bureau of customs. After a jury of experts was unwilling to accept the picture as an original, the Port of New York Customs authority made a surprisingly competent investigation of the painting and authenticated it to the apparent satisfaction of the art world.

Other anniversaries celebrated in 1950 were the 75th of the Art Student's league, New York city, and the 125th of the

"TRANSITION," an urban landscape in water colours by Leonard Cutrow which was awarded the 1950 gold medal of honour by the American Water Color society

National Academy of Design, New York city. One of the most important conferences of the year brought together painters and museum directors at Woodstock, N.Y., with a result which promised greater museum support of living artists in the future. *Life* magazine made a contribution to contemporary painting by collecting an exhibition of young American painters (under 36), which was shown at the Metropolitan museum and part of it published in *Life*. Universities, particularly in the middle west, continued to present major exhibitions of modern art, but support of contemporary painting by big industries, through exhibitions and prizes, largely ceased. (See also ART EXHIBITIONS; ART SALES; MUSEUMS; SCULPTURE.)

FILMS OF 1950.—*Art and Life in Italy* (Coronet Instructional Films). (L. D. L.)

**Paints and Varnishes.** Paint sales in the United States for 1950 were estimated at about \$1,100,000,000, slightly exceeding the previous peak sales in 1948. This high rate of production was made in spite of increasing costs and scarcity of raw materials following the outbreak in June of hostilities in Korea. In the last half of the year various imported materials related to paint became scarce, particularly tung oil and hog bristles. Stocks of flax and rosin held by the government in price support programs were dissipated to the point where these materials rose sharply in price. Limitation by the government on the use of cobalt in paint promised to become a severe handicap to paint manufacturers, since cobalt is the most active and least replaceable of the metallic driers. Almost all cobalt comes from Africa.

The use of safflower oil as a drying oil increased. A fast drying fraction of fish oil was introduced commercially on a new and economic basis by the use of propane refining. Commercial success was attained in production of dimerized fatty acids by a new catalytic process.

Ether resins, developed in recent years from a phenolic intermediate, and epichlorohydrin were so much in demand that a new plant was erected for their production. Small commercial production was begun on orthophenanthroline as a drier supplemental to manganese. Allyl sucrose and a styrene copolymer of this was proposed as another polymer-forming material for coatings, while the older allyl starch gained sufficient commercial success in lacquer-type coatings to warrant a price reduction. Ethyl hydroxyethyl cellulose was another new compound in the lacquer field.

An English development proposed the use of calcium plumbeate under United States and British patents as a pigment having rust-inhibitive properties superior to red lead.

There were several offerings of auto polishes based on silicone polymers which were claimed to have superior water repellence. Manufacturers of automotive refinishing enamels became concerned about nonadherence of their enamels over coatings of silicone polish. Finishes based on vinyl polymers reached new peaks of resistance to abrasion, alkalies and related chemicals in service on railway hopper cars. Two companies offered trade sales wall paints with strong claims of low odour during drying. Fluorescent poster and billboard colours were widely used.

A new challenge to the performance of protective coatings was made in May by the United States navy's bureau of aeronautics which asked for a finish for the leading edges of aeroplanes, which are made of aluminum, magnesium and other alloys, which would withstand erosion by air and rain at speeds of 700 m.p.h.

By 1950, graduate and undergraduate courses in paint technology were offered in a score of colleges throughout the country, in contrast to a very few courses offered 20 years earlier. An industry-sponsored co-operative research program on the fundamentals of drying oil chemistry was being carried on in 15 college and other laboratories, and an annual symposium on the theoretical aspects of coatings technology had been established by the American Association for the Advancement of Science. (Jo. C. W.)

**Pakistan.** A self-governing member of the Commonwealth of Nations, Pakistan is a federation of provinces, whose areas and populations are shown in the table.

	Area (in sq.mi.)	Population (1941 census or est.)
Sind . . . . .	48,136	4,535,000
West Punjab . . . . .	62,100	15,800,000
North-West Frontier province:		
(a) Administered area . . . . .	14,200	3,038,067
(b) Tribal area . . . . .	24,986	2,500,000
Baluchistan . . . . .	134,002	857,835
Total, West Pakistan . . . . .	283,424	26,730,902
East Pakistan (East Bengal). . . . .	54,100	41,880,000
Total. . . . .	337,524	68,610,902

Pop. (March 1, 1950, est.): 75,000,000. Languages: Urdu, Punjabi, Baluchi and Pashtu in West Pakistan and Bengali in East Pakistan; English used as a medium of instruction in higher education. Religion: Moslem (72.9%); Sikh, Hindu, Christian, Parsee and other minorities. Chief towns (pop. 1941 census): Karachi (cap., 359,492; 1948 est. c. 1,000,000); Lahore (671,659; 1948 est. c. 1,000,000); Dacca (213,218); Rawalpindi (181,169); Multan (142,768); Sialkot (138,348); Peshawar (130,967). Governor general: Khwaja Nazimuddin; prime minister: Liaquat Ali Khan (q.v.).

**History.**—At the end of April 1950 the prime minister, Liaquat Ali Khan, set out on a prolonged tour of the U.S. and Canada. The chief object of his visit was to enable the western democracies to obtain a clearer understanding about what Pakistan stood for, and the odds against which it had to struggle. On his arrival at New York city he was met by Harry S. Truman, president of the U.S., and on May 4 he addressed the house of representatives. In Canada he was the guest of the governor general, and addressed the houses of parliament. On his way home he was officially entertained by the British government.

Relations with India still left much to be desired, though some of the causes of disagreement were temporarily settled by the Delhi pact. On the other hand, widely felt disappointment was aroused by the failure of Sir Owen Dixon, the mediator appointed by the U.N. Security council, to reach an understanding over Kashmir (q.v.). Apart from the political and religious aspects of the question, Kashmir was vital to the existence of Pakistan because of the water supply. The six rivers necessary

to Pakistan's economic life, irrigating approximately 20,000,000 ac., all rise beyond Kashmir's northern or eastern frontiers. Water was the lifeblood of West Pakistan and its control by a hostile neighbour would mean ruin.

What water was to the Punjab, jute was to East Bengal. Of the total world yield of jute 75% was grown in the Brahmaputra and Meghna valleys, and the acreage planted in jute was under the control of the government, which fixed the annual quota in order to prevent profiteers from devoting to it land which would otherwise be planted with rice, the staple food of the country. At the root of the trouble with India over jute was the devaluation of the rupee. Here India had followed the United Kingdom and the other commonwealth countries with which its economy was closely bound. Pakistan, on the other hand, saw no reason for taking such a step. It had a favourable trade balance and feared that devaluation could lead to inflation. The jute from East Bengal was processed in Calcutta for export and the dispute which arose over prices led to the hold-up of 300,000 bales. India retaliated by stopping the supply of coal which Pakistan regarded as a violation of the interdominion agreement.

Trade between the two states came to a standstill, and railway communications were interrupted to such an extent that tea and other commodities from Assam could reach Calcutta only by a special link line. In Calcutta, mills were closed and unemployment led to fresh outbreaks of communal rioting. The disastrous migrations which had been successfully dealt with two years previously started again and threatened to reach unmanageable proportions.

Fortunately the seriousness of the situation was realized in time by the leaders of both countries. After correspondence on the subject Liaquat Ali Khan journeyed to Delhi and started conversations with Jawaharlal Nehru, prime minister of India, with a view to reaching a mutual understanding. Arrangements were made for the supply of 300,000,000 lb. of raw jute by Pakistan, in return for an equivalent supply of manufactured goods by India. In a joint declaration, the prime ministers expressed their determination to punish rioters, recover looted property, protect minorities and provide facilities for refugees who were already moving, while discouraging large-scale migra-

tions. A joint tour of the affected districts in Bengal by the minority ministers, which lasted for 13 days, had also a remarkable effect in restoring confidence (*see* INDIA).

In food grains the country was self-supporting, and the export trade to the United Kingdom in jute, raw cotton and tea had trebled. In the first half of 1950 it amounted to £34,250,000. In October members of the International Bank for Reconstruction and Development mission arrived to discuss the government's application for a loan of £80,000,000 for industrial expansion. Pakistan's strength lay in the fact that, unlike India, it was untroubled by internal dissensions. Communism was non-existent and the only political party was the Moslem league. The chief obstacles were the dearth of trained administrators, the dislocation of trade with India and the crushing burden of military expenditure in Kashmir. (For the Plan for Co-operative Economic Development in South and Southeast Asia *see* CEYLON. *See also* UNITED NATIONS.) (H. G. RN.)

**Education.**—Baluchistan: schools (Oct. 1949): primary 186, secondary 23, private 4, European 2, institutions of higher education 1; total pupils 18,500. North-West Frontier Province: recognized educational institutions (1947-48): for males 1,059, pupils 101,377; for females 156, pupils 11,035. Sind: schools (March 1946): primary for boys 2,327, pupils 165,653; for girls 398, pupils 40,257; secondary for boys 206, pupils 34,810; for girls 37, pupils 9,262. Colleges 9, students 3,700.

**Finance and Banking.**—Budget: (1949-50) revenue Rs. 754,600,000, expenditure Rs. 1,293,800,000; (1950-51 est.) revenue Rs. 772,800,000, expenditure Rs. 1,157,000,000, including defense Rs. 500,000,000. Internal debt (1948-49): Rs. 894,000,000. Currency circulation (Sept. 1950): Rs. 1,686,000,000. Gold and foreign exchange (Sept. 1950): U.S. \$449,000,000. Bank deposits (Sept. 1950): Rs. 1,065,000,000. Monetary unit: Pakistani rupee with an exchange rate of Rs. 3.32 to U.S. \$1.

**Foreign Trade.**—(1949) Imports Rs. 1,273,000,000; exports Rs. 898,000,000. Main sources of imports: U.K. 31.2%; India 15.3%; U.S. 10.7%. Main destinations of exports: U.K. 22.2%; India 10.0%; France 8.7%; U.S. 7.9%. Main imports: cotton piece goods 22.6%; cotton twist and yarn 14.7%; machinery and millwork 7.4%; vehicles (excluding locomotives, etc.) 5.6%. Main exports: raw cotton 46.0%; raw jute 32.5%; black tea 6.4%; raw wool 4.1%.

**Transport and Communications.**—Roads (1949): 55,913 mi. Licensed motor vehicles (Dec. 1949): cars 17,000; commercial 12,000. Railways: (1949) 6,682 mi., freight ton-miles (1947-48) 1,979,000,000; passenger-miles (1947-48) 4,334,000,000. Shipping (1949): merchant fleet 120,000 gross tons. Air transport (1949, six months): 1,175,250 mi. flown. Telephones (Jan. 1949) 16,454. Radio receiving sets (1949) 75,000.

**Agriculture.**—Main crops (metric tons, 1949): rice 12,403,000; wheat (1950) 4,080,000; barley 132,000; maize 430,000; sugar, raw value, 1,035,000; jute 820,000; cotton, ginned, 208,000; linseed 12,000; sesame seed 29,500; rapeseed (1948) 251,000; chick-peas 798,000; tea 20,000; tobacco 79,000. Livestock: cattle (1947-48) 24,296,000; buffaloes (1947-48) 5,600,000; goats (1939) 7,982,000; sheep (1947-48) 6,145,000; camels (1947-48) 454,000; horses (1947-48) 470,000; mules (1947-48) 41,000; chickens (1947-48) 22,248,000; ducks (1948-49) 5,063,000. Wool production, greasy basis, 12,000 metric tons in 1949. Milk production (metric tons, 1948): cow 2,477,000; goat and buffalo 3,340,000. Fisheries (annual est.): total catch 183,475 metric tons.

**Industry.**—Employment (1949): all industries 662,000; manufacturing 200,000. Fuel and power: coal and lignite (1949) 336,000 metric tons; electricity (1949) 169,000,000 kw.hr. Raw materials (metric tons, 1948): rock salt 140,000; chromite 16,000. Manufactured goods (metric tons, 1949): cotton cloth and yarn 13,600; glassware 7,300; vegetable oils 90,400; cement 325,000.

**FILMS OF 1950.**—*The Promise of Pakistan* (March of Time Forum Films).

**Palaeontology.** Reflecting the basically descriptive nature of palaeontology, the results of study on fossil back-boned animals published in 1950 were predominantly morphologic and systematic. A large balance of the annual bibliography, however, comprised the responses of many workers to the necessity, always dictated by such increases in factual data, of reviewing the broad geologic and biologic principles and methods of the science. Of perhaps greatest general interest from among these latter contributions was a compilation of papers by 11 eminent scientists entitled *Paléontologie et Transformisme*, which presents some of the major evolutionary problems, interpretations and theories.

**Fishes.**—Offering an account of the vertebrates, chiefly ostracoderms, from the "Passage Beds" and Old Red Sandstone of the Welsh borders, E. I. White demonstrated that these fossils are useful over a wide area in zoning the Downtonian and Dittonian

MOSLEM REFUGEES from Kashmir huddled for shelter in an abandoned aeroplane hangar at Jhelum, Pak., in 1950, pending a plebiscite to determine whether Kashmir would become part of India or Pakistan

rocks, and discussing the Silurian-Devonian boundary problem argued fixing it at the Ludlow Bone-Bed. Additional studies on lower fish groups included an attempt by R. M. Robertson to establish standard taxonomic criteria for families, genera and species within the agnathous order, Osteostraci; an admirable analysis of the neurocranium of *Jagorina* by E. A. Stensio; and the description of a late Devonian arctolepid from continental deposits in New York state by R. H. Denison from which it was concluded that slowly evolving arthrodiran stocks persisted in fresh waters throughout Devonian times while the main radiation of the order was taking place in marine environments. E. Jarvik continued his exhaustive studies of the middle Devonian lobe-finned fishes, and E. Nielsen in the second part of his monograph on Triassic fishes described *Australosomus* and *Birgeria*.

**Amphibians.**—Continuing his general surveys of the fossil amphibians, A. S. Romer discussed the criteria for the definition of the Palaeozoic Microsauria. In this, *Hylonomus* and a number of other animals usually assigned to the group are excluded as reptiles, and the belief is expressed that the microsaurians were possibly ancestral to the living urodelan and apodous amphibians. Remains of some Tertiary salamanders from Europe received the attention of W. Herre and H. Lunau, and a new labyrinthodont from the lower Triassic of South Africa was described by R. Broom.

**Reptiles.**—Initiating a series of studies on fossil turtles, E. E. Williams presented two papers: one on the variation and selection in the cervical central articulations of living turtles, and the other on the general evolutionary picture of western hemisphere tortoises. Among new fossil forms described are a variety of mammal-like reptiles from the Permian and Triassic of South Africa (R. Broom and M. George; and F. von Huene); a *Testudo* of Miocene age from Montana (T. M. Oelrich); a crocodilian with remarkably modified teeth from Cretaceous sediments in Brazil (L. I. Price); and a large cotylosaur from the Permian of Oklahoma (J. W. Stovall). Other papers of general interest included: a discussion by F. von Huene on the early Triassic origin of the ornithischian dinosaurs; a review by W. Janensch of the systematic position of the African camptosaur, *Dysalatosaurus*; a re-examination by W. G. Kühne of the ictodinosaur genera *Mucrotherium* and *Uniserium*; and speculation on the propagation physiology of the ichthyosaurs by B. Ottow.

**Birds.**—Knowledge of the fossil avian faunas of both the eastern and western hemispheres was increased. H. Howard summarized the fossil history of birds. Remains of a Miocene flamingo were recorded by L. Miller, and comparisons undertaken by W. R. Dawson indicated that the Pleistocene towhee from the Rancho la Brea Tar Pits was smaller than its nearest living relative.

**Mammals.**—T. Edinger investigated the evolution of frontal sinuses in horses. Sinus development in mammals generally was indicated to result from the disharmonious growth of the various skull parts and it was observed that with cerebral expansion the decisive factor in the origin of frontal sinuses, such pneumatizations occurred only late in the phylogeny of many phyla. Among many other contributors, C. Couto reported on a series of carnivorous mammal remains from Brazil; a new species of chalicotheres was described by M. George from the late Tertiary of the Transvaal; C. W. Hibbard and J. A. Wilson recorded the interesting occurrence of a middle Tertiary rodent in an oil well sample from Texas; C. Stock presented a note on a hyaenarctid bear from the middle Pliocene of Chihuahua, Mexico; and A. E. Wood analyzed the history and palaeogeography of the porcupines.

In research on the history of man, interest remained centred in the fossil ape men of South Africa (R. Broom, W. E. LeGros Clark, F. S. Dawe and others). (D. H. D.)

**Palaeobotany.**—Palaeobotanists participated in the Seventh

International Botanical congress, held at Stockholm, Sweden, July 12 to 20, 1950, by presentation of papers and emendation of some of the rules of palaeobotanical nomenclature.

During the year interest continued in the identification of plant remains preserved in coal balls, as shown in a study by Sergius Mamay of Washington university, St. Louis, Mo., who reported new species of fern fructifications from several localities in the United States. In two papers Rudolf Florin of Stockholm summarized his investigations of Upper Carboniferous and Lower Permian conifers. His segregation of genera and species was based largely on observations of cuticles taken from compressions and impressions, and on the morphology of the reproductive organs, particularly the female cone. Anna Lundblad, also of Stockholm, published studies of the ferns, seed ferns and cycads of northwestern Scandia.

Joaquin Frenguelli, of La Plata, Argentina, in another of his series on the Upper Gondwana flora of Argentina, added one new genus and four new species to that flora.

A colorful cross-section of a Brazilian fossil fern trunk, 8 cm. in diameter, was described by Henry N. Andrews, Jr., of Washington university, as *Osmundites braziliensis*. Its large size and characteristic internal structure identify it as a tree fern distantly related to the considerably smaller royal and cinnamon ferns of the eastern United States. It is surpassed in size by only one other fossil osmundaceous species, *O. carneri*, from the Tertiary of Paraguay.

Collections of plants from a sequence of carnotite-bearing strata in southwestern Colorado were studied by Roland W. Brown, of the U.S. geological survey, for determining the most likely position of the Lower Cretaceous-Upper Cretaceous contact in that area. The plants, which include ferns, cycads, conifers and dicotyledons, fall into two groups that, according to comparisons with those from other regions, serve to locate the boundary with reasonable certainty at the base of a sandstone locally called the Dakota. Another study by Brown identified leaves from Oligocene strata near Sweet Home, Ore., as those of an evergreen cherry. These leaves, besides showing the usual features of *Prunus*, have glands within the blades, thus relating them to the evergreen cherries, and particularly to the laurel cherry, *Prunus laurocerasus*, of southwestern Asia. The sequoia, hydrangea, sycamore and sweet gum, associated with the cherry, indicate a genial climate for the region at that time.

Seido Endo, of Tohoku university, reviewed the Miocene maples of Japan, Korea and south Manchuria, finding 12 nominal species.

Investigation of wooden pilings recovered from the foundations of buildings ruined by the bombing of Rotterdam, the Netherlands, in May 1940, yielded to W. W. Varossieau, of Delft, some interesting facts about the deterioration of wood below groundwater level. Disintegration proceeded from the outside inward by progressive decomposition of the cellulose in the cell walls, but this was not attributed to the action of fungi. The chemical changes were accompanied by development of a cubic or prismatic structure, paralleled by the first of a series of changes during coalification and petrification of wood.

**Palestine:** see ISRAEL; JERUSALEM; JORDAN.

**Panamá.** A republic of Central America adjoining South America, Panamá is bisected by the Canal Zone, which is leased to the United States. Area: 28,575 sq.mi.; pop. (off. est., July 1, 1949): 763,800, both exclusive of the Canal Zone. The capital is Panamá city (146,117 in 1949); other principal cities are: Bocas del Toro (2,453), Chitré (5,676), Colón (54,334), David (13,656), La Palma (1,442), Las Tablas (2,667), Penonomé (2,031) and Santiago (6,944). Language: Spanish; religion: predominantly Roman Catholic. President in 1950: Arnulfo Arias Madrid.

**History.**—Repressive measures against both Liberals and Communists highlighted Panamá's political history during 1950. In January José Daniel Crespo, former minister of interior, and three other Liberals were placed under house arrest reportedly for harbouring clandestine radio equipment. In July Crespo and another Liberal were imprisoned for 20 days for publishing charges of President Arias' complicity in the secret drug trade. Meanwhile the authorities had closed down the local headquarters of the communistic People's party, and on Nov. 2 the national assembly approved a supplementary appropriation of \$13,000 to help stamp out communism.

In June, María Santo Domingo de Miranda became the first woman member of the cabinet when President Arias appointed her to succeed Aurelio Guardia as minister of labour, social welfare and public health.

In a convention signed Jan. 26, Panamá agreed to honour \$350,000 worth of U.S. claims filed as far back as 1915. On Aug. 2, the president and his cabinet agreed to offer the United Nations use of the nation's military bases, roads, merchant marine and volunteer troops for the Korean campaign.

On the economic front the year was marked by drastic reductions of government expenditures in an attempt to balance the budget, new price controls to check inflation and a new loan to consolidate the foreign debt. The new \$10,556,875 obligation, at 3% interest, cancelled five separate loans at varying rates for an annual saving of \$240,000. During the year the government also granted free tracts from the public domain to landless farmers and special privileges to expanding industries. A world-wide boycott of Panamá-registered shipping was voted into effect April 18 by the International Transport Workers federation in an effort to force better wages and working conditions in the Panaman merchant marine. In July the government pledged to improve its shipping conditions.

**Education.**—For the 1948-49 school year there were 922 primary schools with 3,175 teachers and 101,249 students; 15 secondary schools with 316 teachers and 7,155 students; 52 professional schools and colleges with 497 teachers and 9,149 students. The national university enrolled 1,100. In 1950 the government allotted 34.7% of the national budget to public education.

**Finance.**—The monetary unit is the balboa, maintained at par with the U.S. dollar. The national budget for 1950 called for expenditures of \$32,245,919.06 (\$33,208,233.04 for 1949). At the end of 1949 the deficit was approximately \$2,500,000; the foreign debt \$15,361,529; the domestic debt \$12,119,696. As of June 30, 1949, there were 11 banks, capitalized at \$4,850,000, with reserves of \$2,106,661.35 and deposits of \$68,437,200. At the same date money in circulation amounted to 1,510,000 balboas in specie and 1,253,000 in paper.

**Trade and Resources.**—Exports during 1949 amounted to \$11,050,305 (\$10,477,272 in 1948); imports, \$62,148,370 (\$63,775,726 in 1948). About 90% of the trade was with the United States. The chief exports in 1949 were: bananas (5,788,435 stems, valued at \$6,818,991), abaca fibre (about 7,000,000 lb., at \$1,595,575), cacao (5,793,480 lb., at \$1,001,004), gold bars (300,370 gr. at \$390,870), cowhides (42,369 hides, at \$309,315), beverages (80,980 gal., at \$221,740), cabinet woods (1,134,525 sq.ft., at \$200,494) and coconuts (2,512,000 nuts, at \$131,339). Imports were mainly manufactured and semimanufactured goods. The unfavourable balance of trade was partly compensated for by sales to tourists, especially from the Canal Zone.

**Communications.**—At the end of 1949 there were 223.4 mi. of railroads and 1,479 mi. of highways. At the end of 1948, 14,932 automobiles and 6,417 trucks and buses were registered. There were 1,270 mi. of telephone and telegraph lines, 8,400 telephones, 44 broadcasting

stations and about 50,000 radios. The merchant marine as of Dec. 31, 1949, registered 725 ships totalling 3,587,049 tons.

**BIBLIOGRAPHY.**—Pan American Union, *The National Economy of Panamá* (1947); U.S. Dept. of Commerce, *Foreign Commerce Weekly*; Dirección General de Estadística, *Estadística Panameña* (Panamá city); *Hispano-Americano* (Mexico City). (M. L. M.)

**Panama Canal Zone.** A United States military reservation embracing a ten-mile strip across the Isthmus of Panama, leased for the protection and administration of the Panama canal, the Panama Canal Zone has an area of 553 sq.mi., including 191 sq.mi. of fresh water. Population, exclusive of uniformed military personnel (1949 off. est.): 46,461, of whom 22,830 were U.S. citizens; (1950 census): 52,822. Administrative centre: Balboa Heights (pop. 1946: 12,623).

Governor in 1950: Brig. Gen. Francis K. Newcomer.

**History.**—In Sept. 1950 the United States government enacted a measure reorganizing the administration and accounting system of the Canal Zone with a view toward greater efficiency. The new act established two distinct agencies: (1) the Panama Canal Co., to be solely in charge of canal operations; and (2) the government of the Canal Zone, to be responsible for civil functions. The costs of the latter agency were to be calculated separately from those of the former and not computed into the base on which canal toll rates are set.

**Education.**—In 1949 there were 14 schools with 4,509 students and a junior college for whites; 14 schools with 3,277 students and a normal school for nonwhite students.

**Finance.**—Total canal revenues for the 1948-49 fiscal year were \$20,744,910.78; net expenses, \$21,217,495.11; and net capital investment as of June 30, 1949, \$721,907,811. During the fiscal year 4,793 ships passing through the canal carried cargoes totalling 25,305,158 tons and paid tolls amounting to \$20,541,230.

**BIBLIOGRAPHY.**—*Annual Report of the Governor of the Panama Canal, 1949*; *Hispano-Americano* (Mexico City). (M. L. M.)

**Pan American Union:** see ORGANIZATION OF AMERICAN STATES.

**Paper and Pulp Industry.** The estimated production of paper and paperboard in the United States for 1950 was about 24,000,000 short tons as contrasted with 20,304,243 tons for 1949.

This had become the sixth largest industry in the United States. The great increase in production and consumption was due to a general effort to build up inventories and the first stages of wartime buying for government requirements.

**Canada.**—The latest paper production figure available for Canada in 1950 was for the year 1948, when 6,063,646 tons were made. Including the production of the industry in Newfoundland,

\*Includes all pulp screenings.

**United Kingdom.**—Although no official production figures were available for Great Britain, the output in 1949 averaged 8,914 tons per week as compared with 5,736 tons per week in 1948. During the early part of 1950 the weekly production average was 10,897 tons. If maintained this would amount to a total production of about 567,000 tons for the year. This was less than the government's estimate of 71.5% of pre-World War II production for 1950. (See also **FORESTS**.) (R. G. M.)

**Papua:** see COMMONWEALTH OF NATIONS.

**Paraguay.** A landlocked republic in south-central South America, Paraguay is bounded north and east by Brazil, south by Argentina and west by Bolivia. Area: 157,047 sq.mi., of which 95,338 sq.mi. constitute the sparsely populated Chaco, while the 61,709 sq.mi. lying east of the Paraguay river contain 95% of the population and activity. Population (mid-1949), 1,304,000. The people are a homogeneous mixture of Spanish and Guaraní stock, with some Portuguese and Italian, which has developed into a racial type. Official language: Spanish. The Guaraní tongue has survived more than the blood, but is secondary and recessive. Capital and chief centre: Asunción, pop. (1948) 130,067. Other cities: Villarica (31,081), Concepción (16,487), Encarnación (16,078). The official religion is Roman Catholic. At the end of 1950 the president was Federico Chaves, the foreign minister Bernardo Ocampos and the minister of finance Ramón Méndez Paiva.

**History.**—The Colorado party took over the country in June 1948 from the military government of Gen. Higinio Morinigo which had been in power since early 1941. Early in 1949 a military coup sought to bring back to Paraguay the exiled Liberal and Franquista leaders for a general election, but the two factions of the Colorado party united to induce other military officers to restore the party to authority. In Sept. 1949, the president, Felipe

Molas López, who belonged to the Guión (Standard) Colorado faction, was ousted by the Democrático Colorado faction in favour of Federico Chaves, who had been the head of the entire party for many years. This brought about the exile of the Guión Colorado leaders. Elections were called for July 16, 1950; and in April 1950 a party convention which included only the Democrático Colorados was held to nominate candidates for the presidency and for the congress, and to elect the governing board of the Colorado party. Federico Chaves was nominated for the presidency without opposition; likewise single lists were approved for the congress and the governing board. In a single-slate election held in July, the candidates nominated were elected to office. On Aug. 15, 1950, Chaves was inaugurated as president. The country remained peaceful during the rest of the year, though the government stated that it forestalled a number of conspiracies.

**Education.**—The latest official estimates available in 1950 were for 1946; they showed 2,000 elementary schools, of which a large number give three years of instruction, with 65,000 pupils. There was a national junior college at the capital, as well as a national school of agronomy which in 1950 had 200 students and 20 teachers. There were also several local normal schools and agricultural schools in various towns. The National university at Asunción had in 1950 approximately 1,800 students and 100 professors.

**Finance.**—As a member of the International Monetary fund, Paraguay maintained the gold parity of its currency unit, the guaraní, at 3.09 to the U.S. dollar. After Nov. 5, 1949, however, special official rates for the conversion of outside funds ranged from five to eight guaraníes per dollar, and the black market rates were higher. (The statistics in dollars used in this article have been converted at the official parity rate, and should therefore be scaled down to give practical values.) Government revenues in 1948 were \$15,000,000, with expenditures \$24,000,000; the national debt was \$22,500,000. Obligations of the government to the banks almost tripled in 1948 and 1949, standing at \$28,000,000 in Jan. 1950. Currency in circulation increased in much the same ratio, attaining \$29,300,000 in Jan. 1950. Reserves of foreign exchange and gold were about \$5,000,000, as compared with \$8,500,000 a year earlier. Total bank loans almost doubled in 1949, rising to \$36,000,000, while deposits subject to check rose 50%, reaching \$39,000,000.

**Trade and Communication.**—Paraguayan exports in 1949 were \$33,000,000, while imports were \$28,500,000. During the first quarter of 1950 the exports were \$12,000,000 (if the value in guaraníes is converted at official parity), while imports were \$8,000,000. The principal exports were quebracho extract, lumber and logs, cotton fibre, hides, canned beef, tobacco, yerba maté and petitgrain essential oil. The principal imports were non-tropical foodstuffs, textiles, machinery and metal manufactures, vehicles, chemicals, petroleum products and paper. In 1949 the sources of imports were: the United States 33%, Argentina 22% and the United Kingdom 18%. The same countries were the principal destinations of Paraguayan exports.

The low-water season in the Paraguay river early in 1950 was unusually long and severe, but the traffic later in the year compensated. The latest estimates (1948) gave 440,000 tons as the river movement, with 240,000 tons as the railway movement. The Paraguay Central railway, which is British-Argentine in control, runs 278 mi. southeast from Asunción through the best farm and forest areas to Encarnación on the upper Paraná, where it connects by car ferries with the Argentine railway systems at Posadas. It carried more than 2,000,000 passengers in Paraguay, as well as freight consisting of forest and farm products in 1950. The construction of gravel-crowned highways continued steadily in 1949 and 1950, notably in the Misiones region, and the total of such modern roads was more than 500 mi., in addition to 80 mi. of asphalt. Earth roads totalled 4,000 mi. in 1948, but many of them were primitive, for ox-drawn traffic. The number of automotive vehicles at the beginning of 1950 was 3,100, of which 1,800 were passenger cars, 1,000 were trucks and 300 were buses. The telephone system, in charge of the government, served 5,000 subscribers in Jan. 1949. The network of 137 telegraph stations is state-owned, and the railway's telegraph facilities are also used by the public. Operating to outside countries in 1949 were eight radio-telegraph and two radio-telephone circuits. There were six long-wave and three short-wave radio stations in 1948, and more than 25,000 receiving sets.

**Agriculture.**—Early in Aug. 1950 the ministry of agriculture estimated cotton production for the year at 45,000 tons, as compared with 38,000 tons in 1949. About 10,000 tons of tobacco were produced, as compared with 8,200 tons in 1949. Cottonseed amounted to 26,300 tons. The peanut crop, which was promoted by the government, for the first time attained more than 1,000 tons. The maize crop for 1950 was estimated at 127,000 tons, as against 100,000 tons in 1949; while rice production reached 20,000 tons, an increase of 5,000 tons. The 1950 crop of 220,000 boxes of grapefruit was of record size. The lemon and lime yields, at 168,750 and 149,100 boxes respectively, showed good increases. The orange and tangerine yields were lower than in 1949. Cattle were estimated at 3,369,000 head, as compared with the 1948 figure of 5,000,000. This decrease was attributed largely to increased domestic beef consumption, which was approximately 570,000 head in 1950, as well as to the diminution of imports from Argentina.

**Manufacturing.**—The production of tanning extract from quebracho wood and the production of canned beef are the principal manufacturing industries; but lumber and plywood, vegetable oils and processed yerba maté

are important semimanufactured products. There is also a substantial textile industry, making fabrics of cotton, silk and wool. Asunción has flour mills, a brewery and plants which produce furniture, shoes, soap, glass, matches, cigarettes and processed foods. The total number of industrial workmen is estimated at 50,000. Wages were increased by 30% to 50% in 1950 in consequence of the increase in the cost of living to an index of 863 based on 1938 as 100.

**Mines and Forests.**—The output of lime in 1949 was 14,000 tons, and the output of kaolin 7,000 tons. Extensive explorations for petroleum conducted by a large U.S. oil company were terminated unsuccessfully in 1949. In the first ten months of 1949 the exports of logs and lumber were valued at between \$5,000,000 and \$6,000,000.

**Point Four Program.**—The first Joint Commission for Economic Development under the Point Four program of the United States in Latin America was established for Paraguay early in Dec. 1950. It would utilize a staff of Paraguayan and U.S. technicians, and would concentrate on the improvement of basic production and of transportation to the world's markets. In part its efforts would be based on the activities of the already existing U.S. missions to Paraguay dealing with agriculture, technical education and sanitation. (W. FT.)

**Parents and Teachers, National Congress of:** see SOCIETIES AND ASSOCIATIONS.

**Paris.** Capital and largest city of France, Paris had in 1946 a population of 2,725,374. President of the municipal council, Pierre de Gaulle.

To the 1,400,000 tourists who visited the French capital during 1950, and who spent there the equivalent of nearly \$100,000,000, Paris presented an aspect not only of completely unrestricted well-being, but of luxury and abundance as well. There was a marked increase of all commodities and services that, in any way, touched upon the tourist and related luxury trades. As usual, there was a continuous program of artistic events that included opera, ballet, art shows, symphony concerts and special exhibits in the numerous state museums.

But the living conditions of an increasingly large portion of the population left much to be desired. The housing situation was critical, and more than 50,000 priority requests for official help in obtaining suitable living quarters remained unsatisfied.

WOMAN BOARDING a French army truck pressed into emergency transport service in Paris in March 1950, during a Communist-led strike by bus-line and subway employees

Salaries remained low by comparison with the cost of consumer goods and services, and in consequence, the majority of the Parisian population was unable to share in the abundance and luxury evident in the shops. To aggravate this situation, social insurance levies proved to be insufficient, and a revision with possible reduction of these services was under consideration.

The ministry of education reported that 181,000 children of all ages were enrolled in the 579 state schools located in Greater Paris Seine *département*. Educators felt, however, that the lower age groups, grown suddenly larger as a result of a sharp rise in the post-World War II birth rate, were not adequately provided for.

The city's budget for 1951 was tentatively balanced at 47,050,000,000 fr. as compared with 44,000,000,000 fr. in 1950.

(M. JOL.)

**Parks and Monuments:** see NATIONAL PARKS AND MONUMENTS.

**Parliament, Houses of.** In 1950 parliament was dissolved on Feb. 3, nominations closed on Feb. 13 and, with the exception of the Moss Side division of Manchester, polling took place throughout the country ten days later. Of the electorate of 34,269,764, the percentage voting was 84, the highest vote and the largest electorate in history, against 76% and 32,836,419 in July 1945. The final state of the parties was: Labour 315; Conservatives 297; Liberals 9; others 4. (See also GREAT BRITAIN AND NORTHERN IRELAND, UNITED KINGDOM OF.)

The 39th parliament of the United Kingdom of Great Britain and Northern Ireland, with the most evenly divided house of commons in 100 years, met on March 1 and its first session was opened by the king on March 6. Col. Douglas Clifton-Brown (Hexham) was re-elected speaker.

The small government majority was soon tested in a division; the first two divisions on the king's speech gave majorities of 14 and 25.

On Oct. 23 the members of the commons met for the first time in the new chamber, architecturally designed by Sir Giles Gilbert Scott and with engineering and structure by Oscar Faber, to replace the chamber destroyed in an air raid in May 1940. The commons chamber was designed on lines similar to the old house.

Ten by-elections were held during the year, but the only change in the composition of the house of commons after the election was the resignation from the Labour party on Aug. 4 of Raymond Blackburn (Northfield, Birmingham).

The member elected to the house of commons for Belfast West, the Rev. J. G. MacManaway, was a clergyman of the Church of Ireland and immediately after the election doubts were expressed in the house of commons as to his eligibility to sit. His case was examined by a committee of the house and the judicial committee of the privy council was asked for its opinion. Its view, that he was not entitled to be a member, was accepted by the house on Oct. 19 and his seat was declared vacant. A member also of the Northern Ireland house of commons, he continued to sit there.

During the committee stage of the Festival of Britain (Sunday Opening) bill, an amendment to prohibit the Sunday opening of the fun-fair in Battersea park was carried against the government on a free vote by 389 votes to 134.

Eight members and former members of the house of commons—all Labour—were raised to the peerage during the year.

Winston Churchill (*q.v.*) celebrated during the year the 50th anniversary of his entry to the house of commons for Oldham on Oct. 1, 1900. Lady Megan Lloyd-George completed 21 years' con-

tinuous membership of the house of commons. She had represented Anglesey from 1929.

**Pashtunistan:** see AFGHANISTAN.

**Patents.** During 1950 the United States patent office granted 48,009 patents, including 4,718 for designs, 90 for plants and 129 reissues. This was an increase of 8,200 over the 39,809 total for 1949.

Applications for patents filed in the patent office for the calendar year 1949 totalled 74,810; for the first 11 months of 1950 the number filed was 68,564. In Dec. 1950, approximately 220,000 applications were pending in the patent office, of which about 124,000 were awaiting action by the office, the remainder being under rejection awaiting response by applicants, or in interference or on appeal.

Trade-marks registered (16,829) and renewed (3,564) during 1950 totalled 20,393. This compared with 19,769 registrations and renewals in 1949. In addition, 2,053 registrations were re-published. Applications for registration, republication and renewal for the first 11 months of 1950 totalled 21,701, compared with 25,492 applications for the entire preceding year. Approximately 34,000 trade-mark applications were pending in the office in Dec. 1949, of which about 23,000 were pending before the examiners.

At the end of 1950, the patent office had granted more than 2,535,000 patents, of which about 600,000 were unexpired. More than 50,000 unexpired patents were listed on the register of patents available for licensing or sale—the new listings being published in the weekly issues of the *Official Gazette*. During the year ended June 30, 1950, more than 7,000,000 copies of United States patents and trade-marks were distributed, of which more than 800,000 were sent to libraries in the United States, and more than 1,250,000 to other countries under exchange agreements.

The project undertaken in 1948 to perfect the patent copy reference collection maintained for public use in the search room was completed in Feb. 1950; a smaller staff was continuously engaged in keeping this work current. A second edition of the booklet *Rules of Practice in Trade-Mark Cases with Forms and Statutes*, under the 1946 Trade-Mark act, incorporating amendments in the rules effective since July 5, 1947, was published in Feb. 1950. The preparation and publication of a pamphlet entitled *General Information Concerning Trade-Marks* was completed in March 1950. An office publication entitled *Patent Laws* was enlarged when republished in Oct. 1950, by the addition of a supplement containing laws relating to patents and notes to laws of interest in connection with patents enacted during the 81st congress.

An innovation to aid in the selection of a trade-mark prior to using and applying for registration was the establishment of a trade-mark index of pending applications, digesting the application data by identifying the applicant and the serial number of the case, specifying the mark sought to be registered, and describing the goods or services to which applied.

During the first year of publication of abstracts of abandoned patent applications, which commenced in the July 5, 1949, issue of the *Official Gazette*, a total of 490 cases were abstracted and printed.

Net receipts for the fiscal year ended June 30, 1950, were \$5,430,739.26. Obligations incurred under all patent office appropriations amounted to \$11,023,035.67 as compared with \$10,101,937.71 for the preceding year. (J. A. ML.)

**Peaches:** see FRUIT.

**Peanuts.** The U.S. in 1950 harvested 2,038,425,000 lb. of picked and threshed peanuts, considerably more than the 1,875,825,000 lb. of 1949, but 13% below the record 1948 crop of 2,338,470,000 lb. Acreage harvested in 1950 was 2,315,000, slightly below the 2,332,000 ac. of 1949. Average yields of 881 lb. per acre were a record high compared with 804 lb. in 1949 and an average for the 1939-48 decade of 687 lb. Yields in Virginia were a record high of 1,475 lb., and three other southeastern states made new record per acre yields.

The season average price of 1950 crop peanuts to farmers was estimated at 11.0 cents per pound, slightly above the government support price and comparable with 10.4 cents per pound in 1949. The crop was valued at \$223,406,000, as compared with a 1949 crop valued at 194,582,000. Price supports were available on peanuts produced on allotted acreages by eligible producers at 90% of the Aug. 1 parity or 10.8 cents per pound. Under

U.S. Peanut Production by Leading States

(In thousands of pounds)				
State	1950	1949	1948	Average 1939-48
Georgia . . . . .	691,200	612,000	818,300	666,233
Alabama . . . . .	335,400	290,500	354,710	295,360
Texas . . . . .	330,750	333,450	300,800	283,952
North Carolina . . . . .	248,040	243,080	346,625	315,847
Virginia . . . . .	221,250	195,960	237,800	186,333
Oklahoma . . . . .	116,580	113,900	153,000	89,137
Florida . . . . .	59,040	51,255	85,250	63,350
South Carolina . . . . .	15,750	14,300	18,200	18,312

existing legislation, price support would continue at 90% of parity on this basic crop if either marketing quotas or acreage allotments were in effect; voting growers in December approved by 71% (62 $\frac{2}{3}$ % approval required) the continuance of production and marketing controls for three more years in spite of the fact that Virginia growers (of the so-called edible-type peanut) voted disapproval. However, public agitation by some growers to have controls removed from the 1951 crop continued.

Per capita consumption of shelled peanuts in the U.S. continued at 4.4 lb., compared with a peak of 6.4 lb. in 1945, but approximated the prewar average. In spite of uptrend in price, moderate amounts were still held by the Commodity Credit corporation late in the year as available surplus stocks.

World production of peanuts in 1950 was estimated at 11,400,000 short tons, unshelled, by the U.S. department of agriculture, perhaps a new record, compared with a revised estimate of 10,878,000 tons in 1949 and a prewar average of 9,550,000 tons. The largest producer, India, with a crop of 4,099,000 tons, compared with a crop of 3,806,000 in 1949, accounted for part of the increase. China and Nigeria also showed increases, whereas Brazil and Argentina had smaller crops. The partially developed East African peanut project of the Overseas Food corporation of the British government apparently was de-emphasized and somewhat diverted to other crops. (J. K. R.)

**Pears:** see FRUIT.

**Pearson, Lester Bowles** (1897— ), Canadian politician, was born at Toronto, Ont., April 23. After serving in World War I, he graduated from the University of Toronto, went to St. John's college at Oxford university on a Massey foundation fellowship, and became history lecturer in the University of Toronto.

In 1928 he entered the Canadian department of external affairs as a first secretary. In 1935 he went as secretary to the office of the high commissioner for Canada in London, but was recalled to Ottawa in 1941 to become assistant undersecretary of state for external affairs. He was posted to Washington, D.C., in 1942 as minister-counsellor at the Canadian legation, and in 1945 he was appointed Canadian ambassador to the United States. A year

RETURNING FROM A HIKE to headquarters, during the Boy Scouts' National jamboree held at Valley Forge, Pa., during June-July 1950. The jamboree was attended by 47,000 scouts from the U.S. and abroad

later he was recalled to Ottawa to become undersecretary of state for external affairs.

In 1948 Pearson joined the cabinet as secretary of state for external affairs, and was elected to the house of commons as Liberal member for Algoma East, Ont. In 1949 he was chairman of the Canadian delegation to the United Nations general assembly, and was elected chairman of the political and security committee.

During 1950 Pearson attended the commonwealth meeting on foreign affairs at Colombo, Ceylon, in January, the North Atlantic council meeting in London in May, and the general assembly of the United Nations in September. (C. Cy.)

**Pennsylvania.** A middle Atlantic state and one of the 13 original states of the union, Pennsylvania is popularly known as the "Keystone state." Area, 45,333 sq.mi., including 288 sq.mi. of inland waters. Population (U.S. census, 1950) 10,498,012, an increase of 6% over 1940. Capital, Harrisburg (pop. 1950 preliminary figures, 89,091); cities with a larger population: Philadelphia (2,064,794); Pittsburgh (673,763); Erie (130,125); Reading (109,062).

The urban population in 1940 numbered 6,586,877 and the rural, 3,313,303.

**History.**—In the year 1950, many items in the program of public improvement, inaugurated by Gov. James H. Duff, were carried forward to a successful conclusion. The eastern extension of the Pennsylvania turnpike to the outskirts of Philadelphia was completed in October, and construction of a western extension

from Pittsburgh to the Ohio border, was well under way. In addition, \$113,600,000 was expended in 1950 for construction and improvement of state highways.

Outstanding among the many developments in the state's clean-stream program was the removal, during the year, of approximately 10,000,000 cu.yd. of accumulated silt from the upper Schuylkill river.

The total removed to the end of the year was more than 16,000,000 cu.yd.

Under the State Housing and Redevelopment act, 34 state housing projects and 13 urban redevelopment projects had been subsidized. During 1950, a total of \$383,777,815 was paid out to 1,066,146 veterans of World War II, as a service bonus.

In the Nov. 1950 election, James H. Duff, Republican, received 1,820,400 votes for U.S. senator, against 1,694,076 for Francis J. Myers, Democrat. John S. Fine, Republican, received 1,796,119 votes for governor, against 1,710,355 for Richardson Dilworth. Lloyd H. Wood, Republican, was elected lieutenant governor; William S. Livengood, Jr., secretary of internal affairs; John C. Bell, Jr., justice of the supreme court and Blair F. Gunther, judge of the superior court. All successful candidates for state-wide offices were members of the Republican party. The state's principal officers for 1950 included: James H. Duff, governor; Daniel B. Strickler, lieutenant governor; William S. Livengood, Jr., secretary of internal affairs; Charles J. Margiotti, attorney general; Weldon B. Heyburn, auditor-general; Charles R. Barber, treasurer.

Francis B. Haas was superintendent of public instruction and James B. Drew was chief justice.

JOHN S. FINE, Republican, elected governor of Pennsylvania, Nov. 7, 1950

**Education.**—Statistics for 1948-49, the latest year for which complete figures were available in 1950, showed a net enrolment of 1,537,261 pupils in the public schools of Pennsylvania, including 60,316 in the kindergarten, 919,856 in the elementary division and 557,089 in the secondary schools. Similarly, there were 907 kindergarten teachers, 30,126 elementary teachers, 24,025 giving instruction in high schools, 1,376 elementary principals, 861 secondary principals, 1,905 supervising officials and 1,243 other professional employees. The total expenditure, including current expense, capital outlay and debt service was \$332,568,230, of which \$278,517,949 was for current expenses. School districts supplied 64% of their receipts from local taxation, while the state government contributed 34.9% and the federal government 1.1% for current operating expenses.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During 1950, expenditures by the department of public assistance totalled \$156,000,000, including \$103,000,000 state funds and \$53,000,000 federal funds. The assistance rolls contained an average of 90,000 old-age assistance cases, 50,000 cases receiving aid to dependent children, 46,000 general assistance cases, 15,000 blind pensioners.

The state maintains eight penal and correctional institutions for the support of which a biennial appropriation of \$14,773,000 was made for 1949-51. In addition, it owns and operates 10 medical and surgical hospitals, which received an appropriation of \$8,780,000; 4 institutions for the feeble-minded and epileptic, \$11,240,000; 17 mental hospitals, \$57,077,000; and contributed \$14,865,600 for the aid of privately operated hospitals and homes.

**Communications.**—Of the approximately 100,000 mi. of highways in Pennsylvania in 1950, 41,000 were on the state highway system under the supervision of the department of highways. Included in this state highway total were 675 mi. in the cities of Pennsylvania and 2,179 mi. in the boroughs. As of Dec. 31, 1950, 38,400 mi. were of improved type, leaving 2,600 mi. unimproved. In addition, there were 260 mi. of superhighway operated by the Pennsylvania Turnpike commission.

**Banking and Finance.**—On Oct. 4, 1950, there were 352 state banks, including 8 savings banks, with assets of \$5,290,208,615.26. These state

banks had total deposits of \$4,743,756,356.96. In addition, there were as of Dec. 31, 1949, 784 building and loan associations with assets of \$531,475,774.56. On Oct. 4, 1950, there were 630 national banks located in Pennsylvania, with assets of \$7,537,820,000. The deposits of these national banks totalled \$6,721,476,000.

Appropriations and allocations from the general fund and motor licence fund for the biennium ending May 31, 1951 were \$1,055,532,725. The estimated receipts from these two funds were \$935,419,900. The gross debt Oct. 31, 1950, was \$550,838,000, which cash and securities in the sinking fund reduced to a net of \$510,097,300.

**Agriculture.**—The total gross farm income for 1949 was \$852,008,000, including \$847,180,000 in cash receipts from farm marketings and \$4,828,000 in federal government payments.

**Manufacturing.**—In 1949 there were 20,683 manufacturing establishments in the state, employing 1,682,556 persons to whom \$4,705,847,300

Table II.—Principal Industries of Pennsylvania

**Perón, Juan Domingo** (1895— ), president of Argentina, was born on Oct. 11 near Lobos, south of Buenos Aires, and was educated in military schools. He became one of the leaders of the G.O.U. (Grupo de Oficiales Unidos), a nationalist clique of young army officers who in 1943 helped overthrow the regime of Pres. Ramón S. Castillo. Perón became war minister and later vice-president under Pres. Edelmiro Farrell, and in 1946 was himself elected president on the Labour party ticket.

From 1948 on, progressive political steps were undertaken by Perón's followers to permit him to succeed himself, though this required adoption of a new constitution, which was accomplished in 1949. Though Perón himself insisted that he did not intend to run for re-election, his followers renominated him at their party convention in Buenos Aires in July 1949.

In a speech on Jan. 1, 1950, Perón declared the Argentine way of life was a model to the world of one "that does not lead to war and may lead to peace." By Jan. 10 more than 50 newspapers had been shut down for failure to emphasize national observance of the centennial anniversary of the liberator, San Martín, which Perón had proclaimed. On July 17 and again on Sept. 6, Argentine officials announced that they would abide by their obligations to support the U.N. forces in the Korean war. In the autumn the Argentine congress passed stringent laws against espionage and sabotage, which Perón's opponents termed beyond the needs of defense and capable of being used to intimidate the public.

**Persia:** see IRAN.

**Peru.** A republic situated on the west coast of South America and bounded on the north by Ecuador and Colombia, on the east by Brazil and Bolivia, on the south by Chile and on the west by the Pacific ocean, Peru has an area of 482,258 sq.mi. The population, estimated at 8,204,000 in 1949, is composed approximately of 52% "white" and mestizo and 46% Indian; there are also some Negro and Asiatic elements to the extent of about 2%. Lima, including its suburbs, has a population of about 1,000,000. It is the capital. The population estimates for the other major cities are: Callao 100,000; Arequipa 85,000; Cuzco 45,000; Trujillo 40,000; Iquitos 38,000; Chiclayo 35,000; Huancayo 35,000; Ica 25,000 and Piura 22,000.

PERUVIANS kneeling in prayer at Cuzco, after a brief but destructive earthquake that shook the ancient Inca capital on May 21, 1950, destroying an estimated 80% of its buildings

**History.**—The military junta under the leadership of Gen. Manuel Odría, which took over the executive power in Oct. 1948, continued its reform program and made definite progress toward an economic and fiscal restoration, particularly after the sol, the unit of currency, was left to find its own level in Nov. 1949. The decree of the military junta dated Jan. 8, 1949, which suspended the congress and announced the assumption by the cabinet (appointed by the military junta) of all executive and legislative authority, was modified in 1950 to provide for the restoration of constitutional parliamentary government. In accordance with this decision of the military junta a national election followed on July 2, 1950. Gen. Manuel Odría was elected president of the republic. Prior to the election of July the cabinet was composed of officers of the Peruvian armed forces; but with the restoration of parliamentary government, the departments of foreign relations, treasury and commerce, interior and police, as well as agriculture, were placed under civilian officials. The Aprista party, outlawed in 1948, was unable to rebuild the left wing movement. Their leader, Víctor Raúl Haya de la Torre, had remained a refugee in the Colombian embassy in Lima since Jan. 1949. The Peruvian and the Colombian governments agreed to submit to the International Court of Justice (*q.v.*) the question of the right of Colombia to

afford protection to De la Torre. However, the ruling of the court was considered ambiguous and the matter was resubmitted for clarification. Two other Aprista leaders fled the country. Peru accused Cuba of aiding in their escape and severed diplomatic relations; by the end of the year these had not been re-established.

(S. DE LA R.)

**Education.**—In 1948 there were 10,239 public and private primary schools with 908,695 pupils. The 103 public secondary schools had 37,256 students; there were also about 100 private secondary schools, most of which were conducted by religious orders. University education was available at four public universities—Lima, Arequipa, Cuzco and Trujillo—and at the Catholic university of Lima. Appropriations for education in 1950 comprised 16% of estimated government expenditures.

**Finance.**—The monetary unit is the sol, valued at \$0.0639 U.S. currency, free rate, on Sept. 30, 1950. Actual government expenditure amounted to 1,140,000,000 soles in 1949; revenue was 1,175,200,000 soles. The budget for the year 1950 balanced expenditure and revenue at 1,644,500,000 soles. The direct public debt on Dec. 31, 1949, totalled 1,621,996,110 soles, made up as follows: external dollar and sterling debt (including accrued interest) 447,375,145 soles; internal consolidated debt 549,662,180 soles; internal floating and short-term debt 624,958,785 soles. Notes in circulation on Oct. 31, 1950, totalled 894,000,000 soles; the gold reserve was \$28,000,000. Sight deposits on Aug. 31, 1950, totalled 1,205,000,000 soles; time deposits were 699,000,000 soles.

**Trade and Communications.**—Exports in 1949 totalled 2,107,518,091 soles; imports were 2,692,079,877 soles. Chief exports were cotton (29%), sugar (16%), petroleum and products (15%) and copper (6%). Principal customers were the U.S. (29%), Chile (17%) and the United Kingdom (15%). Chief suppliers were the U.S. (63%), the United Kingdom (9%) and Argentina (5%).

Railways (1947) totalled 2,612 mi., of which 2,101 mi. were privately owned and 511 mi. state-owned. Roads used by motor traffic on Dec. 31, 1949, totalled 19,468 mi., of which 7,903 were hard-surfaced. Motor vehicles (Dec. 1949) included 25,148 automobiles, 17,687 trucks and 2,511 buses. In 1949 the three principal air lines carried 171,879 passengers, of whom 80% were carried by Compania de Aviacion Faucett. International air service in 1950 was furnished largely by Panagra and Braniff Airways; British Overseas Airways corporation participated to some extent in the traffic. According to *Lloyd's Register of Shipping*, the merchant marine had 43 steamers and motor ships (100 tons and over), aggregating 88,164 gross tons on June 30, 1949.

**Agriculture.**—Agriculture engaged a large majority of the people; in 1949 about 3,800,000 ac. out of a total arable area of 29,500,000 ac. were under cultivation. Production of cotton, the chief export crop, was about 73,400 short tons in 1949. Sugar output included 517,783 short tons, centrifugal, and 25,731 tons, open-pan. Rice production (milled) was about 110,000 short tons.

Livestock estimates (1948) showed 2,661,995 cattle, 17,287,624 sheep, 962,471 goats, 776,941 hogs and 2,449,746 alpacas and llamas. In 1949, about 9,350 short tons of sheep wool and 3,650 tons of alpaca wool were produced.

**Manufactures.**—There were in 1949 5 cotton spinning mills, 11 cotton textile mills, 7 rayon weaving mills and a rayon yarn plant. In 1949, 50,790 short tons of fish were processed, and 15,183 tons of canned bonito and tuna and 2,879 tons of frozen swordfish were produced, largely for export to the U.S. A total of 28 fish-canning plants, most of them erected since World War II, were in operation. The cost-of-living index stood at 427 and the wholesale price index at 650 in Aug. 1950 (1937=100).

**Mineral Production.**—Production of the principal minerals in 1949 was as follows: copper 26,250 short tons; silver 10,888,000 oz.; gold 118,950 oz.; lead 62,750 short tons; zinc 74,850 short tons. Crude oil production totalled 14,796,093 bbl. (J. W. Mw.)

**Petroleum.** World petroleum production resumed its upward trend in 1950, averaging 10,373,000 bbl. daily, a gain of 11.5% over the previous year, and establishing a record high. This contrasted with a slight decrease registered in 1949 from 1948. In 1950 U.S. production was estimated to have averaged 5,403,000 bbl. daily, a gain of 7.2% over 1949 and falling just short of its 1948 record.

Changing patterns of supply were primary factors in the world oil production picture, with the middle east producing areas taking over the supplying of the requirements of the eastern hemisphere in ever-increasing degree and thereby cutting into the demands made upon Venezuela, the United States and other producing countries of the western hemisphere.

In 1950, western hemisphere production exclusive of the U.S. was estimated at 2,025,500 bbl. daily, an increase of 12.9%, while production of the middle east averaged 1,750,200 bbl., an increase of 24.6%.

Meantime, the U.S. demand for oil products continued to increase, necessitating considerable importation of oil, mainly from Venezuela and Colombia, but in increasing quantity from

the middle east. The estimated demand averaged 6,455,000 bbl. daily, an increase of 11% over 1949. This far exceeded the former high demand of 6,143,000 bbl. daily, set in 1948.

To meet the skyrocketing demand, and to keep the nation prepared for eventualities, the U.S. petroleum industry in 1950 also shattered its old marks in well completions, refinery capacity and runs to stills (the amount of liquid petroleum processed in refineries). The number of wells completed was around 43,000, or about 3,400 wells more than in 1948. Of this total, 8,228 were exploratory wells. The nation's refinery capacity reached a total of about 6,732,000 bbl. daily, an all-time high. Crude oil processed amounted to 2,091,085,000 bbl., compared with the previous high of 2,048,349,000 bbl. in 1948.

The U.S. industry continued its \$2,000,000,000-a-year expansion and modernization program. Capital investment in 1950 was estimated to be \$2,172,000,000, slightly less than the 1948 record of \$2,300,000,000. During 1946-50, capital expenditures averaged more than \$2,000,000,000 a year. The postwar total was \$10,000,000,000. If U.S. oil expenditures overseas were included, the over-all total exceeded \$12,000,000,000 for the period 1946-50 inclusive.

As in past years, expenditures for production operations—searching for and developing necessary oil and gas reserves and supplies—accounted for more than half of the 1950 outlay. In 1950, approximately \$1,360,000,000 was earmarked for this purpose. Refinery expenditures were estimated at \$394,000,000. Transportation estimates totalled \$324,000,000, the major portion of which was scheduled for pipe-line construction work as follows: crude oil lines \$120,000,000; product lines \$74,000,000; natural gas lines \$91,000,000. Marketing expenditures were estimated at \$281,000,000, a record high for this field.

Gross assets employed by the U.S. petroleum industry rose from \$30,200,000,000 at the end of 1949 to about \$32,000,000,000 at the end of 1950. Over-all, only the railroads and the utilities exceeded the petroleum industry in industrial capital investments.

It was estimated that \$100,000,000 was spent in 1950 in research work to find new production methods and uses for petroleum and to improve known products.

The wholesale price index of crude petroleum and petroleum products advanced only one percentage point in 1950, despite the squeeze of spiraling costs and other economic factors. This was in contrast to a 4.1 point increase in the index of wholesale prices for all commodities during the same period. The average retail price of motor fuel in 1950 declined slightly, while the average for local, state and federal taxes on motor fuel advanced slightly. The average total cost per gallon to consumers was only slightly less than that of 1949. (See also CHEMISTRY.)

(L. M. F.)

**Philadelphia.** According to the census of 1950, Philadelphia, Pa., retained its position as the third largest city in the United States with a total population (preliminary figure) of 2,064,794. This represented an increase of 6.9% over the 1940 population. There was an additional 1,500,000 population in the seven counties adjacent to the city. The net increase for the entire metropolitan area was 14.2% during the decade. These increases resulted from high levels of employment in existing establishments, the introduction of numerous new industrial and commercial establishments, and high rates of natural increase continuing throughout the decade. The administration of the city in 1950 was Republican; the mayor was Bernard Samuel.

New dwelling construction during the first seven months of 1950 totalled slightly more than 19,000 units in Philadelphia and its immediate environs. Total employment for the eight-county metropolitan area was estimated in July at 1,436,500, about 60% of which was employed within the city.

In 1950 Philadelphia forged ahead on its vast program of public improvements. Projects finished, continuing or begun on a wide variety of municipal services represented expenditures totalling \$188,000,000. The Northeast Sewage Treatment works was placed in service and work was started on the southeast and southwest plants. Construction continued on intercepting sewers and structures to eliminate storm water flooding. Numerous contracts for waterworks improvements included a new pretreatment plant at the Queen Lane works. Water mains, sewers and paving were extended to keep pace with home building. As extension of the Market street subway into west Philadelphia advanced toward completion, work began on equipping the Locust street subway. Contracts were let for a new terminal building and related construction at the Philadelphia International airport. A pier of the most modern type was added to the port equipment.

Improvement of highways jointly by the city and the state proceeded under contracts for the Penrose avenue bridge, the widening of Vine street and the repaving of the east lane of Roosevelt boulevard. An underpass at Ridge and Hunting Park avenues was opened to traffic. Land was acquired for the first section of Independence mall.

The new Youth centre for the detention and study of juvenile delinquents neared completion. A city-wide survey of public-health facilities was completed, and numerous improvements were made in the city's hospitals and health-centre facilities. Five new schools were opened and additions made on five others.

Buildings were added at the older recreation centres and work continued to place 53 newly acquired sites in use pending fuller development. A new branch library was opened.

New police and fire stations were constructed and in some instances these facilities were consolidated for greater efficiency. A rubbish incinerator for south Philadelphia was placed under contract.

Substantial progress was made toward the selection of sites for public housing and of areas for redevelopment. One project sponsored by the Society of Friends got under way. (B. SA.)

**Philanthropy:** see DONATIONS AND BEQUESTS.

**Philately.** A new problem in international postal relations was posed in 1950 by the decision of the United Nations to issue stamps of its own. Since it occupies a small enclave in the United States, the stamps are strictly "for revenue only" and the deciding consideration that swayed the delegates was a possible \$400,000 per annum of income. The U.S. post office department, which does the work anyway, was less than lukewarm over the plan, but the state department fa-

voured it.

**New Issues.**—Early in the year the post office department published the projected list of stamps for the year, and held to that list. For the first time in decades, collectors knew what to expect. The list was shorter than usual.

Eleven stamps, all three-cent values, were issued. The first, a dark-green confection, honoured the American bankers. The next, the only one not in the familiar 0.84 by 1.44-in. format (the size of the special delivery stamp) was of the "Famous Americans" design and honoured Samuel Gompers, a labour leader. During the year there were four stamps for the sesquicentennial of Washington, D.C., one for "The Gateway to the West" tied to Kansas City, Mo., one for the Boy Scouts, one for the sesquicentenary of Indiana territory, one for the railroad engineers and one for the centenary of statehood for California.

For the first time since 1932, new embossed envelope stamps were issued by the U.S.

A new definitive issue appeared for the Ryukyu Islands (Okinawa is the best known of them), which are under U.S. military administration. Canada reissued all current stamps without the bilingual "Postage-Postes" legend. A pictorial 50-cent value also appeared. Liberia issued two stamps boosting a literacy campaign. Haiti celebrated, with stamps, the bicentenary of Port-au-Prince. The new Finnish airmail stamp was the highest value stamp that democracy had issued—300 markkaa.

**Prices.**—On the whole, prices did not fluctuate much in 1950, and the increased use of superior material continued.

**Exhibitions.**—The outstanding philatelic event of the year was the Centenary exhibition at London, Eng. Originally scheduled for 1940, the 100th anniversary of the first postage stamp, it finally was held, with great éclat, in 1950. There were many exhibits from the U.S. and other non-British sources.

**BIBLIOGRAPHY.**—The standard editions of the various stamp catalogues, dated 1951, appeared in 1950. Vol. III of Robson Lowe's *Encyclopædia of British Empire Postage Stamps*, dealing with British Asia, appeared. *First Hundred Years of United States Territorial Postmarks, 1787-1887*, by Carroll Chase and Richard McP. Cabeen, which had been appearing spasmodically since 1945 in the *American Philatelist*, was issued as a book. (M. HA.)

**Philippines, Republic of the.** This republic, situated in the western Pacific ocean east of Indochina, comprises an archipelago composed of almost 7,100 islands, totalling 115,600 sq.mi. The population by the census of Oct. 1, 1948, was 19,234,182; 1949 est. was 19,356,000. The chief city is Manila, the capital, whose metropolitan area held about 1,300,000 persons. Other sizeable cities are Cebu (167,000) and Iloilo (110,000). About 10,000 U.S. citizens and 12,000 occidentals from other countries live in the islands. By official count Chinese number about 140,000, but the actual fullblooded Chinese population exceeds 200,000. Most Filipinos are Catholic in religion (Roman Catholic or native Aglipayan Catholic). In the southern islands live some 800,000 Mohammedans, while about 425,000 Protestants and almost 700,000 pagans are widely scattered.

**History.**—Early in the year 1950 President Elpidio Quirino's budgetary proposals for the fiscal year 1950-51 brought to light serious financial deficits which had been accumulating since the advent of independence in 1946. Inadequate levying and inefficient collecting of regular taxes had not produced revenues adequate to support normal government procedures in a country with a rapidly increasing population that still was faced with serious problems of war rehabilitation. Increased expenditures upon education, extraordinary expenses connected with quelling agrarian unrest and the decline of customs revenues following the imposition of drastic import controls were the specific factors crystallizing these financial problems. It became clear, in the course of the year, that inefficiency and

PHILIPPINE ARMY PATROL entering Santa Cruz after a series of raids by Huk guerrillas which brought death and destruction to 11 towns in central Luzon late in Aug. 1950

corruption within the ranks of the national government, coupled with financial misadministration, had brought the government almost to the brink of bankruptcy in a country with an abundance of resources. Early rumours of financial difficulty set off a period of coin hoarding. This was followed by rising prices and consumers' goods scarcities consequent upon tightened import controls and the outbreak of the Korean war. Finally came the refusal of banks to accept government checks when income failed to meet disbursements.

President Quirino had foreseen difficulties and early in the year invited the United States to carry out an economic survey to propose remedial measures. During the summer of 1950 the Bell Economic Survey mission studied the situation. In October their report recommended some fundamental changes in government administration which, in the course of several years, could materially improve conditions for the islands as a whole. The Bell report was well received by private citizens in the islands who had become discouraged over the inability of their government to cope with its problems. Late in the year a few steps were taken toward initiating proposals of the Bell mission, but the full implementation of the program would require time. Meanwhile the precarious financial situation of the government was expected to continue.

On the international front the Philippines took a forward step by inviting the nations of southeast Asia to participate in a conference upon common problems. Australia, Ceylon, India, Indonesia, Pakistan and Thailand accepted. The seven-nation conference met in May at Baguio and reached mutual agreement upon common problems, though no formal organization of southeast Asia countries resulted. The 1947 Philippine military pact with the United States, to expire in 1951, was extended until 1953. Under this pact the United States had supplied military equipment to the armed forces of the Philippines. During the year all military units in the Philippines were concentrated under one command. (See also FAR EASTERN UNITY.)

As 1950 began, the basic features of the agrarian problem, with its militant expression, were in a worse situation than before. Resettlement programs and the provision of new lands

during 1949 proved insufficient, for these efforts barely kept pace with the normal increase of needs in a rapidly growing population. Military attempts to dispel the Communist-led elements using the agrarian problem as their spearhead made no lasting progress. At the end of 1949 dissident forces were thought to number as many as 25,000 men, including some Chinese, who ranged throughout most of Luzon.

Early in the year 1950 the Philippine constabulary was returned to its regular police tasks, and the duty of combating the "Huks" was assigned to the army. During March, in celebration of the eighth anniversary of the founding of the Hukbalahap, extensive guerrilla raids were made upon many Luzon towns and cities. At this time, also, the name of the organization was changed to "Hukbong Mapagpalaya Sa Bayan," translated as "Nation's Liberating Forces." This change clearly indicated that agrarian reform, as such, was not the real aim of the dissident group. By July, in Nueva Ecija province in central Luzon, more than 100,000 village farmers had moved into the towns and cities for protection, considerably lessening the cultivation of rice lands throughout the province. Enlarged government programs were initiated to provide land in Mindanao, but again these programs seemed neither to attack the heart of the problem nor to promise lasting results. By the end of the year the army had made some progress toward lessening the scope of guerrilla activities, but no real advance toward eliminating them. During the latter half of the year popular opinion throughout Luzon began to crystallize against the "Huks," as they still were known, to strengthen government efforts both to suppress the dissidents and to take real steps toward a lasting solution of the agrarian and Communist problems.

**Trade and Rehabilitation.**—Most of the organized aid contributed to the Philippines by the United States was terminated during 1950. The bureau of public roads and the War Damage commission were the only U.S. agencies carrying their activity forward into 1951. War Damage commission payments during the year amounted to about \$250,000,000. Much of the aid given by the United States went to individuals rather than to government or to operating and producing organizations. Considerable government revenue was put, as matching funds, into rehabilitation programs of many sorts. This helped provoke the budgetary deficiencies noted above.

Agricultural production generally stood higher than during 1949, and the expansion of agriculture resulted in the largest crop of rice to date, about 2,800,000 tons, still not an ample supply for the islands. Coconut, sugar, manila hemp, tobacco and pineapple crops improved their positions but still fell short of providing an adequate export total. Lumber and minerals exports also increased slightly. A new and more stringent import control law went into effect in May, designed to trim down the import of nonessential consumer goods. Totals for the first half of the year indicated a marked reduction in imports, with a slight increase in exports, but the Philippines continued to import more than it exported.

The cost-of-living index for Manila fell to a new low of 320.2 in May, as against a 1941 base of 100, but by November it had risen to 357.0, its highest point since January, 1949. (J. E. Sp.)

**Philosophy.** The year 1950 found philosophers, like many others, looking back over a half century in the effort to judge the meaning and value of their individual and collective work. Philosophers of great distinction who had done some or most of their work in this period were so numerous that citation of names could at best be only a selection of representative thinkers. The names of Francis Herbert Bradley, Bernard Bosanquet, Josiah Royce, Charles Peirce, William James, John Dewey, George Santayana, Alfred North Whitehead, Bertrand Russell, Samuel Alexander, Henri Bergson, Edmund Husserl, Ernst Cassirer, would come readily to the mind of even a casual observer of the philosophical production of the 20th century. Of these men, whose work represented solid achievement in various schools of thought in the earlier part of the half-century, only a few were alive in 1950. This list, moreover, would represent but a fraction of the important people who had done original work in the period, and would not include a host of younger philosophers who had come into prominence at its close.

The 50 years were marked by the rise of numerous schools and movements among philosophers. Absolute idealism, dominant as the century opened, was vigorously attacked by pragmatism which was followed by successive waves of realism, these in turn yielding part of the ground to logical positivism and, especially after World War II, to existentialism. No school, however, was completely vanquished; each retained some adherents who continued to argue its case with vigour. Existing thus side by side, the various schools of thought kept each other very much on the alert with the result that all were invigorated by the critical and polemical attitude of the time. To observers living in the period, it seemed to be a time of unusually intense and varied philosophical activity.

Among major influences upon the philosophers, from outside the field of their specialized endeavours, were the progress of mathematics and physics on the one hand, and of psychology on the other. Two contemporary men of genius in particular stood out as contributors of utmost importance to the conception of nature and man. These were Albert Einstein and Sigmund Freud. Their work posed inescapable problems and issues for philosophy. Two other men, though of the 19th century, exerted powerful influence on the thought of the 20th as it reached the half-way point. As the influence of Karl Marx stormed through the social world, the anguish and the fear and trembling of man caught in a storm found its voice in the existentialist discoverers of the Danish genius, Søren Kierkegaard.

At year's end, the American Philosophical Association's eastern division, meeting at Toronto, undertook as part of its program an estimate of historical trends and of the then current status of certain aspects of philosophy. Such topics as "Recent Trends in Philosophy," "The Modern Distemper of Philosophy" and "The New Rationalism in Ethics" were on the agenda. Under the first of these topics, a paper by Grace A. de Laguna gave an interpretation of the period. Her argument ran as follows: In the 20th century there had been, she said, two notable movements in philosophy which were opposed to one another. Speculative philosophy had flourished with new vigour, but so had a strong current of criticism which sought to discredit metaphysics in so far as metaphysics claimed to reach a level of finality superior to that of science. The central issue had been the nature, function and scope of conceptual thought. Above and beyond such thought Henri Bergson had found intuition; George Santayana had appealed to a more primitive "animal faith." Edmund Husserl and the existentialists, in spite of differences, had urged the critical limitation of conceptual thought and had recognized transcendental insight, but at the same time they viewed reality as no fixed system but rather as characterized by indeterminateness, incompleteness and self-creative change. Charles Peirce and Alfred North Whitehead had agreed that no metaphysics expressed in conceptual terms could be final, but they had refused to invoke any sort of faith. They had attempted, instead, to justify conceptual thought by conceiving it more adequately, enlarging the scope and function of rationality so that their own speculations, though admittedly tentative, could reflect without resort to nonrational faith an indeterminate and incomplete reality. Such was Grace de Laguna's summary of main issues in speculative philosophy.

At the same meeting, while Willard V. Quine was examining "Two Dogmas of Empiricism," and William Frankena was discussing "Moral Philosophy at Mid-Century," William Pepperell Montague in more clinical mood diagnosed "The Modern Distemper of Philosophy" as due in large measure to the attempt made by such movements as behaviourism, operationalism, and logical positivism to limit philosophy to topics that can be formulated in terms of physical and sensory observation; taken separately or together these movements were unable, said Montague,

to do justice to man's deepest interests. George Boas in reply commended these schools for their insistence on precision, and suggested that the so-called modern distemper of philosophy might well have arisen from the fact that modern thinkers had taken time seriously, with all the implications which this held for theories of knowledge and reality.

Among notable philosophical works published in English in 1950, many were translations from other languages.

(E. L. MN.)

**Pholien, Joseph** (1884– ), Belgian prime minister, was born on Dec. 28 at Liège. He practised as a lawyer, enlisted in 1914 in the Belgian army as a volunteer and was demobilized as a first lieutenant. He entered politics in 1936 when as a right-wing Social Christian he was elected to the senate. He was minister of justice in the Spaak coalition cabinet (May 1938–Feb. 1939). At 56, he rejoined the army in 1940. During the second German occupation he remained in Belgium and was thrice arrested for protesting against German interference in Belgian administration. With Albert Devèze, minister of state, and Raoul Hayoit de Termicourt, attorney general at the supreme court of appeal, he signed on June 1, 1940, a legal pronouncement declaring that King Leopold (*q.v.*) was a prisoner of war and as such unable to reign—a document which gave legal basis to the Belgian government in exile. From 1945 he strongly supported the king's unconditional return. The settlement reached on the royal question (*see* BELGIUM) aroused considerable opposition inside the Social Christian party and Pholien led the Leopoldists accusing Jean Duvieusart, the prime minister, and some of his colleagues of lack of courage and energy. After the resignation of Duvieusart, Pholien headed on Aug. 15 a new Social Christian government.

**Phosphates:** *see* MINERAL AND METAL PRODUCTION AND PRICES.

**Photography.** World production of photographic products in 1950 was well ahead of the previous year. By the close of the year, however, new war restrictions on metals and other materials were beginning to curtail the production of some products. While the United States showed a moderate increase of between 5% and 10% in the sale of photographic products, the photo industry in western Germany was rapidly regaining its dominant position in Europe with a production increase of 170% over 1949. This activity drew considerable engineering and technical personnel from the Russian occupied zone to the U.S. and British occupied areas.

Agfa Division Farbenfabriken Bayer, Leverkusen (British zone), regained its leading position in the production of sensitized materials in Europe. New building facilities were made for production of the Agfa colour print process which was perfected for commercial use. This plant was also active in the production of photographic dyes and chemicals. A new photocopy paper called PhotoRapid with a double emulsion for making copies on both sides of the paper was produced.

Voigtlaender & Son, Brunswick (British zone), introduced a new wide angle lens called the Ultragon with extremely short focal length of only 24 mm. and a viewing angle of 94°. There was a new Voigtlaender Vitessa folding camera with built-in range finder, and several other new cameras including a new model X-ray camera with the new Nokton f/1.5 lens.

E. Leitz Optische Werke, Wetzlar (U.S. zone), was in full production making more than 4,000 Leica cameras per month during 1950. Zeiss-Opton, Stuttgart, Oberkochen (U.S. zone), introduced the Contessa 35 and a new Contax IIa, the latter a refined model of the former model II. Tewe G. M. B. H., Berlin

WASHINGTON, D.C., photographed by a U.S.A.F. "horizon-to-horizon" camera being tested for reconnaissance use in 1950. The camera was mounted on a B-17 bomber flying at 10,000 ft. which gave it a horizontal distance coverage of approximately 26 mi.

(British zone), produced the revolutionary Polyfocus zoom-type view finder for use with Leica and Contax cameras, covering focal lengths ranging from 35 mm. to 180 mm. (and 28 mm. with adapter); the finder shows a constant 12 x 18 mm. image with every focal length. Arnold & Richter, Munich (U.S. zone), introduced their Arriflex II 16-mm. motion-picture camera, among the finest of its type on the market.

N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands (largest European manufacturers of flash lamps), showed their new Philips Flashcamera for the first time in March 1950. This camera, with built-in reflector and synchronizer, was designed for the average amateur photographer interested in making snapshots by artificial light with a minimum of equipment.

England did not introduce many new photographic products during the year. Manufacturers were required to allot the bulk

of their production for export, and consequently did not come into competition with producers from other parts of the world. The British Industries fair of May 18 and 19 was much smaller than in 1949. Such manufacturers as Kodak, Pathe, Ilford, Barnet-Ensign, Ross and others did not exhibit.

**United States.**—There was a noticeable increase in the production of specialized cameras and photo products for recording, streak cameras, X-ray, cathode ray tube cameras, the Bore Hole camera, and the Fairchild adapter for using the Polaroid Land camera for oscilloscope recordings. With this adapter equipment, made by the Fairchild Camera and Instrument corporation (New York), a finished picture could be made within 60 seconds. The J. A. Maurer company of Long Island City, N.Y., developed a 70-mm. combat camera for military use, operating by a spring motor to make five exposures on one winding. Each loading produces 25  $2\frac{1}{4} \times 2\frac{3}{4}$ -in. negatives on the 70-mm. perforated film.

Greater effort was made in the sale of equipment to young people and other beginners. Ansco produced a home construction kit which combined the hobby of photography with the fun of model building to make their Craftsman camera. Ansco also assembled three camera outfits in attractive carrying cases for beginners. Eastman Kodak company packaged two camera-flash outfits with flash lamps and films for the amateur photographer. It was notable that both the Ansco and Kodak outfits provided for the making of flash pictures, which had increased more than 500% within a few years.

Other cameras introduced in the lower price class included the Kodak Pony 135 camera for use with 35-mm. film, two new Kodak Duaflex cameras with built-in flash synchronizers and the Brownie Hawkeye camera, flash model.

The Kalart company of Plainville, Conn., continued with important developments in their camera and extensive line of products for synchronized flash photography. The Kalart II was an improved model of this  $3\frac{1}{4} \times 4\frac{1}{4}$  press-type camera with many automatic and built-in features. The most important progress in the field of flash photography came with the development of the Kalart B-C Multiflash. This battery-capacitor flash equipment would fire up to six flash lamps with 250 ft. of extension wire. The main feature was that the lamps were fired by the 250-mfd. capacitor, drawing current from a miniature 22½-v. B battery and storing it until the instant of flashing, then releasing the full stored-up charge.

Colour photography continued its steady growth in still and motion-picture photography. Ansco brought out a revised processing procedure for its colour film containing a new nonirritating developing agent. This film, as well as Kodak Ektachrome, could be processed by the individual photographer in his own darkroom.

In the motion picture field two full colour duplicating films, type 238 16-mm. and type 838 35-mm., were announced by Ansco. These improved duplicating materials were designed to produce full colour duplicates by reversal from full colour originals. Both type 238 and 838 films could be used for making release prints, or, in cases where the original camera film must be protected from wear and tear, for making printing masters.

The Eastman Kodak company made available a special paper for printing black-and-white prints from Kodak Ektacolor film, useful for making black-and-white proofs or finished prints from the colour original. Kodacolor film, daylight type, was available for the Kodak Bantam and Kodak Pony 828 cameras. Eastman also announced a new colour film which could be used to make duplicate colour transparencies equivalent to the finest original colour photographs. Known as Kodak Ektacolor Print film, the new product was the first commercially available colour film produced specifically for making duplicate colour

transparencies of superb quality directly from colour negatives. It was available in sheet film sizes and in rolls up to 40 in. in width. Strips of the film could be spliced together to form larger sheets, thus making possible the production of huge transparent photomurals in natural colours.

Gevaert's Diaversal paper for printing monochrome sepia enlargements from positive colour transparencies was made available in the United States. With this direct process it was not necessary to make a negative copy of the original colour film and then make the print. The copy is made direct and then developed under the ordinary darkroom safety light in three solutions. By the end of the year the Revere Camera company prepared its Enlarger-Viewer kit with a supply of Diaversal paper for making enlargements from original still and motion picture colour films.

Kodak Opalure Print film was a new type of quality printing material designed for making portrait and exhibition prints in either large or miniature sizes. Its velvety matte surface yielded brilliant images with depth and roundness. The film could be used for regular print-making purposes or the print could be placed in a mount for viewing by transmitted light. Window displays, lamp shades and special transparencies for home use were some of the applications for this new film. Kodak Lina-graph Drift Survey film in 16-mm. and 35-mm. widths was available for use in a standard clinometer or drift survey camera. This film was used in well drilling operations to record instrument readings as drift meters.

The photo products department of E. I. du Pont de Nemours & Co. produced a Warmtone Projection paper type 9034 offering the advantage of much greater emulsion speed than usually found in papers of this type and a warm brown image colour with conventional processing. The paper possesses stability of image colour and contrast during development, allowing the photographer to compensate for exposure errors by varying development time without objectionable changes in contrast and image colour.

Rotofilm, a new transfer film for use in making cylinders and plates in gravure printing, was also brought out by du Pont. This film consists of a cellulose acetate safety base affixed to a stripping membrane on which is coated a photographic emulsion. Exposure requires no advance preparation and can be made in a matter of seconds. Three graphic arts products were also made available by Ansco: Reprolith Ortho, Vinyl Base; Reprolith Pan; and Reprolith Ortho type B.

Most of the new cameras were made with built-in flash synchronizers. The new automatic Rolleiflex had this feature and also a built-in frame sport finder. The Rolleicord camera was back on the market with a number of improvements. A new model of the Argoflex camera also had the built-in synchronization and automatic double-exposure prevention.

Polaroid's new type 41 black-and-white film was produced for the Polaroid Land camera which takes and finishes a picture within one minute. Contrast can be controlled by changing the development time in the camera after the exposure has been made. Formerly only sepia coloured pictures could be produced with this camera. The new film will not crack or curl in dry weather because a thin film of reagent formerly left on the sepia print is carried away on the negative.

Ansco introduced a number of new photographic chemical items. Among these were Rapafix, an improved photofinishing fixer with extremely great capacity when replenished as recommended; Supradol, a specially designed photofinishing developer of great capacity; and Vividol and Vividol replenisher, in large sizes for processing finishing papers. Permadol developer was another new Ansco chemical with improved formula for general use. Permadol cut developing times and was designed for long

"PREPARING FOR BATTLE," photographed by Edward Steichen during World War II and included in an exhibit of his work at the American Institute of Architects gallery, Washington, D.C., in May 1950. The picture was taken on infra-red film aboard the U.S.S. "Lexington" just before an attack on Kwajalein Island

life when used with Permadol replenisher.

A fixed-focus Cine-Kodak magazine 8 camera was available for the amateur movie maker interested in a small convenient 8-mm. camera. The new 16-mm. Cine-Kodak Royal magazine camera was the latest addition to the magazine 16 group of movie cameras. This camera was luxuriously appointed and combined the convenience of magazine loading with the optical quality of the  $f/1.9$  Ektar lens. Other features included an improved adjustable view finder which could be set to show the fields covered by the interchangeable lenses, shutter speeds of 16, 24 or 64 frames per second, and a single frame release for animation and special titles. A Cine-Kodak Duo splicer outfit was also produced for use with silent or sound 8-mm. and 16-mm. motion picture films.

The Kodascope Pageant sound projector, weighing less than 33 lb., appeared for 16-mm. sound pictures. Low price, portability, light weight and ease of operation were the principal features, besides the high quality of sound reproduction and the lumenized two-inch  $f/1.6$  Kodak Projection Ektanon lens incorporating a field flattener.

A 15-mm. wide angle Balowstar  $f/1.3$  lens was introduced by the Zoomar corporation of New York city for use on 16-mm. motion-picture cameras and also the Cine Balowstar  $f/1.3$  lens in  $1\frac{1}{2}$ - and  $3\frac{1}{2}$ -in. focal lengths for high speed photography under

difficult lighting conditions. These two lenses were a result of new and better optical glasses, antireflection lens coatings, new methods of lens computation and improved optical machinery.

Bausch & Lomb Optical company produced two new  $f/1.5$  Animar lenses for use with 8-mm. and 16-mm. motion-picture cameras with Balcoted surfaces. This firm also made a new series of eight  $f/2$  projection lenses with focal lengths from  $5\frac{1}{4}$  to 7 in. The increased screen illumination made these lenses suitable for use in drive-in theatres and large movie houses. Bausch & Lomb also made a new high speed camera for photographing the interior patterns of the eye.

Graflex, Inc., made the Grafmatic Film holder in  $2\frac{1}{4} \times 3\frac{1}{4}$ -in. size, holding six sheets of film. This film holder has a warning signal to prevent removal until the built-in dark slide has been placed in position to protect the film from accidental fogging, and also an automatic system to prevent double exposure. The Graflex 120 roll film magazine was available for the  $3\frac{1}{4} \times 4\frac{1}{4}$  and  $4 \times 5$  cameras. The field of photographic enlarging equipment had been greatly extended and improved through the introduction of a series of accessories known as Graflargers which quickly convert sheet film cameras such as the Graphic and Graflex into cold cathode fluorescent light enlargers. This particular light source under the trade name of Aristo Cold Lite received the 1950 U.S. Camera award for the outstanding contribution of the year in its field.

Annual U.S. Camera achievement awards were presented to David Douglas Duncan, Carl Mydans, Charles D. Rosecrans, Jr. (posthumous), Leopold Mannes and Leo Godowsky.

The Museum of Modern Art in New York city presented a number of important photographic exhibitions, starting with photographs of Picasso by Gjon Mili and Robert Capa.

For the first time the Photographic Society of America compiled its own listing of exhibitions in the field of pictorial photography. Its "Who's Who in Pictorial Photography," published in the November *P.S.A. Journal*, recognized 46 exhibitions with 638 photographers meeting the requirements for listing. The society's Clark Maxwell award for the best colour print in its international exhibition went to Thomas Limborg, of Minneapolis, Minn., and its 1950 Progress medal was awarded to Loyd A. Jones of Rochester, N.Y. (See also MOTION PICTURES; MUNITIONS OF WAR; NEWSPAPERS AND MAGAZINES; TELEVISION; X-RAY AND RADIOLOGY.)

**Phumiphon Adundet** (BHUMIBOL ADULYADEJ) (1927– ), king of Thailand, was born at Cambridge, Mass., Dec. 5, younger son of Prince Mahidol of Songkhla (1892–1929). He succeeded to the throne on the death of his brother, King Ananda Mahidol, on June 9, 1946. The official explanation given of Phumiphon's departure two months later for Lausanne, Switz., was that the king was resuming his studies. In Sept. 1949 it was officially announced that the king and Princess Sirikit Kitiyakara (b. 1933), daughter of the Thai ambassador in London, had become engaged to be married. They returned to Bangkok at the end of March and the wedding took place on April 28. On May 5, during an impressive and traditional ceremony, he crowned himself "lord of the earth, unmatched in brilliance and power." The actual assumption of the crown by the king was witnessed by only the diplomatic corps, the senior members of the Chakkri dynasty and the members of the government.

**Physics.** The increasing technical complexity of world civilization in 1950 put increasing values on manpower possessed of high scientific skills. Attention was given to making the best use of the manpower already available, by ensuring that scientific news was quickly circulated throughout the world. To this end, although existing abstracting services were not deemed inadequate, a committee of the United Nations Educational, Scientific and Cultural Organization met in 1950 to consider the desirability and possibility of instituting an international abstracting service. The committee's affirmative recommendations awaited adoption by the International Conference of Scientific Unions before being put into effect.

During 1950 there was no discovery like that of the neutron or of nuclear fission which could alter, within the year, the primary pattern of research. But there were gradual developments of basic new ideas from the status of isolated experimental observations to that of recognized fields of research.

In times of emergency it is useful for a nation to have an accurate forecast of its potential reservoir of scientific manpower. Some interesting studies of the origins, training and movements of professional physicists were compiled and published by Marsh W. White and his collaborators. Typical of the findings was that in the U.S., depending on the geographical region, between 0.45 and 2.0 physicists per annum were derived from each million of population,—figures that were in interesting agreement with an estimate made in the 1930s for Great Britain by Sir William Bragg, who believed that the development of professional physicists was at the rate of one per 1,000,000 per year.

**Cosmic Rays.**—Although the term cosmic rays is reserved for the description of the penetrating invisible flow of energy that

descends continually upon the earth from other parts of the universe, it must be kept in mind that other types of rays, corresponding to the visible, the infra-red and the radio portions of the electromagnetic spectrum, exist at the same time though not necessarily derived from the same sources. To arrive at the correct explanation is a very puzzling matter in all cases. Probably the greatest progress in 1950 in the interpretation of the penetrating radiation came from the work of Marcello Conversi of the Institute of Nuclear Studies, The University of Chicago. This, of course, was not an isolated experiment, but followed in a tradition of The University of Chicago maintained by Marcel Schein and others following the transfer of A. H. Compton's primary research interest from X-rays to cosmic rays about 1930. Owing to the rapid development of knowledge concerning mesons, consequent upon the Nobel prize-winning work of C. F. Powell (University of Bristol) with photographic emulsions, the electrical experiments of Conversi were susceptible to reasonably consistent interpretation. A detailed listing of the new knowledge would be out of place in so general an article as this. It will be enough to say that the frequency of occurrence of the various cosmic ray particles and the variation of this frequency with altitude remained extremely complex. Although the behaviour of a particular component could, in favourable cases, be catalogued, it usually could not be related with certainty to the behaviour of another component. In many cases the origin of the particles was still a matter of conjecture. The main avenues of research that seemed to offer promise were those dealing with primary and secondary protons, and with mesons. The energies of all these particles as they occur in natural cosmic rays are, however, so large that a lapse of several years was anticipated before particle-accelerating machines of the requisite power could be built to test their behaviour in the laboratory, under controlled conditions. Meanwhile, evidence as to the properties of the rays was built up piecemeal, event by event, as the story was unfolded in observations on photographic emulsions that were exposed at high altitudes.

At the same time, physicists generally felt that the spate of tentative mathematical theory on the subject of mesons as the "cement" that binds particles together in the atomic nucleus had been singularly unproductive of real understanding of the nucleus, and that some radical new idea would be needed to explain the short-range forces that bind neutrons and protons together.

**Ingredients of the Universe.**—Thanks to the light, observed spectroscopically, that stars and nebulae send to the earth, it was possible to list with some certainty the proportions of different elements in the far reaches of the universe. Simultaneously, careful studies of meteoric matter, collected and analyzed after it impinged upon the earth, provided similar information of a more local character relating specifically to the regions of space within the solar system. The important questions to be answered were: (1) What are the proportions of different elements in the universe; and (2) is the distribution the same everywhere except for what may be called local irregularities?

It turned out that in most ordinary stars, hydrogen and helium, the lightest elements, accounted for more than 99% of the stuff of which they are composed. In the white dwarfs, however, these two light elements were absent, having been burned up, as it were, while the star went through its pre-ordained evolutionary sequence, leaving the other heavier elements, originally a tiny fraction of the whole mass, occupying a quite prominent place. Such studies as were possible indicated that, with respect to elements heavier than oxygen, stars, no matter whether large or small, dull or bright, contained different

atoms in approximately the same proportions. It must be emphasized that the data upon which such a conclusion was based were obtained only by recourse to the finest astronomical observations coupled with bold and occasionally speculative applications of difficult physical theories. Consequently, if at a later date this view had to be modified, the change would occasion no great surprise.

A comparison by Harrison Brown of the latest data on meteoric matter and on the sun and stars showed that, as far as the heavy metallic elements were concerned, the abundances were roughly the same. It was reasonable to deduce that the materials arose from a common origin. Thus, in spite of tremendous differences of location, of appearance, of temperature, of density, the universe was found to be remarkably regular in its composition.

To a philosophically minded scientist like G. Gamow, of George Washington university, Washington, D.C., such a regularity of composition presented a challenge, a suggestion that there must have been some common origin of the material, at some remote time when there was easy opportunity of thorough mixing. In working out the consequences of such a hypothesis, allowance had to be made for radioactive decay and for atom smashing and building in regions of local high temperatures. Gamow and his collaborators developed the theme in a series of papers in which they considered the evolution of an originally highly compressed blob of stuff through the series of nuclear reactions that were most likely to occur as the material flew asunder to form the expanding universe. He was able to adapt his theory so that it gave a very plausible account of the observed uniformity of composition of the universe and of the numerical relative abundances of light and heavy elements. In its latest form, the theory could not yet take care of such refinements as the reason for the natural formation of more atoms with even atomic numbers than with odd. Gamow's was an interesting attempt to establish a logical connection between basic physics and cosmology.

**Nuclear Reactors.**—Although many of the details of the U.S. Atomic Energy commission's program were held secret, the main features were given generous publicity. In spite of the temporary emotional reaction of the public to the decision to proceed with the development of the hydrogen bomb, the feasibility of constructing it apparently remained to be proved. Such a proof could not be demonstrated by the usual industrial technique of first building and testing a pilot plant, for in most aspects of nuclear engineering only a full-scale experiment is possible at all. This novel feature is consequent upon the impossibility of creating nuclear chain reactions with small (sub-critical) reacting masses.

The Atomic Energy commission was engaged in the design or construction of at least four new reactors. First, an experimental breeder reactor reached the stage of completion of the architect-engineering design. A reactor of this kind was to test the practicability of growing new fissionable material with fast neutrons and to investigate the application of liquid metals to the removal of heat from the working volume. Second, a materials-testing reactor reached the contract stage, and construction was expected to commence soon. This reactor plays the same role as the materials-testing laboratory in a conventional industrial plant. Not enough information was available concerning the ability of materials of construction to withstand the high temperatures and tremendous radioactive fluxes that occurred under working conditions in a large reactor. Third, a ship propulsion reactor was under consideration. It was expected to reach the engineering design stage about the beginning of 1951, not yet the design of a marine power plant, but the design of a preliminary unit to be operated and tested on land. Fourth,

an intermediate power breeder reactor was planned for construction at the West Milton, New York, site of the Knolls Atomic Power laboratory. Its purpose was to evaluate the possibility, hitherto untested, of using neutrons of intermediate energy to manufacture new fissionable material and to generate useful power.

**New Unstable Particle.**—In the 1920s, despite awareness among physicists of the incompleteness and inadequacy of their data, the universe was describable in terms of three fundamental particles—protons, negative electrons and photons. These three were considered to have a reasonably permanent existence apart from the possibility of their emission or absorption by more complex systems. After the discovery of the neutron and several types of meson, and especially after the recognition of the unstable (radioactive) character of these new particles, it was clear that the behaviour of matter in the universe was much more complex than the simple beliefs of the preceding generation would have predicted. From time to time new experiments were reported which could be woven into the existing web of physics only if the existence of new types of particles were admitted. Characteristic of such observations was a brief note by Gerhart Groetzinger and David Kahn in which they presented new evidence for the existence of positively charged particles appearing near beta-emitters. A few earlier investigators had tentatively identified such positive particles in cloud chamber photographs and had assigned to them a mass about twice that of the electron. But a search for the particles in conventional beta-ray spectrometers gave no confirmation of the photographic evidence. Groetzinger and Kahn implied in their note that these two items were not necessarily contradictory provided it was assumed that the elusive particles decayed so rapidly after being created that they failed to survive in detectable numbers the time of flight through the usual beta-ray spectrometer. Therefore, they built a special beta-ray spectrometer in which the path length was only 4.4 cm., about  $\frac{1}{2}$  or  $\frac{1}{10}$  of the usual distance. With this instrument they found definite evidence of positive particles accompanying the emission of negative electrons, from radioactive  $P^{32}$  in this case, to the extent of approximately one positive particle for every thousand negative electrons. Since measurements made with a beta-ray spectrometer have to be interpreted in terms of the ratio ( $m/q$ ) where  $m$  is the mass and  $q$  the charge of a particle, no determination of mass or charge separately was possible. Another supplementary type of experiment was needed to measure the momentum or the charge of these new particles.

**Harwell Nuclear Physics Conference.**—Typical of helpful conferences arranged by physicists for face-to-face exchange of information was the Nuclear Physics conference held at the British Atomic Energy Research establishment at Harwell in Sept. 1950, during which nearly 100 papers were presented, covering most of the important basic and applied aspects of the subject. A strong delegation from the U.S. was present, representing in a roughly proportional way the emphasis being placed on nuclear physics at the several special laboratories on Long Island, N.Y., in Tennessee, in Illinois, in California and elsewhere. The papers contributed by this delegation formed a considerable part of the proceedings. Much new information was reported concerning the interactions of the fundamental particles, the half-lives of mesons and of neutrons, the energy levels of particular types of nuclei, and the spins and moments of nucleons. The theory of nuclear reactors was considered, not from the point of view of the production of energy, but from the point of view of the reactor as a scientific instrument useful for the determination of nuclear cross-sections.

Papers reporting theoretical work, or experimental work, from half a dozen countries were blended in a harmonious inter-

national atmosphere. (See also STANDARDS, NATIONAL BUREAU OF.)

**BIBLIOGRAPHY.**—The reader in search of further information on recent advances in physics research is recommended to start with *Nature* (London), vols. 165, 166, and the *Physical Review*, vols. 77–80. Social and international problems of physics, and the control of atomic energy are discussed fully in the *Bulletin of the Atomic Scientists*, vol. 6, and in *Physics Today* and *The American Journal of Physics*, published monthly by the American Institute of Physics, 57 E. 55th Street, New York 22, N.Y.

## Physiology. Effects of Cortisone and ACTH in Man.—

Extensive metabolic studies were made on 33 patients to secure data regarding the effects of prolonged administration of cortisone and ACTH in man, the possible hazards involved in their use and the mechanism by which the favourable clinical effects were produced. Up to the close of 1950 no apparent correlation was found between the metabolic changes which were observed and the beneficial effects of therapy. The data confirmed the view that these substances are powerful hormonal agents which influence many physiological processes. When given in large doses over a long period, cortisone has the capacity to produce most of the clinical features of Cushing's syndrome such as rounding of facial contour, acne, hirsutism, muscular weakness, keratosis pilaris, oedema, amenorrhoea, cutaneous striae, mental depression, impairment of carbohydrate tolerance, negative nitrogen balance, increased excretion of corticosteroids in the urine and alkalosis. When ACTH was given, study of the excretion of urinary steroids indicated that the adrenal cortex secreted 17-hydroxycorticosterone (Compound F) rather than cortisone.

Cortisone seemed capable of depressing the functions of the adrenal cortex in man as it does in the rat. The changes in carbohydrate tolerance were not marked. Abnormal glucose tolerance curves were apparently produced in some patients but not in others. However, more pronounced effects might be expected if the patient has latent or frank diabetes. The biological effects of cortisone and ACTH should be kept in mind when they are employed therapeutically.

**Visual Purple.**—The rods and the cones are the structures in the retina which are sensitive to light. The rods contain a photochemical substance, rhodopsin or visual purple, which is bleached by light and is resynthesized in the dark. On exposure to light, visual purple yields a protein and an orange-yellow carotenoid pigment called retinene<sub>1</sub>. A more prolonged exposure to light or a more intense light results in the further reduction of retinene to vitamin A<sub>1</sub>. A deficiency of vitamin A is known to impair vision in dimly lighted surroundings.

Experiments were carried out in which synthetic retinene<sub>1</sub> was used. It was prepared from crystalline vitamin A<sub>1</sub> by chromatographic oxidation on solid manganese dioxide. Cattle or frog rhodopsin in solution bleached in the presence of a high concentration of synthetic retinene regenerated about 70% of its original content of visual purple when replaced in the dark.

Colourless rhodopsin protein which was proven to be free from native retinene<sub>1</sub> was extracted from the retina. When synthetic retinene in high concentration was mixed with the rhodopsin protein large yields of rhodopsin were obtained. Thus the synthesis of rhodopsin from vitamin A<sub>1</sub> was accomplished. Tests indicated that the naturally occurring and the synthetic forms of rhodopsin were identical. Probably the formation of rhodopsin requires only retinene and rhodopsin protein and it seems that energy is liberated in the reaction. In the reverse process the energy required for the bleaching of rhodopsin would be supplied by light.

**"Suspended Animation" in Rhythmically Contracting Structures.**—After eggs were incubated for 35 to 50 hours, the chick embryos were removed and partially dehydrated with ethylene glycol. The embryo, supported on a thin piece of mica, was immersed in liquid nitrogen at  $-195^{\circ}$  C. At this low temperature solidification occurred rapidly. The solidified embryo was removed from the liquid nitrogen a few hours later and rewarmed rapidly by placing it in a salt solution (Tyrode's) at  $40^{\circ}$  C.

The heart resumed its beating and in some instances continued beating for hours.

The embryo chick heart at this stage is small although beating rhythmically. It can be excised and treated similarly. On re-warming rhythmic contractions may occur for many minutes. This was, as far as was known to the author, the first report of survival of an entire excised organ of a vertebrate after exposure to such a cooling process.

Small pieces of amnion were excised and treated in like manner with similar results. The smooth muscle of the amnion may contract spontaneously and rhythmically. Contractions in some instances may be observed for a few hours.

The conditions permitting recovery are ultrarapid cooling (at a rate of several hundred degrees per second), ultrarapid re-warming and dehydration. Because such great speed of cooling is required, the method is applicable to small organisms or small pieces of tissue. All treated tissues or organs are injured to some extent.

The results seem to support the view that life is preserved to the extent to which crystallization is avoided. Aqueous solutions of a variety of substances when rapidly cooled may pass from the liquid to the vitreous state (amorphous solidification) without crystallization. If the cooling or re-warming occurs more slowly, crystallization with disruption of the living structure occurs.

**Mammals Thriving on Sea Water.**—Man is constantly losing water from the body by way of the skin, respiratory tract and in the excretions. Water must be replaced or the body, which consists of approximately two-thirds water by weight, will become dehydrated. Food contains water and in addition some water is obtained by oxidation of the hydrogen in the foodstuffs. Sometimes a supply of water is not available. The evidence indicates that man is not able to utilize sea water in place of drinking water. Yet certain animals such as seals and whales do not have access to fresh water.

If an animal should excrete urine with a higher concentration of salt than sea water has, water would be gained for the body.

Although the white rat had been shown to have a more powerful excretory system than other laboratory animals, yet it could not substitute sea water for drinking water. Work was carried out on the kangaroo rat, *Dipodomys merriami*. Normally this rodent does not need drinking water. In order to make it drink sea water, dry food with a high protein content was given. The large amounts of urea formed from protein are excreted by the kidneys, increasing the loss of water by way of the kidneys. It was found that if only dry food with a high protein content was given, the body weight steadily diminished, reaching about 60% of the initial weight in 16 days. If either fresh water or sea water was supplied, after a slight initial loss the weight was regained and maintained so that after 19 days the two groups of animals were alike in this respect. The blood plasma concentrations of urea and electrolytes were alike in the two groups, that is, about 156 millimolarity. Sea water from the Atlantic ocean was used in one set of experiments and from the Pacific ocean in another, having electrolyte concentrations of 545 millimolarity and 585 millimolarity, respectively. K. Schmidt-Nielsen and co-

workers had previously shown that the maximum electrolyte concentration of the urine of the kangaroo rat may reach 1,200 millimolarity, more than twice as high as sea water.

The ability of the animal to excrete highly concentrated urine enabled it to survive, using sea water in place of fresh water.

**Pittsburgh.** In 1950 the Pittsburgh district was disturbed by prolonged strikes that affected coal production, suburban bus lines and milk and department store deliveries, and forced suspension of all daily newspapers for six weeks. A record-breaking 31.3-in. snowfall, beginning on Nov. 24, paralyzed all transportation for days.

In spite of these handicaps, the University of Pittsburgh's bureau of business research reported that business activity in the district in the first 11 months of 1950 was 182.5% of the 1935-39 average, 15.7% higher than for the corresponding period in 1949, and only 1.6% less than in the 11 months of 1948. For the year, industrial production was 184.4% of the 1935-39 average, up 18.9% from 1949, but down 2.3% from 1948. Steel operations were at 97.2% of capacity, 24.6% above 1949 and 4.4% above 1948.

Bituminous coal production in Pennsylvania was 15.6% in excess of 1949, but 23.2% less than in 1948. For the first 11 months numbers employed were 111% and payrolls 247.9% of the 1939 average.

Department store sales for 11 months were 3% above the corresponding period of 1949.

The rebuilding program sponsored by the Allegheny Conference on Community Development progressed. Demolition was begun on 13 ac. at the confluence of the Monongahela and Allegheny rivers to make way for a major traffic interchange and a memorial park, and in the adjoining 26-ac. tract acquired by the Urban Redevelopment authority, where ground was broken for three multistory office buildings, privately financed. Construction proceeded on the high-speed Penn-Lincoln parkway to connect the downtown area with the western extension of the Pennsylvania turnpike, also being built.

Jones & Laughlin Steel corporation announced that it would build 11 additional open-hearth furnaces at its south side works, instead of 6 as originally planned, at a total cost of \$400,000,000, on land made available through the Redevelopment authority. The Pennsylvania Railroad company pushed toward completion a large freight warehouse and terminal.

At the University of Pittsburgh medical centre ground was broken for a nurses' home and a 1,000-bed veterans' hospital. John Christian Warner was inaugurated fourth president of Car-

negie Institute of Technology.

The 1950 U.S. census fixed the population of Pittsburgh at 673,763 (preliminary figures), 12th in the nation, and that of Allegheny county at 1,508,255. The Pittsburgh metropolitan district numbered 2,205,544.

Taxable real estate for 1951 in Pittsburgh was \$1,017,800,000; in Allegheny county, \$2,239,700,000. (C. F. Ls.)

**Pius XII** (1876- ), the 262nd successor of St. Peter in the see of Rome, was elected by the cardinals in conclave on his 63rd birthday, March 2, 1939, and was crowned as pope on March 12.

In 1950 Pope Pius welcomed an estimated 3,000,000 visitors who went to Rome to do penance and to gain the special indulgences extended to pilgrims during the Holy Year. After the close of the Holy Year the pope issued a bull on Dec. 25 extending the spiritual benefits of the Holy Year to the entire world in 1951.

Concern for the thousands of orphans and needy children in war-torn lands was expressed by Pius XII in a broadcast to 3,000,000 children in the schools of the United States opening the annual Lenten children's collection for the victims of war. In the encyclical, *Anni Sacri*, the pope called upon priests and laity to combat antireligious forces by a crusade of prayers for a new order in the world based on "truth, justice and charity."

Addressing several thousand French teachers and students of both Catholic and public schools, Pope Pius said that not faith but those who deny or discard God should be considered the real enemies of learning and science. Explaining that "between the concrete results of scientific investigations and the essential gifts of faith there is not and cannot be any irrevocable opposition," the pope continued: "As for the occasional divergencies, they must be attributed to the errors to which human judgments easily become subject, but never to any objective and irreconcilable contrast between science and faith."

In a letter to the prefect of the Sacred Congregation for the Propagation of the Faith, on the occasion of the International Missionary congress, the pope said: "The Church has no desire to rule over peoples or to vest itself with power in merely temporal matters; its anxiety is to bring the heavenly light of Faith to all nations and to promote human civilization and fraternal concord among peoples."

*Summi Maeroris*, an encyclical published in July, urged bishops throughout the world to pray for peace among the nations. This encyclical was a reply to the so-called Stockholm peace appeal issued by the Communist-organized Permanent Committee of World Congress and of the Defenders of the Peace which demanded outlawing of atomic weapons.

Pope Pius warned theologians against a too conciliatory doctrinal attitude toward non-Catholics in his encyclical *Humani Generis*. It indicated the Vatican did not intend to compromise on questions of faith and morals and warned against projects of union with other Christian churches unless they were based on Roman Catholic doctrine.

In June the pope called upon the people and governments to pool their resources in a world-wide campaign to bring about social justice and to halt the march of atheism and materialism. This was believed to indicate the pope's support of United States economic policy, according to Vatican circles.

Making the first solemn dogmatic definition uttered by the pope alone since the definition of the doctrine of the Immaculate Conception in 1854, Pope Pius XII proclaimed, on Nov. 1, the dogma of the corporal assumption of the Blessed Virgin Mary to heaven.

Concern for peace was shown by Pope Pius in an encyclical letter in December calling on all Roman Catholics throughout the world to start a crusade of prayers to avert war. In his

Christmas broadcast also, the pope appealed to the Soviet Union and the western powers to enter into direct negotiations to avert war. (See also ROMAN CATHOLIC CHURCH; VATICAN CITY STATE.) (J. LAF.)

**Plague, Bubonic and Pneumonic.** The World Health organization (United Nations) proposed, in its meeting of Dec. 1949, to implement active measures against plague. A committee whose membership was composed of persons experienced in experimental and practical aspects of the subject was organized and agreement was reached on the designation of some members to the execution of specific studies. After general discussion, it was decided that a more definite knowledge of the extent of dissemination and the delimitation of endemic areas was of fundamental importance. More specifically, it was agreed that the relationship of wild rodent plague to that of domestic rodents was to be studied, and Africa was selected as the site for these observations. Demonstrations of control methods by the use of rodenticides, pulicides and practically applicable rat-proofing were to be carried out in Bombay province, India, and possibly in Madagascar. A recommendation was made for a study of the disinfestation of rice by fumigation with liquid hydrocyanic gas, as in practice at Colombo, Ceylon, but because of the danger inherent in the use of the liquid gas, alternative methods were selected, which included the application of cyanogas (calcium cyanide) by pouring the powdered chemical over the rice while in bin storage, also the use of methyl bromide and acrylon. Treatment of pneumonic plague by the administration of streptomycin was set for trial in South Africa and China. Prophylaxis was to be investigated by the administration of sulfadiazine or sulfamerazine to the contacts of cases. Studies were to be made toward establishing a world-wide nomenclature of animal reservoirs and plague vectors.

The significance of these proposals for organized investigations under a central agency was attested by the world-wide incidence of plague, the suggested variations in its epidemiology in different areas and in the diversities among reports concerning its control and the treatment of cases. Between January and June 1950, human cases were reported to have occurred in Africa—83 cases, of which 45 were in Madagascar; Asia—Burma, 342 cases, China 943 (Fukien province, 696), India 36,529, Indochina 492, Java 339, Thailand 56, and a scattered few in other eastern countries; South America—Ecuador 14, Peru 16, Venezuela 5; North America—the United States 3.

In Bolivia, the disease was apparently of low-grade endemicity with occasional outbreaks of epidemic proportions. Seventeen years earlier a severe epidemic had occurred among a small population of the department of Chuquisaca in which there were 1,000 deaths. Five years later, there was a recurrence in this and neighbouring departments involving 150 reported cases, of whom 62 died. After 1948 antiplague measures were practised but during July of 1950 five cases were reported within a few days, suggesting an epidemic outbreak. A survey indicated that similar periodic outbreaks of lesser proportions had occurred in Venezuela.

An analysis of ten years' observations and experiments in Kenya, Africa, indicated a seasonal epidemicity, and disclosed factors which were at variance, apparently, with those operative in other parts of the world. *Xenopsyllus cheopis* and *brasiliensis*, *Dinopsyllus lypus* and *Ctenophthalmus cabirne* are the four common fleas in the area, and all transmit plague under experimental conditions. *Rattus* and *Mastomys coucha* are the common rats, and the latter species is probably the predominant animal reservoir of the endemic. *X. brasiliensis* is regarded as the most important vector to both rats and man. The plague outbreaks and seasons are accompanied by a marked increase in the number of *Rattus*. As many of these were trapped during one week of an

outbreak as during four months of a quiescent period. The absence of *Rattus* is a main factor in the absence of the disease. The flea index of both *Rattus* and *M. coucha* was much higher during the quiescent period than during the outbreak. It is not a high flea index but a prevalence of *Rattus* that is responsible for the initiation and continuance of an outbreak; and the number of fleas on a rat has no correlation with its sickness or health. It was suggested that *X. brasiliensis* is stronger, numerically, during the initial plague period, and declines with the subsidence of the epidemic. During the subsidence, the ratio of males to females increased, and in the quiescent periods, males predominated, numerically.

Other observations indicated that all fleas do not leave dead rats at once, some species leave sooner than others. *X. cheopis* leaves early, others remain for days. *X. cheopis* is associated more with rats living underground, and *X. brasiliensis*, with those living in roofs. *X. cheopis* areas are distinguished by an intensity of human infections, whereas *X. brasiliensis* areas show a low incidence in man. No satisfactory explanation of this difference had been developed.

The development and use of new chemicals as rodenticides continued during the year. A report of the use of sodium fluoracetate during four years in the deratization of ships indicated that poisoning by this chemical was gaining precedence over fumigation. It was distributed as a 1 to 256 aqueous solution tinted with nigrosine, as a warning, in crateriform paper cups of three-quarter fluid ounce capacity. The number of cups placed on a ship depended upon its size, structure, cargo and degree of rat-proofing, but averaged 60 to 70. The period of exposure averaged about 18 hours, after which the rats and cups were collected, and the latter promptly destroyed by burning. The efficiency of the procedure was regarded as a kill of 91.8% of the rats estimated to have been on the ship. As an additional measure of precaution the cups of poison were placed in and surrounded by an ample area heavily dusted with dichloro-diphenyl-trichlorethane (DDT) for the purpose of killing fleas which left the rats. Many of the latter died within short distances of the cups.

A compound, 3 ( $\alpha$  phenyl  $\beta$  acetyl) 4 hydroxy coumarin, related to dicoumarol, was proposed by the Wisconsin Alumni Research foundation to be used as a rodenticide under the name W.A.R.F. 42. A field test of this compound was made in a second-class residential section of a city in the United States. The number of rats per city block was estimated, and a box of poisoned bait, one milligram of the poison to a gram of finely ground corn, was set out for each colony detected. Control conditions were maintained for reference. It was concluded that the kill averaged 84.5% under the conditions of the test and based on the estimates of the numbers of rats previously present and those subsequently found dead. It was considered that the poison was relatively harmless to handle. Three to five days exposure as bait was the more effective period. The results of poisoning were short-lived since a survey of the area three months after the poisoning operations indicated that there had been an increase of 88% of the post-poisoning population. In the undisturbed reference city blocks, the population continued without change.

An outbreak during 1950 of five cases of pneumonic plague in Calcutta appears to have been satisfactorily controlled by the administration of sulfadiazine and streptomycin. Such treatment had been relatively successful among laboratory animals under varying experimental conditions, but pneumonic plague in man results in a fatality rate of high degree.

**Plant Industry, Soils and Agricultural Engineering,**  
**Bureau of:** see AGRICULTURAL RESEARCH ADMINISTRATION.

**Plastics Industry.** The plastics industry in the U.S. broke all records in 1950 when it produced more than 1,500,000,000 lb. of synthetic resins and cellulose as compared with a little more than 1,000,000,000 lb. in 1949. While the figures are subject to individual interpretations and varied methods of compilation, Table I gives a working comparison.

Table I.—*Production of Synthetic Resins and Cellulosics*  
 (in pounds)

	1949	1950*
Cellulose plastics (all)††	90,500,000	127,000,000
Phenolics††	250,500,000	376,500,000
Urea and melamine†	115,500,000	174,000,000
Styrene and styrene-derivative polymers and copolymers†	222,500,000	300,000,000
Vinyls†§	302,000,000	411,000,000
Miscellaneous†	125,500,000	266,000,000
Total	1,106,500,000	1,654,500,000

\*Last four months estimated.

†Includes fillers, plasticizers and extenders.

‡Excludes data on protective coating resins.

§Includes data for spread coating and calendaring-type resins.

||Includes data for acrylic, polyethylene, nylon and other moulding materials.

¶Includes data for about 100,000,000 lb. of coumarone-indene and petroleum resins plus alkyd, nylon, silicone and other resins for miscellaneous uses.

Source: United States tariff commission figures and *Modern Plastics* estimates.

The outstanding feature of the plastics industry during 1950 was the increasing number of large extrusion machines put into service. As shown in Table II, only 3 machines of 30-oz. or larger capacity were delivered in 1947; in 1950, 91 were delivered.

Table II.—*Injection Machines Delivered, by Size*

	2-oz. or less	3-, 4-, 6-oz.	8-, 10-oz.	12-, 16-oz.	20-, 28-oz.	30-oz. and more
1947	74	48	34	103	23	3
1948	182	74	39	81	21	12
1949	392	52	103	113	6	34
1950*	181	113	156	229	34	91
Total	829	287	332	526	84	140

\*Sixty-five machines of 4- to 32-oz. size not included for 1950, because of lack of information on exact size. A similar ratio exists in the other years since it has never been possible to obtain the exact size of every machine shipped.

**Benzol.**—The threatened shortage of benzol in 1950 was largely made up by imports. In the first eight months United States imports of benzol were 4,500,000 gal. from Great Britain; 3,000,000 gal. from Poland and Czechoslovakia; and 800,000 gal. from Canada. Contracts were made for about 45,000,000 gal. to be imported from the United Kingdom over a year's time, starting in the summer of 1950. Benzol users asserted that this imported material plus domestic production would be enough to assure a sufficient supply of benzol for the facilities available to handle it in 1951—provided, of course, that there was no all-out war.

**Styrene.**—The big 1950 increase in polystyrene was spread out among all types of applications, but the most spectacular growth was in the ever-increasing size of moulded pieces. Refrigeration parts and equipment, housewares, wall tile, novelties, toys and premiums, and television parts were the leading products.

Production of polystyrene moulding material approached 250,000,000 lb. in comparison with 184,000,000 lb. in 1949. Production increased from 16,000,000 lb. in February to almost 25,000,000 lb. in September, yet there were estimators in the industry who claimed that 30,000,000 lb. or more could have been absorbed in each of the last six months. In 1949 the largest month's consumption (October) had been 19,000,000 lb., and the monthly average had been about 15,000,000 lb. Thus, moulders used more than 33½% more polystyrene in 1950 than in 1949.

**Polyesters.**—The styrene-based polyesters, which contain

"PLAXPAK" BOTTLES being used to package toiletries, chemicals and other products in 1950. Made of polyethylene, a plastic, the bottles are squeezable and therefore useful for creams and liquid sprays, and were impervious to certain acids affecting glass

about one-third styrene, were manufactured in 1950 in quantities at least three times that of 1949 when 3,000,000 lb. were turned out. Corrugated sheet for skylights and other structural forms was claimed to be the biggest outlet. Polyesters were being used to an increasing extent in the manufacture of washing machine tubs and in dishwashers, and they were used in making such commodities as tote boxes for bakeries and textile mills. The aviation industry and the boat industry also used considerable quantities.

**Cellulosics.**—Cellulose acetate and cellulose acetate butyrate moulding powder production was around 80,000,000 lb. in 1950 in comparison with 56,000,000 lb. in 1949. Materials were on allocation for months, and many millions of pounds more could have been sold if they had been available.

Acetate usage not only grew because of a general increase in demand for all plastics, but also benefited by intense design and merchandising campaigns by material producers; by a low-cost opaque material that met with wide acceptance; by higher heat- and flame-resistant materials that proved highly successful in Christmas tree ornaments, electrical appliance housings and kitchen cutlery. Butyrate, as usual, continued to advance in applications where its stability was highly desirable, but gained particular acceptance in transparent housings where visibility is desirable and made definite inroads into the pipe market because of its toughness and noncorrosive properties.

Cellulose propionate (Forticel) was discontinued in 1950, not only because of material shortages and pressure of work on other materials, but because other hard formulations of acetate were developed, capable of doing almost the same job as any other cellulosic and at the same price as standard material.

Acetate film of less than 0.003 gauge increased in volume by between 4,000,000 and 5,000,000 lb. over the amount used in 1949. This increase resulted largely from a new dry extrusion

process that got under way in 1950.

Interest in ethyl cellulose for moulded items reached its highest point since 1945. Scale models for advertising promotion, textile bobbins, tool handles, large-size refrigerator pieces, extruded wire coating for use in blasting operations, and sporting goods items such as shotgun shell casings, bowling pins, golf club faces and football helmets in ethyl cellulose were all beginning to make their presence felt in the markets.

**Acrylic.**—Acrylics were under allocation by producers before the end of the year. Moulding material was sold in the greatest quantity ever reached. Automobile medallions, lenses, etc., were by far the largest outlet, but large moulded signs were beginning to show up in increasing quantities.

**Polyethylene.**—Polyethylene was first of the plastics to feel the direct impact of increased military demand. One of the most widely discussed military applications was the WD-1 assault wire used for telephonic communications in the field. The wire requires about 14 lb. of polyethylene and 9 lb. of nylon per mile.

At the beginning of 1950 it was estimated that total capacity for polyethylene production was somewhere between 50,000,000 and 60,000,000 lb. annually. A great portion of it was used for film and sheeting. Thin gauge was used for packaging, refrigerator bags and in various types of consumer goods. Extruded pipe that would not corrode began to find a market. Polyethylene dishware factories sprang up in various parts of the country.

**Phenolic.**—The phenolic branch of the plastics industry produced more than 370,000,000 lb. of material in 1950 compared with slightly more than 250,000,000 lb. in 1949. A good portion of this increase was in moulding material where there was a growth of from 131,000,000 lb. in 1949 to considerably more than 210,000,000 lb. in 1950.

Phenolic laminating-resins production increased from 40,000,000 lb. in 1949 to almost 70,000,000 lb. in 1950. Decorative laminates continued to make gains, but industrial laminates constituted the bulk of the business.

Miscellaneous phenolic resins for use in brake linings, grinding wheels, rock-wool binder, cast resins, wood waste and foundry moulds or cores showed almost a 20% production increase in 1950. The two newest—wood waste and foundry core resins—were reported to account for about 7% of the total production.

**Urea and Melamine.**—Urea and melamine resins made large gains in production in 1950. The moulding powder and laminating resins gained more than 45% in 1949. Of the almost 70,000,000 lb. produced during the year, substantially more than 50,000,000 lb. were estimated to be urea, compared with an average production of about 30,000,000 lb. during 1949. Urea crystal, the material from which the plastic is made, became scarce toward the end of the year.

The supply of melamine was limited during the last quarter of 1950. The demand for laminating resin used in decorative laminates, and the wide acceptance of melamine moulded dishware, were probably the leading factors in this situation.

**Vinyl.**—Everything in this category—including plasticizer, filler and all types of vinyl including vinyl chloride and copolymers, butyral, formal, acetate, alcohol and saran—consumed a total of more than 500,000,000 lb. in 1950. There were sizable increases in every end use. Film of less than ten gauge continued its lead as the largest volume user with the principal end uses continuing to be draperies, shower curtains, raincoats and tablecloths. An even greater percentage of growth was in unsupported sheeting. The increase was generally credited to more volume in the automotive upholstery field, a more extended use of upholstery to include different styles in chairs, and considerably more use of vinyl in luggage.

The fabric coating increase included an increase in the use

of plastisols and organosols for spread coating. Perhaps 60% of this material was spread-coated, and was encroaching on the calendering field. Nearly all the materials with a seven- or eight-mil coat were now spread-coated, as were even some of the thicker materials. Fabric-backed upholstery for the automotive trade is generally calendered because it is more economical in long runs, but such items as automotive visors, kick plates and trim may be spread-coated, since they do not require heavy sheet. **Pleven, René** (1901— ), French prime minister, was born on April 13 at Rennes. After graduating in law at the University of Paris, he chose a business career and at the outbreak of World War II was managing director of an industrial company in Great Britain. He went to the U.S. as deputy chairman of the French Air mission but was back in France at the time of the capitulation. He joined Gen. Charles de Gaulle in London and was sent to assist in rallying French Equatorial Africa to the Free French cause. After his return to London, he became commissioner for economy, finance and the colonies in the French National committee in Sept. 1941. He was minister of colonies in the French provisional government at Algiers (June 1943) and minister of finance in De Gaulle's first government formed in Paris (Nov. 1944); subsequently he added the portfolio of national economy to that of finance, retaining both until Jan. 1946. Pleven was a member of the first constituent assembly (Oct. 1945-May 1946) and of the national assembly elected on Nov. 10, 1946. He held no further ministerial office until Oct. 1949 when he became minister of national defense in the Georges Bidault government. After its defeat on June 24, 1950, he declined the president's invitation to form a new government and remained minister of defense in the Henri Queuille government June 30-July 1. On July 11 Pleven was confirmed as prime minister by the national assembly and the following day formed a coalition cabinet of M.R.P. (*Mouvement Républicain Populaire*), Radicals, Socialists and a few smaller groups.

**Plutonium:** see ATOMIC ENERGY.

**Pneumonia.** During the year 1950 terramycin was added to the list of effective antibiotics. This new agent, which resembles aureomycin in almost every important respect, was, like the latter, found effective against almost all the bacteria which are important in the causation of pneumonia. Early reports of the use of terramycin in experimental infections and some limited observations on patients suggested that terramycin, like aureomycin, is also effective against the rickettsias, including Q fever, and also appeared to have a beneficial effect on the so-called viral pneumonias, although the exact causative agent of the latter was still unknown. Details concerning the isolation and properties of terramycin and the results of studies on this agent in a number of laboratories and clinics were presented at a conference held by the section of biology of the New York Academy of Sciences on June 16 and 17, 1950.

In one series of cases of pneumococcal pneumonia, aureomycin was found to be at least as effective as penicillin. In those cases the fatality rate actually was lower and the temperature fell more rapidly in the patients treated with aureomycin than in a larger series of patients previously treated with penicillin at the same hospital and under the direction of the same physicians. This was of particular interest because when cul-

tures of pneumococci obtained from patients with pneumonia are grown in the presence of various antibiotics, their growth is completely inhibited by concentrations of penicillin which are considerably smaller than those of aureomycin required to produce the same effect. In experimental infections of cotton rats or chick embryos with a virus obtained from cases of pneumonia, aureomycin was found to be much more effective than chloromycetin, but direct comparisons of the effects of these agents in viral pneumonias in human patients had not been reported.

A great deal more of controlled experience would be needed before any judgment was made concerning the relative effects of the newer agents on the pneumonias caused by these or other microbial agents. In the meantime, it was safe to say that, among such antibiotics as penicillin, streptomycin, aureomycin and terramycin, there was a choice of effective and beneficial agents available for the treatment of patients with almost every one of the specific types of pneumonia. This aspect was becoming increasingly important, because with the widespread use of chemotherapy and antibiotics for all types of infections, an increasing number of people were rendered sensitive to one or another of these agents so that they might have serious reactions when it was administered to them. Fortunately, the person who is sensitive to one antibiotic and has unfavourable reactions when it is administered may still be able to tolerate the other agents and may be treated effectively with one or another of them. In addition, when a patient with pneumonia fails to respond favourably to one of the antibiotics, treatment with another may still prove successful.

Statistical data from the Metropolitan Life Insurance company reflected the effect which the introduction and widespread use of these successive therapeutic agents had produced on the death rate from pneumonias among its policy holders. These data showed more or less constant decline in deaths from pneumonia, particularly since 1935. The latest figures for death rate recorded for this disease were less than one-fourth what they were in 1935.

The common cold and influenza are known to be most important predisposing factors in cases of pneumonia. In addition, because of their great prevalence—throughout the large part of the year in the case of the common cold and during epidemics in case of influenza—these simple illnesses are a major source of disability and result in a large number of man-days lost to industry. Many attempts have been made, therefore, to prevent and to cure these diseases. During 1950 the antihistaminic drugs, which had been proved to have considerable usefulness in the treatment of certain allergic conditions, were widely publicized as having a most decisive effect in preventing and curing the common cold. Subsequently, however, it was shown by numerous separate and independent groups of observers on the basis of extensive and carefully controlled studies that the antihistaminic drugs seem to have neither preventive nor curative effects on the common cold.

Other studies published during the year indicated that neither the common cold nor influenza viral infections, when uncomplicated by other infections such as bacterial pneumonia and streptococcal sore throats, were favourably influenced by early treatment with penicillin and the same was probably true of the other antibiotics that were available.

In the case of influenza the problem of preventive vaccination was complicated by the demonstration of many new variants of influenza viruses among the strains isolated from acute cases during recent outbreaks. Vaccines produced with older standard strains of influenza virus appeared to offer little protection against infection with some of these newer viruses, although they were closely related to some of them. However, much of

the morbidity and mortality from influenza in the past had been associated with complicating infections, chiefly pneumonia caused by common bacteria. It was believed that the early use of the new antibiotics in severe cases of influenza, or if they were given as soon as such complications were suspected, might be expected to limit the mortality and reduce or eliminate some of the serious complications of this epidemic disease.

Additional knowledge was accumulated concerning the widespread occurrence of Q fever. This influenzalike disease was first recognized in Australia and was later found to be frequently associated with pneumonia and to occur in some parts of the United States, in the Balkan countries and in almost all other European and middle eastern countries. A survey was published in 1950 which indicated how widely prevalent this disease had been in southern California. Epidemiologic studies carried out there indicated that Q fever had been occurring in the Los Angeles area for several years and that as many as 50,000 persons may have been infected with the causative microbe of this disease in recent years. A sizable proportion of these infections caused many persons to have an acute illness, with fever for two or more days, but the illness was not recognized as Q fever. The most frequent and most important sources of human infection were local dairy cows, their very young calves and some of their raw products, particularly raw milk and hides. The persons most apt to have been infected were those who used raw milk in their households, those whose residences were located near a dairy or livestock yard, those who worked in industries handling live or recently killed local dairy cows and young calves (employees in dairies, meat-packing plants and fat-rendering plants) and employees handling the raw products of such animals, such as workers in creameries or hide plants.

An outbreak of Q fever was also reported in Philadelphia, Pa., among workers in a wool-processing plant. The workers were engaged in handling and processing raw wool and goat hair. In this connection it is of interest that the causative agent of Q fever (*Coxiella burnetii*) was isolated from the milk of sheep, and in some cases of the disease there was a history of contacts that specifically suggested sheep as a source of infection. *Coxiella burnetii* was also recovered from the dust-laden air of a dairy in southern California and from dust-laden air of a sheep ranch in northern California. These findings lent further support to the contention that the air-borne route is an important if not the most significant one for the natural infection of human beings with Q fever. Some progress was also made toward developing an effective vaccine for the protection of persons who may be heavily exposed to Q fever infection.

**Poland.** A people's republic of eastern Europe, Poland is bounded on the east by the U.S.S.R., on the south by Czechoslovakia, on the west by Germany and on the north by the Baltic sea. Area: (before Sept. 1, 1939) 150,052 sq.mi.; (after Aug. 2, 1945) 120,359 sq.mi.—a reduction by one-fifth, the result of the annexation of 68,667 sq.mi. by the U.S.S.R. and of the establishment of a new western frontier along the rivers Oder and Neisse which, together with the partitions of East Prussia between Poland and the U.S.S.R., gave Poland an area of 38,974 sq.mi. Population: (before Sept. 1, 1939) 35,339,000; (Feb. 14, 1946, census) 23,929,757; (Dec. 1950 est.) 25,036,000. Language: Polish. Religion: overwhelmingly Roman Catholic. Chief towns (with latest est. pop.): Warsaw (Warszawa) (cap., Nov. 1, 1950, 673,959); Łódź (July 1, 1949, 615,000); Cracow (Kraków) (Dec. 1, 1949, 347,517); Poznań (July 20, 1950, 341,678); Wrocław (Sept. 1, 1948, 299,000); Szczecin (Dec. 1, 1949, 201,000); Gdańsk (Danzig) (Sept. 1, 1948, 164,000); Katowice (Sept. 1, 1948, 163,000).

President of the republic: Bolesław Bierut; prime minister: Józef Cyrankiewicz.

**History.**—Soviet control over Poland's home affairs, armed forces, economy and cultural life was further tightened during 1950; the nation's imposed isolation from the west seemed complete, social intercourse between Poles and the western diplomatic corps was reduced to a minimum and by the end of the year the only western correspondent left in Warsaw was Edward A. Morrow of the *New York Times*.

At a meeting of the central committee of the Polish United Workers' (Communist) party, held in Warsaw from May 8 to May 10, the chairman, B. Bierut, forecast a depression in the U.S. and increasing divergencies between the foreign policies of the U.S. and Great Britain. He insisted that at home the party should be more vigilant in unmasking class enemies, foreign spies and saboteurs.

The Communist grip on the government increased during the year. Cyrankiewicz, a former Socialist, remained formally prime minister, but the real power was in the hands of the three Communist deputy prime ministers, Hilary Minc, A. Zawadzki (appointed on May 3) and Hilary Chelchowski (appointed on June 14).

The fourth deputy prime minister was Antoni Korzycki, leader of the United Peasant party. During the year this party was once more heavily purged.

The fiction of a coalition government was maintained during the year: Jan Rabanowski, who in March was elected leader of the Democratic party, continued to serve as minister of transport.

On March 20 the *sejm* abolished the offices of provincial governor (*wojewoda*), of district administrator (*starosta*), of mayor (*burmistrz*) and of chairman of the rural council (*wójt*), establishing instead popular councils on the soviet model; these were responsible to the state council (*rada państwa*), a small body of picked Communists presided over by Bierut and similar to the presidium of the supreme soviet of the U.S.S.R. This reform put an end to such little self-government as remained and heralded the introduction of a new soviet-inspired constitution which simplified the control of the country by the Politburo of the Communist party.

Until Feb. 1950 the duration of compulsory military service was 18 months and recruits were conscripted at 21. On Feb. 4 the *sejm* increased the general period of service to two years (three years in the air force and the navy and 27 months in the home security formations) and the age of conscription was lowered from 21 to 20 years. By this procedure the Polish armed forces consisted from October of three age groups and comprised about 510,000 men.

The high command of the armed forces was exclusively composed of high-ranking soviet officers of Polish origin or with Polonized names.

The trouble which had been fermenting between the Communist regime and the Roman Catholic Church for five years came to a head. Hostilities were opened by the government on Jan. 23 when, under the pretext of preventing misuse of goods and money, it seized control of Caritas, a charitable organization receiving funds and relief goods from public collections in Poland and abroad (mainly from the U.S.) and also subsidies from the state. The Polish hierarchy met in Cracow on Jan. 30 and on Feb. 12 a statement was read from the pulpits throughout the country. Four days later Adam Cardinal Sepieha, archbishop of Cracow, and Msgr. Stefan Wyszyński, archbishop of Gniezno and Warsaw and primate of Poland, addressed a letter to Bierut accusing the government of bad faith in dealing with religion and the church. The government replied on Feb. 27 by a communiqué accusing the hierarchy of hostility toward the people's Poland. On March 20 a law was passed by the *sejm* by which all estates and farms exceeding 250 ac. owned by the church were to be seized together with all livestock and buildings.

On April 14, in the name of the hierarchy but without the sanction of the Holy See, an agreement was signed by Msgr. Zygmunt Choromański, bishop auxiliary of Warsaw, Msgr. Tadeusz Zakrzewski, bishop of Plock, and Msgr. Michał Klepacz, bishop of Łódź; for the government the document was signed by Władysław Wolski, minister of public administration, and by two members of the Politburo, Edward Ochab and Franciszek Mazur. The agreement included a guarantee by the state of religious tuition in the schools, of pastoral care in the armed forces, hospitals and prisons, of the continued activity of the Catholic university at Lublin, and of publication of Catholic books and periodicals. It also recognized the pope as the authoritative and supreme head of the church in matters of faith, morals and ecclesiastical jurisdiction; in other matters, however, the hierarchy was to be guided by the state. The bishops agreed to support efforts directed toward "the preservation of peace and to oppose tendencies working for the preparation of a new war"; they also stated that the recovered territories east of the Oder-Neisse line belonged perpetually to Poland and undertook to ask the Holy See to recognize Polish sovereignty there by appointing diocesan bishops in place of the apostolic administrators in Wrocław, Gdańsk, Gorzów, Opole and Olsztyn.

On the day of signature of the agreement Cardinal Sapieha arrived in Rome and on April 20 was received by the pope, returning to Cracow on May 9. Two days earlier an Office for Religious Cults was established at the presidency of the council of ministers with a Communist, Antoni Bida, as director. Failing to carry out the April agreement, the government suppressed religious tuition in more than 1,000 schools and the police continued to harass the clergy. On Sept. 12, after a special episcopal assembly at Częstochowa, Cardinal Sapieha and Archbishop Wyszyński addressed a second letter to Bierut surveying the previous five years and protesting that despite assurances the government was waging an unrelenting struggle against religion and the church. The government replied by countercharges. On Oct. 24 Bida sent a note to Msgr. Choromański, secretary to the hierarchy, accusing the church of an attitude antagonistic to Poland's national interests because it had failed to recognize the new frontiers and to appoint bishops in the recovered territories. The Communist regime was thus able to bring its campaign against religion onto ground where it had almost the whole nation behind it.

On June 5 a delegation of the eastern German government led by Walter Ulbricht, deputy prime minister, arrived in Warsaw to discuss outstanding questions between the two countries. An

OPEN-AIR PEASANT MARKET in Lemberg, showing used personal belongings for sale. These and agricultural products were among the few articles permitted free commercial exchange in Poland in 1950, the prices of most other goods being fixed by the soviet government

agreement recognizing the Oder-Niesse line as the permanent frontier was initialed. It was signed on July 6 at Zgorzelec-Görlitz, a town on the river Neisse divided in two by the new frontier. (See also GERMANY.)

**Education.**—Schools (1949-50): kindergarten 5,860, pupils 343,000; primary 22,417, pupils 3,242,000, teachers 76,560; secondary (1948-49), lower grade 335, pupils 197,110, higher (liceum) grade 486, pupils 140,893; secondary vocational 1,131, pupils 183,440; teachers' colleges 149, students 31,000; higher vocational institutions 39, students 16,988; universities 8, technical colleges 5 and other institutions of higher education 14, students 92,444.

**Finance and Banking.**—Budget (prerevaluation): (1949 est.) balanced at 612,058,000,000 zlotys; (1950 est.) balanced at 1,265,800,000,000 zlotys. Currency circulation (Dec. 1948, last figure published): 128,800,000,000 zlotys. A drastic currency revaluation was introduced on Oct. 28, 1950, to bring the zloty at par with the soviet rouble. Banknotes were exchanged at the rate of 100 old zlotys to 1 new zloty except in the case of industrial workers and collective-farm peasants who were allowed to exchange their cash at the ratio of 100 to 3; savings accounts and all bank deposits up to 100,000 zlotys were revalued at the rate of 100 to 3; wages and prices were reduced at the same ratio. The new exchange rate was U.S. \$1=4 zlotys.

**Foreign Trade.**—Figures for 1949 were issued in roubles: imports 2,530,000,000 roubles, exports 2,476,000,000 roubles.

**Transport and Communications.**—Railways (Jan. 1948): 21,415 km.; freight traffic (1949, monthly average) 2,724,000,000 ton-kilometres; passenger traffic (1949, monthly average) 1,752,000,000 passenger-kilometres. Roads (April 1947): 96,605 km. Licensed motor vehicles (April 1948): cars 24,240, buses and trucks 28,957, motorcycles 24,561. Shipping (May 1949): merchant vessels 46, total tonnage 164,989 gross registered tons. Freight traffic in Polish ports (monthly averages, metric tons, 1949): unloaded 238,000, loaded 1,171,000. Air transport (1948): Polish air lines, kilometres flown 2,400,000, passengers flown 77,522; foreign air lines, passengers flown 6,960. Telephones (Jan. 1948): subscribers 137,400. Radio receiving set licences (July 1949): 1,054,551 including 335,489 home loud-speakers.

**Agriculture.**—Main crops (in metric tons, 1949): wheat 1,781,000; rye 6,759,000; barley 1,028,000; oats 2,333,000; sugar, raw value 825,000; potatoes 26,670,000. Livestock (mid-1949) cattle 6,345,000; horses 2,541,000; pigs 5,818,000; sheep 1,617,000; goats 654,000. Fisheries: total catch (1949 est.) 69,600 metric tons.

**Industry.**—Fuel and power: coal (1949) 74,076,000 metric tons; electricity (1949) 8,148,000,000 kw.hr.; crude petroleum (1948 est.) 132,000 metric tons. Raw materials (metric tons, 1949): steel ingots and castings 2,304,000; lead (1948) 18,500; zinc (1948) 120,000. Manufactured goods (metric tons, 1949): cotton yarn 91,200; wool yarn 38,-

500; rayon filament yarn 9,000. Cement (1949) 2,340,000 metric tons. BIBLIOGRAPHY.—T. Komorowski, *The Secret Army* (London, 1950); A. Zoltowski, *Border of Europe* (London, 1950). (K. SM.)

**Pole Vaulting:** see TRACK AND FIELD SPORTS.

**Police.** An important development of 1950 was completion of the report of the Committee on Police Conditions of Service (for England and Wales) which was appointed in 1948 by the home secretary, with Lord Oaksey acting as chairman. This review promised to rank with the report of the Desborough committee in 1919 British police recruiting difficulties since World War II had been so severe that the findings of the Oaksey committee proved especially timely. The committee's first report, in 1949, had proposed immediate pay increases and certain preliminary improvements in conditions of service, so that 1950 witnessed a perceptible advance in the rate of recruitment. Nevertheless, the 127 police forces of England and Wales and the 36 forces in Scotland showed only gradual recovery of a manpower depletion that stemmed back to midwar shortages. Emphasis was accordingly being placed upon an increasing use of training facilities at regional police schools, and further motorization and mobile radio service for uniformed patrols. By these recourses it was anticipated that the reduced strength might be offset by improved methods.

By contrast, police in the United States were increasing in number in 1950; the preceding ten years had witnessed a 20% enlargement of the ratios.

Table I.—Numerical Strength of U.S. Municipal Police Forces

(Number per 1,000 inhabitants)			
Population groups of cities		1950	1940
Group I—Over 250,000	.....	2.44	2.12
Group II—100,000 to 250,000	.....	1.78	1.45
Group III—50,000 to 100,000	.....	1.76	1.37
Group IV—25,000 to 50,000	.....	1.65	1.23
Group V—10,000 to 25,000	.....	1.51	1.05
Group VI—Less than 10,000	.....	1.42	1.04
		1.95	1.61

Police salaries also continued their rapid upswing, reaching a 1950 average cost for cities of \$6.72 per capita for local population. This level was more than 50% higher than that prevailing five years before. As yet, however, there was no evidence of a systematic approach to the policeman's hire, such as the Oaksey committee had maintained, and in the United States the entire issue was being allowed to drift on an uncharted course in response to inflationary influences. Highest salary paid for the rank of patrolman was \$4,375, with national averages ranging between \$2,520 and \$2,760 per annum. Per capita expenditures for all police purposes rose to \$8.04, thereby emphasizing the need for considering numbers and salaries together.

Enlarged quotas of police, an unparalleled wealth of equipment, increased salaries, shorter hours and liberal pension arrangements had operated to raise the formal standards of policing in the United States during a generation or so. But since the onset of World War II city police had been relatively unsuccessful in solving their cases, as shown in Table II. While the marked decline in effecting arrests for burglary and larceny was disturbing in its implications, it must be borne in mind that reduction in the amount of crime is the ultimate aim of all policing.

Table II.—Per Cent of Crimes Cleared by Arrest in U.S. Cities

Uniform Crime Classification (Part II)	1949	1944	1939
Murder and nonnegligent manslaughter	93.7	90.8	87.4
Manslaughter by negligence	85.1	81.5	87.7
Rape	80.2	74.8	81.8
Robbery	39.5	38.7	41.9
Aggravated assault	77.2	75.7	76.5
Burglary	29.0	31.6	34.0
Larceny	21.6	23.2	25.1
Auto theft	27.3	24.4	24.4

The International Criminal Police commission, representative of the police forces of western Europe, met in Paris during the summer of 1950. In both Europe and the orient the countries still under occupation by western military forces were permitted to enlarge their independent spheres of police activity.

The International Association of Chiefs of Police held its 57th annual conference at Colorado Springs, Colo., Oct. 7-12. Total registration exceeded 1,300 police administrators and conference guests. Official representatives from the United States, Canada, Great Britain, Belgium, Formosa, Germany and Japan attended. Discussions of public relations, organized gambling and Communist activities were included, among other subjects. Walter F. Anderson, director of the North Carolina state bureau of investigation, was elected president of the association for the ensuing year. (See also CRIME; FEDERAL BUREAU OF INVESTIGATION; SECRET SERVICE, U.S.)

**BIBLIOGRAPHY.**—International City Managers Association, *Municipal Year Book*, vol. 17 (1950); England and Wales, *Report of His Majesty's Inspectors of Constabulary, 1949* (London, 1950); *Eighty-Sixth Report of His Majesty's Inspector of Constabulary for Scotland, 1949* (Edinburgh, 1950); Federal Bureau of Investigation, *Uniform Crime Reports for the United States and Its Possessions* (semiannual, 1949 and 1950); Home Office and Scottish Home Department, *Report of the Committee on Police Conditions of Service, Parts I and II* (London, 1949); and the four *Reports of the Police Post-War Committee* (London, 1949).

**Polo.** The 1950 polo season in the United States got off to a good start in Florida where visiting players from Chicago, Detroit, New York and Texas participated in matches from January to the end of March.

California once again played host to the Hurricanes, a well-known Long Island, N.Y. team, and to the four Gracida brothers from Mexico. In the first game of the Pacific Coast Open championship, the Hurricane team defeated the California team 13 to 9 and went on to defeat the Mexican team in the finals, 19 to 8. However, in the California-Mexico series, Mexico defeated the California team 7 to 4 and 8 to 5 in a two-out-of-three series.

The National Inter-Circuit and Twelve Goal tournaments were held at the Oak Brook Polo club at Hinsdale, Ill., during August.

California sent a team to Long Island to take part in both the National Twenty Goal tournament and the National Open championship. This team was defeated in the first game of the Twenty Goal by the Bostwick Field team which, in turn was defeated by a Milwaukee team. In the National Open the California team worked its way into the finals but was defeated by the Bostwick Field team.

In November a United States team went to Argentina to compete for the Cup of the Americas, which was at stake for the first time since 1936. In two closely fought matches, they were defeated by an Argentine team, the Venado Tuerto. (L. M. L.)

**Porto Rico:** see PUERTO RICO.

**Portugal.** A republic of southwestern Europe. Portugal forms part of the Iberian peninsula and is bounded east and north by Spain. Area: 35,413 sq.mi., including Azores (888 sq.mi.) and Madeira (302 sq.mi.). Pop. (1940 census) 7,722,152; (mid-1949 est.) 8,491,000, including Azores (1940 census, 286,885) and Madeira (250,124). Language: Portuguese. Religion:

predominantly Roman Catholic. Chief Cities (pop., 1940 census): Lisbon (cap., 709,179); Oporto (262,309); Funchal, Madeira (54,856); Coimbra (35,437). President of the republic, Marshal Antonio Oscar de Fragoso Carmona; prime minister, Antonio de Oliveira Salazar.

**History.**—A major cabinet reorganization, announced on July 31, 1950, included the creation of three new ministries: presidency (João Pinto da Costa Leite), defense (Col. Fernando dos Santos Costa) and corporations (Soares de Fonseca). The two former, integrated in the presidency of the council, lightened the administrative burden weighing on Salazar; the third was previously an undersecretaryship. Six other ministries changed hands, Trigo de Negreiros becoming minister of the interior, Aguedo de Oliveira of finance, Brig. Abranches Pinto of the army, Paulo Cunha of foreign affairs, Comdr. Sarmiento Rodrigues of colonies and Ulisses Cortes of economy.

Communist trials included one of seven men accused of planning to overthrow the government and assassinate the prime minister.

The 1950 budget showed little change from 1949 in ordinary expenditure (4,300,000,000 escudos), while extraordinary expenditure was down by nearly one-third to 900,000,000 escudos. Total receipts were estimated to allow a credit balance of 3,000,000 escudos. There was no increase in taxation, and export duties were substantially reduced. The financial year 1949 closed with a surplus of 47,000,000 escudos. Steep increases in import duties on various manufactured goods—cars, electrical equipment, industrial machinery and tools—were imposed in September in protection of new industries and of the country's trade balance; ranging from 10% to 1,000%, the increases averaged about 50%.

Economic Cooperation administration aid to Portugal in the second year (1949-50) amounted to \$31,500,000, of which \$27,500,000 were long-term loans and the remaining \$4,000,000 convertible grants. Hydroelectric development, the rebuilding of the merchant navy and the equipping of certain basic industries were first charges on the National Development fund. Import restrictions on trade with Spain were lifted in March, in furtherance of the policy of the Organization for European Economic Cooperation of freeing intra-European trade. A claim from Great Britain, France and the United States for the surrender of 43.9 tons of gold, alleged to be German war loot deposited in Portugal, was contested by the Portuguese government. Sharp falls in sardine catches for the second year in succession, indicating the possibility that the fish may be leaving Portuguese waters, severely hit the important sardine packing industry. The 1949 catch was 34,000 metric tons, as compared with 120,000 tons in 1944.

Portugal, not having requested U.S. military assistance along with the other North Atlantic treaty powers in the autumn of 1949, did so in Aug. 1950, and a survey mission of the U.S. state and defense departments visited Lisbon to examine the request.

Visa requirements for travellers spending only a few days in Portugal were lifted in May, and by an agreement in August the reciprocal exemption from visas already in force with the U.S. was extended to include Madeira. (W. C. AN.)

**Education.**—Schools (1947-48): primary 10,411, pupils 549,712, teachers 14,080; private elementary, pupils 59,938; secondary (*licéus*) 43, pupils 20,642, teachers 1,063; private secondary, pupils 24,974; technical 58, pupils 39,151, teachers 1,527; commercial 8, pupils 3,125, teachers 204; colonial high school, students 134, professors 17; universities 3, students 8,629, professors and lecturers 467; institutions of higher education 3, students 4,717, professors and lecturers 284. Illiteracy (1940) 49%.

**Finance and Banking.**—Budget: (1949 actual) revenue 5,667,300,000 escudos, expenditure, 5,666,400,000 escudos; (1950 est.) revenue 5,271,500,000 escudos, expenditure 5,268,300,000 escudos. National debt (1948) 12,515,000,000 escudos. Currency circulation (Aug. 1950) 7,680,000,000 escudos. Bank deposits (July 1950) 16,640,000,000 escudos. Monetary unit: escudo, with an exchange rate (Nov. 1950) of 28.90 escudos to the U.S. dollar.

**Foreign Trade.**—Imports (1949) 9,048,000,000 escudos; exports (1949) 4,092,000,000 escudos.

**Transport and Communications.**—Roads (1948): 16,276 mi. Licensed motor vehicles (Dec. 1949): cars 61,000, trucks 20,000. Railways (1948): 2,240 mi.; passenger-miles (1948) 810,000,000; freight carried (1949) 3,600,000 tons. Shipping (July 1949): merchant vessels over 100 gross tons 338; total tonnage 526,373. Telephones (1948): 124,639. Radio receiving set licences (1949): 187,385.

**Agriculture and Fisheries.**—Main crops (metric tons, 1949): wheat 411,000, (1950) 561,000; barley 101,000; oats 109,000; maize 220,000; rye 133,000, (1950) 158,000; rice, paddy, 74,000; potatoes (1948) 994,000; dry beans 59,000; grapes, total, 1,360,000. Production of wine (1948) 818,000 metric tons. Production of olive oil (1949) 89,000 metric tons. Livestock (Dec. 1948): cattle 1,000,000, sheep 4,000,000, hogs 1,200,000. Meat production (1949) 79,000 metric tons. Fisheries, total catch (1949): weight 184,347 metric tons; value 882,000,000 escudos.

**Industry.**—Fuel and power (1949): coal 444,000 metric tons, lignite 112,000 metric tons, manufactured gas 38,000,000 cu.m., electricity 834,000,000 kw.hr. Raw materials (metric tons): lead (1949) 2,040, tin ores (1948) 1,856, wolfram (1948) 2,617, pyrites (1948) 565, cork (1948) 131,459, kaolin (1948) 25,849. Manufactured goods (metric tons, 1949): cement 518,000, cotton piece goods 24,000, cotton yarn 30,400.

**Portuguese Colonial Empire.** Under this heading are grouped the Portuguese possessions in Africa and Asia. Their total area is approximately 803,835 sq.mi. and the total population (mid-1949 est.) 12,967,000. Certain basic facts and figures relating to the Portuguese colonies are given in the accompanying table.

**History.**—Substantial progress was made on the construction of the main dam in the new hydroelectric works at Mabubas, on the river Dande, Angola. This undertaking, among the largest ever carried out in the colony, was expected to revolutionize industrial development in Luanda, the capital. A 20-yr. agreement concerning the port and railway of Beira, Mozambique, was concluded in Lisbon on June 17 between the Portuguese, British, and Southern Rhodesian governments. By it Portugal undertook to maintain the port and railway in a state adequate for traffic from the Rhodesias, to exempt from transit dues goods passing

through Beira, and to establish a free zone in the port. The British and Southern Rhodesian governments guaranteed sufficient traffic to keep the port busy. The Economic Cooperation administration provided \$57,500 for a survey to lay the groundwork both for better railways between Southern Rhodesia and Mozambique and for port improvements at Beira and Lourenço Marques. In October the Portuguese government applied to the same agency for a loan toward the construction of a new quay at Beira.

As a consequence of less attractive labour conditions in India after its independence, the trend of emigration from Goa shifted from India to British and Portuguese East Africa. Remittances sent home by emigrants continued to play a large part in making up the heavily adverse trade balance in Goanese economy. By an agreement with the Holy See the Portuguese government renounced its rights, under the "Patronate of the Orient," in the nomination to the bishoprics of Mangalore, Quilon, Trichinopoly, Cochin, São Tomé de Meliapor and Bombay.

Minor incidents affecting China and Macao were reported. Portuguese troops opened fire on a Chinese patrol boat which violated territorial waters near Macao on March 6. The Chinese returned the fire and withdrew. Portugal rejected a charge of having several times flown aircraft over Chinese territory in October and November, saying that it had no air forces in Macao.

(W. C. AN.; X.)

**Post Office.** **United States.**—Revenues of the post office department for the fiscal year 1949-50 amounted to \$1,677,486,967.30. Additional postage that would have been collected if the service had been on a regular pay basis in the case of penalty and franked mail, free-in-county mail, differentials in second-class mail matter and free matter for the blind

"THE WONDERFUL WIZARDS OF WASHINGTON," a cartoon by Manning of the McNaught Syndicate, Inc., published in 1950

and the cost of aircraft service over the postage revenue derived from air mail was estimated at \$120,000,000.

The expenditures of the department for the fiscal year amounted to \$2,222,949,081.60, of which amount \$119,568,535.48 was on account of prior years. There was \$120,938,636.10 unpaid on account of the 1950 fiscal year. This left a total expense of \$2,224,319,182.22, resulting in a gross operating deficit on accrual of \$546,832,214.92. This amount did not include pending retroactive payments to railroads, but did include a 25% interim increase granted participating railroads by the Interstate Commerce commission. It also included the estimated increased cost for pending establishment of permanent rates on air mail routes by the Civil Aeronautics board.

The tremendous increase in the volume of mail handled by the post office department for other branches of the government had been a matter of concern to congress and the department for a number of years. Thousands of tons of forms, pamphlets, circulars and supplies were sent by government departments and establishments free of postage under the penalty privilege.

All envelopes, wrappers, cards and other articles bearing the indicia for matter mailed free of postage by all government departments and agencies must be procured or accounted for through the postmaster general. During the fiscal year ended June 30, 1950, 1,230,000,000 free pieces weighing 87,500,000 lb. were mailed for other government departments, an increase of 22,000,000 pieces and 6,300,000 lb. over 1949.

On June 30, 1950, war savings stamps were on sale at 41,464 offices. Sales from July 1, 1949, to June 30, 1950, amounted to \$13,876,750.05. During the fiscal year savings bonds with a sale value of \$328,423,687.50 were sold. At the close of the fiscal year 1950, bonds were on sale at 26,563 post offices.

Through the 41,464 post offices and 3,951 stations being conducted under contract agreement, as well as 2,236 stations and branches, there were received, transported and delivered 45,060,000,000 pieces of mail matter during the fiscal year having a weight of 11,525,000,000 lb., an increase of 1,505,000,000 pieces

but a decrease of 100,000,000 lb. from the previous year.

Delivery service was established in 219 additional cities during the fiscal year, thereby increasing to 4,632 the number of cities in which this service was operated.

During 1950 it was impossible to deliver 18,922,309 letters, an increase of 4.63% from the previous year. A total of 3,881,790 letters were returned to the senders. Letters containing valuable enclosures numbered 368,554, of which 89,825 contained money amounting to \$196,224.61. There were also 788,964 unclaimed parcels and articles found loose in the mails. A total of 135,312 were returned to the senders. The remaining 653,652 parcels were sold at public auction and \$211,699.31 was realized.

On June 30, 1950, there were 158,977 mi. of domestic air-mail routes in the United States—an increase of 3,663 mi. over the previous year. Eight new domestic air-mail routes were established. A new six-cent stamped air-mail envelope was placed on sale for the first time during the year 1950.

**Rural Delivery.**—The rural delivery routes in operation on June 30, 1950, required a total daily travel of 1,486,098 mi. by rural carriers in providing service to approximately 31,457,836 patrons. Operation of the service resulted in an expenditure of \$162,787,400 for the fiscal year compared with \$152,800,000 for the previous year. Amounts saved through consolidation of routes were utilized to establish new routes and provide extension of existing routes.

**Postal Savings.**—Postal savings depositors numbered 3,779,784 for 1950, a decrease of 4.66% from the preceding year. The balance due depositors by outstanding certificates of deposits was \$3,097,061,857, a decrease of \$180,111,449 or 5.5%. In addition there was held in trust for depositors accrued interest of \$113,302,612 and unclaimed deposits of \$254,592, making a total of \$3,210,619,061. At the end of the fiscal year, postal savings certificates were on sale at 8,233 depositories, including 1,020 branches and stations, and savings stamps were on sale at all post offices and practically all branches and stations.

**Buildings.**—During the fiscal year ended June 30, 1950, the post office department operated 3,169 government-owned buildings, but on July 1, 93 of these were turned over to the public buildings service for maintenance and operation. (I. Gc.)

**Canada.**—Although total post-office revenues for the 1949-50 fiscal year were \$101,277,434, compared with \$95,957,468 for the similar 1948-49 period, the 1949-50 net credit balance was down to \$1,888,914, compared with \$2,975,781 for the previous year. This reflected post-office wage and salary increases and the increased cost of mail transportation. The 1950-51 parliamentary vote to the post office for railway mail service was \$9,005,000. In Oct. 1950 the federal cabinet passed an order in council boosting by 25.8% the amount paid the railways. Among other 1950 post-office developments were the following: postal notes were discontinued; sales of the philatelic section during the 1949-50 fiscal year totalled \$384,308, compared with \$214,731 for the year before; in November Canadian artists were invited to submit designs for new stamps, at the rate of \$300 per accepted stamp.

FILMS OF 1950.—*Your Postal Service* (March of Time Forum Films). (C. Cv.)

**Potash:** see MINERAL AND METAL PRODUCTION AND PRICES.

**Potatoes.** Total production of white potatoes in the U.S. in 1950 was again very large at 439,500,000 bu., the fourth largest crop on record; the 1949 crop was 411,565,000 bu., and the average for the decade was 403,284,000 bu. Harvested acreage reached a new record low of 1,847,000, 3% less than that of 1949 and about two-thirds the decade average of 2,654,200 ac. Per acre yields reached a new high record of 237.9 bu. per acre, as compared with about 215 bu. in 1948 and 1949 and a 1939-48

South Carolina . . . . .	1,768	1,650	1,408	2,563

average of only 154.6 bu. per acre. Maine set a new record of 475 bu. per acre.

An average price of approximately 98 cents per bushel was estimated for the crop, as compared with \$1.29 for the 1949 crop; prices during 1950 varied between a high of \$1.36 per bushel in January to 86 cents in October, the variation being related not only to different types and seasonal factors but also to the fact that the support level dropped from 90% on the 1949 crop to 60% on the 1950 crop. Prices for a time in the autumn of 1950 dipped below support levels (\$1.68 per hundredweight national average) as the production of seven states, representing about 25% of the total crop, which had disapproved marketing orders and hence were not eligible for price support, came to market. It was estimated that government operations would eventually absorb nearly 100,000,000 bu. of the 1950 crop. Under existing law, there would be no price supports on 1951 potato production.

Consumption per capita in 1950 was approximately 108 lbs., the same as in 1949, but only 82% of the pre-World War II average.

Canada again had a very large crop and prices were low; substantial amounts were exported to the U.S. even in the face of the lower prices and an abundant supply in the states.

Estimated world potato production in 1950-51 of 8,580,000,000 bu. was 6% above the 8,062,000,000 bu. of 1949-50 and 3% above the prewar average. Acreage yields averaged 163 bu., exactly the same as the prewar average and 10 bu. more than in 1949-50. Acreage devoted to potatoes amounted to 52,783,000, slightly above the previous year and comparable with 51,000,000 ac. prewar.

The U.S.S.R. produced 2,850,000,000 bu., about one-third of the total world crop and 50,000,000 bu. more than in 1949. The European crop (excluding the U.S.S.R.) of 4,860,041,000 bu. was slightly less than the prewar average but large compared with the 4,418,296,000 bu. of 1949.

**Sweet Potatoes.**—The U.S. sweet potato crop of 1950 amounted to 58,729,000 bu., 6% more than the 55,368,000 bu. crop of 1949, but 5% below the 61,786,000 bu. average for the previous decade. The 562,800 ac. harvested was slightly larger than the 550,700 ac. of 1949 (the second smallest of the century) but substantially less than the 683,300 ac. average 1939-48. The average yield of 104.4 bu. per acre was a new record; comparable figures were the 100.5 bu. of 1949 and the 90.8 bu. average of the decade. Louisiana, as usual, was the leading producer (10,290,000 bu.), followed by North Carolina (6,785,000 bu.), Georgia (5,850,000 bu.) and South Carolina (5,671,000 bu.). The season average price to producers for the 1950 crop was estimated at \$1.72 per bushel, well below the \$2.15 per bushel

for the 1949 crop, hence an estimated value for the crop of \$100,743,000, compared with \$118,776,000 for the smaller crop of 1949. (See also FOOD SUPPLY OF THE WORLD; VEGETABLES.)

(J. K. R.)

**Poultry:** see LIVESTOCK.

**Powell, Cecil Frank** (1903— ), English physicist, was born at Tonbridge, Kent, Eng., Dec.

5. He was educated at Judd school, Tonbridge, and at Sidney Sussex college, Cambridge. After gaining first-class honours in parts I and II of the Natural Science tripos in 1924-25 he worked for a time under C. T. R. Wilson, studying the condensation of steam. From Cambridge he went in 1928 to Bristol to be research assistant to A. M. Tyndall. His earliest researches there were concerned with the discharge of electricity in gases, on which he published many papers.

In 1938 he began to work on problems in nuclear physics. An experimenter of the highest technical skill, he evolved and perfected by 1946 a method of observing the tracks of elementary particles by means of an instrument combining a photographic emulsion and a microscope. This instrument found its widest application in nuclear physics, and by 1950 its use had led to important discoveries. Of these the discovery by Powell and his collaborators G. P. S. Occhialini and C. M. G. Lattes of the heavier  $\pi$  meson in 1947 was one of the most fundamental. Powell also carried out intensive researches on the nature of the primary cosmic rays by exposing his special plates at high mountain altitudes. He was awarded the Nobel prize for physics in 1950. He was Melville Wills professor of physics in Bristol university since 1948 and a fellow of the Royal Society since 1940. Powell was joint author with Occhialini of a monograph on *Nuclear Physics in Photographs* (1947) and published numerous other works.

(W. J. Bp.)

**Prasad, Rajendra** (1884— ), Indian statesman, was born in Saran district, Bihar, India, Dec.

3. He was educated at the Presidency college, Calcutta. In 1920 he gave up a promising legal career and joined Mahatma Gandhi in his nonco-operation movement. He later became general secretary of the Indian National Congress party and a member of its working committee, and in 1934 and 1939 was president of the annual sessions of the party. From 1947 to 1950 he was Congress party president. He was often imprisoned for his part in the civil disobedience movement, his last term being from 1942 to 1945. His only cabinet office was that of member (later minister) for agriculture and food in the interim and fully constituted governments of 1946-48. He was chairman of the constituent assembly from Dec. 1946 and, two days before the proclamation of the Republic of India on Jan. 26, 1950, was named its first president. When he opened the first republican parliament on Jan. 31, the president said that it was the firm policy of his government to maintain friendship with all other nations and, addressing an emergency session at the end of July, emphasized that the Korean conflict had made it "even more necessary than before that there should be co-operation among independent countries of Asia."

**Precious Stones:** see GEM STONES.

**Presbyterian Church.** The western section of Reformed Churches throughout the world holding the Presbyterian system, within the United States of America, numbered 12 branches of Reformed Churches in 1950, and included 18,461 ministers, 18,571 churches and 4,521,607 communicant members.

Negotiations for union among the various members of the World Presbyterian alliance were carried on during the year.

The United Presbyterian Church of North America was negotiating for a union with the Reformed Church in America, the Associate Reformed Presbyterian Church, the Presbyterian Church in the United States (Southern) and the Presbyterian Church in the United States of America (Northern). A plan for union of the latter two bodies was also in the process of development.

The Presbyterian and Reformed Churches were also participating actively in a program of union beyond the reaches of the alliance. In Dec. 1949 the Greenwich conference, comprising delegates from churches with a combined membership of 15,000,000, was held and an organization known as the Conference on Church Union was formed. Delegates from the Presbyterian Church, U.S.A., and from the Evangelical and Reformed Church were present. The Presbyterian Church, U.S., sent an observer. Presbyterians participated actively in an interdenominational movement, known as the National Council of the Churches of Christ in the U.S.A., that met in Cleveland Nov. 28-Dec. 1, 1950. This council brought together eight denominational agencies of 29 major Protestant and Eastern Orthodox communions, comprising 150,000 churches and 31,000,000 communicant members. Its purpose was to unify the work of the different denominations at home and in the mission field. The major Presbyterian and Reformed bodies joined in this movement for unity of action.

The various branches of the Presbyterian Church launched a movement, known as the New Life movement, to evangelize those outside of the Christian church and awaken nominal members. Lay workers visited the unchurched peoples to win them to a positive allegiance to Christ. During the three years in which this movement had been in effect the increase in membership amounted to 658,583. This was an increase in new members over a corresponding three-year period, just prior to the New Life movement, of 194,000. There was a need for additional ministers to meet the increase in membership and population. In the fall of 1950 the enrolment of young men in theological seminaries increased to such an extent that enlarged facilities were required. The Presbyterian Church in the U.S.A. created a special lay committee on theological education to develop plans for raising \$8,000,000 to provide facilities for the education of young men for the ministry.

**Europe.**—The eastern section of the alliance met in Strasbourg, Fr., from Aug. 24 to 28, 1950. Twelve nations were represented by 20 European churches at this meeting. No delegates were present from churches outside of Europe, and the need for new sections in Asia, Australasia and Africa, where many younger churches were arising, was discussed. In addition to the work within each branch of this section the matter of union was foremost. To avoid obstacles to union where doctrinal issues had arisen, the Strasbourg conference emphasized the fact that the Reformed doctrine is "founded on the Word of God," and goes beyond Calvin to the Bible as its foundation. The work of reconstruction and aid to displaced persons was furthered during the year by continued assistance from churches in America. (See also CHURCH MEMBERSHIP.) (G. S. K.)

**Presidents, Sovereigns and Rulers.** The following list includes the names of those holding chief positions in their countries as of Jan. 1, 1951:

Country	Name and Office	Accession
Afghanistan . . .	Mohammad Zahir Shah, King . . . . .	1933
Albania . . . . .	Shah Mahmud Khan, Prime Minister . . . . .	1946
	Omer Nishani, Chairman of the Praesidium of the People's Assembly . . . . .	1946
Arabia, Saudi . . .	Gen. Enver Hoxha, Prime Minister . . . . .	1944
Argentina . . . . .	'Abd-al-'Aziz Ibn-'Abd-al-Rahman Ibn-Faisal Ibn-Sa'ud, King . . . . .	1927
Australia . . . . .	Gen. Juan Domingo Perón, President . . . . .	1946
	William John McKell, Governor General . . . . .	1947
	Robert Gordon Menzies, Prime Minister . . . . .	1949
Austria . . . . .	(Vacancy) <sup>1</sup>	
	Leopold Figl, Chancellor . . . . .	1945

Country	Name and Office	Accession
Bahrein . . . . .	Sulayman bin Hamid al-Khalifa, Sheikh . . . . .	1942
Belgium . . . . .	Baudouin, Prince Royal . . . . .	1950
	Joseph Pholien, Prime Minister . . . . .	1950
Bolivia . . . . .	Mamerto Urriolagoitia, President . . . . .	1949
Brazil . . . . .	Gen. Eurico Gaspar Dutra, President <sup>2</sup> . . . . .	1946
Bulgaria . . . . .	Georgi Damyanov, Chairman of the Praesidium . . . . .	1950
	Vulko Chervenkov, Premier . . . . .	1950
Burma . . . . .	Sao Shwe Thaik, President of the Union of Burma . . . . .	1948
	Thakin Nu, Prime Minister . . . . .	1948
Canada . . . . .	Field Marshal Viscount Alexander of Tunis, Governor General . . . . .	1946
	Louis Stephen St. Laurent, Prime Minister . . . . .	1948
Ceylon, Dom. of . .	Lord Soulbury, Governor General . . . . .	1949
	Don Stephen Senanayake, Prime Minister . . . . .	1948
Chile . . . . .	Gabriel González Videla, President . . . . .	1946
China . . . . .	Chiang Kai-shek, President of the National Government . . . . .	1943
	Gen. Chen Cheng, Premier . . . . .	1950
China, People's Republic of . . .	Mao Tse-tung, Chairman of the Central People's Government of the People's Republic of China . . . . .	1949
Colombia . . . . .	Laureano Gómez, President . . . . .	1950
Costa Rica . . . . .	Otilio Ulate Blanco, President . . . . .	1949
Cuba . . . . .	Carlos Prío Socarrás, President . . . . .	1948
Czechoslovakia . . .	Klement Gottwald, President . . . . .	1948

**Prices.** In the United States at the beginning of 1950 there was a reversal of the downward trend of both wholesale and retail prices which had started in the summer of 1948 and continued throughout 1949. Wholesale prices advanced 11.4% and retail prices 4.8% in the six months following the outbreak of the Korean war, however, and for the year as a whole they advanced 15.9% and 6.5%, respectively. By December both the wholesale and consumers' price indexes had reached all-time peaks.

The wholesale price index was 134% greater than in Aug. 1939, and the consumers' price index was 81% greater than in Aug. 1939. The high price levels and corresponding shrinkage in the purchasing power of the dollar led to widespread and frequent demands for price controls. However, by the end of the year, no comprehensive system of over-all price controls had been placed in effect, although congress gave the president broad powers over prices and the president ordered the establishment of an office of price stabilization.

Wholesale prices for each major group of commodities shown in Table I, except for farm products, foods and fuel and lighting materials, reached their post-World War II highs in December. However, wholesale prices generally advanced less percentage-wise after World War II than after World War I, the notable

exceptions being farm products, foods and metals and metal products. Price increases in the latter group were roughly comparable during both periods.

The smallest relative increases were registered by fuel and lighting materials, housefurnishings, textile products and building materials respectively.

On the retail level, as reflected by the cost-of-living indexes of the bureau of labour statistics, the postwar peak in the prices of all items was reached in December. The only components which did not attain their highest levels in December were food, which was within 1% of the previous peak of July 1948, and apparel, which was within 3% of its previous high in Oct. 1948.

When compared with the post-World War I increase in the cost of living, as shown in Table II, the price rise for all items following World War II was not as severe—81% as compared with 101%. Only in food (which, however, is a sizable item in the budget of a moderate-income family for which the cost-of-living index is computed) was the price increase in the later period greater (132% compared with 126%); rent increases were only two-fifths as great, and apparel prices increased less than two-thirds as much.

Table II.—Per Cent Increase in Cost of Living (Consumers' Retail Prices), by Major Items, United States, Prewar Prices to Postwar High Points

Item	High post-World War II increase from Aug. 1939*	High post-World War I 1920 increase from July 1914
All items . . . . .	81	101
Food . . . . .	132	126
Apparel . . . . .	101	176
Rent . . . . .	21	51
Fuel, electricity, etc. . . . .	48	49
Housefurnishings . . . . .	104	†
Miscellaneous . . . . .	61	82

\*The high points for food and apparel were attained in July and Oct. 1948, respectively. All other items reached new peaks in Dec. 1950.

†Not available.

Source: Computed from data published by the National Industrial Conference Board for the years 1914-20 and the bureau of labour statistics for the period beginning with 1920.

As shown in Table III, wholesale prices were, at the end of 1950, 134% greater than in Aug. 1939, 87% greater than at the start of U.S. participation in World War II in Dec. 1941, and 55% greater than at the termination of price controls in June 1946. Wholesale prices rose continuously during the year, except for a temporary decline in October, and were accelerating at the end of the year. The Korean crisis led to very rapid increases in prices of basic commodities required for the defense effort and the production of civilian goods.

Substantial increases occurred in textile products, chemicals and allied products, hides and leather products, housefurnishings and products of the farm.

Housefurnishings . . . . .	99	164
Miscellaneous . . . . .	92	102

\*The high points for farm products occurred in Jan. 1948; for foods in Aug. 1948; and for fuel and lighting materials in Nov. 1948. All other commodity groups reached new highs in Dec. 1950.

Source: Computed from data published by the bureau of labour statistics of the U.S. dept. of labour. Except as otherwise indicated, all computations presented in this article are based on such data.

Consumers' prices increased each month from March to the end of the year. Food prices, the most important item in the consumers' cost-of-living index, led the index down through February and then upward during the remainder of the year. Housefurnishings prices also increased more than the average. Rents rose

Monthly changes in the various components of the cost-of-living index are indicated in Table V, and monthly changes in the indexes of wholesale and of consumers' prices are shown in Table VI.

The relative stability of prices during the first half of the year reflected a relatively high level of employment, a continued disposition of consumers to spend, a high level of industrial output and an expanding national income. The rapid increase in prices after the outbreak of the Korean conflict reflected both consumer and industrial hoarding and the pressures of an inflationary money and credit structure on goods in actual or anticipated short supply. These sudden price increases led to immediate demands by the government for voluntary action to

curb inflation. The president indicated that he would seek power to control prices if voluntary controls were unsuccessful. Statutory power to control prices was granted the president in the Defense Production act of Sept. 8, and although an office of price stabilization was created immediately, reliance continued to be placed on fiscal and credit controls and on voluntary action. Control over consumer instalment purchases was imposed in September; down payments for housing were increased; and margin rates for stock purchases and reserve rates against bank deposits were also increased. Some specific price orders, notably those calling for roll-backs of announced price increases in the automobile industry, were issued in December. However, the anti-inflationary controls imposed and voluntary resistance to raising prices were not successful in preventing a strong general upswing in prices. At the end of the year it was apparent that stronger measures would be necessary if a further rise in prices was to be prevented. The planning of tremendous expenditures for the defense program, the high level of consumer expenditures, the volume of planned new private investment and continued expenditures for aid abroad all tended to have a disproportionately inflationary effect upon goods and services in short supply.

(W. V. W.)

**Great Britain.**—It is convenient to analyze British price movements in 1950 in two stages: first there is the translation of higher world prices for basic commodities into a rising level of import and wholesale prices and into a worsening of the terms of trade; secondly there is the delayed and damped reaction of retail prices to the general upward trend. The analysis of prices

"SAME OLD GAME," a 1950 cartoon by Fitzpatrick published in the *St. Louis Post-Dispatch*

in Great Britain which follows is based on an article in the London and Cambridge Economic Service *Bulletin*, Nov. 1950.

Though not all basic commodity prices in sterling were marked up following devaluation of sterling and other currencies in Sept. 1949, increases were certainly not confined to materials mainly imported from dollar sources. Indeed, commodities originating in the sterling area and largely sold to the U.S. rose in price as much as dollar goods. The later price increases around the middle of 1950 were general, though the extent was much larger for some materials (e.g., rubber) than for others. Moreover, the rising trend was not of short duration since, for many commodities, increases were recorded after September (when the Korean war seemed nearly over) as well as in the previous three months.

British import prices, measured in sterling, increased by nearly 20% following devaluation and then levelled off in the second quarter of 1950. It had been estimated that the direct effect of devaluation would be to increase prices of British imports by a little more than 15% while there would be a further rise because of indirect effects. The latter were substantial; and, as already noted, there was a marking-up of sterling prices of goods originating in sterling countries. The rise in import prices was resumed in the middle of 1950, though confined (at least at first) to those of materials as opposed to those of foodstuffs. From May to Nov. 1950 this resumed increase amounted to 12%.

During the first 15 months after devaluation British export prices increased steadily but much more slowly, domestic costs being relatively stable. As a consequence, first of devaluation and then of boom conditions in the U.S. and elsewhere, there was a worsening in the terms of trade, amounting to about 13% between Aug. 1949 and May 1950 and to a further 6% in the second half of 1950. This was the case, to a greater or lesser extent, in all countries which devalued their currencies: indeed, it was one of the objects of devaluation to make imports dearer in relation to exports.

Among wholesale prices, those of industrial materials, including semimanufactures, increased by 11% in the nine months after devaluation (Aug. 1949 to May 1950 in the official index number). This can be compared with the increase of 25% in prices of imported materials. The difference arose because there were practically no changes in wholesale prices of domestic materials such as coal, iron and steel or in the domestic element of other wholesale prices. Wholesale prices in general reflect in part prices of imported commodities and domestic costs and prices. Like import prices, materials prices at wholesale increased further in the second half of 1950.

In 1950, as in earlier postwar years, prices of imported foods were largely determined by the ministry of food in their bulk-buying operations, while wholesale food prices were also affected by subsidies. From Aug. 1949 to May 1950 import prices of food and tobacco increased by 16% and wholesale prices rose by 11%. In the summer and autumn of 1950, any upward trend in food prices was hidden by seasonal declines (e.g., in fruit and vegetable prices). There were, however, indications of a renewed upward movement toward the end of the year.

**Europe.**—Most countries in western Europe devalued their currencies with sterling in Sept. 1949 and approximately to the same extent. Subsequent movements in domestic prices were broadly similar to those in Great Britain. In Scandinavian countries and even in the Netherlands and France import prices in local currencies rose less than in Great Britain: industries in these countries did not make such demands on basic materials with prices largely determined by the U.S. market. But the general course of wholesale prices was on the British pattern: a slowly rising trend until early in 1950, followed by a general in-

"HI YA, BABE!" a cartoon by Summers which appeared in the *Buffalo Evening News* in 1950

crease after the middle of the year in response to boom conditions. Retail prices generally followed those at wholesale, without such time lags as were evident in Great Britain. Sweden was the only country in the group to succeed in maintaining a relatively stable price level, at least until the middle of 1950.

On the other hand, Switzerland kept parity with the dollar in 1949 and Swiss price levels generally followed those in the U.S. Prices continued to fall, not only at the end of 1949 but also well into 1950; no marked increase occurred until after mid-1950. The same was broadly true of Italy, where prices had previously been highly variable. In Belgium devaluation of the franc in 1949 was limited, and there were no large price-movements until after the middle of 1950.

Mainly as a result of devaluation, the large exporting countries of western Europe, apart from Switzerland, found their export prices in 1950 much reduced in terms of the dollar. In the second quarter these prices were only about 75% to 80% of the predevaluation level.

**British Commonwealth.**—Australian prices continued to rise during 1949 and 1950, and devaluation of sterling only served to accentuate temporarily the upward trend. In Canada, where prices generally follow those in the U.S. closely, there was in fact no decline to parallel that in the U.S. in 1949; and prices increased from the beginning of 1950. Much less movement was evident in other commonwealth countries than in Great Britain, at least until mid-1950; in South Africa and New Zealand, for example, devaluation seemed to have little immediate effect, and prices did not move upward until the second quarter of 1950. It would appear that price increases in the basic imported materials were offset for some time by a stable or even decreasing level of domestic prices. **Primary Education:** *see* EDUCATION.

**Prince Edward Island.** Smallest province of Canada, 2,184 sq.mi. Prince Edward Island lies in the Gulf of St. Lawrence. Pop. (1950 est.) 96,000. Capital: Charlottetown; pop. (1941) 14,821.

**History.**—Only 46 bills were given royal assent at the 1950 legislative session. Most laws brought existing island laws into conformity with similar legislation in the other provinces, but there were two major exceptions: (1) the ban on the manufacture and sale of butter substitutes was tightened, and (2) restrictions were authorized to help eradicate Bang's disease. Late in the year the liberal government held a seat when the death of the minister of highways threw it open to by-election, and thus kept its 24 to 6 lead in the legislature.

**Education.**—The latest revised statistics for provincially controlled schools for 1947 were: total enrolment, 17,867; average daily attendance, 14,850; teachers, 672; total revenues, \$687,087.

**Finance.**—The 1950–51 budget estimated revenues at \$7,043,022 and expenditures at \$8,674,788, of which \$2,178,500 were capital expenditures, largely for highways and public health buildings. On March 31, 1950, the total provincial debt stood at \$15,290,386.

**Transportation.**—Minor 1950 paving operations kept the provincial record of more miles of paved roads per capita than any other province. On an experimental basis, the "Abegweit" ferry was supplemented by the "Prince Edward Island" ferry on the Cape Tormentine-Borden run during the June 15–Sept. 15, 1950, period.

**Agriculture.**—Canning turkey and marketing fresh strawberries by air to the mainland proved to be two new successful agricultural enterprises in 1950. The 1949 potato crop of 14,000,000 bu. was the largest in provincial history, and 1949–50 shipments of potatoes brought \$9,000,000 to farmers. The total farm income for 1949 was \$22,000,000, including: butter, \$2,938,742; cheese, \$237,747; fluid milk, \$421,620; ice cream, \$220,354; canned poultry, \$3,000,000.

**Fisheries.**—The MacDonald process of sealing live lobsters in tins revolutionized that industry during 1950. A federal-provincial arrangement subsidized fishermen wanting to buy deep-sea draggers (with as little as \$400 capital needed by a fisherman). In 1949, 28,000,000 lb. of fish were caught and sold for \$2,000,000. The largest single item was lobsters, with 6,800,000 lb. worth \$1,421,000.

**Industry.**—Prince Edward Island's second largest industry (after agriculture) continued to be the tourist trade (1949 receipts, \$5,000,000). During 1950 the government set up a department of industry and natural resources, which collected data for creation of branch industries on the island. The government promoted food shipments to Newfoundland (1949, \$3,000,000). The provincial employment index was: Sept. 1950, 185.9; Sept. 1949, 154.3; 1942 monthly average, 101.5. Aggregate pay roll index: Sept. 1950, 265.7; Sept. 1949, 238.7; 1942 monthly average, 101.5. Average weekly wages: Sept. 1950, \$31.31; Sept. 1949, \$33.59; 1942 weekly average, \$21.91. (C. Cy.)

**Principe:** *see* PORTUGUESE COLONIAL EMPIRE.

**Printing.** An important technological development in printing plate making during 1950 was Time, Inc.'s colour scanning machine (developed jointly by Eastman Kodak company and Time) for making colour-corrected, continuous-tone three-colour and black separation negatives automatically from colour transparent copy. Electronics, optics and photography are employed. The colour scanner is a lathe-like machine, with a shaft extending from end to end. At the right end is mounted a transparent drum upon which is fastened the colour transparency. On the same shaft at the left side four sheets of sensitized photographic film are mounted side by side, one each for yellow, red, blue and black separation negatives, in that order. A spot of light projected from a lamp scans the colour transparency wrapped on the transparent drum at the right of the rotating shaft. The light spot beams a varying colour pattern by mirror through three filters, which separate the colour values and by means of photo-electric cells pass them on to the electronic and amplifying panels. In turn, the colour values (varying currents) are sent to the four lamps which expose the four revolving sensitized negatives on the drums mounted at the left on the shaft. In operation, the drums are advanced along the axis of the shaft. The action is similar in principle to a screw-cutting lathe. It was claimed that the scanning operation required 1 hr.

5 min. for an 8-in. by 10-in. colour transparency at 250 lines to the inch.

Another notable development of 1950 was the Koloroid colour proofing process—a method of making full colour, ink pigment colour preproofs from separation screen or continuous-tone negatives. The plate-making colour photographer thus can see a proof of his separation negatives in full ink colours and can do colour masking and check results before the retoucher or etcher receives the negatives. These he can compare with the original copy to see how the colours match and what retouching or etching is necessary. Each basic colour is controlled by length of exposure of the negative on the pigment paper. For example, a strong chrome yellow can be cut to a light lemon yellow by reducing the exposure time. The proofer is guided by an exposure chart with which the exposure time before the printing lamp is determined. The inks of the exposed pigment papers are each deposited on a Koloroid base sheet one at a time—laying one colour over the other, developing each colour before the other is put on. The yellow pigment paper is placed on the base sheet; the red is then laid over the yellow, and the blue next. The black is finally registered on the yellow, red and blue proof and is developed. The register position of each is determined by three holes in the colour separation negatives.

A two-magazine Teletypesetter-operated high-speed line-composing machine was announced by the Mergenthaler Linotype company. The machine can be operated at 12 lines per minute automatically, on 8 pt., 12-pica slug, with or without automatic quadding. The machine was simplified and redesigned for accelerated movement of machine parts. Mergenthaler also exhibited and demonstrated a prototype model of a two-magazine, 42-pica photographic line-composing machine at the Chicago National Graphic Arts exposition in September. The machine photographs type lines on sensitized film, a complete line at a time, in any measure from 4 picas up to and including 42 picas; the end product is a film ready for use after development in plate-making operations. Operating speed is 8 lines per minute when composing shorter-length straight matter. Matrices are similar in shape to the hot-metal machine two-letter matrices, except that in place of the letter punchings, the characters are carried in black, 12-pt. size, on a white background. All enlargements or reductions (from 6 pt. to 36 pt.) are made from the 12-pt. letter characters. The manufacturer stated that by a simple arrangement of focusing stops, undistorted magnification or reduction of type is possible. Type point size is obtained by adjusting the position of the camera forward or back in relation to the justified matrix line. One 6-in. focal length lens is used. Two 6-w. General Electric blue fluorescent lamp tubes make up the light source. Lines may be leaded as required. The film holder can be supplied with 60 ft. of high contrast film.

Efforts to hybridize the elements of three processes into one printing press continued. Development of a high speed web printing press utilizing the principles from three printing processes—gravure, offset and letterpress—was announced by Crawford Engineering, Inc. The press prints offset-gravure for one-colour, colour and colour process work, and by letterpress with rubber plates with a single (gravure) ink distribution system. The press, which prints wrappers, labels, insurance policies, packaging products, etc., is arranged in units; as many colours as there are press units may be printed. The offset-gravure unit consists of three cylinder components. The design (gravure) cylinder prints the image on an offset or transfer cylinder which in turn prints on the paper. In this unit, the paper web passes between the offset or transfer cylinder and a pressure cylinder. The letterpress unit consists of three cylinder components—a gravure inking cylinder used as a plate cylinder inking mechanism which inks the rubber plate cylinder which in turn prints on the paper web. In operation,

the web passes between the rubber plate cylinder and an impression cylinder. A press unit may be converted from the offset-gravure process to the letterpress process by replacing the gravure cylinder with a cellmeter roller. This is a gravure cylinder etched with an over-all screen pattern. This cylinder revolves partly submerged in the ink reservoir and, because of the fineness of the cells in the screened cylinder, acts as a rubber plate-inking mechanism. An oscillating doctor blade removes surplus ink from the nonprinting surface of the cylinder. Next step is to replace the offset or transfer cylinder with a printing plate cylinder on which are mounted the sticky-back rubber plates. By combining two or more press units, it is possible to combine the printing by two processes in a single press run.

FILMS OF 1950.—*Story of Printing* (Encyclopædia Britannica Films Inc.). (M. St.)

**Prisoners of War.** Large-scale military operations in Korea during 1950 again centred interest on prisoners of war. At the outbreak of hostilities, the International Committee of the Red Cross offered its services as a neutral intermediary for prisoners of war to all of the belligerents. Both the Republic of Korea and the Democratic People's republic of Korea agreed to recognize the provisions of the Prisoner of War Convention of Geneva, which neither had signed, and the Unified Command of the United Nations announced that the provisions of the convention would be observed by all armies under its control. Representatives of the International Committee of the Red Cross were accepted in southern Korea but were not able to obtain visas for northern Korea. Exchanges of lists of prisoners, however, were effected.

On several occasions during 1950 the governments of France, Great Britain and the United States requested an accounting from the government of the U.S.S.R. for an estimated 1,000,000 World War II prisoners of war still believed to be held by the U.S.S.R. In each instance, the U.S.S.R. replied that all prisoners

of war except those accused of crimes had been repatriated.

All World War II prisoners of war held by other countries had been repatriated or released as civilian workers except those held for crimes.

At its meeting in Lake Success on Dec. 13, the general assembly of the United Nations passed a resolution over opposition of the soviet bloc calling for an investigation and the return of all prisoners of World War II. The International Red Cross or, failing that, the secretary-general of the United Nations was called upon to choose an *ad hoc* commission of three qualified impartial persons with a view to settling the question of prisoners of war in a purely humanitarian spirit and on terms acceptable to all governments concerned. (See also RED CROSS.)

**Prisons.** Penal construction programs lagged during 1950 because of rising costs of labour and materials. However, in Massachusetts ground was broken for a new state prison near Norfolk to replace the century-old Charleston prison, which had long been condemned.

Illinois opened a special reformatory at Sheridan for youths up to the age of 17 who were convicted of felonies. This would eliminate congestion at the state training school at St. Charles, to which less serious offenders would be sent. Neglected and dependent children, previously housed at St. Charles and allowed to mingle with delinquents, would be placed in the custody of welfare agencies.

California announced that it would close its institution for women at Tehachapi. A new women's prison would be located at Corona, near Chino. At Chino, a new medical, reception and guidance centre was being completed, and at Tracy, a new institution for youthful offenders was to be built to replace one located at Lancaster.

In some states educational facilities were enlarged and greater attention was placed on libraries and on incentives to win academic recognition. A few prisons hired trained librarians, and a travelling library was set up at the state prison in southern Michigan to service other penal institutions and farms in far-away areas.

The increasing interest of laymen in the problems of prisoners was significant. In Elmira, N.Y., the American Association of University Women provided funds for reformatory inmates desiring to pursue advanced studies either through correspondence courses or by obtaining necessary technical books. In Michigan and other states, selected groups of businessmen were taken on all-day visits through penal institutions. They were even allowed, in some instances, to sit in on sessions of the parole boards. In that way they learned of an inmate's progress and response to rehabilitation procedures. As a result, many employers registered a desire to assist a worthy prisoner by giving him employment. This desire was not based on sympathy, but on an inmate's capacity to handle competently a specific job.

Through a grant of funds by the New York foundation, New Jersey initiated a new plan for short-term treatment of youthful offenders. Some youths committed to reformatories need not be held for the usual period of about 18 months. Others are not psychologically prepared for probation when they come before the court. Under the New Jersey plan certain selected youths are placed on probation provided they agree to go for treatment to a special home known as Highfields, where there are no guards or custodial officials. The youths, limited to about 20, remain at this home for about four or five months. At the home, treatment is centred around, although not limited to, the technique of guided group interaction which was developed in New Jersey reformatories after 1948, and which had achieved outstanding success. To make sure that the results of the short term treatment

U.S. MARINES covering a North Korean soldier flushed from a rice paddy in the Nakdong river sector in Aug. 1950. The prisoner was wounded, but still armed

of youthful offenders were carefully measured, a research study was being made in 1950 under separate auspices out of funds provided by the Vincent Astor foundation. (See also CRIME.)

**Protestant Episcopal Church.** Heartening growth and progress in practically every phase of its life and work characterized the year 1950 for this church. Almost all previous records were broken, indicating substantial recovery from the effects of World War II.

According to statistics published in the *Living Church Annual*, 1951, the church listed 6,654 clergy, an increase of 2.88% over 1949; more than 2,500,000 church members (2,540,548 baptized persons), an increase of 3.09%; and 1,688,611 communicants, an increase of 1.6%.

Other records never equalled before included ordinations: deacons, 255; priests, 240—an increase of more than 40% in each order; postulants (those listed by the bishops as desiring ordination), 1,106, an increase of 2.98%; lay readers, 6,016, an increase of 8.8%; confirmations, 85,989, an increase of 8.6%. An especially encouraging factor was the number of scholars enrolled in the church schools, 514,754, an increase of 6.4% over 1949, and more than 125,000 above the war year of 1944. Total receipts amounted to \$73,844,880.41, an increase of \$4,500,000 or 6.5% above 1949.

Baptisms, numbering 104,037, were substantially the same as during the previous year, but numbered 6,500 less than the high mark of 1948. Marriages and burials were the only items showing considerable decline: marriages numbered only 28,695 in 1950 compared with 33,502 in 1949, a decline of 14.3%; burials totalled 55,354 in 1950 compared with 56,577 in 1949, a decline of 2.1%.

Toward the end of the year an increasing number of college students who wished to study for the ministry were being drafted into the armed forces of the United States. Although the church's theological seminaries were full to overflowing, the threatening international situation appeared likely to curtail the recruiting of the ministry and to blight any hope of executing a program of expansion. (See also CHURCH MEMBERSHIP.)

**Psychiatry.** The treatment of severe forms of mental disease, particularly the more serious types of psychoses such as schizophrenia, by physical methods, as contrasted to psychotherapy, continued unabated in 1950. Electroshock therapy was widely used. Surgical intervention by intracranial operations and by extracranial methods found advocates in increasing numbers throughout the world, and intravenous drug medication became generally accepted. Ugo Cerletti, the pioneer in electroshock, who had invented the term 12 years earlier after its first use on man, made a prolonged investigation into the mechanism of the therapeutic action of electroshock. Not satisfied that the convulsion itself would account for the improvement in mental patients, he sought some changes in the blood or tissues from previously shocked patients.

He found in the brain a substance which he called acroagonine and noted salutary behavioral changes in patients following the injection of suspensions of cerebral material containing

acroagonines.

The most striking changes occurred in the field of neurovegetative functions of sleep, vasomotor stability, sweating, general nutritional condition and, of more importance, in affect and in the state of anxiety. Cerletti also found that the peculiar properties of shocked brain suspensions in water tended to grow fainter with the passage of time and disappeared altogether in about two months.

Cerletti's work on acroagonine had not yet been confirmed, but evidence had been presented highly suggestive of a humoral factor in the mechanism of improvement following electroshock.

These studies and others led to the repetition of electroshock treatment many times a day for certain patients, the method which came to be referred to as annihilation. Frequently treatment was given in clusters of daily shock for three or four days, followed by a three-day rest. This form of therapy, less intense than the annihilation method, was often effectual in patients with minor forms of psychosis. Leo Alexander and others developed an even less violent form in their nonconvulsive electric stimulation therapy, particularly adapted to the affective disorders, with anxiety and depression as the chief symptoms. Alexander obtained his best results by using both convulsive and nonconvulsive stimulation in the same patient. Convulsive treatments relieved depression but reduced awareness for memory content. In some cases he found, unfortunately, that anxiety was enhanced, rather than reduced. On the other hand, nonconvulsive treatment relieved anxiety and restored awareness for memory content, but sometimes brought on a depression. The use of the two methods was most efficient in reducing the number of untreatable conditions left after electroshock treatment. The variation in response again emphasized the need for meticulous evaluation of the patient's condition both before and after electroshock. This form of treatment was still in the experimental stage, although confidence was being established in its effectiveness when carefully used in controlled surroundings. Machines for giving electroshock were highly efficient, but trained personnel to administer this violent form of therapy were insufficient. In spite of the great number of electroshock treatments given each day, conservative physicians did not consider it an office procedure, nor one lightly entered into by either the physician or the patient. Furthermore, medical science still had much to learn about the mechanism of the biochemical changes set up in the brain as the result of shock, and the practitioner was not yet fully informed regarding the type of patient most favourable for treatment. The advances in 12 years since Cerletti's original work, while important, were only steps in the progress toward the ultimate goal of complete knowledge of the value of this important therapeutic weapon.

Prefrontal lobotomy, developed by Egas Moniz in 1936 for the treatment of psychoses by cutting the nervous connections between the frontal poles and the remainder of the brain, continued to be used throughout the world as the chief surgical method of combating mental disease. The technique of the operation underwent modification. Selective partial ablation of the frontal cortex, or topectomy, replaced in many clinics the blind surgery methods of a few years earlier. An evaluation of the results of focal surgery could be made only at some future date, but there were some indications that progress was being made.

Gross obsessive-phobic symptoms were often relieved, but paranoid trends sometimes resulted, thus nullifying the good results in overcoming anxiety and compulsive behaviour.

Transorbital lobotomy, first used in Italy by A. M. Fiamberti in 1937 and revised by Walter Freeman in the U.S. in 1948;

opened up a new field in psychosurgery. The operation, done by driving a suitable instrument into the brain, the entry being through the orbital plate, was reported to be both simple and safe. The patient was first given electroshock to the point of deep coma. Many hundreds of cases had been done, particularly in institutions, without fatalities or complications. Transorbital lobotomy, still undergoing evaluation, gained ground as a practical aid in dealing with intractable mental illness.

Further investigations in the drug treatment of mental illnesses were reported in 1950. The studies on the metabolism of nerve cells by H. Hydén in Sweden in 1947 led to the use of malononitrile in man in an attempt to affect the psychic functions in disorders of the mind. The 1950 report by Hans Hartelius of Stockholm, Sweden, would indicate that this simple therapeutic procedure had considerable value. It may be used in cases where electroshock is contraindicated. The series of patients which had been treated was too small, however, to have statistical significance. Hartelius believed that there were sufficient grounds to warrant a testing of the method on a larger scale.

Insulin shock treatment, with its resulting hypoglycemic state, continued to be widely used. Manfred Sakel, who had introduced the method 22 years earlier, reported that insulin should be considered a specifically vagotonic medication or hormone. Insulin appears to affect the basic pathogenic processes in a more profound way than electroshock. Improvement after its use was noted in a large variety of psychoses. Sakel felt that insulin coma gave the best and most lasting results in schizophrenia, although a favourable response also occurred in cyclothymia, involutional melancholias and depressive states. He made a strong plea for insulinotherapy, but the final evaluation of this method could not be considered as reached, even after more than two decades of experience. Acetylcholine shock, carbon dioxide treatment, the production of anoxia and even asphyxia as forms of treatment received recognition in 1950. (See also

**Psychology.** John C. Flanagan and a number of others extended the use of the critical incident technique to a variety of psychological problems during 1950. The critical incident is a report by a competent observer of something a person did on a job which was outstandingly effective or ineffective in getting the job done. The systematic collection of such incidents provides the basis for establishing the critical requirements for that job. The critical incident technique is thus a specialized type of job analysis which emphasizes factual reports of observations of behaviour that are crucial to successful work performance.

One example of an effective incident collected in a study of research in the physical sciences was as follows:

In tests of a new aviation device, complaints were made that a recording accelerometer was "no good because it was affected by vibration." This engineer recognized that the complaining personnel might be overlooking very important data on structural strength. By analyzing the accelerometer data and comparing them with laboratory data he proved conclusively that the vibratory accelerations were of dangerous magnitude. His arguments were subsequently verified by a serious structural failure caused by vibration fatigue in this equipment.

Flanagan and his colleagues at the American Institute for Research studied 3,347 such incidents. As a result of their systematic classification, the following eight major areas of a scientist's work, critical for his success or failure, were named: (1) formulating problems and hypotheses; (2) planning

**TILTED ROOM** used by the psychology department of Princeton university in 1950 to teach the distinction between vision (mechanical) and perception (interpretive). Here, the distorted room is perceived as normal and the six-foot man seems three times as tall as his five-foot son

and designing the investigation; (3) conducting the investigation; (4) interpreting research results; (5) preparing reports; (6) administering research projects; (7) accepting organizational responsibility; and (8) accepting personal responsibility.

A check list for appraising effectiveness of research personnel and a selection procedure for predicting research ability in the physical sciences were then constructed. Both covered the eight areas originally identified by classification of actual critical incidents.

The preceding incident which was cited was an effective example of "formulating problems and hypotheses."

Other scientists used the critical incident technique in as widely varied fields as the determination of the requirements for successful work in dentistry and the development of a code of ethical practices for psychologists. The influence which this technique might have on future work was indicated by the fact that the critical incident technique was one of the most frequently discussed topics at the 1950 meeting of the American Psychological association.

Harold Gulliksen, in his *Theory of Mental Tests*, brought together the hitherto widely scattered material on the theory and statistical methods basic to the construction of good psychological tests. To a closely written integration of earlier material, Gulliksen added a number of his own contributions, including excellent discussions of the logic of item analysis, of the purposes to be served by item analysis and of prospective developments in item-analysis techniques.

John L. Kennedy and a group of collaborators at Tufts college, Medford, Mass., produced the first systematic handbook in the rapidly expanding field of human engineering ("Handbook of Human Engineering Data for Design Engineers," Technical Report No. SDC 199-I-1, NavExosP-643, Special Devices Center: copyright 1949 by the Trustees of Tufts College). Engineers and physical scientists had invented such complex machines and systems of machines that the limits of efficiency are set by the human operator rather than by the machine. "Handbook of Human Engineering Data for Design Engineers" was written to help the engineer increase accuracy and efficiency by tailoring his machines to human capacities. It brought together information on measurements of the human body, vision, audition, skin sensitivity and proprioception, motor skill, intelligence and the physiological conditions which affect efficiency. The section on motor responses illustrates the type and organization which the handbook presented. It gave the basic concepts and the principal characteristics of motor responses, the factors which influence the efficiency of motor performance and the principles of motion economy. Results of experiments and measurements were summarized in tables, graphs and brief abstracts.

The handbook offered the engineer a ready reference source to use when a control movement on a device he is developing can be made in this direction or that, when a signal can be presented to the ear or to the eye, in red light or in some other colour, as a steady or as a flickering light, and so on. By taking advantage of what is known concerning the speed, precision, adaptation and other characteristics of behaviour under different conditions, machines can be built which their operators can handle with greater efficiency, fewer errors and less fatigue.

Samuel A. Stouffer and his colleagues completed the "Studies in Social Psychology in World War II" series with publication of volume 4 (Samuel A. Stouffer, Louis Guttman, Edward A. Suchman, Paul F. Lazarsfeld, Shirley A. Star and John A. Clausen, *Measurement and Prediction*). Unlike the first three volumes of the series, which emphasized the highly significant studies of soldier attitudes and mass communication conducted by the

army's information and education branch during World War II, volume 4 was devoted to methodology. It gave the most detailed account available of scale theory and associated working procedures, for which Guttman was primarily responsible, and the theory of latent structure analysis, for which Lazarsfeld was primarily responsible. Both of these developments represented efforts to treat qualitative data in a rigorous fashion developed specifically for qualitative instead of for quantitative data.

The more radical departure from earlier work, according to Stouffer, was represented by Guttman's thinking concerning scalable attitude areas. An attitude area is considered scalable if it is possible to arrange the items of a test or questionnaire in an order in which all persons answering a question favourably have higher ranks than do persons answering the same question unfavourably. This result can be obtained only if the items have a cumulative property which is simply illustrated by three questions on height:

- |                                       |       |      |
|---------------------------------------|-------|------|
| 1. Are you over 6 feet tall?          | — Yes | — No |
| 2. Are you over 5 feet 6 inches tall? | — Yes | — No |
| 3. Are you over 5 feet tall?          | — Yes | — No |

Anyone answering yes to item 1 must also answer yes to items 2 and 3. Anyone answering yes to item 2 must also answer yes to item 3. Thus if a man's score is the number of items to which he has answered yes, we know exactly which items have been answered yes. A score of 1, for example, can have only one meaning: items 1 and 2 were answered no and item 3 was answered yes.

Frequently it is impossible to find an order in which the items possess the cumulative property necessary for a scale. But sometimes that is possible and sometimes a scale can be constructed consisting of part of an original set of items. When a scale can be constructed, a very small number of selected items suffices to define each respondent's position on an attitude continuum.

Together, these four quantitative developments advanced the science of psychology measurably in 1950. (See also PHYSIOLOGY; PSYCHIATRY; PSYCHOSOMATIC MEDICINE.)

FILMS OF 1950.—*Am I Trustworthy, Appreciating Our Parents, Are You Ready for Marriage?, Better Use of Leisure Time, Control Your Emotions, Developing Friendships, Developing Imagination, The Fun of Being Thoughtful, Good Sportsmanship, How Do You Know It's Love, How Honest Are You?, How to Get Cooperation, How to Observe, How to Remember, How to Think, How We Cooperate, Let's Share with Others, Overcoming Worry* (Coronet Instructional Films); *Can Animals Think* (Almanac Films, Inc.); *Careers for Girls* (March of Time Forum Films); *Child Care and Development, Children's Emotions, Choosing for Happiness, Frustrated Student, It Takes All Kinds, Marriage Today, Principles of Development, Stay-In, Who's Boss* (McGraw-Hill Book Co., Text-Film Dept.); *Counseling—Its Tools and Techniques* (Carl F. Mahnke Productions, Vocational Guidance Films, Inc.); *Glen Wakes Up* (Young America Films, Inc.); *Obligations* (Simmel-Meservey); *Unconscious Motivation* (Association Films, Inc.). (H. M. WE.)

**Psychosomatic Medicine.** During the decade 1940–50 Harold Wolff and his associates at the New York hospital carried on an active research program dealing with the emotions, life situations and disease. Many important contributions on psychological-physiological relationships were made and among these one of the most important dealt with the cardiovascular system. The accomplishments of Wolff and his group were reviewed in a lengthy article with regard to the cardiovascular apparatus as one subjected to a series of adaptive and protective reactions. If the adaptive and protective patterns are maintained unduly long or if the reacting organs are weak, or already operating under strain, or if the protective reactions exert an additive effect with other stresses, then the system may collapse. As part of the reaction to stressful life situations, notably those associated with tension, frustration, conflict, anxiety and depression, the cardiovascular apparatus exhibits both hyperdynamic and hypodynamic responses. These include alterations in the rate, rhythm, force and magnitude of cardiac contractions, changes in the electro-

cardiogram and modifications in the peripheral circulation. At the same time the respiratory apparatus is affected, and the changes in the visceral circulation, notably the kidney, may affect other vital functions, further jeopardizing the health and survival of the organism. Detailed physiological studies were made documenting these changes which indicate that psychic stress may burden the normal as well as the diseased heart and in the latter may bring about or hasten heart failure.

Studies on ACTH and cortisone (pituitary and adrenal hormones) called attention to the general adaptation syndrome of Hans Selye. Selye postulated that exposure of the organism to stress (any nonspecific noxious stimulus of sufficient intensity) may result in sufficient liberation of toxic substances to cause the first stage of the syndrome, that is, the alarm reaction. Certain bodily changes occur. In the first or shock stage there is rapid heart action, increase in muscle tone and body temperature, lessening of urine output, changes in the blood, as well as certain changes in other organs and tissues. If the damage is not too severe the pituitary gland is stimulated to discharge adrenocorticotrophic hormone which, in turn, stimulates the adrenal gland to produce a cortical hormone. This apparently raises the resistance of the body in what is known as the second phase of the alarm reaction, viz., the counter-shock phase, which is characterized by an enlarged and hyperactive adrenal cortex plus certain lymphatic organ changes. Now the signs characteristic of the shock phase undergo a reversal. A final stage of the syndrome appears after prolonged exposure to stress and this is called the stage of exhaustion and is attributed to a failure in the adaptive mechanisms. When this occurs the changes characteristic of the alarm reaction reappear and death ensues. With the concept of the general adaptation syndrome Selye attempted to integrate a number of seemingly unrelated observations into a single unified biological system. The keynote of unification is the tenet that all living organisms can respond to stress as such and that in this respect the basic reaction pattern is always the same, irrespective of the agent which produces the stress. This response is called the general adaptation syndrome and its derailments, the diseases of adaptation. Anything that causes stress endangers life, unless it is met by adequate adaptive responses; conversely, anything that endangers life causes stress and adaptive responses. Adaptability and resistance to stress are fundamental prerequisites for life, and all vital organs and functions participate in them.

In another paper Selye and Claude Fortier called attention to the fact that important alterations in the morphology and function of the nervous system can result from hypo- or hyperactivity of the pituitary-adrenal system, the main endocrine regulator of adaptive processes, and that the coexistence of disordered endocrine mechanisms with psychoneurotic or psychotic states suggests some relationship between pituitary-adrenal and mental processes. The precise nature of this relationship was not yet established. It had been observed that stimuli of a neurogenic or psychogenic nature are particularly potent activators of the pituitary adrenocorticotrophic function and produce rapid and intense alarm reactions.

The clinical use of cortisone and ACTH in rheumatoid arthritis had in several instances apparently produced beneficial alterations in the mental state of the patient which could only be attributed to the action of the drug itself and this opened up a vast field regarding the possibility of influencing mental illness by these new hormones. However, such studies were just beginning and awaited further investigations. (See also MEDICINE; NERVOUS SYSTEM; PSYCHIATRY; PUBLIC HEALTH SERVICES.)

**Public Assistance:** see CHILD WELFARE; RELIEF; SOCIAL SECURITY.

**Public Health Engineering.** The year 1950 was an appropriate time to note one of the two most dramatic victories of public health, namely the control of diseases transmitted by arthropods. Insect control to prevent human diseases had been carried on for approximately half a century. The accomplishments were matched only by the control of other diseases by protective immunization. In a few instances it had actually been possible to eradicate a particular type of insect vector from a particular region of the globe. This was achieved with *Anopheles gambiae* in north-eastern Brazil. Almost complete elimination of malaria had been accomplished with almost complete elimination of anophelines in Sardinia, Cyprus and Tobago. Chile claimed to be the first American country to have exterminated both malaria and anophelism.

This change was brought about, not so much by intentional antimalarial campaigns, but by elimination of breeding places through agricultural drainage and the protection of man through generally better physical environment, such as houses. In the entire United States, malaria had become a vanishing disease. As in typhoid control and other environmental successes, the price of freedom from malaria was constant vigilance. In less fortunate areas of the world, where such progress had not been made, the control of insect vectors remained the number-one health problem.

The last confirmed case of yellow fever originating in the Canal Zone or the republic of Panamá was reported by William Gorgas on May 22, 1907. Until 1949 it was believed that yellow fever was nonexistent in Panamá. In that year, however, seven known yellow fever deaths were recorded. It was curbed by immunizing 500,000 of the total population of 600,000.

A large number of newer economic poisons had become available for control of insect-borne diseases. They included the chlorinated hydrocarbons such as DDT and its analogues; benzene hexachloride; lindane; chlordane; toxaphene; and the familiar pyrethrum and some of its derivatives.

A new and curious source of infection was emphasized in the contamination of shellfish by wastes discharged or flowing from duck farm operations. In one area of the United States about 20 farms produce more than 2,000,000 ducks annually. The waste carried significant numbers of pathogenic organisms potentially dangerous to man and recovered in shellfish taken from waters polluted by duck farms.

The hazards in the use of radioactive materials and their control were receiving increasing attention. A specific example of successful control of such a hazard was in shielding radioactive static eliminators used on printing presses and in other industrial operations. In order to free static electric charges created by machinery in motion, radium-containing bars were used. Protection against their gamma and in some instances beta radiation was accomplished by care in locating the bars and by adequate monitoring and medical supervision of the workers.

Radiological health was receiving increasing attention, not to attempt the avoidance or the elimination of all radiation exposure, but to apply intelligent care in dealing with high-energy radiation. The recommended maximum permissible dose of 0.3 roentgen per week for repeated or sustained exposure was generally accepted as sufficient to prevent any injury to an individual within a normal lifetime. Medical, research and industrial applications of X-rays, radium emanations and other types of high-energy radiations had expanded rapidly, with the

potential exposure of increasing numbers of technicians, radiation workers, radiologists and even the general public. The U.S. Atomic Energy commission led the way in developing standards for radiological protection. Its accomplishments were notably successful. The report of the commission of July 1950, entitled *Control of Radiation Hazards in the Atomic Energy Program*, contained invaluable hints for the public health engineer.

The problem of air pollution assumed increasing significance to the public and to professional workers. The effects of sulphur dioxide, fluorides, fly ash and other air contaminants were intensively studied. These efforts were accompanied by the passage of legislation in several North American states and by increased emphasis upon micrometeorological or small-scale weather phenomena.

New interest was developed in the commoner forms of gastroenteritis resulting from contaminated water, milk and other foods. Control of the situation was inadequate because of poor diagnostic terminology, inadequate laboratory diagnoses and insufficient epidemiological information.

Health department interest in home accidents was rising, on the belated recognition that accidents in the United States killed 15 times as many children as died of poliomyelitis in nonepidemic years. Deaths and injuries from accidents in all ages were 60 times greater than for poliomyelitis. Home accident prevention was recognized as a joint enterprise of the health officer, the engineer and the educator.

The incidence of human murine typhus fever and the abundance of rat fleas were significantly reduced as a result of county-wide DDT dusting of rat runs and harbourage in southern Georgia and in Texas. An additional method of controlling the general problem of rodent-borne diseases became available.

Discovery of the first cases in America of human beings contracting rabbit fever from a domestic water supply was announced. Four human patients had contracted tularemia from drinking water on a Montana ranch. None of the four had come in close contact with rabbits or other rodents. Tests of the water supply showed the wide presence of the tularemia organisms. The same experience had been reported several years previously in the U.S.S.R.

**Public Health Services.** About 25,000,000 persons, more than one-sixth of the population in the United States, were estimated to have chronic diseases in 1950. About 7,000,000 of these had appreciable disability from illness, while 1,500,000 were invalids. Each year chronic diseases were causing nearly 1,000,000 deaths, and were responsible for the loss of almost 1,000,000,000 days from productive activity.

Public health workers continued to direct their efforts toward the control of chronic diseases, the most important of which are heart disease, arteriosclerosis or hardening of the arteries, high blood pressure, kidney disease, tuberculosis, syphilis, cancer and diabetes. Based upon the fundamental public health concept that early detection, early diagnosis and adequate treatment can accomplish substantial reduction in disability and deaths resulting from chronic diseases, a new technique called multiphasic screening examinations was being employed in the

war against chronic illness. These examinations included chest X-ray for detection of tuberculosis, heart disease and other lung pathology; blood examinations for syphilis, diabetes and anaemia; height, weight and blood pressure measurements; a two-lead electrocardiogram; vision and hearing testing; and a special eye test in adults to detect the presence of glaucoma, a dangerous eye disease.

Large population groups could be screened economically, safely and rapidly under such a program. Many thousands of cases of diabetes, syphilis, tuberculosis, heart disease, anaemia and the other diseases for which the tests are made, and which otherwise would not be discovered, may be found under such a program and early treatment may be started.

**Poliomyelitis.**—In a carefully controlled study of contacts to a case of poliomyelitis in a nursery, F. M. Schabel, Jr., A. E. Casey, W. I. Fishbein and Helen T. Smith found indications that, under proper conditions, close contact and a susceptible population, a high percentage of those exposed to poliomyelitis virus become infected. This study offered additional evidence that poliomyelitis is a common contagious disease.

**Tuberculosis.**—In a further endeavour to control tuberculosis, BCG (*Bacillus-Calmette Guérin*) vaccine was used in some parts of the country. There was no general agreement, however, as to the indications for use for this vaccine.

R. J. Anderson and C. E. Palmer clarified the subject by stating that mass vaccination programs are warranted only for carefully documented evaluated studies. Otherwise, the most that could be suggested at this time was its use in selected groups in which known exposure existed. Such projects should be designed with the possibility of contributing to knowledge of the subject, or of at least avoiding interference with studies under way or proposed. Whatever the use of BCG vaccine, however, no one should place reliance in it to the extent of relaxing the prosecution of accepted tuberculosis control methods for the community and the individual.

**Arteriosclerosis.**—With the reduction in infant mortality, improved sanitation and the control of communicable diseases such as diphtheria, typhoid fever and scarlet fever, many people who years before would have died of such diseases are living into the middle and older age groups. At this period of life they are subjected to the so-called degenerative diseases, among which arteriosclerosis, or hardening of the arteries, is the most common. Evidence in 1950 indicated that the metabolism, or the burning of fat in the body, is in some way associated with the development of arteriosclerosis. In certain conditions such as diabetes and overweight in which there is a derangement of fat metabolism, the incidence of arteriosclerosis is greater than in people without these conditions.

During 1950 experimental evidence indicated that the use of certain derivatives from vitamin B, such as choline and inositol, together with a diet low in fat, might be of value in delaying the onset and progression of arteriosclerosis. (See also EPIDEMICS; FEDERAL SECURITY AGENCY; INDUSTRIAL HEALTH; MEDICINE; and articles on specific diseases.)

**Great Britain.**—The gross cost of the national health service in 1948-49, the first year of its operation, was £368,000,000 with a net cost to the taxpayers of £278,000,000, the other £90,000,000 being contributed from the National Insurance fund (£41,000,000) and met from superannuation contributions and recoveries from regional hospital boards. The revised estimate for 1949-50 was £450,000,000 as against an original estimate

of £352,000,000. For 1950-51 the cost was estimated at £484,000,000. In 1946, when the National Health Service act was passed, the service was believed to be costing £160,000,000 a year. There was considerable pressure by the doctors for increased remunerations, but without results. The general practitioner service accounted for 12.3% of the total expenditure in 1948-49, but for only 10.5% in the estimates for 1949-50, the cost in the latter year being £47,100,000, or less than that of the dental service.

The number of general medical practitioners was increasing at the rate of about 300 a year but their distribution throughout the country was not entirely satisfactory. The Medical Practices committee, a statutory body appointed under the National Health Service act to regulate the distribution of doctors, pointed out that one of the chief difficulties encountered was that doctors who wished to start new practices and local executive councils which were anxious to attract doctors were repeatedly baulked by the difficulty of obtaining suitable premises from which a practice could be conducted. A second complete review of the situation in the whole country was undertaken and fresh schedules published of "underdoctored" and "overdoctored" areas. An experiment was planned with the co-operation of the British Medical association, the ministry of health and the Medical Practices committee for one large county area where there was a shortage of doctors. In assessing the general position, it may be noted that there was an average of one general medical practitioner for 1,789 patients in the London area (without counting assistants) but in March 1950, 206 doctors were found to have lists of patients exceeding the maximum of 4,000 prescribed by law for one doctor. In one wealthy London borough, the average was one doctor for 525 patients; in some boroughs in east London there were 3,000 patients to one doctor.

Further consideration was given to the expenditure on drugs and appliances which increased from £23,600,000 in 1948-49 to £35,300,300 in 1949-50. The government did not, however, bring into operation the power given by parliament to make a small charge for each prescription, though the minister of health sought the co-operation of medical practitioners in the prevention of wasteful prescribing. The number of prescriptions made up by pharmacists in 1949-50 was 200,000,000 compared with an estimate of 149,000,000. There was growing criticism of the large payments to dentists which increased from £29,100,000 in 1948-49 to £48,600,000 in 1949-50, and the minister of health made regulations providing for an interim reduction of 10% in their remuneration.

The lack of sound financial control and the absence of effective co-ordination between its different branches were the two great unsolved difficulties of the health service. An official committee was therefore set up to study means of securing co-operation between hospitals, general practitioners and the local health service.

**Public Utilities.** The outbreak of the Korean war roughly divided the year 1950 into an earlier half,

**LINEMEN** doing emergency repair work after locating a break in the electric power lines in northern California, where a series of four blizzards threatened to disrupt power distribution in Jan. 1950

which was still dominated by the trends of postwar reconstruction, and a later half conditioned by the defense emergency. This transition also coloured events in the public utility field in the United States.

So far as they affected public utilities, the Hoover Commission on Organization of the Executive Branch of the Government recommendations were included among 21 plans submitted to congress by Pres. Harry S. Truman on March 13, 1950. Only nine of these were concerned with agencies having a public utility jurisdiction, three affecting the departments of interior, agriculture and commerce and six affecting federal regulatory commissions. Most of these failed of adoption in whole or in part. The plan reorganizing the department of the interior centralized all responsibility by vesting in the secretary the functions of all officers, employees and offices but authorized the delegation of their functions. Apart from the creation of minor cabinet officials, the plan as approved was more significant for what it failed to do. It did not establish, as recommended by the Hoover commission, a national public works board, nor transfer the civil functions of the United States corps of engineers, which would have made interior the dominant conservation agency. In like manner, the responsibility of the secretary of commerce was heightened. However, he lost the Inland Waterways corporation but gained the regulatory functions of the maritime board and the operating functions of a maritime administration from the maritime commission, which was abolished. The Hoover commission recommendations that all nonregulatory transportation activities, like the business operations of the maritime commission, the safety, car service and consolidation planning functions of the Interstate Commerce commission, be transferred to the commerce department failed of adoption, at least in large part.

Early in 1950, the United States supreme court decided *Federal Power Commission v. East Ohio Gas Co.* (338 U.S. 464). Although the Natural Gas act of 1938 exempted the local distribution of natural gas from federal jurisdiction, in this case such jurisdiction was extended over a gas distributing company operating entirely within Ohio. By using what is, in effect, the original package doctrine, the court held that, by taking delivery of the gas at the border and transmitting it for long distances before reducing the pressure and letting it flow into its local distribution network, the company was engaged in interstate commerce since the prior movement of the gas had not come to an end. Applying the reasoning of the court in this case, the Federal Power commission expanded its jurisdiction into situations involving local gas distribution, which state commissioners and the industry generally had always regarded as within their purview.

The most significant conflict, however, again arose over the question whether congress intended to exempt from the provisions of the Natural Gas act the independent operators who produce or gather and sell natural gas "at arm's length" to natural gas companies who later transmit it in interstate commerce. The commission had issued an order to reassure the independents that they could sell such gas without apprehension that they might become subject to its jurisdiction. To reaffirm such exemption by amending the act, congress passed the Kerr bill in 1950, which was vetoed by President Truman. Thereupon, on Aug. 17, 1950, the commission rescinded its general order and proceeded to throw the entire independent field open to special investigations to ascertain jurisdiction beginning with the major companies. In view of the low prices for transmitted natural gas resulting from the evaluation of such gas on a cost basis, when owned by the regulated pipe-line companies, natural gas had been displacing artificial gas as well as other substitute fuels at a tremendous rate. With the prospect of further expansion in the use of natural gas into formerly unserved areas, such as New England and some seaboard southern states, the disparity be-

tween gas prices and oil prices would be further emphasized. The issue, therefore, was whether these competing fuels should be permitted to seek price adjustments in an open market.

On Jan. 3, 1950, the president appointed a seven-member commission to investigate facts and policies with respect to the present utilization and further development of the water resources of the U.S. and to recommend desirable legislation or changes therein. The report covered generally problems in connection with water resources management and land reclamation. Insofar as the recommendations related to public utilities, properly so called, the report recommended that federal agencies use the river basin approach of co-ordinating public utility functions with other functions, procedures most commonly associated with the Tennessee Valley authority (*q.v.*). What was perhaps most significant from the point of view of the privately owned segment of the power industry was the recommendation: "No licensing of private power projects which interfere with the full accomplishment of comprehensive multiple purpose development of river basins, including marketing of the power incident to such programs . . . should be permitted." On the other hand, water supply for municipal purposes "should continue to be primarily a local responsibility, including intercommunity cooperation through the formation of metropolitan water districts to make possible area-wide coordination of water supply sources to meet the needs of an increasing population." Moreover, water supply, like power supply, should constitute a "fully reimbursable service" of multiple purpose projects. The most problematical and far-reaching suggestion of the committee was that waterways be fully developed and integrated with all other forms of transport into a fully reimbursable segment as to cost.

The shadows of war were traceable in the Atomic Energy commission's power requirements in its expanding atomic energy program, particularly for its new plant at Paducah, Ky. According to plans and contracts consummated before the end of the year, TVA and a consortium of five neighbouring power companies, organized as "Electric Energy, Inc.," would each supply approximately one-half of a 1,000,000-kw. requirement. Similarly, the denial of a licence to the New York State Power authority by the Federal Power commission to develop the U.S. portion of the St. Lawrence international power project was significant. The requirement of the seaway portion of this project for the transport of iron ore from eastern Canada and elsewhere to the inland steel industry, was back of this action by the commission and of its recommendation to congress that the United States itself develop the entire project.

A record of new installations of 6,700,000 kw. was set up by the utility industry for 1950. With this went a generation of 328,000,000,000 kw.hr. to meet all-time highs in the energy requirements of a rapidly advancing war economy. (See also DAMS; ELECTRICAL INDUSTRIES; FEDERAL POWER COMMISSION; RAILROADS; RURAL ELECTRIFICATION; TELEGRAPHY; TELEPHONE; TENNESSEE VALLEY AUTHORITY.)

(M. G. G.)

**Canada.**—Public utilities in terms of power, transit, telephone and gas were faced in 1950 with such sharply rising demands that capital investment ran to around \$703,000,000, or more than \$50 per capita. The problem faced by such utilities was three-fold: in the 1940-50 period Canadian population rose about 17%; in the same ten years Canada's economy became increasingly industrialized; finally, Canadian wage earners by and large moved into a higher standard of living. Public pressure upon utility services showed no signs of slackening. In the 1945-50 period, consumption of primary power rose 32.7% (and went up 10% in the first two months of 1950), telephones in service increased 34% and consumption of natural and manufactured gas went up 26.6%. Transit companies carried 14,000,000 more passengers in 1949 than in 1948.

Telephone companies continued their expansion programs, the greatest in their histories; although 243,800 new phones were installed in 1949, bringing the total number to 2,690,331, or 19.6 per 100 of population, there remained an imposing waiting list, which was little diminished by 1950 installations.

The federal government gave consideration to piping Alberta natural gas to fuel-hungry industrial areas of Ontario.

(C. Cy.)

**Publishing (Book):** see BOOK PUBLISHING.

**Puerto Rico.** A U.S. insular dependency in the West Indies, Puerto Rico has an area of 3,435 sq.mi. Pop. (April 1, 1950, final census figures) 2,210,703; (1940 census) 1,869,255. According to 1950 population estimates, rural population was 57.9% of total, urban population, 42.1%. Chief cities (with April 1, 1950, preliminary census figures): San Juan, the capital (223,949); Río Piedras (132,369); Ponce (99,190); Mayagüez (58,744); Caguas (33,733); Arecibo (28,500). Languages: Spanish and English. Religion: predominantly Roman Catholic. Governor: Luis Muñoz Marín.

**History.**—On July 3, 1950, the president of the United States approved public act 600 recognizing the right of the people of Puerto Rico to organize a government pursuant to a constitution of their own adoption. In the procedure established by this act, the people of Puerto Rico, through a referendum, would honour or reject this law. If accepted, a general election would be held to choose the persons who would frame the constitution. A further election would be held to approve or reject the constitution framed by these persons.

On Oct. 30, members of the Nationalist party of Puerto Rico started a series of disturbances throughout the island for political reasons. Armed clashes with the police occurred, but in no way did these disorders resemble an armed revolution. A group of Nationalists made an unfruitful attack on the official residence of the governor in an attempt to assassinate Gov. Muñoz Marín. The insular police and the Puerto Rico national guard quickly brought the situation under control. As part of this same movement, two Nationalists attempted the life of Pres. Harry S. Truman.

The Nationalist party comprises a small minority of the population and stands for political independence from the United States at any cost. Unable to get its ideas through by a democratic process it resorted, unsuccessfully, to force.

**Education.**—Total enrolment during 1950 in the public and private schools of Puerto Rico was 444,723. Public schools had an enrolment of 422,128 pupils; private schools 22,595. Enrolment in the public schools was distributed as follows: 317,158 in elementary schools, 90,970 in secondary schools, 1,555 in vocational schools and 12,445 in evening schools. In the public schools the number of teachers, principals and assistant superintendents was 9,220; private schools employed 1,067 teachers. Higher education was carried on by the University of Puerto Rico, the Polytechnic Institute of Puerto Rico, the College of the Sacred Heart and Santa Maria university.

**Banking and Finance.**—Bank deposits on June 30, 1950, amounted to \$261,048,849; bank debits were \$319,462,170; bank loans amounted to \$129,053,915.

Insular government revenues and receipts for the fiscal year 1949-50 totalled \$218,626,004 of which \$121,818,832 was received in the general fund and \$96,807,172 in all other funds. The total disbursements for the same period were \$203,654,358. Of this total, disbursement from the general fund amounted to \$122,436,384 and from all other funds \$81,217,974.

**Trade.**—The total value of imports into Puerto Rico during the calendar year 1949 was \$333,672,371. Of this total, \$309,011,549 (92.6%) were shipments from the United States to Puerto Rico and \$24,660,822 (7.4%) were imports from other countries. The total value of exports for the same period was \$222,375,733 of which \$213,824,654 (96.2%) were shipments from Puerto Rico to the United States, and \$8,551,079 (3.8%) were exports to foreign countries.

**Communications.**—During the fiscal year 1949-50, 60,727 motor vehicles were registered, of which 36,492 were automobiles and buses, excluding government-owned automobiles; 9,365 were heavy trucks; 9,130 were light trucks; 5,740 were other motor vehicles, including government-owned vehicles. The insular department of the interior kept under maintenance as of June 30, 1950, 3,560 km. of roads. During the fiscal year 1949-50, 3,540 vessels arrived at the island with a registered tonnage of

PUERTO RICAN national guardsmen questioning the wife of a Nationalist party leader of Jayuya on Nov. 1, 1950, after a brief but violent uprising in the town; all known Nationalist and Communist leaders were ordered arrested after the revolt

12,080,741 short tons. During the same period, a total of 136,572 passengers arrived at the island, 129,114 by air and 7,458 by water. The total departures of passengers were 170,727; 163,261 by air and 7,466 by water.

As of June 30, 1950, there were 34,509 telephones in service.

**Agriculture.**—During the 1950 crop year, 10,614,633 short tons of sugar cane were harvested. The coffee crop for the crop year 1950 was estimated at 199,000 cwt.

**Manufacture.**—Sugar production for the 1950 crop year amounted to 1,293,947 short tons of raw sugar, 96° basis. Sugar-refining operations in the island yielded 220,385 short tons of refined sugar, 96° basis.

The total production during fiscal year (ending June 30) 1949-50 of some other manufactured products was as follows:

Product	Production	Product	Production
Blackstrap molasses, gal. . .	49,522,486	Beer, gal. . . . .	2,894,836
Distilled spirits, proof gal. .	4,337,955	Heavy clay, tons . . . .	14,055
Cement, bbl. . . . .	2,347,064	Sanitary ware, pieces . .	27,879
Cigars . . . . .	64,648,000	Glass containers, short tons.	24,448

During the year the total amount of construction authorized through building permits amounted to \$35,479,111. Electric power generated for the same period amounted to 539,376,947 kw.hr.

**Employment.**—As of June 30, 1950, the total labour force of the island was estimated to be 771,000 persons. Of this total 664,000 were employed, 246,000 in agriculture and 418,000 in other activities. The estimated unemployment as of this date was 107,000 persons. (See also LAW.) (J. L-EE.)

**Pulitzer Prizes.** The annual Pulitzer prizes in journalism, letters and music, first awarded in 1917, were established at Columbia university by the will of Joseph Pulitzer. The 1950 prizes in letters, five in number and of \$500 each, were awarded as follows: fiction award to A. B. Guthrie, Jr. for *The Way West* (Sloane); biography award to Samuel Flagg Bemis for *John Quincy Adams and the Foundation of American Foreign Policy* (Knopf); history award to Oliver W. Larkin for *Art and Life in America* (Rinehart); poetry award to Gwendolyn Brooks for *Annie Allen* (Harper); drama award to *South Pacific* (Random House), by Richard Rodgers, Oscar Hammerstein II and Joshua Logan.

Eight prizes in journalism, of \$500 each, were awarded as follows: for meritorious public service to the *Chicago Daily News* and to the *St. Louis Post-Dispatch* for articles exposing the presence of Illinois newspapermen on state pay rolls; for local reporting to Meyer Berger of the *New York Times* for his account of Howard B. Unruh's killing of 13 persons in Camden, N.J.; for national reporting to Edwin O. Guthman of the *Seattle Times* for his reports clearing Melvin Rader, University of Washington, of charges of communism; for international reporting to Edmund Stevens of the *Christian Science Monitor* for his series of articles "This is Russia—Uncensored"; for

distinguished editorial writing to Carl M. Saunders, editor of the *Citizen Patriot*, Jackson, Mich.; to James T. Berryman of the *Washington Evening Star* for his cartoon "All Set for a Super-Secret Hearing in Washington"; to Bill Crouch of the *Oakland Tribune*, Calif., for his picture of the near-collision of a B-29 and a stunt flier at an air show.

The Pulitzer prize for music, first awarded in 1943, was given to Gian-Carlo Menotti, composer of the opera, *The Consul*.

**Quebec.** The largest Canadian province is located along the lower St. Lawrence river and extends north to Hudson bay. Area: 594,860 sq.mi. Pop.: (1941) 3,331,882; (1950 est.) 3,976,000. Capital: Quebec city (pop. 1941) 150,757. Chief city: Montreal (q.v.) (pop. 1950) 1,181,955.

**History.**—Two sessions of the legislature under Premier Maurice Duplessis, head of the Union Nationale government, were held during 1950. Major laws of the spring session included: enabling legislation for the province to co-operate with the federal government for housing construction; a grant of \$500,000 to municipalities for fire prevention purposes; approval of a provincial lottery to aid health and education (with action deferred until revision of criminal code of Canada). Most of the bills considered by the autumn session concerned money: authorized fire-devastated Rimouski to float a \$1,000,000 bond issue for rehabilitation; voted an extra \$8,000,000 for agricultural development; raised gasoline taxes from 11 to 13 cents per gallon.

**Education.**—In a report to the legislature on Feb. 22, 1950, the government announced that in the 1944-49 period it built 1,089 schools at a cost of \$30,349,185; granted \$6,542,990 to classical colleges and seminaries; built 18 new schools for training teachers; and repaired 6,295 of 9,161 schools at a cost of \$7,000,000. In 1947 (latest year of revised statistics) total enrolment of Quebec schools was 566,120, with an average daily attendance of 533,765.

**Finance.**—Estimated provincial revenues for the 1950-51 financial year were \$201,349,960, with estimated ordinary expenditures at \$149,952,860, debt charges at \$19,647,000, and capital expenditures at \$31,015,000 (leaving an over-all surplus of \$735,100). On March 31, 1949, the net provincial debt stood at \$299,364,639.

**Transportation.**—In the 1944-50 period the government spent about \$30,000,000 to build or improve 700 bridges. The \$60,000,000 to be raised from the gasoline tax increase over the 1951-53 period was earmarked for a three-year highway expansion program. The government continued to remain aloof from the federal trans-Canada highway project.

**Agriculture.**—Crop conditions of 1950 were better than the year previous, which saw production setbacks caused by drought. Latest revised statistics for 1949 (with 1948 in parentheses) showed butter production at 93,000,000 lb. (96,000,000), concentrated milk 126,000,000 lb. (132,000,000), cheddar cheese 23,700,000 lb. (13,000,000). Population of horses, cattle and sheep was down in 1949 compared with 1948, but that of swine and poultry was up 17% and 10% respectively. The 1949 fruit crops were excellent, with 1,600,000 bu. of apples (up 33% from 1948), 7,500,000 quarts of strawberries (up 44%), and 20,000,000 lb. of blueberries (up 22%).

**Industry.**—Manufacturing continued to hold first place in Quebec's economy, with a gross annual value running over \$2,500,000,000. In the Jan. 1945-July 1948 period 4,883 new industries were established in the province, employing 74,000 additional workers.

**Minerals.**—The government announced that deposits of millions of tons of copper had been found in the Gaspé peninsula, and plans were discussed for government building of roads and development of waterpower to exploit the discovery. The Ungava iron ore deposits remained in the 1950 headlines, with construction starting on a railway from Sept Iles on the St. Lawrence river to the mines. First ore was smelted from the 1949-discovered 200,000,000-ton titanium deposit. Quebec mineral production for the first nine months of 1949 (with 1948 percentage comparisons in parentheses): gold, \$33,383,000 (up 23%); copper, \$27,863,000 (up 27%); asbestos, \$34,629 (down 18%). (C. Cy.)

**Quirino, Elpidio** (1890- ), president of the Republic of the Philippines, was born on Nov. 16 in Vigan, Luzon, and graduated from the University of the Philippines law school in 1915.

He became secretary to Manuel Quezon, who was later first

president of the Philippine commonwealth. Quirino served in the Philippine house of representatives and senate, and in 1936 was named secretary of the interior. He practised law and secretly helped the underground during the Japanese occupation. In 1946 he became vice-president of the new republic, and on the death of Manuel Roxas, on April 15, 1948, Quirino became president. In 1950 he sponsored a political, economic and cultural union of non-Communist states of the far east. His country supported the United Nations' defense of South Korea, and he continued the campaign to obliterate native Communist forces in the Philippines.

**Racing and Races:** see AIR RACES AND RECORDS; AUTOMOBILE RACING; HORSE RACING; MOTOR-BOAT RACING; TRACK AND FIELD SPORTS; YACHTING.

**Radar:** see ELECTRONICS.

**Radio.** There was no appreciable change in the number of radio broadcasting stations operating or under construction throughout the world in 1950, according to the best available estimates. These placed the total at about 6,500, including booster or relay stations but not television and frequency modulation (FM) stations.

The number of radio receiving sets in use throughout the world was estimated unofficially at about 166,000,000 to 171,000,000, a gain of about 10,000,000 over the 1949 figures. Most of these were concentrated on the North American continent, as in the past. Sets in use in the U.S. alone were estimated at 90,000,000 by O. H. Caldwell, editor of *Tele-Tech* magazine. This represented a gain of 9,000,000 over the 1949 U.S. total.

**U.S. Stations and Scientific Developments.**—The year 1950, like the one before it, brought no spectacular expansion in the broadcasting field. The amplitude modulation (AM) or standard broadcast band contained little room for new stations after the unprecedented building program of the first two years following World War II, when stations were added at a rate approximating 500 a year. The public's failure to respond enthusiastically to frequency modulation (FM) broadcasting offered little incentive for entry into the FM field.

*Broadcasting Telecasting Magazine's* box score of station authorizations showed that 3,104 broadcasting stations—AM, FM, TV—were operating or had been authorized by the end of Dec. 1950. This figure compared with 3,138 a year before. But while the number of authorizations declined by 34 during 1950, the number of stations actually in operation at the end of the year was the greatest in history—3,014 as compared with 2,926 at the end of 1949. The 34 authorizations "lost" during the year compared with a decline of 81 during 1949.

AM stations, as always, predominated in the 3,104 broadcast authorizations outstanding. *Broadcasting Telecasting Magazine's* compilation showed 2,319 AM authorizations—a gain of 82 since Dec. 30, 1949. The number of operating AM stations was 2,231.

In FM, the number of station authorizations dropped from 790 to 676, but at the end of December the records showed that all 676 authorized stations were on the air. A year before, however, 743 FM stations had been in operation.

Because of FCC's licensing freeze, there was no change in the number of television station authorizations—109—but during the year the number of these in operation increased from 97 to 107.

In tempo with the slowed pace of new station construction, the rate of applications also dropped during 1950. In Dec. 1949 there were 329 applications for new AM stations awaiting FCC action; in Dec. 1950 there were 263. Of this number, 136 had been set for hearing, usually for the reason that two or more applicants were seeking a frequency which could be assigned to only one.

REHEARSAL for *Goodbye Again*, a 1950 production of the "Theatre Guild on the Air." Shown, left to right, are Linda Darnell, Ezio Pinza, Homer Fickett, director of the series, and Madeleine Carroll

In FM there were 150 applications, of which only six were awaiting hearings. There were 374 applications for television stations, but this figure was not conclusive, for the FCC had urged would-be applicants to withhold their requests until it had completed the broad technical proceedings in which it was engaged.

*Facsimile.*—The facsimile field proceeded quietly in 1950, with about a dozen FM stations engaged in facsimile transmissions. Most of these were newspaper-owned stations, and their facsimile transmissions followed the newspaper style. Technical standards prescribed paper size of 8.2 in., with speeds permitting transmission of 16 letter-size pages per hour.

*Transit and Subscription Radio.*—One of the most significant developments in the FM field was the growth of transit radio—the transmission of special programs (usually music and news) to receivers installed on streetcars and city buses—and related services such as "storecasting" and "factorycasting," which involved similar broadcasting especially to stores and factories. Expansion of this type of FM operation continued in 1950 despite a series of protests which seemed likely to require a ruling by the FCC on the question of its legality. By the end of 1950, transit companies in approximately 19 cities had subscribed to this type of service.

Muzak Corp., which once before had failed to win FCC permission to launch a "pay-as-you-hear" radio service, reactivated its plan with a proposal for subscription FM, telling the FCC in September that it could provide a nation-wide FM service. The FCC had not acted at the end of 1950.

**U.S. Commercial Broadcasting.**—*AM Revenues and Expenses.*—The upward trend of total revenues from AM operations continued in 1949, the latest year for which official reports were available. The 1.67% gain in gross revenues was more than offset by a 4.26% increase in expenses, however, with the result that net income before federal taxes dropped 12.21% below the 1948 figure.

The year's 1.67% increase in total revenues put the 1949 total at \$413,784,633, according to a report issued by the Federal Communications commission late in Nov. 1950.

The report also showed that broadcast expenses reached \$357,521,718, which, deducted from the gross revenue figure, left

broadcast income totalling \$56,262,915 before federal income taxes. The FCC report was based on information supplied by seven AM networks, their 27 owned and operated stations and 1,994 other AM stations, compared with seven networks and 1,824 stations in 1948.

The four nation-wide and three regional networks and their owned stations accounted for \$108,079,704 (26.12%) of the 1949 total revenues, and \$17,473,756 (31.06%) of the net broadcast income before taxes. The 1,994 other stations which filed reports accounted for \$305,704,929 (73.88%) of the total revenues and \$38,789,159 (68.94%) of the net income. By comparison in 1948 the networks and their owned stations received \$109,031,802 (26.79%) of broadcast revenues and \$18,085,191 (28.22%) of net income, while 1,797 other reporting stations accounted for \$297,963,612 (73.21%) of total revenues and \$46,006,493 (71.78%) of net income.

*Receipts from the Sale of Time.*—Time sales, the financial mainstay of broadcasting, reached an all-time high mark in 1949 with a 2.07% increase which put the total at \$425,357,133, compared with \$416,720,279 in 1948. The rate of gain was less than that of the previous year, when time sales climbed 11.9% above those of 1947. Revenues from time sales to network advertisers totalled \$134,898,325, a loss of 4.36% from the 1948 figure, while time sales to national and regional ("spot") advertisers amounted to \$108,314,507 (a gain of 3.39%) and sales to local advertisers totalled \$182,144,301 (a gain of 6.57%).

These figures included commissions paid to agencies, representatives, etc., which broadcasters consider an expense of sale. Commissions, etc., aggregated \$50,307,683, representing little change from the previous year's total of \$50,292,281. (See also ADVERTISING.)

Table I.—Financial Status of AM Broadcasting Industry in U.S.

AM networks and stations	1949*	1948†	Per cent increase (decrease in parentheses)
Revenues, sale of network time . . . . .	\$134,898,325	\$141,052,353	(4.36)
Revenues, nonnetwork time . . . . .	290,458,808	275,667,926	5.37
Commissions to agencies, etc. . . . .	50,307,683	50,292,281	0.03
Revenues from talent sales, etc. . . . .	38,735,183	40,567,416	(4.52)
Total broadcast revenues . . . . .	413,784,633	406,995,414	1.67
Total broadcast expenses . . . . .	357,521,718	342,903,730	4.26
Broadcast income (before federal income taxes) . . . . .	56,262,915	64,091,684	(12.21)

\*Seven networks, 2,021 stations covered in report.

†Seven networks, 1,824 stations covered in report.

**AM Industry Balance Sheet.**—Table 1, prepared from FCC records, provides a comparison of pertinent financial information for the AM broadcasting industry in the calendar years 1949 and 1948.

**Average Station's Finances.**—The average AM station's net income (before taxes) declined 14.29% in 1949, according to the FCC study, which placed average income at \$29,038 per station in 1949 as compared with \$33,879 the preceding year. The study was based on reports from 1,423 "identical" stations. Average pretaxes income ranged from \$276,189 (the average of 53 clear-channel 50-kw. stations) to \$2,591 (the average of 74 local part-time stations). Percentagewise, the part-time locals suffered the greatest decrease in net income, taking a 51.97% drop.

The average income of stations affiliated with nation-wide networks was reported as \$39,824, while that of stations not affiliated with national networks was \$7,982, according to the FCC report. The average network affiliate's income was 16.04% less than in 1948, however, while that of the average nonaffiliate was 7.63% higher than it was in the previous year.

**Broadcast Expenses.**—As in preceding years, programming was the largest item of expense to broadcasters in 1949, accounting for \$134,497,120 of the expense total of \$354,882,577 reported by seven networks and 1,889 AM stations. The FCC study also showed \$116,860,657 in general and administrative expenses, \$54,735,268 in technical expenses and \$48,789,532 in sales expenses. Figures for 132 other stations, which did not have as much as \$25,000 in time sales during the year and therefore were not required to supply the FCC with detailed information, brought the AM expense total to \$357,521,718 for the networks and 2,021 stations, compared with \$342,903,730 for the networks and 1,824 stations in 1948.

The number of AM stations which reported losses from broadcast operations went from 581 in 1948 to 684 in 1949, according to the FCC. The 1949 total represented about 30% of all AM station authorizations outstanding as of Dec. 30, 1949. A majority

of the 1949 losers—516—were stations which were built after World War II, although 129 of the total had been in operation since before 1940. Total losses of the 684 stations were reported as \$9,803,462.

**Tangible Broadcast Property.**—Total investment in tangible AM broadcast properties in 1949 aggregated \$230,587,035, according to the FCC. Of this, the investment of four nation-wide networks and their 11 key stations was reported as \$22,120,239; one regional network and one key station \$670,778 (two regional networks not shown); and 2,005 stations \$207,796,018. The depreciated cost of these properties, after deducting depreciation to date, was placed at \$150,074,292, broken down as follows: nation-wide networks and 11 key stations \$9,594,667; one regional network and one key station \$76,910; and 2,005 stations \$140,402,715.

Table II.—AM Tangible Broadcast Property in the U.S.\*

	1949	1948	Per cent increase
Cost to licensee . . . . .	\$230,587,035	\$201,408,564	14.5
Depreciation to date under ownership of licensee . . . . .	80,512,743	66,745,050	20.5
Depreciated cost . . . . .	150,074,292	134,663,514	11.4

\*1949 figures include four nation-wide networks and 11 key stations, one regional network and one key station and 2,005 other stations. 1948 figures include four nation-wide and three regional networks and 1,824 stations.

**FM Finances.**—There were no auditable figures on FM finances in 1950, primarily because many FM stations were operated in conjunction with AM stations and no clear distinction was made between the finances of the two. Additionally, in many AM-FM cases the FM audience was offered as a bonus with the AM. It was conceded, however, that FM's revenues were still relatively meagre. The FCC made a preliminary report on 1949 FM revenues early in 1950, but did not include these statistics in a final report covering AM and TV revenues.

**Estimated 1950 Time Sales.**—Broadcasting Telecasting Magazine estimated 1950 AM time sales at approximately \$453,600,000, or 6.6% more than the 1949 figure of \$425,357,133. Revenues from the sale of talent, etc., were expected to surpass the 1949 total of \$38,735,183, which would push total broadcast revenues close to the \$500,000,000 mark.

**U.S. Manufacturing.**—Preliminary estimates by the Radio-Television Manufacturers association, representing more than 80% of the industry, placed production for 1950 as follows: home

Table III.—Total FM Broadcast Revenues in the U.S.

	1949		1948	
	Number of Stations	Total FM Revenues (millions)	Number of Stations	Total FM Revenues (millions)
FM stations operated by:				
AM licensee:				
Joint AM-FM operation . . . . .	452	...	516	...
Separate FM operation . . . . .	167	\$1.2	77	\$0.6
Non-AM licensee . . . . .	114	1.6	89	1.1
Total FM stations . . . . .	733	\$2.8	682	\$1.7
Total FM broadcast income (before federal income tax)				
FM Stations operated by:				
non-AM licensees . . . . .	114	—(\$3.5)	89	—(\$3.1)
Industry Total . . . . .		*		*

Parentheses denote loss.  
\*AM licensees operating FM stations reported FM station revenues, if any, separately from AM station revenues. In view of the difficulty of making allocations as between AM expense and FM expense, such licensees were not requested to report separately their FM station expenses. Thus, data with respect to FM expense and income (or loss) were available only for FM stations operated by non-AM licensees.

Table IV.—Time Sales of U.S. Stations

Class of business	1950 (estimated)	1949	Per cent increase (decrease in parentheses)
National network . . . . .	\$121,687,446	\$128,903,467	(5.6)
Regional and miscellaneous networks . . . . .	6,120,750	5,994,858	2.1
National and regional non-network time . . . . .	120,185,348	108,314,507	10.9
Local . . . . .	205,612,178	182,144,301	12.9
Total . . . . .	\$453,605,722	\$425,357,133	6.6

radios 8,002,500; automobile radios (11 months) 3,785,297; portable radios (11 months) 1,560,501.

The prospects for 1951 production were not too bright as a result of increasing military demands for electronic equipment in the government's preparedness program. Early estimates placed the civilian production cutback at 10% to 20%, but at the year's end the actual effect of the preparedness program upon the production of radio sets for home use could not be foretold.

**U.S. Programs.**—The most popular AM network programs during the third week of Oct. 1950, were as shown in Tables V and VI, according to the A. C. Nielsen Co., which in February acquired the national rating services of C. E. Hooper, Inc. Tables V and VI, segregating the programs between daytime and nighttime, compare the positions held in the third week of Oct. 1950 with those of a comparable week in Oct. 1949.

**Network Programs by Types.**—Table VII shows the general composition of commercial evening programs broadcast by the radio networks in 1950. The table compares the third week of Oct. 1950, with the corresponding week of 1949.

**Program Trends, Special Events.**—The international situation, and particularly the outbreak of hostilities in Korea on June 25, brought an intensification of news interest, and radio expanded its efforts to satisfy the public appetite with first-hand accounts and expert analyses.

On the domestic scene, radio coverage of the November congressional and state elections reached a new high in comprehensive off-year election reporting. Sports continued to provide substantial radio fare. Gillette Safety Razor Co. paid \$800,000 for television rights to the 1950 world series baseball games—

Table VII.—Percentage of U.S. Nighttime Radio Commercial Hours Devoted To Each Program Type

Type of Program	Oct. 1950	Oct. 1949
Mystery drama . . . . .	23.4	21.4
Comedy situation . . . . .	19.5	18.4
General drama . . . . .	12.8	16.0
Quiz and audience participation . . . . .	10.6	14.3
Popular music . . . . .	10.6	10.1
Concert music . . . . .	10.4	4.7
Variety music . . . . .	7.2	9.4
Variety comedy . . . . .	5.5	5.7

SIMPLIFIED TRANSMISSION LINE developed by Georg Goubau (above), and presented before the Institute of Radio Engineers in March 1950. The simple wire with special insulation and funnel-shaped terminals was designed to replace costly and intricate coaxial cable for many applications

four times the 1949 cost—plus \$175,000 for radio rights.

**U.S. Nation-Wide Networks.**—The number of national U.S. radio networks increased from four to six in 1950. The "old-timers"—American Broadcasting company, Columbia Broadcasting system, Mutual Broadcasting system and National Broadcasting company—were joined by Liberty Broadcasting system, which commenced full-time service as the fifth network on Oct. 2, and by Progressive Broadcasting system, which commenced operations Nov. 26.

**U.S. Organizations; Regulation.**—The National Association of Broadcasters' board of directors voted in Aug. 1950 to expand its sales agency, Broadcasting Advertising bureau, by creation of a "super-B.A.B." supported by a \$1,000,000 budget. At its annual convention, held in Chicago, Ill., in April, N.A.B. also elected William B. Ryan, of KFI, Los Angeles, Calif., as N.A.B. general manager. N.A.B. President Justin Miller in the meantime was given far-reaching powers within the organization.

In March, the formation of Broadcast Audience Measurement, Inc. was begun, a new firm to succeed Broadcast Measurement bureau as the audience measurement organization sponsored by N.A.B., the American Association of Advertising Agencies and the Association of National Advertisers.

The Radio Manufacturers association reorganized at its annual convention in Chicago in June, changing its name to Radio-Television Manufacturers association. R. C. Sprague, of Sprague Electric Co., was elected board chairman and interim president.

To intensify and co-ordinate radio-TV participation in the national defense mobilization program N.A.B., at White House suggestion, led in the formation of an industry-wide Broadcast Advisory council, with Justin Miller as chairman. The Radio-Television Manufacturers association and the National Security Industrial association meanwhile jointly formed the National Electronics Mobilization committee, to co-operate with government officials on mobilization problems.

**Regulation.**—During a great part of 1950 the FCC was preoccupied with the question of colour television. (See TELEVISION.) It disposed—partially—of one of its older and more controversial policy questions in July, however, by ruling that the networks were not violating the FCC network rules by representing affiliates in the sale of advertising. The National Association of

Radio Station Representatives (N.A.R.S.R.) had protested this network activity in 1948. Although it held that the networks were not thus violating existing rules, the commission left for later decision the question of whether the rules ought to be changed.

The FCC also heard arguments on its proposal to adopt a uniform policy which would be applied in all cases where applicants or licensees had violated laws other than those dealing with broadcasting—primarily the antitrust laws. Radio attorneys participating in the arguments, conducted in April, almost unanimously opposed adoption of such a plan, and the question was still pending at the end of the year.

Of potentially great future significance to the over-all regulation of all radio and wire communications—including, of course, broadcasting and telecasting—was Pres. Harry S. Truman's appointment in Feb. 1950 of a temporary Communications Advisory board. This five-man group, headed by Irvin Stewart, president of the University of West Virginia, Morgantown, and a former member of the FCC, was assigned to study the use of radio and wire communications by both government and private agencies, and to recommend methods of achieving economy in the use of frequencies. Late in 1950 the board was considering a proposal to create a permanent, top-level government body which would be known as the National Telecommunications Policy board.

**Inter-American Agreements.**—A protracted series of conferences which had started in Montreal, Que., in the fall of 1949, culminated Nov. 15, 1950, in the signing of a new North American Regional Broadcasting agreement (N.A.R.B.A.) to govern AM broadcast allocations among the U.S., Canada, Cuba, the Bahamas and Jamaica and the Dominican Republic. Mexico, a signatory of the original N.A.R.B.A. (1941-49), withdrew her delegates midway in the second session of the conference, and Haiti was unable to participate at all in the second session, held in Washington, D.C., from Sept. 6 to Nov. 15.

The chief issue in the negotiations involved the demands of Cuba, which the U.S. considered too restrictive on U.S. operations. Bilateral discussions between U.S. and Cuban delegates were held in Havana in February and March, but no agreement was reached until the waning days of the Washington sessions approximately eight months later. The Clear Channel Broadcasting service, representing independently owned clear-channel stations in the U.S., protested that U.S. broadcasting stations and listeners would suffer interference as a result of the agreement, and promised to oppose its ratification when the senate considered it. (See also STANDARDS, NATIONAL BUREAU OF.) (R. W. CR.; S. TF.)

**International Developments.**—The formation of a European Broadcasting union (E.B.U.) was an important event in the field of zonal co-operation. This took place in Feb. 1950 at Torquay, Eng., when accredited representatives of the broadcasting organizations of 21 European countries pledged themselves to active membership of the new union. They were from Belgium, Denmark, Egypt, France, Greece, Ireland, Italy, Lebanon, Luxembourg, Morocco and Tunisia, Monaco, Norway, Netherlands, Portugal, Sweden, Switzerland, Syria, Turkey, the United Kingdom, Vatican City and Yugoslavia. Israel and Finland also took part but postponed any decision concerning adherence.

The eastern European broadcasters, though invited to Torquay, retired to Prague where they formed a body of their own, with which the E.B.U. declared its intention of maintaining friendly relations. The E.B.U.'s headquarters were at Geneva, Switz., with a technical centre in Brussels, Belg. Sir Ian Jacob, director of the British Broadcasting corporation overseas services, was the first president of the E.B.U. and L. Wallenborn, of Switzerland, the first director.

The Copenhagen wave-length plan which aimed at bringing

order out of chaos in the air networks of Europe came into fairly complete operation in March despite earlier misgivings. The technical centre of the new union was quickly at work monitoring and reporting on conditions, especially later in the year when, in the normal course of events, interference became more apparent. As expected, Germany and Austria provided the chief difficulties with Spain a close third. The U.S. had declined to accept the recommendations in the plan so far as they affected the U.S. zone of Germany. The result was that there was broadcasting on 27 frequencies in that zone and on 9 in the other three zones. The long-term effect of this might conceivably have been advantageous since all the broadcasting organizations in western Germany and notably Nord-west Deutsche Rundfunk in the British zone were compelled to experiment with ultrashort waves, which were free from interference. By December, 20 such transmitters were operating and as many again were planned for 1951, although suitable receiving sets were few in number. The immediate effect of U.S. nonparticipation in the plan, however, was disastrous: it was estimated in Bonn at the end of the year that at least a third of the people in western Germany could not receive a single native program clearly and regularly.

Although it was allocated four frequencies at Copenhagen, Austria continued to work on at least 13. Austria's central position and the grouping of its stations round the centre of gravity of European broadcasting made this divergence from the plan a serious one.

The other principal factor compromising success of the plan was the position of Spain. For reasons thought valid at the time and supported by the majority of the delegates at Copenhagen, Spain was not invited to attend. Not unnaturally, Spain did not consider itself bound by the allocations made to that country. With the coming of winter it became obvious that interference from Spanish stations was going to prove a source of nightly irritation to listeners throughout the eastern coastal districts of England and Scotland.

A conference on high-frequency broadcasting—international except for the U.S.S.R. and the eastern European countries who walked out in the first meeting because the Chinese Communist government was not represented—was held at Florence and Rapallo, Italy, during the greater part of the year. After months of hard work and the exchange of much information it was decided that since the demands so greatly exceeded the spaces available in the bands allocated to high-frequency broadcasting by the International Radio conference at Atlantic City, N.J., in 1947, and in view of the international developments during the summer months, all work on plan-making should be discontinued.

The Italian organization introduced a "third" program in October, its program structure, of "light" "national" and "third," thereafter corresponding almost exactly to the British. The Italian "third" ran for two hours each evening offering perfect reception to a third of the listening population. The subject matter, it was declared, would be planned to bring to the microphone not only the world's inheritance of literary and musical masterpieces but also contemporary works showing the vitality of the modern art of writing for broadcasting. Poland's free university of the air was a somewhat similar project but with a more utilitarian purpose, with "The Theory of Dialectical Materialism" and "The History of Workers' Movements" as two of the ten courses which would cover a two-year study period. By the autumn 100,000 persons were listening regularly, many of them in groups organized by the trade unions. Many of the European countries increased their foreign-language broadcasts during the year, the barrage directed to Yugoslavia for instance, from west and east alike, reaching formidable proportions.

**United Kingdom.**—While waiting for the publication of the report of the Beveridge committee on the future of broadcasting

and television, which was expected at end of Jan. 1951, the B.B.C. continued to experiment and to plan for the future both in programs and in technical matters. In the Light program vast audiences listened to poetry programs introduced by the popular entertainer, Wilfrid Pickles, and in the same service children under five were offered, and many eagerly accepted, a program of their own, called "Listen With Mother." The outstanding successes of the Third program were a series of talks by a young Yorkshire and Cambridge mathematician, Fred Hoyle, on "The Nature of the Universe," and a full quarter's theme, expressed in music, readings, drama and discussion, devoted to "The Concept of Liberty."

The B.B.C. made rapid progress in its scheme of providing five main and five satellite television stations designed to serve most of the population of Great Britain. The Birmingham station, which was in 1950 the most powerful television transmitter in the world, successfully completed its first year's operation, with only a few minor technical difficulties. The effective range of the station was considerably greater than had been anticipated. The radio link that was ordinarily used for conveying programs between London and Birmingham in either direction was supplemented by a co-axial cable link installed by the general post office; valuable experience was expected to be gained on the relative merits of these two systems of interconnecting television stations.

The performance of television receivers was appreciably improved, and there was much controversy about the relative merits of those using direct-viewing tubes of large diameter and projection types. For home viewing purposes, the tendency was to use large tubes up to 18 in. in diameter, but several excellent demonstrations were given of the possibilities of projection from a 2½-in. tube to give pictures ranging from 4 ft. by 3 ft. to 20 ft. by 16 ft., the latter being suitable for use in theatres. **Railroads. United States.**—The demands of the larger volume of tonnage incidental to the accelerated program of national defense and the military needs of the war in Korea were adequately met in 1950 notwithstanding one unfavourable factor: here and there throughout the country there were shortages in the supply of freight cars and consequent delays in getting the goods in transit. To correct this serious deficiency in service the orders for new cars were expanded early in the year and extraordinary efforts were made to bring down the number of cars awaiting repairs as close as possible to the desirable minimum of 4% of the total number. By October the situation was fairly well in hand. During the first nine months of the year 26,237 new cars had been put in service and nearly 100,000 new cars were on order. The number of cars out of service for repairs had been reduced from 7.3% of the total on Oct. 1, 1949, to 5.9% on Oct. 1, 1950.

In one other respect the railroad record of 1950 was unfavourable. The number of passengers killed in train accidents was distressingly high. An Interstate Commerce commission report showed that in the first nine months of 1950 74 passengers lost their lives in train collisions or derailments and 888 passengers were injured. These figures, moreover, did not include the 78 who were killed and the 203 who were injured in the Long Island col-

**GAS TURBINE-ELECTRIC LOCOMOTIVE**, the first built in the United States, shown during a 1950 test run. The 4,500-h.p. unit had more than twice the horsepower of a diesel-electric unit of comparable size

lision of Nov. 22. During the first nine months of 1949 there was only one passenger fatality in train accidents (see also DISASTERS).

The unfavourable earnings trend of U.S. railroads in 1949 was arrested in 1950. The volume of traffic and the earnings, both gross and net, were substantially greater than in 1949, and the net income after payment of charges was more than in any year since 1943. The most important items in the income account of Class I railroads (comprising about 95% of the total mileage) for the 12 months ending Oct. 31, 1950, compared with the calendar years 1949, 1948 and 1944, are shown in the accompanying table. The year 1944 is shown because it is representative of the abnormal conditions of World War II and had the greatest volume of rail traffic, both passenger and freight.

**Condensed Income Account: U.S. Class I Railroads**

	(In millions) 12 months ended Oct. 31, 1950	1949	Calendar years 1948	1944
Total operating revenues . . . . .	\$9,106	\$8,580	\$9,672	\$9,437
Total operating expenses . . . . .	6,912	6,892	7,472	6,282
Taxes . . . . .	1,056	833	1,028	1,846
Net railway operating income . . . . .	959	686	1,002	1,106
Net income after charges . . . . .	711*	438	698	667
Return on investment less depreciation . . . . .	3.99%	2.86%	4.24%	4.73%

\*Estimated.

An analysis of the higher net income of 1950 should, however, take account of the fact that the railroads made gross capital expenditures for additions and betterments in the amount of about \$1,039,000,000. Such gross capital expenditures in 1949 were \$1,312,000,000 and the net addition to the investment account, after allowances for property retired and other charges to operating expenses, was \$747,000,000. There was, therefore, an additional investment of nearly \$750,000,000 on which a return must be earned. The rate of return on property investment, less depreciation, plus working cash and value of inventory of material and supplies, was estimated as fairly close to 4% in 1950; 2.86% in 1949; 4.24% in 1948; and 4.73% in 1944. While the net income in 1950 was favourable in comparison with 1949, the return on the investment was substantially less than the 6% rate which railroad financiers assert is the minimum to support railroad credit and, through the sale of capital stock enable the railroads to finance urgently needed improvements in roadway, track

and other structures, signals and other fixed property. New capital for modern locomotives and rolling stock was readily available under equipment trusts or by lease from two insurance companies which in 1950 embarked on such a program. Of the gross capital expenditures during the first six months of 1950 76% was for equipment and 24% for fixed property.

There were no general increases or decreases in freight and passenger rates during the year. The only changes to be noted were a 21% increase in charges by the Railway Express agency, a subsidiary of railroads collectively; an increase of suburban (commutation) rates on railroads serving the cities of New York and Chicago; and an upward adjustment in the rates paid to the railroads by the post office department for the transportation of mail. Under a compromise agreement between the post office department and the railroads, approved by the Interstate Commerce commission in December, the railroads were to receive back pay in the amount of about \$150,000,000 for underpayments from 1947 to the end of 1950. The ICC, in December, had under consideration the rates to apply from Jan. 1, 1951.

In Dec., 1950, the eastern railroads petitioned the ICC for permission to raise freight rates 4% to offset higher costs of operation. The petition was presented prior to the wage increases for train and yard service employees granted on Dec. 21, which were estimated to add \$131,000,000 per year to operating expenses.

The anti-trust suit instituted by the department of justice in 1944 against western railroads and certain individuals had not been concluded at the end of 1950, but the suit brought against the southern and eastern railroads in 1944 by the state of Georgia, alleging undue discrimination against the state in freight rates, was dismissed on appeal to the supreme court. The petition of the department of justice to the ICC to order reparations (refunds), in the amount of about \$2,000,000,000 for alleged overcharges on government freight moved by railroads in World War II was still before the ICC at the close of the year.

As a counterpart of the Office of Defense Transportation, which during World War II was the government agency to co-ordinate transportation in the interest of national defense, a Defense Transportation administration was created in Oct. 1950 under authority of the Defense Production act. James K. Knudson of the ICC was made director and was given charge of priorities and allocations with respect to rail, highway and inland waterway transportation. The secretary of the interior was given authority in those fields over oil and gas pipelines, and the secretary of commerce was given like powers over commercial air transportation and coastwise, intercoastal and ocean shipping. The activities of these authorities had gone little beyond the organizational stages by the end of the year.

In labour relations, especially the train and yard service unions, the year was one of almost continuous turmoil, with final achievement of substantial gains in a shorter working week and higher rates of pay. The year began with a heavy backlog of unsettled disputes. Direct negotiations between the railroads and the unions, mediation by officials of the federal government, and hearings and reports by fact-finding boards appointed by President Truman, failed to bring the two sides together until late in the year. Strikes, both local and on a national scale, were called, and President Truman under his statutory powers was forced to take over the railroads and assign them to the secretary of the army for operation by existing personnel under army supervision. The railroads as a whole were under that type of government operation at the close of the year.

Apart from a few disputes which were local to individual roads and minor in character there were two principal issues: (1) the demand by yard switching employees for a five-day week (40

hours) with an increase in the hourly rate so that the weekly pay for five days would be as great as that for six days at existing wage rates; and (2) the employment of an additional fireman on multiple-unit diesel road locomotives and a fireman as well as an engineer on small diesels in yard service.

Inasmuch as the five-day week, without loss in weekly pay, had been granted in 1949 to nearly 900,000 nonoperating employees, it was natural that the 120,000 yard employees, who were paid on a time basis, would seek the same advantage, and that the 150,000 men employed on trains and paid on a mileage basis, would ask for more pay without change in the hours of service. The issue, however, was complicated by jurisdictional strife between the Switchmen's union, which controlled about 5% of the yardmen, and the Brotherhood of Railroad Trainmen and the Order of Railroad Conductors, which controlled about 95% of those employees. The two groups would not work together for the yardmen and each sought to get better terms than the other. The S.U. was ahead of the B.R.T.-O.R.C. in carrying through the stages of direct negotiation, mediation and the appointment of a fact-finding board, and was first in a threat to strike, but the B.R.T.-O.R.C. was close behind. When the S.U. called a strike, President Truman in March appointed a fact-finding board and, while hearings were in progress, designated that board to find also the facts in the B.R.T.-O.R.C. dispute, those two unions having also called a strike. The issues in the two cases were almost identical. The board's request for an extension beyond the 60-day limit for its report was refused by the S.U. and the board met the situation by finding in its report on the S.U. dispute that its members should be given the same treatment as the board would recommend in its forthcoming report of the B.R.T.-O.R.C. dispute. Those recommendations were that the five-day week should be granted and that the hourly wage rate should be increased 18 cents. Inasmuch, however, as an increase of 31 cents would be needed if the men were to get as much pay in five days as they had been receiving for six days at the current rate, the board's recommendations were rejected by both union groups.

In subsequent negotiations with the railroads the B.R.T.-O.R.C. group was offered an additional 5 cents per hour (23 cents in all) and an arrangement under which, from Jan. 1, 1951, they would be given an additional 1 cent per hour for every point of advance in the bureau of labour's cost-of-living index. This offer was refused by the B.R.T.-O.R.C.

The S.U. did not spend much further time in negotiations with the railroads. Failing to get what it insisted upon, a strike was called on five western railroads, including the Rock Island. This action, effective June 25, seriously crippled rail traffic and led President Truman to seize the Rock Island for government operation. The strike was terminated on four of the five railroads on July 6 and on the Rock Island two days later. The S.U. then resumed negotiations with the railroads and a settlement was reached, effective Sept. 1, on the terms that had been offered to but rejected by the B.R.T.-O.R.C.—an increase of 23 cents per hour with future adjustments quarterly of 1 cent per hour for each one-point advance in the cost-of-living index.

When the B.R.T.-O.R.C., after further negotiations, failed to reach agreement, a nation-wide strike was called to become effective Aug. 28. This threat of transportation paralysis while the Korean war was in progress forced President Truman to take over the railroads for operation under supervision of army officers and the strike order was revoked Aug. 27. Conferences were again resumed, but as it was apparent that little progress was being made toward settlement the yardmen in Chicago, on Dec. 13, staged a wildcat strike which spread quickly to other cities in the middle west and the east. The strikes lasted only three days. President Truman, in his nation-wide broadcast Dec.

15 had urged the men to return to work, reminded them that the railroads were under government operation, that their action required an embargo on Christmas mail, and that the strike was seriously interfering with the movement of military supplies to Korea.

Further negotiations with the railroads and mediation at the White House level brought about an agreement, with a three-year contract, on Dec. 21. The B.R.T.-O.R.C. yardmen were given an increase of 23 cents per hour, retroactive to Oct. 1, with an additional 2 cents to be given Jan. 1, 1951, and future adjustments were to be geared to the cost of living. This settlement from the union viewpoint was somewhat better than that won by the S.U. and in addition to the concessions to the yardmen the railroads agreed to an increase of 5 cents per hour to engineers, firemen, conductors and trainmen in road service, plus another 5 cents beginning Jan. 1, 1951, with provision for future adjustments on the cost-of-living basis. This settlement, however, although agreed to by the national officers of the four train service unions, was subject to ratification by the general chairmen's committees of the four unions. On Dec. 29 the terms were rejected by the engineers. The other three unions were to make their decisions early in January.

The second major cause of labour disputes in 1950 was the demand of locomotive firemen for the employment of an extra fireman, three men in all, on multiple-unit diesel locomotives in road service. A fact-finding board had found in 1949 that the third man was unnecessary and recommended that the request be withdrawn. This the firemen refused to do and, when they were unable to prevail upon the railroads to meet the demand, a strike was called, May 10, on parts of four selected major railroads. The resultant partial paralysis of rail transportation, on an issue which a presidential fact-finding board had found to be without merit, caused such strong public criticism that the strike was called off after six days. The union agreed to withdraw the demand for the third man on road diesels and the railroads agreed to arbitrate two subsidiary issues. (See also INTERSTATE COMMERCE COMMISSION; UNITED STATES.) (W. J. C.)

**Great Britain.**—Several large-scale schemes of new works, designed and begun by the former four main-line railways, were completed in 1950. Of special note was the great marine station at Southampton docks, costing about £750,000, which replaced a pier destroyed during World War II and was unique in passenger-landing facilities. Primarily designed to handle expeditiously transatlantic passengers of the two Cunarders, the "Queen Mary" and the "Queen Elizabeth," it was opened by Clement Attlee, the prime minister, in August.

Passenger train speeds had not reached the pre-1939 level and the summer passenger services totalled about 80% of the 1939 daily mileage. New standard steam locomotive types were not to appear until 1951, but tests were conducted with various new diesel-electric units and with a gas-turbine locomotive imported from Switzerland.

Falling revenues and rising costs induced the Transport commission to apply for a higher level of freight rates; an increase was granted in May, bringing the average level to 81% over that of 1938. No increase was requested in railway passenger fares. Some adjustments were made in October in the level of passenger fares in the London area chiefly affecting the services of London transport; these were designed to bring in more revenue.

**Northern Ireland and Ireland.**—The financial position of the G.N.R. serving Northern Ireland and Ireland became acute in 1950 and the railway announced its intention to cease service unless a solution, which would involve government action by Ulster, could be found. The G.N.R.'s progressive policy in developing light diesel trains and inaugurating its "Enterprise" expresses between Belfast and Dublin, a service extended to Cork

for the first time, merited better reward. From June the Irish railway (C.I.E.) became a nationalized concern having suffered serious financial deficits during the previous few years. The same chief executive was in charge of the management of both the G.N.R. and the C.I.E. concerns. The latter started to use main-line diesels.

**Europe.**—Financial considerations in France limited construction projects to little more than the rebuilding of war-damaged facilities and the completion of electrification schemes in hand. Conversion to electric traction of the most important French railway artery, Paris-Dijon 196 mi., was completed in September, the southerly section between Laroche-Migennes and Dijon having been finished early in the year. A feature of the rearranged facilities was the ability to use either track, on certain sections, for northbound or southbound traffic, thereby avoiding expensive widening. New electric units of Co-Co type were placed in service, and others of 4,000 h.p. and 2-D-2 type were employed on this heavily graded main line. France could claim the speediest passenger services in Europe in the summer of 1950 when 120 daily runs were scheduled at 60 m.p.h. or over, almost all with diesel or electric traction.

An experimental electrification scheme was completed using the 50-cycle single-phase system on the 48½ mi. Aix-les-Bains to La Roche-sur-Foron section; the results would be studied closely by railways in many countries because, if successful, the costs of electric traction for light traffic lines might be much reduced. The 12-yr. electrification plan of the French railways called for the postwar conversion of 1,125 mi. including the 320-mi. Paris-Dijon-Lyons section of the Paris-Marseille main line: the tonnage of coal saved thereby in a year would be almost 1,600,000, but problems of finance might retard the program. An autonomous railway administration was set up in the Saar.

In western Germany electrification of the Nuernberg-Regensburg 62½ mi. main line was completed in May, thus linking two sections already electrified, and projected conversions concerned the Stuttgart-Karlsruhe and the Karlsruhe-Basel lines.

The Italian state railways completed their vast Termini sta-

"MOVIE COACH" aboard a German express passenger train where U.S. cultural films were shown free of charge in 1950 by arrangement between the U.S. High commission for western Germany and German railway officials

tion at Rome in time for Holy Year traffic and electrification of the Avezzano-Sulmona line was finished in May.

The Swiss federal railways continued widening the Zurich-Sargans line, and were operating 19 trains a day at 60 m.p.h. or more. The Swiss railways had also extended the use of 36-m. rails (118 ft. 1½ in.), and some new Bo-Bo type electric units of improved design came into service. The Berne-Loetschberg-Simplon railway placed in international traffic a remarkable design of lightweight all-metal corridor coach providing a new standard of comfort for 54 passengers on a tare (empty) weight of only 33 metric tons.

Electrification figured largely in the Belgian national railways works program in 1950, a start being made with the Brussels-Ostend line and the extension of the existing Antwerp electrification to Roosendaal (Dutch frontier). The Netherlands railway developments centred primarily on accelerated services giving door-to-door delivery of freight by a highway subsidiary using containers, thus ensuring overnight service throughout the Netherlands.

The Spanish National railways continued construction of the Zamora-Orense-Corunna line, and in Portugal new electric multiple-unit trains improved the service on the Estoril railway. Railway construction and the regauging of narrow-gauge lines continued in Yugoslavia, and some new construction could be recorded in Bulgaria, where the long Yeli Dol tunnel near Klisura, on the Makocevo-Sopot line, was pierced in August.

**Asia.**—India proposed to regroup its various railway systems, but detailed plans had not been published at the end of 1950; in the north the metre-gauge railway link between India and Assam via Siliguri, avoiding Pakistan territory, was opened in January in advance of schedule. The scheme involved considerable new construction as well as the regauging of existing lines. Because of coal supply difficulties Pakistan converted many steam locomotives to oil burners.

Reconstruction progressed in Burma and also in Malaya where civil unrest continued to restrict railway development and services. The Iraq state railways placed in service fine new passenger cars.

**Africa.**—New steam railcar sets using oil-fired boilers appeared on the Egyptian state railways, which had had long experience with this type of traction. The chief railway developments, however, took place in east Africa where the welding together of the Kenya and Uganda and Tanganyika systems, until latterly separate, made good progress. The 131-mi. Mpanda branch in western Tanganyika, begun in 1948 to develop mineral resources, was opened in August. The combined East African Railways and Harbours administration, with lines of metre-gauge, received some heavy 4-8-4 + 4-8-4 Beyer Garratt steam locomotives, together with some lighter Garratts originally intended for Burma.

The line serving Mozambique in Portuguese East Africa had been extended westward and stretched about 300 mi. from that port with further extensions planned to near Lake Nyasa. In the same area the Tete line was opened from Dona Ana, on the Central Africa railway, to Moatize in 1949.

**South America.**—Some of the last company-owned railways in Brazil were nationalized, the sale of the Great Western of Brazil, a British company, being approved in July. The São Paulo railway had been renamed the Santos Jundiá on being taken over by the federal government, and electric traction was inaugurated on the Jundiá-Moocha section of 40 mi. in July. For the newly electrified section Co-Co type traction units were supplied from Britain. The system employed was 3,000-v. D.C.

In Argentina, after nationalization of all the main-line railways, the aim had been to eliminate interrailway competition as on the Buenos Aires-Rosario route: redundant stations were

closed and boundaries between the several railways were redrawn. New 4-8-0 steam locomotives were received from Britain for the General Roca railway, but it was proposed in future to develop diesel traction because of Argentina's oil resources.

**Canada.**—The most striking feature of Canadian railway development was the growing turnover from steam to diesel-electric traction, exemplified by the use of these diesel units by the Canadian Pacific railway on the Vancouver Island and the Montreal-Wells river (Vermont) lines and also for freight traffic on the sections north of Lake Superior. The Canadian National was using 4,500-h.p. diesels on its transcontinental services, and the Pacific Great Eastern, north of Vancouver, proposed to replace steam traction entirely by diesel operation. The Ontario Northland, owned by the province of Ontario, also embarked on a six-year program of conversion to diesel traction.

In July the Temiscouata railway, in New Brunswick and Quebec, was taken over by the C.N.R.; it had long been worked by the latter. A start was made with the construction of a new line from the north shore of the St. Lawrence gulf to develop valuable mineral resources.

**Australia.**—Locomotive fuel problems, labour troubles and shortage of key materials still hindered the efforts of the railways in the several Australian states to improve their services and overtake arrears of track and rolling stock renewals. Financial deficits after payment of fixed charges tended to increase, and there were heavy delays in the delivery of rolling stock ordered from Australian shops. New Garratt locomotives, however, arrived in Queensland, and 35 Pacific (4-6-2) class locomotives reached Western Australia from Britain. In Victoria certain sections in Gippsland were widened and roomette sleeping-cars were inaugurated on the Melbourne-Adelaide service. South Australia was regauging from 3 ft. 6 in. to 5 ft. 3 in. the Wolseley-Mount Gambier line, and Tasmania placed extensive orders for diesel and steam locomotives. The complete gauge standardization plan still hung fire. (See also ELECTRIC TRANSPORTATION.)

**Rayon and Other Synthetic Fibres.** New production records of rayon and other synthetic fibres were achieved in 1950. World production of rayon was expected to reach a total of 3,500,000,000 lb., an increase of 25% over the previous high record of 2,800,000,000 lb. produced in 1941. Production of rayon staple, used in the manufacture of spun rayon yarns, was estimated at 1,600,000,000 lb. or an increase of 50% over that of 1949. This was even greater than the previous high of 1,550,000,000 lb. produced in 1941 when Japan and the European countries were the leading producers.

So great was the demand in 1950 that, in the United States, new records were made in the importation of rayon staple. In the first 11 months of the year, imports of rayon staple reached 80,500,000 lb., compared with 11,200,000 lb. for the same period in 1949. The leading suppliers were France, the United Kingdom and Belgium, and substantial amounts were also received from Austria, western Germany, Japan and Sweden. Imports of rayon filament yarn also reflected the accelerated pace of world production, but the amounts were relatively small compared with

U.S. domestic production.

United States rayon production for the year was approximately 1,200,000,000 lb., an increase of 27% over that of 1949, and representing about one-third of the world production.

**Table I.—United States Rayon Production**  
(In millions of pounds)

	1945	1946	1947	1948	1949	1950
Rayon filament yarn . . . . .	624	677	747	856	800	879
Rayon staple fibre . . . . .	168	177	228	268	178	300

Acetate yarns, both filament and staple, were being used in increasing amounts. In 1939 the average monthly consumption of acetate filament yarn was 8,700,000 lb. In 1950, it was 26,400,000 lb. The change was even greater in respect to acetate staple. In 1939, the average monthly shipment was 500,000 lb. In 1950, it was 9,400,000 lb. There was an increase of 84% between 1949 and 1950 alone.

In 1950 definite steps were taken by the U.S. Federal Trade commission to review its 1937 rules for the identification of rayon fibres, so as to remove acetate type yarns from the rayon classification, reserving the name "rayon" for the viscose and cuprammonium type yarns and classifying the acetate type as a synthetic yarn. The commission announced that a conference would be held early in 1951 for the purpose of removing acetate from the rayon classification and giving it the same independent status as nylon and other newer man-made fibres. Some of the newer fibres which were used in substantial quantities during 1950 were Orlon acrylic fibre, Fiber V (known in England, where it originated, as Terylene), dynel, Chemstrand and Perlon (a German fibre of the nylon type).

Dynel, the Chemstrand fibre and Orlon were used chiefly in suiting fabrics.

Figures were not available in 1950 for nylon yarn production. During the year E. I. du Pont de Nemours & Company, sole U.S. makers of nylon, enlarged their Martinsville, W.Va., plant for the eighth time since World War II. The new construction doubled the capacity of that plant.

The standard all-filament rayon yarn fabrics also set new levels of production in the United States during 1950. Table II shows the U.S. production of rayon broad woven fabrics in 1939 and during the years 1945–50.

**Table II.—U.S. Production of Rayon Broad Woven Fabrics**  
(By Types Except Tire Fabrics)  
(In millions of linear yards)

Year	All-filament	All-spun rayon	Comb. filament and spun rayon	All other rayon mixtures
1939 . . . . .	998.0	176.8	22.8	97.2
1945 . . . . .	1,028.7	161.9	159.1	170.4
1946 . . . . .	1,047.1	190.9	172.3	253.0
1947 . . . . .	1,210.3	294.4	182.2	170.0
1948 . . . . .	1,343.0	377.0	256.0	182.0
1949 . . . . .	1,271.1	322.9	176.8	156.2
1950 . . . . .	1,533.0	419.0	200.0	141.0

In 1950, 110,000,000 yd. of nylon woven fabric came from U.S. mills. Although figures were not available for the production of knitted cloth, trade estimates pointed to a substantial gain over the 1949 production of 3,700,000 lb. of such cloth for the underwear and nightwear manufacturers.

The women's hosiery market continued to be almost exclusively a nylon hosiery market. The 1950 production was 55,200,000 dozen pairs.

In the United Kingdom, which is the second largest user of synthetic fibres, the average monthly production in 1950 of all types, including rayon and nylon, was 30,800,000 lb. This compares with a 24,100,000-lb. monthly average in 1949. The increase was chiefly in production of staple.

British production of rayon and nylon fabrics was at the monthly rate of 190,900,000 sq.yd. in 1950. Of this amount, 68%

was used for home civilian consumption.

In Japan, rapidly attaining its prewar place as a large rayon fibre and fabric producer, the 1950 production was 103,200,000 lb. of filament yarn, an increase of 36,400,000 lb. over the previous year. Staple fibre production achieved greater gains. The total was 149,600,000 lb., a gain of 96,900,000 lb. in the year.

French manufacturers who, as in the United States and other countries, represent a combination of synthetic yarn and silk users, reported an increased production of fabrics of about 10% by volume and 2% by value. While the production of synthetics and silk was given in one figure, the comparative interest in the several fibres was expressed as 85% rayon, 5% silk, and 10% cotton and others.

**Reconstruction Finance Corporation.** The Reconstruction Finance corporation, originally created by the congress Jan. 22, 1932, has succession through June 30, 1956. Its lending powers terminate two years prior to that date.

The management of the corporation is vested in a board of directors consisting of five persons appointed by the president of the United States, by and with the advice and consent of the senate. The president designates the chairman of the board, who is the chief executive officer. Beginning on July 1, 1950, the terms for appointees were: two directors for a term of one year, two directors for a term of two years, and one director for a term of three years. Appointments thereafter would be for a term of three years; continuity of management thereby being provided through the use of staggered terms. Not more than three members of the board may be from the same political party, nor may more than one member be from any one federal reserve district.

On Nov. 1, 1950, the board consisted of W. Elmer Harber, chairman; C. Edward Rowe, vice-chairman; Walter E. Cosgriff; Walter L. Dunham and William E. Willett.

The outstanding capital stock of the corporation was reduced from an original amount of \$500,000,000 to \$100,000,000. In addition to retirement at par of \$400,000,000 of its capital stock, dividends amounting to \$308,736,740 were paid over to the U.S. treasury.

An additional dividend payment of \$18,674,005 was to be paid on or before Dec. 31, 1950.

The purposes of the corporation are to aid in financing agriculture, commerce and industry; to encourage small business; and to help in maintaining the economic stability of the country; and to assist in promoting maximum employment and production. To serve the objectives of the congress, the RFC is authorized to purchase the obligations of, and to make loans to, business enterprises, including railroads and air carriers, either directly or in participation with banks or other lending institutions; to make loans to financial institutions; to subscribe for or make loans upon nonassessable preferred stock of insurance companies; to purchase the securities of, or make loans to, municipalities and other public agencies to assist in financing projects authorized under federal, state or municipal law; and to make loans because of floods or other catastrophes.

The total amount of loans, purchases and commitments made after June 30, 1947, may not exceed \$3,800,000,000 outstanding at any one time (\$3,750,000,000 pursuant to the RFC act, as amended, and \$50,000,000 pursuant to section 102 of the Na-

tional Housing act, as amended). Included in the total is the authority of Federal National Mortgage association to purchase home mortgages which was transferred to Housing and Home Finance agency, effective Sept. 7, 1950; the authority under section 102 of the National Housing act, referred to, was similarly transferred on that date.

Under the provisions of the RFC act, as amended, the corporation may not make loans to business enterprises unless the financial assistance applied for is not otherwise available on reasonable terms and such loans must be so secured as reasonably to assure repayment.

During the 1950 fiscal year 13,086 applications were received from business enterprises for financial assistance in the aggregate amount of \$1,592,000,000. Over the same period the corporation authorized 5,506 business loans amounting to \$593,600,000, and banks participated in 1,626 of these loans to the extent of \$70,900,000.

Participation loans are of two general types, immediate participations and deferred participations. In the case of an immediate participation, the entire loan is disbursed by the RFC and the bank immediately purchases an agreed percentage, or the bank makes the disbursement and RFC purchases a portion of the loan. A deferred participation contemplates an agreement between the RFC and a bank under the provisions of which the bank disburses the loan and RFC agrees to purchase a stipulated percentage of the unpaid balance when and if called upon to do so by the bank. In deferred participation loans RFC's participation is limited to 70% of the balance of the loan outstanding at the time of disbursement in instances where the total amount borrowed is \$100,000 or less and the corporation's participation may not exceed 60% of the balance outstanding at the time of disbursement in cases where the total amount borrowed is more than \$100,000.

Of all business loans authorized during the fiscal year 1950, approximately 90% of the number were for \$100,000 or less and 51.3% did not exceed \$25,000. At the close of the fiscal year, 6,667 business loans were outstanding in the aggregate amount of \$518,300,000. In addition, the corporation had outstanding at the end of the fiscal year commitments to participate in 5,638 business loans under deferred participation agreements for a total of \$129,900,000.

Other loans or purchase of obligations authorized during the period included those to municipalities and other public agencies amounting to \$10,000,000; catastrophe loans aggregating \$1,170,000, railroads \$3,774,000; and loans on preferred stock of insurance companies \$100,000. As of June 30, 1950, total loans and investments outstanding aggregated approximately \$2,089,000,000.

Reorganization plans of 1950, no. 22 and 23, which became effective Sept. 7, 1950, transferred from the RFC to the Housing and Home Finance agency (1) the Federal National Mortgage association, together with all its functions; (2) all functions of the RFC under section 102 of the Housing act of 1948, as amended, relating to loans to, or the purchase of obligations of, business enterprises producing prefabricated houses or prefabricated housing components, or for large-scale modernized site construction; all other functions of RFC, under the Reconstruction Finance Corporation act, as amended, or any other law, with respect to financing predominantly for the production, manufacture, distribution, sale, purchase or erection of prefabricated houses, sections or panels, or site improvements therefor.

The Reconstruction Finance corporation is authorized until June 30, 1956, or until such earlier time as the congress shall provide, (1) to buy, sell and transport tin and tin ore and concentrates; (2) to improve, develop, maintain and operate by

lease or otherwise the government-owned tin smelter at Texas City, Tex.; (3) to finance research in tin smelting and processing; and (4) to do all other things necessary to the accomplishment of the foregoing. During the fiscal year 1950, the corporation's sales of refined tin amounted to \$141,187,207.

The corporation continued to carry out its synthetic rubber activities. The corporation retained on June 30, 1950, 28 of the original 51 facilities in the program, of which 17 were engaged in active production and 11 complete plants and the unused portion of one other plant were held in standby. During the fiscal year 1950, government-owned plants produced 322,356 long tons of synthetic rubber, including 274,343 tons of GR-S (general purpose rubber) and 48,013 tons of GR-I (special purpose rubber, principally for pneumatic inner tubes). This represented 28.4% of the domestic natural and synthetic rubber supply of 1,134,000 long tons. Also during the year, conversion of facilities in the copolymer plants to enable the production of approximately 183,000 long tons per year of "cold" rubber was completed at a cost of \$4,700,000. Seven of the eight copolymer plants in operation were producing cold rubber during the year and a total of 105,441 long tons of this material was manufactured. Sales of synthetic rubber during the fiscal year 1950 amounted to \$156,006,135.

The expansion and operation of Central American abacá plantations were being continued by the corporation. During the fiscal year 1950, 31,693,512 lb. of fibre were produced and 31,590,639 lb. were sold for \$7,101,160.

Liquidation of other wartime activities was being brought to conclusion as promptly as circumstances permitted. As of June 30, 1950, there remained for liquidation defense plants and equipment, acquired by the corporation during World War II, costing \$56,401,251, including plants presently under long-term lease having a book value of \$36,142,963.

At June 30, 1950, the corporation had 4,640 employees, compared with a peak employment of 12,299 in July 1946; 1,369 employees comprised the Washington staff and 3,271 were employed in the corporation's 31 regional offices. (W. E. Hr.)

**Red Cross. United States.**—To meet existing and anticipated commitments in connection with the country's defense mobilization, the American Red Cross in 1950 once again embarked upon a period of expansion. With the outbreak of hostilities in Korea, the largest overseas operation since World War II was undertaken. In September the Red Cross was asked by the National Security Resources board to train 20,000,000 persons in emergency first aid as a part of civil defense preparation.

In July the organization was made the official co-ordinating agency for blood procurement for the armed forces and, a month later, the official agency to co-ordinate the blood program for civil defense.

In the 1950 fiscal year more than 1,600 Red Cross workers served the armed forces at 1,306 military installations and 111 military hospitals. Home service workers in chapters handled a monthly average of 234,360 servicemen's, veterans' and emergency civilian cases and requests for service. Financial assistance to military personnel from field workers and chapters totalled \$5,017,000; financial aid to veterans amounted to \$2,814,300. A monthly average of 21,000 workers, 99% of them volunteer, aided staffs in 133 Veterans' administration hospitals serving 134,000 patients.

Operating through 34 regional programs, 750 Red Cross chapters collected from July 1, 1949, to June 30, 1950, approximately 567,500 pints of blood, which, whole or fractionated, were delivered to 1,895 hospitals and 104 clinics.

During the fiscal year the Red Cross engaged in 390 domestic

disaster operations, assisting 55,900 families at a cost of \$5,054,480. In addition to 900 nurses who provided emergency aid to disaster victims, nurses were recruited to supplement local nursing resources in polio-stricken areas. During the year, 179,966 home nursing certificates were awarded. Approximately 82,000 volunteers a month in the nine Red Cross volunteer services gave more than 11,005,000 hr. of service during the year in federal and civilian hospitals and in other community agencies.

Red Cross emphasis on safety continued. In the armed forces, classes in first aid and water safety enrolled 42,200. A total of 399,935 certificates in first aid and 728,607 in water safety were awarded during the year. New authorizations boosted to 70,000 the number of instructors qualified to teach first aid, accident prevention and water safety.

On the international scene, the American Red Cross provided material aid valued at \$1,000,000 to 38 countries. In addition, Red Cross consultants co-operated closely with sister societies and worked with international agencies, and 26 Red Cross workers from 13 countries benefited from study visits, scholarships and fellowships in the United States.

The American Junior Red Cross sent more than \$1,000,000 worth of school, health and recreational supplies to children in other lands, and continued other programs for cultivating international understanding and friendship. Included in supplies prepared by Junior Red Cross members were 527,000 gift boxes and 300 educational chests.

E. Roland Harriman assumed office as president of the American Red Cross on Dec. 1, 1950. (J. G. MA.)

**World.**—The 21st meeting of the board of governors of the League of Red Cross Societies in Monte Carlo, Oct. 16-20, 1950, with representatives present from 58 countries, highlighted the year in the Red Cross world. The conference appealed to all governments to adopt and maintain effective undertakings that would prohibit and prevent the use of nondirected weapons, atomic energy and similar forces for the purpose of warfare; requested the United Nations to make every effort to find means of returning Greek children to their homes; requested the United Nations to take proper action for the repatriation of Palestinian refugees; authorized a Red Cross meeting in Germany to study the German refugee situation; approved a long-term program for the co-ordination and standardization of Red Cross emergency relief; and approved a long-term public health program for Red Cross societies. Justice Emil Sandstroem (Sweden) was elected chairman for the ensuing two years with the following vice-chairmen: Boris Pachkov (U.S.S.R.); James T. Nicholson (U.S.); Rajkumari Amrit Kaur (India); Ali Rana Tarhan (Turkey); G. A. Bohny (Switzerland); Don J. Pedro Valencia Parparcen (Venezuela).

On May 1, the League of Red Cross Societies, the International Committee of the Red Cross and the American Friends Service committee transferred to the United Nations Relief and Works agency approximately 900,000 Palestinian refugees in the near east who had been cared for by the above-mentioned agencies since Jan. 1, 1949, with voluntary contributions raised by the United Nations.

A second mandate given the International Red Cross by the United Nations in Dec. 1948, the repatriation of approximately 25,000 Greek children who were in Czechoslovakia, Hungary, Bulgaria, Rumania and Yugoslavia, drew nearer realization on Nov. 25 when the Yugoslav government through the Yugoslav Red Cross transferred to the delegate of the International Red Cross at Termalna Banja on the Greco-Yugoslav frontier 21 Greek children claimed by their parents in Greece. Governments of the other countries concerned, while agreeing to the principle of repatriation, had for various reasons refused actual transfer.

RED CROSS TRUCK leading a caravan of vehicles bringing aid to flood victims of Winnipeg, Man., in May 1950. The trucks were chained together for greater safety

Following the outbreak of military action in Korea in June, an agreement was reached between the unified command of the United Nations and the League of Red Cross Societies whereby the latter was recognized as the co-ordinating agency for all Red Cross civilian relief in southern Korea; offers of assistance to the civilian population of northern Korea by the league remained without response from the Popular Democratic government. (See PRISONERS OF WAR for action by International Committee of the Red Cross.)

Additional international Red Cross relief action undertaken in 1950 through the League of Red Cross Societies followed earthquake and floods in Iran, floods in Canada, a mining disaster in Mariemont, Belg., an earthquake in Peru, an earthquake in Colombia, floods in Nicaragua, an earthquake in India and floods in Pakistan. Assistance also was given to refugees in Syria, Lebanon, Jordan, Pakistan, India, Burma, Germany, Turkey, Italy and France.

On Nov. 15, 61 nations had signed the 1949 Conventions of Geneva and the governments of 6 of these countries had ratified them. (H. W. Dc.)

**Reforestation:** see FORESTS.

**Reformed Church:** see PRESBYTERIAN CHURCH.

**Refugees.** Approximately 200,000 of the Polish, Ukrainian, Baltic and Yugoslav refugees and displaced persons remaining in Germany, Austria and Italy as a result of the displacements of World War II were assisted by the International Refugee organization (I.R.O.) during 1950 to find new homes in other countries. Eighteen governments—Australia, Belgium, Canada, China, Denmark, the Dominican Republic, France, Guatemala, Iceland, Italy, Luxembourg, the Netherlands, Norway, New Zealand, Switzerland, the United Kingdom, the United States and Venezuela—had become members of the organization, which by June 30, 1950, had expended \$332,245,213 on behalf of refugees. Of this sum \$146,599,346

covered overseas transport and resettlement costs and \$183,260. \$12 was devoted to the care and maintenance of refugees prior to movement in repatriation or resettlement.

The I.R.O. had repatriated or resettled a total of 950,000 refugees and displaced persons by Dec. 31, 1950. There remained approximately 225,000 refugees in Germany, Austria and Italy at the close of the year to be resettled chiefly in Australia, Canada, the United States and the Latin-American countries.

During 1950 it was originally planned by the general council of the I.R.O. to terminate the services of the organization by March 31, 1951. However, because of delays experienced during 1950 in the processing and movement of refugees to Australia and to the United States under the U.S. Displaced Persons act of 1948, the council of the I.R.O. decided at its sixth session in Geneva, Switz., in Oct. 1950 to continue operations until Sept. 30, 1951. This extended program was to be financed by funds available to the organization from the prior contributions of member governments without the necessity for further contributions. The council also voted to offer resettlement services to those refugees who had arrived in areas of operations between Oct. 15, 1949, and Oct. 1, 1950. These refugees, numbering more than 20,000, had previously been excluded from such services by earlier decisions of the council.

On July 1, 1950, the I.R.O. transferred responsibilities previously carried for the general supervision, care and maintenance of approximately 100,000 refugees who could not be resettled to public authorities and private relief agencies in the countries of residence of the refugees in Europe. Many of this group had already achieved self-dependence, but all faced uncertainties in legal status pending the acquisition of a new nationality.

The I.R.O. continued its efforts during the year to make permanent arrangements for about 20,000 refugees and their dependent relatives who required continuing hospital or institutional care because of age or infirmities; \$22,000,000 was allocated to provide capital installations for the housing and hospitalization of these refugees. Tentative arrangements for permanent care had been made for 11,000 of these so-called hard core refugees and 9,000 remained awaiting the conclusion of arrangements for permanent care. Belgium, France, New Zealand, Norway and Sweden offered rehabilitation and permanent custodial care for a substantial number of aged, blind and tubercular refugees during the year.

Completing action initiated at its previous session the general assembly of the United Nations on Dec. 14, 1950, established the Office of High Commissioner for Refugees at Geneva, Switz., and elected G. J. van Heuven Goedhart of the Netherlands as high commissioner for a three-year period beginning Jan. 1, 1951. This office was set up to provide legal protection for refugees until they acquire nationality in their new countries of residence. Such protection was originally afforded under the auspices of the League of Nations and later by the Intergovernmental Committee on Refugees and the International Refugee organization.

Representatives of the office would be located in countries providing hospitality to refugees and would intervene with the various governments to ensure that refugees received minimum rights and privileges essential to the achievement of self-dependence. Such rights and privileges include among others freedom from arbitrary expulsion, access to the courts, the right to work, opportunities for education, participation in the benefits of social insurance systems and the possession of identity and travel documents.

The U.N. general assembly in Dec. 1950 also decided to convene in 1951 at Geneva a diplomatic conference to complete and sign the convention relating to the status of refugees recommended to it by the Economic and Social council. This convention

when in force after adherences by governments would provide refugees with a legal status and serve as the chief tool of the high commissioner for refugees in securing nondiscriminatory treatment for refugees in their countries of residence.

The refugees falling under the competence of the high commissioner would be, in general, those previously the concern of the International Refugee organization—namely, those unable or unwilling to avail themselves of the protection of their former countries of nationality for reasons of fear of persecution because of race, religion or political opinion. However, persons recognized by the authorities of the countries in which they had taken residence as having the rights and obligations attached to the possession of the nationality of their country of residence were excluded from the concern of the high commissioner.

Thus, members of former German minorities in countries of eastern Europe currently resident in Germany and refugees in India and Pakistan did not fall under the competence of the high commissioner because they enjoyed the rights of a nationality and did not require legal protection under international auspices.

United Nations efforts to resolve the problem of 800,000 Arab refugees in the near east resulting from the conflict in Palestine in 1948 made slow progress during 1950. Refugees from that part of Palestine incorporated into the state of Israel were located in the neighbouring states of Lebanon, Jordan, Syria and the Egyptian-held area of Gaza in southern Palestine. The general assembly of the United Nations in its resolution of Nov. 19, 1948, established the United Nations Relief for Palestine Refugees (U.N.R.P.R.) and appealed to governments to provide \$32,000,000 for direct relief of the refugees. This sum contributed by governments had maintained the refugees on a relief basis during 1949. On Dec. 11, 1948, the general assembly also established the Palestine Conciliation commission to facilitate a peace settlement and to secure the repatriation or resettlement of the refugees and compensation for their lost properties.

The efforts of the Conciliation commission proved unavailing, and on Dec. 8, 1949, the general assembly established the United Nations Relief and Works Agency for Palestine Refugees (U.N.R.W.A.) as a successor agency to U.N.R.P.R. Emphasis was to be placed upon gradually reducing the relief program and initiating works projects as a measure of assisting the refugees to re-establish themselves on a more normal basis of self-dependency. An 18-month budget totalling \$54,900,000 for the period Jan. 1, 1950, to July 1, 1951, was adopted; \$33,700,000 for relief and works projects during 1950 and \$21,200,000 for works projects for the period Jan. 1 to June 30, 1951.

During 1950 a number of road-building and afforestation projects were undertaken, and previously initiated crafts programs of weaving and garment making were expanded. By Dec. 1, 1950, approximately 20,000 refugees were employed on these projects, which thus supplied a livelihood for 100,000 persons. However, the high cost of work relief projects taxed the available resources of U.N.R.W.A. which recommended to the general assembly in Dec. 1950 that these projects, desirable in themselves, would not contribute to the permanent employment or reintegration of the refugees in the economic life of the area. The expectation that direct relief operations could be concluded in 1950 was not realized.

The general assembly consequently adopted a modified program on Dec. 2, 1950, and authorized U.N.R.W.A. to set up a reintegration fund of \$30,000,000 for the period July 1, 1951, to June 30, 1952, and to continue to furnish direct relief during that period at a cost not to exceed \$20,000,000. The reintegration fund was to be used to secure the permanent re-establishment of the refugees with the co-operation of any near eastern government prepared to assist the agency in this undertaking.

BARRACKS AT DACHAU, former German concentration camp, which were renovated and cleaned to provide temporary homes for displaced persons in Germany in 1950

The problem of integrating the 8,000,000 to 9,000,000 prewar members of the German minorities in Poland, Czechoslovakia, Hungary and Yugoslavia in the economy of western Germany continued to challenge the resources of the German Federal Republic and the occupying authorities of France, the United Kingdom and the United States. These refugees, expelled from their former countries into Germany after World War II, though possessing all the rights of German citizens under the Bonn constitution, experienced great difficulties in securing adequate housing, employment and equalization of burdens resulting from the war. They presented a growing source of political unrest through the organization of pressure groups and the creation of new political parties. The urgency of the adoption of more effective measures for resolving the problem was emphasized during the year by the continuing flow of refugees from the areas of prewar Germany administered by the soviet and Polish authorities.

On June 16, 1950, the U.S. congress adopted amendments to the Displaced Persons act of 1948 extending the period for the issuance of visas from June 30, 1950, to June 30, 1951, substituting Jan. 1, 1949, for Dec. 22, 1945, as the date on which refugees must have entered Germany, Austria or Italy to qualify under the act, and increasing the number of visas to be issued from 205,000 to 341,000. (See also IMMIGRATION AND EMIGRATION; LAW.)

**Reichstein, Tadeusz** (1897– ), Swiss chemist, was born at Włocławek, Poland. July 20. He spent his earliest years at Kiev, where his father was an engineer. He later emigrated to Berlin and then to Zürich, becoming a Swiss citizen in 1914. After graduating (1920) as a chemical engineer from the Eidgenössische Technische Hochschule, he spent one year in a factory and then returned to Zürich to take his doctorate in engineering chemistry in 1922. He stayed on at the Technische Hochschule to undertake extensive researches on the aromatic substances of roasted coffee. This work was not completed until 1931, but meanwhile he had become

a part-time instructor and had given courses on the methods of organic chemistry and on heterocyclic compounds. He was appointed assistant professor in 1934 and associate professor in 1937. He was at the University of Basel as head of the department of pharmacy and director of the pharmacological institute from 1938 to 1946 and thereafter as professor of organic chemistry. His first great achievement was the synthesis (1933) of *L*-ascorbic acid and the discovery of the standard method of producing this vitamin on a commercial scale. His work on the isolation and the determination of the constitution of the suprarenal gland and the partial syntheses of its constituents began in 1935: he and his associates isolated about 28 hormone substances from the gland, including Compound E (cortisone), which he succeeded in synthesizing almost simultaneously with E. C. Kendall (*q.v.*) and others. His investigations on the steroids of plants enabled him to indicate possible means of converting them into cortisone and so of overcoming the enormous difficulties in the way of large-scale production. Other important researches were concerned with sugars and especially with the cardiac glucosides. In 1950 the Nobel prize for medicine was awarded jointly to Reichstein, P. S. Hench (*q.v.*) and E. C. Kendall for their discoveries concerning the suprarenal cortex hormones.

**Relief.** The only major legislative change in the English-speaking nations was a liberalizing amendment to the United States Social Security act, passed overwhelmingly by the congress in Aug. 1950. The purpose of the amendment was to correct a miscalculation in the original act (amended in 1939) whereby the method of insurance might become the chief means of providing for old age and the survivors of the insured, by providing about a 60% increase in benefits to its recipients. The amendment also widened the scope of the act by including certain uncovered portions of the population such as farm labourers, self-employed persons, domestic workers, and, under certain conditions, employees of philanthropic, charitable and religious organizations and public servants. The August report of the Social Security board showed the same heavy weighting of public assistance with responsibility for care of the aged, as had occurred in previous years: about 3,000,000 recipients of old-age and survivors insurance, with an average benefit of \$26.36 per month per beneficiary, an obviously inadequate income, compared with slightly fewer beneficiaries of old-age

assistance, but with a decidedly higher average per capita grant per month of \$43.74.

The amendment created a new category in public assistance, that of the totally and permanently disabled, who would be eligible for federal grants on the same basis as old-age assistance.

The amendment corrected an illogical situation in the provision of aid to dependent children, by including the homemaker among the beneficiaries of a grant similar to that allowed the eldest child. This category came nearest to provision of general assistance, especially in times such as those prevailing during the year under review, when able-bodied men could easily secure work. The average amount per family grant of \$70.10 indicates how it was used to protect families, rather than individuals, from want. However, since it was available only to widows, or to families in which the husband was incapacitated or had deserted, it was more successfully abused than the other categories.

The amendment made no provision for the care of the unemployed or for the family in distress because of the illness of the wage earner. Nor did it correct the glaring gap in the nation's provision for the sick, except for the incurables and permanently incapacitated.

The other English-speaking countries except Canada had recently enacted radical assistance and insurance measures covering the entire range of economic insufficiencies, and made no alteration in their basic laws during the year 1950. New Zealand, which pioneered in a comprehensive coverage, and Australia which had greatly liberalized its assistance provisions, had a reversal of political leadership during the closing months of 1949, but the new governments in each country retained the welfare provisions instituted by their predecessors. The comprehensive insurance assistance provision of Great Britain remained unchanged during 1950, the second full year of its administration. South Africa had an old-age provision of \$25 per month, but with a means test, and a family allowance provision given under a means test to families with three children or more. However, in keeping with the shift of government to the group headed by Daniel F. Malan, benefits were restricted to the noncoloured.

Canada continued to enjoy the most liberal provision for children in the world; and in 1950 considered an old-age pension law. There were constitutional handicaps to be overcome as all provinces must agree to any such law adopted by the dominion. Like the existing law, the suggested law would require contributions from the worker, his employer, and the state, and residence of 20 years in Canada, with a flat grant of \$40 a month without a means test at the age of 70.

Private benefactions in the United States and Canada as reflected in amounts raised by community chests continued to rise, showing about 12% over the amount raised in 1949 in 114 cities in the two countries.

(See also CHILD WELFARE; COMMUNITY CHEST; RED CROSS; SOCIAL SECURITY.) (F. J. B.)

**Religion.** Unmistakable signs of an increased interest in religion in the United States during 1950 reflected a growing anxiety and feeling of insecurity as the results of worldwide attacks on Christianity. Evangelistic campaigns characteristic of Protestantism were wide-spread: some under dramatic preachers like Billy Graham, some under the organized United Evangelistic Advance with the active participation of more than 1,500,000 laymen and laywomen.

The Roman Catholic Church in the U.S. reported a 2% gain in membership as compared with a Protestant gain of 2.9%. Great Britain and other lands felt the same stirring. Churches in Japan reported a 14% increase in membership and a 100% increase in

MESS HALLS set up outside Yankee stadium, New York city, site of an international convention attended by more than 60,000 Jehovah's Witnesses during July 31-Aug. 7, 1950

giving. In other parts of the world, minority or younger churches grew faster than the old ones; e.g., in Spain where drastic restrictions imposed upon Protestants seemed to spur rather than to deter them.

Rome celebrated 1950 as a Holy Year with four intentions: sanctification of souls through prayer and penance; action for peace and defense of holy places; defense of the Church against its enemies; and actual realization of social justice and assistance to distressed peoples. Vast numbers of the faithful from many lands made pilgrimages to Rome. The high point of the year was the promulgation of the dogma of the bodily assumption of the Virgin as a requirement of faith, before the largest assemblage of cardinals and bishops in modern times.

During 1950 the centenary of the restoration of the Roman hierarchy in England was celebrated; Indonesia became the 30th nation to establish diplomatic relations with the Vatican; the first local African hierarchies for 14 centuries were set up in Nigeria, the Cameroons, Togoland, the Gold Coast and Sierra Leone.

Tensions between the Roman Catholic Church and the rest of the Christian world increased; one was theological and concerned the new dogma of the assumption of the Virgin. This was seen by the Anglican archbishops and other Christian leaders throughout the world as a regrettable new barrier between the principal bodies of Christendom. Efforts to have a successor to Myron Taylor appointed as President Harry S. Truman's representative at the Vatican met with strong and practically unanimous Protestant resistance. Federal (U.S.) aid to schools and public funds for parochial schools desired by the Roman Catholic Church were likewise vigorously opposed.

Catastrophe struck all Chinese churches through increasing Communist pressures for domestication or elimination, culminating in the confiscation of all U.S.-owned properties in China and the freezing of all mission as well as other bank accounts. A strong reason for alarm was seen in the deliberate murder by Communist forces in Korea, under Russian and Chinese leader-

ship, of the top leaders of all Christian churches in the country, including the secretary of the National Council of Churches, the head of the Young Womens Christian association, the leaders of several denominations and other prominent churchmen.

The first session of the World Council of Churches (central committee) ever to be held in North America convened at Toronto, Can., in July 1950; it received applications for membership from four additional churches, bringing the council's membership to 160 denominations in 46 countries; it also approved the United Nations' police action in Korea after surveying incontrovertible evidence of Communist aggression. The World Council of Churches program grew in scope and effectiveness particularly through its department of interchurch aid and service to refugees, and through the joint World Council of Churches-International Missionary council Commission on International Affairs.

Along with Roman Catholic and Jewish agencies, those of the Protestant and Orthodox churches led by the World Council of Churches made notable progress in the resettlement of displaced persons in the U.S. and other parts of the world. Financial support was solicited throughout the U.S.

Toronto was the scene of the 1950 meetings of the World Council of Christian Education and the governing committee of the International Missionary council with world-wide representation including some from "iron curtain" lands.

The World Council of Churches at its Toronto meeting also associated itself with other religious bodies such as the Synagogue Council of America and the Vatican in warning against the spurious nature of the Communist-inspired "Stockholm Peace Appeal."

A significant development of the year was the formation at Cleveland, O., in November of the National Council of the Churches of Christ in the U.S.A.

Jewish circles reported the following developments of 1950: the Rabbinical assembly celebrated its Golden Jubilee and stressed Sabbath observance; many new Reform congregations were established (100 in a four-year period ending in 1950); the Jewish Institute of Religion and the Hebrew Union college, formerly of Cincinnati, O., were merged in New York city; the Central Conference of American Rabbis warned against reversion to the idea of theocracy in Israel; and Jewish theologians restated Jewish faith in the light of modern science.

A world organization for brotherhood was formed in Paris under the leadership of the National Conference of Christians and Jews, a United States body.

Other events were: the celebration of the tenth anniversary of World Communion Sunday (observed by Anglican, Orthodox and Protestant bodies in practically all save "iron curtain" countries); the conference of Evangelical Churches of Latin Countries of Europe at Torre Pellice, Italy, which denounced the "denial of religious liberty in certain countries with a Roman Catholic majority" and urged upon Rome the "clarification of its attitude on religious liberty provisions of the United Nations Universal Declaration of Human Rights"; and the severing by the Russian Orthodox Church in North America of all ties with Moscow and its election of Archbishop Leonty as its new patriarch. (See also CHRISTIAN UNITY; CHURCH MEMBERSHIP; also under separate denominations.) (H. S. LR.)

**Religious Denominations:** see CHURCH MEMBERSHIP.

**Religious Education.** Protestant and Orthodox.—The most noteworthy world events in Christian education in 1950, for both Protestants and Orthodox, were four meetings held in or near Toronto, Ont.

First was the third annual meeting of the World Christian

Youth commission, composed of representatives of five world bodies: World Alliance of Young Men's Christian associations; World's Young Womens Christian association; World's Student Christian federation; World Council of Churches; and World Council of Christian Education. Its primary attention was given to a world youth conference projected for 1952 in Asia. One of the principal subjects for attention in the conference was that of reaching young people in industry.

The second event was the World Institute on Christian Education, which brought together 216 selected persons from 52 countries and territories. Part of the time was given to study of the implications for Christian education found in the Christian Gospel and the life of the people and the world in which they live. The other major portion of time was used by commissions working on 12 aspects of Christian education: Christian education of children, of youth and of adults; Christian education in home, in church and in school; preparation of curriculum material; leadership education; audio-visual aids; the Bible in Christian education; purposes and principles of Christian education; and denominational and interdenominational service.

Next came the World Convention on Christian Education, 13th in a series which began in London in 1889. Although a high percentage of the 4,700 delegates came from Canada and continental United States, 60 other countries and territories were represented.

Toronto's fourth major meeting on Christian education was that of the governing body of the World Council of Christian Education. It issued a message in which it declared that: "The present world situation deepens our conviction that the winning and training of lay and professional leaders in all aspects of Christian education must be regarded as a major task of the Church."

In addition to these four world events, a regional and a national event deserve special note. A commission composed of representatives of the Protestant forces in Spanish-speaking Latin America met for a month in Cuba to prepare basic outlines for curriculum material. This was the first time that such an extensive effort in this field had been undertaken under the primary leadership of Latin Americans rather than of North American missionary forces.

A national event of special significance was the merger of the International Council of Religious Education (United States and Canada) with other major interdenominational bodies to form the National Council of the Churches of Christ in the U.S.A. The work of the International council thereafter was carried on by the division of Christian education of the new council. (F. L. KP.)

**Roman Catholic.**—In 1950 there were an estimated 4,750,950 children receiving Catholic instruction in the United States, including those attending part-time. There was an increase of 126,137 pupils in 7,914 elementary schools, in which a total of 2,477,741 pupils were enrolled. There were 82,885 students attending 588 private elementary schools. Parish and diocesan high schools enrolled 324,398 pupils in 1,576 schools, and 806 private high schools taught 195,480 students. Seminaries and novitiates were attended by 25,622 students. There were 72 diocesan seminaries and 316 religious order seminaries. The 225 colleges and universities for men and women had 252,727 students.

The theme of the 47th annual convention of the National Catholic Educational association convention was "Education for International Understanding." In its resolution the meeting: (1) praised the United Nations Educational, Scientific and Cultural organization and promised support of the principles of international understanding promoted by U.N.E.S.C.O.; (2) asked that the schools emphasize in their religious courses the

vital relationship between the principles of the Catholic faith and international understanding; (3) offered its aid in the "spiritual, moral and cultural reconstruction of Germany"; (4) voted support to the Commission on Occupied Areas of the American Council on Education in its program of "stimulation and co-ordination of cultural relations" in occupied areas; and (5) pledged its co-operation to the Institute of International Education "with its comprehensive program of international exchange of students."

The Society for the Propagation of the Faith reported that there were 275 Catholic schools for Negroes in the United States in 1946 and that 40 schools had been added in 1948. More than 710 Negroes attended Catholic colleges and universities. (J. LAF.)

**Jewish.**—The American Joint Distribution committee was forced to curtail expenditures in Europe during 1950; immigration into Israel of refugees from Arab countries made the revision of allocation of funds imperative. The schools of the decimated Jewish communities of Europe found themselves hard pressed. Meagre pay led to inadequately trained teachers. The importation of textbooks from Israel and especially from the United States became difficult.

Despite all these deterrents, some strides were evident in the field of education and culture. In the United States, increased registration was reported in the Sunday and afternoon-weekday schools of Reform, Conservative and Orthodox Jews. Summer camps with Jewish educational programs continued to increase, and there was a growing popularity of all-day schools.

A lag, however, was to be noted in the progress of Jewish adult education. Appeals to adults emphasized support of institutions of higher learning, theological seminaries, research academies, and publication of volumes for scholars, but failed to accent the great need of a wide and systematic program of adult education which would result in a better understanding of Jewish religion and culture.

By contrast, education in Israel was termed *sans peur et sans reproche*. It was being intensively and joyously pursued by old and young. Evidence of its effectiveness was seen in the many books on various subjects published in Israel, the large number of book stores in its cities and the keen appreciation displayed for good music and other forms of artistic expressions. Teachers' conferences and student workshops held in Israel during the summer also attracted increasing numbers in 1950.

(B. H.)

**Rent Control:** see LAW.

**Reparations.** The reparations program in western Germany was virtually completed during 1950. Shortly after the signing of the Petersberg agreement in Nov. 1949, the Inter-Allied Reparation agency (I.A.R.A.) received from the western occupation authorities the final list of plants available to it, and on May 25, 1950, I.A.R.A. made the final allocation of industrial matériel to its member nations. Dismantling and shipment continued during the year.

In February N. E. P. Sutton, the secretary general of I.A.R.A., released his report for the year 1949, in which he esti-

mated the total value of German reparations which would have been received by member nations by the time the agency ceased operations. The figures are given (in 1938 dollars) in the table above.

According to the secretary general's report, member nations had received the following amounts of reparations as of Dec. 31, 1949 (in 1938 dollars):

Albania . . . . .	\$ 975,974	India . . . . .	\$ 8,269,015
Australia . . . . .	3,084,078	Luxembourg . . . . .	1,578,497
Belgium . . . . .	15,161,965	Norway . . . . .	11,294,660
Canada . . . . .	2,919,363	New Zealand . . . . .	1,053,874
Denmark . . . . .	17,277,486	Pakistan . . . . .	1,108,328
Egypt . . . . .	2,565,613	Netherlands . . . . .	34,500,986
United States . . . . .	102,569,186	Czechoslovakia . . . . .	11,177,432
France . . . . .	68,054,728	Union of South Africa . . . . .	6,940,352
United Kingdom . . . . .	84,249,297	Yugoslavia . . . . .	29,875,350
Greece . . . . .	10,150,646	Total . . . . .	\$412,806,830

The secretary general pointed out in his report that between March 1946 and Nov. 1949 the number of plants to be made available to I.A.R.A. was progressively and drastically reduced from 1,800 to about 680. Moreover, substantial parts of many plants which still remained on the list were to be left in Germany. He also pointed out that the 1938 replacement cost of industrial equipment which had been made available to I.A.R.A. was only about 1.3% of the replacement cost of the total investment in German industry in 1938 and that 31% of the industrial equipment allocated to I.A.R.A. came from munitions plants, a large proportion of which had been built during World War II. He concluded that the payment of reparations had had little effect upon the German economy and that the successive cuts in the reparations program had very little economic justification.

On May 16 Soviet Prime Minister Joseph Stalin announced a reduction in soviet reparations demands in a letter to Otto Grotewohl, minister-president of the German Democratic Republic. Stalin stated in his letter that by the end of 1950 east Germany would have paid an estimated \$3,658,000,000 on account of total soviet reparations demands of \$10,000,000,000. In view of this showing, the soviet government, in agreement with the Polish government, had decided to reduce the sum of reparations payments still to be made by 50%, or to \$3,171,000,000, to be paid from current production over a period of 15 years. The figure of \$3,658,000,000 cited by Stalin was at wide variance with reliable western calculations. The office of the U.S. high commissioner estimated that the U.S.S.R. had taken \$18,000,000,000 in equipment and goods out of Germany since 1945. (J. W. MW.)

**Representatives, House of:** see CONGRESS, UNITED STATES; ELECTIONS, U.S.

**Republican Party.** Although the Republican party made gains in the 1950 off-year elections, their new national strength suffered somewhat from a division over domestic and foreign policies. The high hopes for 1952 raised by their success at the polls accounted, in part at least, for general personal and factional rivalry.

The G.O.P. scored a net gain of 5 seats in the senate and 30 in the house. The senate alignment for the 82nd session was 49 Democrats and 47 Republicans, compared with a 54-42 line-up in the 81st. In the lower body it was 234 Democrats, 199 Republicans, 1 Democrat-Liberal (Franklin D. Roosevelt, Jr.) and 1 Independent, a former Democrat with Republican leanings. In the 81st session it had been 259 Democrats, 169 Republicans, 1 American Labor party member and 6 vacancies. The G.O.P. captured 6 governorships from the Democrats, losing none. The resulting line-up at state capitals was 25 Republican governors, 23 Democratic, whereas it had been 29 Democrats and 19 Republicans.

	Value
German external assets . . . . .	\$293,300,000
Incorporation of the Saar into the French economy . . . . .	17,500,000
Industrial capital equipment . . . . .	146,800,000
German merchant shipping . . . . .	43,200,000
U.S.S.R. reciprocal deliveries . . . . .	1,500,000
Captured enemy supplies . . . . .	14,700,000
Total . . . . .	\$517,000,000

The new Republican senate seats were in Pennsylvania, Maryland, Illinois, Utah, Idaho and California. Republicans ousted Democratic governors in Connecticut, Maryland, Nevada, New Mexico, Arizona and Colorado.

The factors behind this Republican revival were encouraging to party strategists. There was a tremendous decline in the Democratic vote in large cities and industrial centres, and an apparent return of rural areas to the G.O.P. The Republicans immediately began to forecast a presidential triumph in 1952, and, indeed, they held a December meeting at Washington, D.C., to make plans for "breaking the solid south." At this conference Sen. Robert A. Taft of Ohio, who had been re-elected by a record vote in the face of labour's attempt to unseat him, expressed confidence for 1952 and said that several border and southern states could be captured by the G.O.P. He declared that many voting elements responsible for 1932-48 Democratic victories, especially labour, had lost faith in that party.

Party divisions appeared as early as Jan. 1950, when National Chairman Guy George Gabrielson proposed a draft of party principles by a committee representing senate and house Republicans and the national committee. The final production branded the Truman Fair Deal as "socialistic."

The statement declared for economy and a balanced budget, the Taft-Hartley act, social security expansion, federal aid to states for medical advancement (as against Pres. Harry S. Truman's national health insurance), elimination of fellow travellers from the state department and protection of minorities (as against Truman's broad civil rights program), and for repeal of the wartime excise taxes. Ominous cracks in party solidarity marked this effort, however. Six Republican governors, headed by Gov. James H. Duff of Pennsylvania, who was elected to the senate in November on a moderately liberal platform, urged the Gabrielson group to abandon "backward-looking" policies and to rebuild along "progressive" lines.

Chairman Gabrielson described this mid-term enunciation as more liberal than the Dewey-Warren platform of 1948. But the Dewey faction disagreed. A group of four senators, headed by Irving M. Ives of New York, a Dewey spokesman, denounced it as a "collection of vague generalities." Indeed, on the very day that the Washington pronouncement asked merely for protection of minorities, a Republican-controlled assembly at Albany memorialized congress to enact Truman's Fair Employment Practices Commission bill.

The party statement on foreign policy was generally satisfactory, winning the endorsement of Sen. Arthur H. Vandenberg of Michigan, advocate of a bipartisan program, and Senate Minority Leader Kenneth S. Wherry of Nebraska, who leaned toward "isolationism." It urged continued co-operation with the administration on foreign affairs, but it criticized "secret agreements" at Yalta and Potsdam as responsible for postwar difficulties with the U.S.S.R.

These conflicts reflected a growing feud between Gov. Thomas Dewey and Senator Taft on the party's future path. Although Governor Dewey had declared that he would not seek the presidency in 1952, his 1950 re-election led him to assert himself as titular party leader. He also intimated that he might favour Gen. Dwight D. Eisenhower as a candidate in 1952.

Senator Taft's great victory naturally made him a 1952 prospect. Although he said after re-election that he would not seek the nomination actively, he admitted that he would not turn it down if it were offered to him. Inevitably, critics of the Dewey-Warren "me too" campaign of 1948 rallied around Taft. In response, a group of about 12 senators and 20 representatives espoused the Dewey philosophy on and off Capitol Hill.

Generally, the Republicans in congress followed the Taft line. Although they voted for social security and agricultural ex-

"THE WAY TO A FAR EAST POLICY," a cartoon by Alexander of the *Philadelphia Bulletin*, published in 1950

pansion, they joined with conservative southern Democrats to block enactment of the principal tenets of the Fair Deal. The increased strength of both blocs in the 82nd congress, together with rearmament demands and pressures, indicated that their views might prevail through the 1951-52 period of President Truman's term.

As the year closed, Governor Dewey clashed unsuccessfully with Capitol Hill Republicans on a major foreign policy issue—namely, the question of whether congressional Republicans should make a formal demand for presidential removal of Dean Acheson, secretary of state. There had been individual calls for his retirement on the ground that he had lost popular confidence. The senate Republican policy committee, headed by Senator Taft, decided that the question was too important to be resolved by this committee, and handed the problem to the full senate membership. House leaders did likewise.

Before either group acted, Dewey delivered a nation-wide radio address on Dec. 8. He rebuked the G.O.P. congressional bloc for seeking Acheson's removal, and called for a "united front at home and with enough other free nations." Although he described himself as "the severest critic in the country of the national administration's policies in the far east, this moment is not the time for further criticism."

On Dec. 15 senate Republicans voted 23-5 for Acheson's elimination and a "thorough housecleaning in the state department." Meeting in caucus on the same day, house Republicans adopted an almost identical resolution by an overwhelming vote. (See also ELECTIONS, U.S.; UNITED STATES.) (R. TU.)

**Réunion.** The status of this former French island colony in the Indian ocean (about 420 mi. east of Madagascar) was changed in 1946 to that of an overseas *département*. Area: 970 sq.mi. Pop.: (1946 census) 242,067 of whom 97% were French subjects but only 6,698 were of French origin; (1949 est.) 252,000. The inhabitants are mainly coloured (Ne-

groes, creoles, mulattoes, Indians and Chinese), speak a creole patois and are mainly Roman Catholic. Chief towns (pop., 1946 census): Saint-Denis (cap., 36,096); Saint-Louis (23,936); Saint-Paul (25,959); Saint-Pierre (22,379). Prefect: Roland Béchoff.

**History.**—The island was stricken in Jan. 1950 by a cyclone which destroyed 2,000 huts and severely damaged the maize and sugar-cane crops. A company was formed in January to undertake the electrification of the *département*. Three electricity power stations were under construction at the end of the year. The introduction of free medical assistance produced an immediate reduction in the mortality rate (6,898 deaths in 1948 and 4,690 in 1949) and especially in infant mortality (from 2,290 to 1,574). The political scene showed signs of trouble, particularly on account of the activities of the Communist party which was strongly represented in the elected assemblies.

**Finance.**—Budget: (1949 actual) balanced at 1,029,700,000 fr. C. F. A.; (1950 est.) balanced at 1,224,500,000 fr. C. F. A. Monetary unit: franc C. F. A. (Colonies Françaises d'Afrique)=2 metropolitan francs. U.S. \$1=350 metropolitan francs.

**Foreign Trade.**—(1949) Imports 3,499,500,000 fr. C. F. A.; exports 3,020,500,000 fr. C. F. A.

**Transport and Communications.**—Railways (1948): 127 km. (100-cm. gauge). Roads (1949): 1,909 km. Motor vehicles licensed (Dec. 1948): cars 2,515; commercial 1,090. Shipping, cargo (1949, metric tons): unloaded 97,800; loaded 109,100. Telephone subscribers (1948): 1,950.

**Agriculture.**—Main products (1949, metric tons): sugar cane 1,058,500; sugar 107,625; rum 84,709 hl.; vanilla beans 40; maize 15,000. (C. A. J.)

**Rhee, Syngman** (1875– ), Korean political leader, was born in Whanghai province, Korea, April 26. He received a classical Chinese education, and then enrolled in a Methodist mission school in Seoul. Imbued with democratic ideals, he joined an independence club in 1894 and founded the *Independent*, Korea's first daily newspaper. In 1897 he led a mass demonstration of students against the Japanese, was arrested and sentenced to life imprisonment, though he was freed in a general amnesty in 1904. Meantime he had become a Christian convert and while in prison had written the book *Spirit of Independence*. He travelled to the U.S., studied at Harvard and Princeton and returned to Korea in 1910 to organize resistance to the Japanese occupation. Discovered, he fled to Hawaii where he directed the Korean Christian institute until 1939. On March 1, 1919, a group of Korean patriots signed a declaration of independence, set up an exile government in Shanghai, China, and elected Rhee president. He was regularly re-elected until 1941. To win U.S. recognition of Korean independence claims, he went to Washington, D.C., during World War II. In 1945 he returned to Korea and was elected first president of the Republic of Korea July 20, 1948. When the North Korean forces invaded the republic in 1950 Rhee moved his government to the south, then returned to Seoul when the United Nations forces recaptured it, only to flee with the government again when the Chinese Communists entered the war.

**Rheumatism:** see ARTHRITIS.

**Rhode Island.** A north Atlantic state of the United States, in New England; one of the 13 original states; popularly known as "Little Rhody." Area: 1,214 sq.mi. (smallest of the United States), including 156 sq.mi. of water; pop. (1950 census): 791,896, a gain of 11% since 1940. The principal cities, with preliminary 1950 populations, were: Providence (cap., 247,700); Pawtucket (81,180); Woonsocket (50,186); Cranston (55,130); Warwick (43,027); Newport (32,090); Central Falls (23,610).

**History.**—At the 1950 session of the legislature, leading measures passed included the following: a general appropriations act for support of the government for the fiscal year ending June 30, 1951, to the amount of \$40,131,456.68; an act establishing a state council of defense and authorizing local councils of de-

DENNIS J. ROBERTS, Democrat, elected governor of Rhode Island, Nov. 7, 1950

fense and otherwise providing for the safety of the state during an emergency resulting from war, hostile action or disaster; an act known as the Slum Clearance and Redevelopment act; an act to assist and encourage the developing and financing of housing facilities in the state; an act extending the Housing Authorities law making it applicable to the towns of the state; an act for the regulation and restriction of evictions; an act establishing a division of charitable trusts within the department of the attorney general; an act creating an emergency state fuel administrator

in the department of labour; an act providing for the administration of first aid and other medical services in places of employment; acts amending previous laws so as to preserve the solvency of unemployment compensation and cash sickness funds; an act vesting policy-making powers in a three-member board of review in the department of employment security; an act providing that no person shall be convicted of the less serious criminal offenses unless indictment is found against him within three years from the time of committing the offense; an act creating a special commission to study financing of highway extension and improvement; an act providing for the modernization and improvement of the state highway system; an act prohibiting the installation and use of television in motor vehicles; an act to protect amateur and professional athletic games and contests and horse racing against bribery and corruption and fixing penalties for violations of the act; an act authorizing the registration of voters who are old, disabled, ill or infirm by method not requiring appearance at the registrar's office in person; an act restricting exemptions from jury service; an act approving the execution of a compact known as the Northeastern Interstate Forest Fire Protection compact.

The chief executive officers of the state elected in Nov. 1950 for 1951–52 were Dennis J. Roberts, governor; John S. McKiernan, lieutenant governor; Armand H. Coté, secretary of state; William E. Powers, attorney general; Raymond H. Hawksley, general treasurer. Edmund W. Flynn was chief justice of the supreme court.

**Education.**—During 1949–50 there were in the public elementary schools 62,774 pupils and 2,135 teachers; in junior high schools 16,028 pupils and 820 teachers; in senior high schools (three years) 12,663 pupils and 688 teachers; in senior high schools (four years and vocational) 4,838 pupils and 248 teachers. Pupils attending private schools were: elementary 26,490; junior high 4,512; senior high (three years) 1,048; senior high (four years) 5,942. The total number of teachers in private day schools was 1,405. Current expenditures for day schools were \$19,240,378.01 and for evening schools \$51,632.46. The director of education in 1950 was Michael F. Walsh.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The total number of persons receiving public assistance in all categories (including incapacitated fathers) in Nov. 1950 was 35,105 or about 4.5% of the state's 1950 population. The total amounts paid out during the year Dec. 1, 1949, to Nov. 30, 1950, were as follows: general public assistance \$5,500,635; soldiers' welfare \$163,085; old-age assistance \$5,714,011; aid to dependent children \$3,931,787; aid to the blind \$111,864. In unemployment compensation, the net amount of benefit payments during 1950 was \$16,216,910.82 to 76,430 different individuals. The amount paid into the fund during 1950 including interest was \$14,657,878.19. There were 653 inmates in corrective institutions on Nov. 30, 1950, and 5,231 patients in charitable institutions and institutions for defectives, the number in the latter being 4,095.

**Communications.**—The total mileage for highways on Dec. 31, 1950 (excluding city roads and streets under the control of the seven cities), was 2,622 mi. of which total 839 mi. were state roads built and maintained by the state into and through the cities. At the close of the year 1949, railroads were operating 184.79 mi. of track in the state. On Dec. 31, 1950, the largest motorbus company operating in the state

operated more than 201.64mi. of road, and trackless trolleys 82.2 mi. of road in the state.

Water-borne commerce of the state for 1949 was 8,623,810 tons of which 726,381 tons were foreign commerce (imports 717,367 tons, exports 9,014 tons), 7,632,110 tons were coastwise (receipts 7,044,327 tons, shipments 587,783 tons), 213,206 tons were internal (receipts 106,402 tons, shipments 106,804 tons) and 52,113 tons were local.

On Dec. 31, 1950, there were three publicly owned (state) airports, one each in class II, III and IV, and seven privately owned airports or landing fields, all class I. Also there were two naval air stations owned by the United States. In Dec. 1950 the telephones in service were 233,908 as reported by the New England Telephone and Telegraph company.

**Banking and Finance.**—There were 30 banking institutions in 1950. Resources of 22 banks under state supervision totalled \$880,186,105.50, and of 8 banks under federal supervision, \$247,577,699.03. Savings deposits (exclusive of club accounts) in savings banks and trust companies (the 22 state banks) amounted to \$542,323,975 on June 30, 1950. In addition, 6 loan and investment companies had resources of \$4,744,881.94; 8 building and loan associations \$89,513,948.27; 38 credit unions \$17,183,515.66.

At the close of the fiscal year, June 30, 1950, total state receipts were \$46,463,315.74; expenditures and encumbrances \$47,437,916.60; deficit from operation \$974,600.86. The state gross debt was \$51,957,000, net debt \$46,952,473.59.

**Agriculture.**—The total acreage of principal crops harvested was 56,000 in 1950. Cash income from crops in 1949 was \$6,131,000; from livestock and livestock products \$16,983,000; from government payments \$65,000; total gross farm income \$23,179,000. The value of livestock Jan. 1, 1950, was \$7,211,000.

Leading Agricultural Products of Rhode Island

Crop	1950	1949	Average 1939-48
Corn, all, bu. . . . .	280,000	266,000	315,000
Hay, all, tons . . . . .	56,000	50,000	50,000
Alfalfa, tons . . . . .	2,000	2,000	2,000
Potatoes, bu. . . . .	1,275,000	1,160,000	1,231,000
Oats, bu. . . . .	33,000	30,000	32,000
Apples (commercial), bu. . . . .	261,000	279,000	207,000
Peaches, bu. . . . .	3,000	15,000	13,000

On Jan. 1, 1950, the livestock population of the state included: 1,000 horses and colts; 21,000 milk cows two years old and older; 6,000 other cattle; 9,000 hogs; 2,000 sheep and lambs; 604,000 chickens; 5,000 turkeys; and 1,000 colonies of bees. Livestock products in 1949 included 140,000,000 lb. of milk valued at \$8,970,000; 996,000 chickens, \$1,897,000; 34,000 turkeys, \$310,000; 7,416,667 doz. eggs, \$4,157,000; 19,000 lb. of honey, \$5,300.

**Industry and Manufacturing.**—The estimated number employed in the state in Oct. 1950 was 301,469 distributed as follows: manufacturing 152,778; trade (wholesale and retail) 51,956; government (federal, state, local) 30,700; service (personal, medical, legal, etc.) 24,304; transportation and public utilities 16,300; construction 13,916; finance, insurance and real estate 10,779; miscellaneous 736. (Farmers, self-employed, domestics and armed services personnel are excluded.)

Employment in manufacturing in Dec. 1950 totalled 131,781 production wage earners and 20,203 nonproduction workers (salaried personnel) and the weekly pay roll was \$7,426,086 for all manufacturing industries in Rhode Island according to the state department of labour. Wage earners were distributed among manufacturing industries as follows: textiles 63,685 (cotton 16,612; rayon-silk 5,202; woollen-worsted 25,696; finishing 11,752; miscellaneous textiles 4,423); jewellery-silverware 20,965; metals and machinery 32,786 (primary 6,679; fabricated 6,243; machinery 13,071; electrical machinery 6,793); rubber products 8,168; miscellaneous 19,290. The number of establishments employing five or more workers was 3,689 in Oct. 1950, and the number of persons employed was 222,496.

**Mineral Production.**—The value of mineral production in Rhode Island is small, exceeding only that of Delaware and the District of Columbia. The principal products in order of value are sand and gravel, stone and graphite. Value in 1948 was \$1,450,000; in 1947 \$785,000; in 1946 \$561,000; and in 1945 \$508,000. The values of products were stone \$536,651 in 1948, \$400,602 in 1947, \$274,130 in 1946, \$219,263 in 1945; and sand and gravel \$728,990 in 1948, \$25,261 in 1947, \$8,486 in 1946 and \$221,530 in 1945. Quantity production of stone was 107,080 tons in 1948, 32,090 tons in 1947, 4,860 tons in 1946, 11,280 tons in 1945; sand and gravel 633,436 tons in 1948, 44,363 tons in 1947, 41,659 tons in 1946 and 17,300 tons in 1945. (M. C. M.)

**Rhodesia, Northern.** A British protectorate on the plateau of central Africa. Area: 290,320 sq.mi. Pop.: (1949 est.) 1,645,000. Religion: Africans 75% pagan, remainder Christian. Chief towns: Lusaka (cap.), Kitwe and Luanshya. Governor: Sir Gilbert Rennie.

**History.**—Livingstone airport, the largest and most up-to-date in Africa, built at a cost of about £1,000,000, was opened in Aug. 1950. Northern Rhodesia was to have official representation at the discussions to be held in London early in 1951 on the closer association of the Rhodesias and Nyasaland and had also accepted the recommendations for the establishment of the

Rhodesia-Nyasaland secretariat and interterritorial conference to replace the Central African council.

Preliminary surveys were completed for the railway link between the systems of Rhodesia and those of east Africa and for the control of the flood waters of the Kafue river. The latter was the first step in the Kafue gorge hydroelectric scheme. Financial aid to the extent of £5,000,000 was promised by the government to local authorities in the protectorate for their building programs.

In March heavy floods caused some loss of life, destruction of stock and damage to property; the railway suffered serious breaches in three places and one bridge was put out of action. A national park of 8,650 sq.mi. was proclaimed in the central Kafue basin.

The protectorate benefited by the rapidly increasing prices for metals. Mineral production was valued at £36,388,920 in 1949, a record and nearly three times the pre-World War II average. Five of the largest mining companies operating in the protectorate announced their intention of changing their domicile from London to Northern Rhodesia. (See also RHODESIA, SOUTHERN.)

**Finance and Trade.**—Currency: Southern Rhodesian pound at par with sterling. Budget (1949 revised): revenue £9,825,068, expenditure £9,561,154; (1950 est.) revenue £11,758,000, expenditure £11,676,000. Foreign trade: (1949) imports £21,266,000, exports £33,122,000; (January-June 1950) imports £12,479,000, exports £21,385,000. Principal exports (1949 totals): copper (blister and electrolytic) £26,900,637; zinc £1,931,279; lead £1,931,279; and tobacco £754,014. (G. R. MN.)

**Rhodesia, Southern.** This self-governing African colony in the Commonwealth of Nations is subject to the power, retained by the crown, to disallow bills affecting the African population, the unalienated lands, the railways and the mineral rights of the British South Africa company. Area: 150,333 sq.mi. Pop. (June 1950 est.): 2,084,800, incl. 129,000 Europeans, 1,959,000 Africans, 3,600 Asians, 5,200 mixed. Chief towns (pop. 1950 est., Europeans only): Salisbury (cap., 38,000); Bulawayo (33,000); Umtali (5,000); Gwelo (5,000). Languages: English, Afrikaans (derived from Dutch) and native tribal dialects. Religion: Africans mainly pagan with substantial Christian minority. Governor: Major Gen. Sir John Noble Kennedy; prime minister: Sir Godfrey Huggins.

**History.**—On the recommendation of a select committee, membership of the Rhodesian parliament was to be increased from 30 to 40 and before the next general election, which had to be held not later than 1953, a senate of 15 members was to be created. An Anglo-Portuguese convention was signed during 1950 in which Portugal agreed to provide adequate port facilities at Beira, and the British territories for which the port is the natural outlet gave assurances about future traffic and the use of the port.

The United Kingdom government decided on a fresh examination of the problem of the closer association of Southern Rhodesia, Northern Rhodesia and Nyasaland, and for this purpose a conference composed of officials of the three central African governments, the colonial office and the commonwealth relations office was to be held in London early in 1951. The Southern Rhodesian government gave notice in Jan. 1950 that it would not continue membership in the Central African council after the end of the year and a committee was set up to study interterritorial co-operation in central Africa. It recommended formation of a Rhodesia-Nyasaland secretariat and a Rhodesia-Nyasaland interterritorial conference. These recommendations were accepted by all three governments.

The colony was represented at the Central and Southern African Transport conference held in Johannesburg in November, where proposals for a permanent co-ordinating organization and for the completion of a direct railway link between the railway systems of the colony and those of South Africa failed to find

agreement.

Measures were passed to render dog racing and sports pools illegal, and a Subversive Activities bill was approved. The budget contained no rise in direct taxation but there were increases on tobacco, cigarettes, surface mail rates for foreign countries outside Africa, telephone calls and installations and boarding school fees. The gold industry contribution was withdrawn. A survey of the catchment area of the Sabi and Lundi rivers was completed and recommendations made for a development scheme costing £20,000,000 over 25 years. An agronomic survey was appointed for the territory. The task was expected to take four or five years. A reconnaissance party examined a project for a pipe line for gasoline and oil from Beira to Umtali. Proposals included tank storage in the colony. Gasoline consumption had risen from 650,000 gal. a year in 1946 to 3,300,000 gal. in 1949.

The housing problem continued to cause grave concern. Though, on this account, efforts were made to restrict immigration to 8,000 a year, 14,096 European immigrants entered the colony in 1949 and a further 7,872 in the first half of 1950. The value of building work done in 1949 was £6,112,000. An agreement was reached in London between tobacco representatives of Southern Rhodesia and of British manufacturers for the sale of 405,000,000 lb., two-thirds of the crops for 1951–55. Central African Airways flew 19,981,538 passenger-miles and carried 690,385 kg. of freight in 1949. The mineral output for 1949 was a record and amounted to £11,293,201. (See also RHODESIA, NORTHERN.)

**Education.**—European (1949): government primary schools 72, pupils 12,400, teachers 447; high schools 14, pupils 4,600, teachers 265; aided private schools 22, pupils 3,650; aided farm schools 13, pupils 195. Asian and mixed (1950): government primary schools 12, pupils 1,774, teachers 60; aided schools 4, pupils 886. Native (1949): primary schools 2,069, pupils 210,021, teachers 5,685 African and 226 European; postprimary schools 10, pupils 974. Teacher training schools 18.

**Finance and Banking.**—Currency: Southern Rhodesian pound (at par with pound sterling); circulation incl. Northern Rhodesia and Nyasaland (Aug. 1949) £8,326,000. Budget: (1949–50) revenue £16,769,832, expenditure £14,843,783; (1950–51 est.) revenue £16,621,000, expenditure £16,620,570. National debt (1950) £83,696,898. National income (1949 est.) £72,700,000.

**Foreign Trade.**—Imports (1949) £54,586,000, exports £29,621,000, re-exports £4,901,000.

**Transport and Communications.**—Main roads (1950): c. 15,600 mi. incl. 2,500 mi. hard-surfaced. Railways: 1,352 mi.; (1949) passenger traffic 2,395,253, freight 5,163,159 long tons; (January–May 1950) passenger traffic 920,882; freight 2,311,428 long tons.

**Agriculture.**—Tobacco (Virginia, 1949–50): 102,500,000 lb. Live-stock (1949): cattle 3,004,000; sheep 315,000; goats 542,000; pigs 107,000; poultry (European production only) 552,000.

**Industry.**—Fuel and power: coal (1949) 2,114,000 long tons; electricity (1949–50) 219,000,000 units sold. Raw materials (1949): gold 528,000 oz.; asbestos 80,000 long tons; chrome 268,000 long tons.

(G. R. MN.)

**Rice.** The U.S. rice crop of 1950 of 37,971,000 bags (of 100 lb. each) was 7% smaller than the record 40,747,000 bags harvested in 1949, but 27% larger than the ten-year average of 29,790,000 bags. The 1,608,000 ac. that were harvested again exceeded the government-announced goal of 1,593,000 ac. The yield of 2,361 lb. per acre exceeded that of 2,215 lb. for 1949 and 2,094 lb. as the average for the previous decade. Texas with 11,544,000 bags replaced Louisiana (10,491,000 bags) as the leading producer; Arkansas was third with 7,975,000 bags and California fourth with 7,772,000 bags.

The price received by farmers for rice during 1950 reached \$5.32 per hundredweight in December as compared with \$4.31 per hundredweight a year earlier. Loans under the mandatory government price support program averaged \$4.56 per hundredweight, or 90% of parity. The official national acreage allotment for the 1951 crop was set at 1,868,000 ac., 15% larger than the planted acreage in 1950, but at the end of the year it appeared likely that controls would be continued on the crop of the new year.

World rice production in 1950–51 was forecast at 343,000,-

000,000 lb. of rough rice, 3% larger than the 333,000,000,000 lb. of 1949–50 and possibly the largest crop since World War II. The world acreage was 224,600,000, slightly larger than in 1949–50. Asia, which produced 93% of the world's crop, accounted for much of the increase with a prospective 318,000,000,000 lb., equal to the 1948–49 crop and considerably in excess of the 1949–50 crop. Much of the prospective increase was credited to China, but conditions in Korea, China and Indochina raised some doubts about harvest and distribution. Europe's harvest of 2,781,000,000 lb. was a record and per acre yields were near the prewar level. (See also FOOD SUPPLY OF THE WORLD.)

(J. K. R.)

**Rio De Oro:** see SPANISH COLONIAL EMPIRE.

**Rio Muni:** see SPANISH COLONIAL EMPIRE.

**Rivers and Harbours.** In 1950 construction was executed on 92 regular river and harbour projects by the U.S. army corps of engineers; of this number, 9 were completed. Maintenance was performed on a total of 321 projects, including the extensive intercoastal waterways and Mississippi river system, the connecting channels on the Great Lakes, the 490 navigation locks and dams, and 270 harbours, and also the channels and canals of the Ohio river system, the upper Mississippi river, the Illinois waterway, the hydroelectric generating plants on the Missouri river at Fort Peck, Mont., and the Columbia river at Bonneville, Ore. During the fiscal year which ended June 30, 1950, \$197,985,690 of federal funds was expended for new work and maintenance of river and navigation projects and inland and coastal harbours.

The Rivers and Harbors act of 1949, including supplemental appropriations, provided \$186,142,500 for maintenance and improvement of U.S. rivers and harbours. Of this total \$113,760,500 was for new construction work on 51 projects in 30 states, the District of Columbia and Alaska. Maintenance, operation and care were allotted \$62,583,906; advance planning, \$1,500,000; preliminary examinations and surveys, \$1,500,000; and miscellaneous items, \$6,798,094. The important river and harbour projects allocated \$1,500,000 or more for construction were: McNary lock and dam, Columbia river, Oregon and Washington, \$39,389,100; Missouri river, Kansas City, Mo., to Sioux City, Ia., \$3,750,000; Mississippi river, between Ohio and Missouri rivers, \$8,500,000; New York and New Jersey channels, New Jersey, \$2,665,000; Gulf Intracoastal waterway, New Orleans district, \$3,400,000; Demopolis lock and dam, Alabama, \$2,100,000; Cleveland harbour, Ohio, \$1,500,000; Morgantown lock and dam, West Virginia, \$2,000,000; Monongahela river, Pennsylvania, \$3,780,000; Jim Woodruff dam, Florida, \$2,750,000; Chief Joseph dam on the Columbia river, Washington, \$18,529,000.

Advance planning was executed during 1950 on 16 river and harbour projects in 13 states. The more important of these planning projects were: the Ice harbour lock and dam, Snake river, Washington; Arkansas river and tributaries, Arkansas and Oklahoma; Alabama-Coosa river, Alabama and Georgia; Tennessee-Tombigbee waterway, Alabama and Mississippi; McGee Bend dam, Angelina river, Texas; and Dover lock and dam, Kentucky.

At the end of 1950, there were 670 authorized investigations in advanced stages of completion. The work involved in this survey program was approximately 45% complete. Included in the studies were the Trinity river, Texas; Galveston-Houston-Texas City channel, Texas; the coast of California, to determine the advisability of providing harbours of refuge for small craft; Hudson river improvement for deep-draft tankers; Duluth-Superior harbour, Minnesota; Illinois waterway duplicate locks; Delaware river, Philadelphia to Trenton; Atchafalaya river, Morgan City, La., to Mississippi river via Old River, La.; and a comprehensive

THE "ESSAYONS," largest dredge operated by the U.S. army corps of engineers at the time of its commissioning in 1950, shown at work on a five-year improvement plan for clearing the New York harbour of silt and enlarging main channels

survey of the water resources of Alaska for navigation, power development, flood control and related purposes.

At the Bonneville dam and reservoir, Oregon and Washington, the ten electric-power generating units were operated at capacity throughout the year. At the Fort Peck dam, on the Missouri river in Montana, the reservoir was operated throughout the year for the maintenance of navigation on the Missouri river, and for the secondary purposes of flood control and hydroelectric production. Operation of the two completed generating units was continued during the major portion of the year, with the total power production during the first six months being 143,481,000 kw.hr. Installation of a third generating unit of 35,000-kw. capacity was under construction. (G. Hb.)

**Canada.**—The 1950-51 parliamentary votes included \$9,296,000 for the improvement of harbours and \$9,330,000 for dredging river channels and maintaining navigation service.

Figures released in 1950 revealed that total tonnages handled by national harbours in 1949 were 6% greater and revenues were 10% higher than in 1948. Nevertheless 1949 operations resulted in a net deficit of \$1,493,517, an improvement of 27% over 1948. Vancouver harbour claimed first place in radar harbour control, with 53,000 vessels using its Lion's Gate system in 1949.

Upon representations made by federal shipping officials, London marine underwriters made a one-third reduction in the scale of minimum additional premiums on hull insurance rates on ships trading into Port Churchill, which was open an extra 10 days (total of 77 days) in 1950. The port of Montreal announced a 40% increase in 1950 tonnages over those of 1949.

## Roads and Highways.

There was marked increase in the rate of highway improvement and a pronounced raising of standards for improvement in most parts

of the world in 1950. Important technical advances were made, but they were largely of a nature contributing to improvement in quality and adequacy of highways rather than discovery of revolutionary materials and processes. In Canada a bridge was built entirely of aluminum. A new method of stressing steel reinforcement and concrete in structures during construction to produce more efficient use of materials was applied on a number of bridges. A concrete bridge was built by casting the parts at a material yard and hauling them to the site for placement. Rubber was used experimentally in bituminous road surfaces and various chemicals were studied as stabilizers of soil surfaces and bases. Progress with rubber and chemicals did not reach a stage that justified recommendation of these materials for general use.

**United States.**—The surfaced roads outside cities grew to about 1,637,000 mi. but a large portion of this mileage was no longer adequate for the greatly increased traffic. There was serious congestion and delay on highways in all cities and travel on many sections of main highways between cities was made difficult and dangerous by deficiencies in surface condition, width, grade and curvature. The cost of correcting existing deficiencies was variously estimated at from \$42,000,000,000 to \$47,000,000,000. In a number of states plans for more rapid highway improvement and for increasing funds for highways were debated. In the last half of 1949 and during 1950 ten states increased the rate of tax on gasoline to produce more highway funds.

With use of highways, congestion and public demand for better highways at all-time peaks, highway organizations made improvements at the maximum rate possible with the funds available. There was a marked increase in the number of cities constructing expressways to solve their worst traffic problems. Construction of four-lane, divided highways, often with controlled access, was accelerated. Many miles of obsolete two-lane roads were widened and straightened, often by relocation. Building of secondary or farm-to-market roads went forward at a record-breaking pace.

Awards of construction contracts by state highway departments in the first nine months of the year totalled \$1,100,000,000 for 48,800 mi. of road. It was indicated that the total for the year would rise to \$1,500,000,000 for 65,000 mi. It was estimated that about 45,000 mi. would be completed. These figures do not include work done by counties and cities without state or federal assistance.

In the federal-aid highway program in co-operation with the states, 20,208 mi. of highway were completed in the fiscal year ending June 30, 1950. Improvements were completed as follows: On the federal-aid primary system outside cities (principal inter-city highways), 5,914 mi. of highway and 1,163 bridges; on urban federal-aid highways, 779 mi. and 353 bridges; and on secondary or farm-to-market roads, 13,515 mi. and 1,631 bridges. Federal-aid funds authorized for the year amounted to \$450,000,000 and work was done at approximately that rate.

**Alaska.**—The enlarged program of modernizing Alaska's 2,000-mi. system of main highways, begun in 1949, was continued in 1950. Improvement of the Alaska highway from the Canadian border to Fairbanks and highways from Fairbanks to the coast at Anchorage and Valdez at a cost of \$45,000,000 went forward rapidly. The year's work resulted in about 150 mi. of improvement.

**Alaska Highway.**—The Canadian and Alaskan sections of the Alaska highway were kept in good condition by the respective governments and served an increasing volume of tourist and commercial traffic. The highway was occasionally closed to travel for short periods because of the weather but in general it was open to travel throughout the year. Trucks and buses operated on schedule in winter as well as in summer.

**Canada.**—A growing population and rapid development of resources led to a large program of construction in every prov-

ROAD SIGNS forming part of a uniform code being fostered by the United Nations in 1950. Universal adoption would make it possible for travellers to read the signs anywhere no matter what language they spoke

ince. The character of the work ranged from four-lane, divided highways near some of the larger cities to pioneer trails reaching out into remote unsettled areas.

For many years there had been discussion of a trans-Canada highway and sections of a projected route had been improved but there still was no satisfactory route across Canada. In 1950 the dominion government took steps that would make a good highway an actuality in a period estimated at six or seven years. The dominion government entered into an agreement with nine of the provinces and was negotiating with the remaining one to complete the highway to high standards at a cost estimated at \$300,000,000 and share the cost on a 50-50 basis. The route agreed upon extended 5,000 mi. from St. John's, Nfd., to Victoria, B.C. Minimum standards required a 24-ft. pavement on a 100-ft. right of way. Difficult construction would be necessary in the swampy area north of Lake Superior and in the Rocky mountains.

**Mexico.**—Improvement of main highways and of farm service roads went forward at a rapid pace. Opening of the final section of the Inter-American highway in Mexico was celebrated in May, making travel possible over the entire 2,176 mi. from the Texas border to the Guatemalan border. There were three routes from the United States to Mexico City, one from Laredo, Tex., one from Ciudad Juárez, Mex., and one from Brownsville, Tex.

**Inter-American Highway.**—Lack of funds reduced the rate of progress below that of previous years. Some construction work was done in Mexico, Guatemala and Nicaragua. Of the 3,200 mi. from the United States to Panamá city, 61% was paved, 30% was unpaved but was passable at all times, 1% was passable only in dry weather and 8% was impassable at all times. Beginning at the Mexican-Guatemalan border there was an impassable gap of 25 mi., another of 65 mi. in northern Costa Rica and one of 150

mi. in southern Costa Rica and Panamá.

**South America.**—In most of the countries of South America construction of highways was accelerated and plans were made for still greater progress in the future. The United States-assisted the Peruvian government in reorganizing its highway department, purchasing equipment and training men to operate and repair the equipment. Reports from Colombia, Ecuador, Peru, Bolivia and Chile indicated marked increases in road construction activity. Brazil had numerous construction jobs under way. A large assembly of modern road-building equipment was at work on the most impressive construction yet undertaken, a 258-mi. highway from Rio de Janeiro to São Paulo. Starting out as a four-lane, divided highway from each city, the roadway reduced to two lanes where traffic was not yet heavy, but grading was being done for a second two-lane pavement to be placed when needed. The travel distance between the two cities would be shortened by almost 70 mi. and there were to be no crossings at grade. The project was notable for the 98 bridges required and the large amount of earthwork necessary to meet modern standards for grades and curvature.

**United Kingdom and Europe.**—In the United Kingdom existing highways were maintained but little more was done. The number of motor vehicles had doubled since the end of World War II and highway users were strongly critical of the failure to make major improvements on main routes. The ministry of transport reported approval of five new routes, 1,000 mi. in total length, to be improved as men and money became available, but there was no indication of early action.

In Europe the enormous job of repairing war damage to roads and bridges was nearing an end. A few notable projects were under way. In Lyon, Fr., work progressed on a tunnel more than a mile in length with a 40-ft. roadway. This tunnel would serve as a main route into the city. In western Germany the *Autobahnen* had been repaired and carried a large volume of freight. This service was particularly valuable because of the inadequacy of rail lines. Belgium began work on a 650-mi. system of four-lane, divided highways connecting Brussels, Liège and Ghent. Italy used financial assistance from the United States to modernize the historic road from Naples to Rome.

**Turkey.**—With the assistance of a staff of engineers from the United States, Turkey made great progress in reorganizing its highway department, equipping it with modern road-building machines and training men in many different branches of highway work. Several main highways that had been little used during rainy weather were conditioned for travel at all seasons of the year. In 1947 nearly all highway maintenance was done by the simplest hand methods. By 1950, 4,500 mi. of national highway were maintained by motorized equipment.

**Africa.**—In nearly all political units roads were extended into remote areas to reach productive lands or other resources. Plans were made for the construction of 4,300 mi. of road in French West Africa, 8,500 mi. in French Equatorial Africa and 200 mi. in the French Cameroun. A grant from the United States of \$1,236,000 in Economic Cooperation administration funds was to be used largely for road-building machinery. Areas shut off from the coast by hundreds of miles of jungle were to be made accessible.

**Republic of the Philippines.**—Rehabilitation of war-damaged roads and bridges with assistance from the United States was in its last stages. The 304 construction and engineering projects provided for the rehabilitation of 81 sections of road totalling 360 mi. and 223 major bridges.

**Japan.**—Less than 3% of the roads were paved. Road improvement by occupation forces was of considerable benefit but was limited to the transport needs of the occupation forces. Japanese authorities embarked upon a more extensive general program. They planned construction of 16,600 mi. of new

road, rehabilitation of 262,000 mi. of existing road and bridge construction to cost about \$60,000,000. (See also MOTOR TRANSPORTATION.)

**Roman Catholic Church.**

During 1950 the Roman Catholic Church celebrated its 25th Holy Year. Vatican officials estimated 3,000,000 pilgrims had journeyed to Rome to do penance and gain special indulgences. Seven canonizations took place. Marie Emile de Rodat, founder of the Sisters of the Sacred Family, April 23; Antonio Maria Claret, Spanish textile worker who became archbishop of Cuba, May 7; Bartolomea Capitanio and Vincenza Gerosa, who collaborated in founding the Sisters of Charity of Lovere, May 18; Jeanne de Valois, wife of King Louis XII, May 28; Maria Goretti, 11-year-old martyr of purity, June 24; Maria Ana de Paredes, who offered her life for the plague-stricken people of Ecuador, July 9.

In January Myron C. Taylor resigned as President Truman's personal envoy to the pope after ten years of service.

The Sacred Congregation of the Holy Office issued new instructions explaining the "Monitum" of June 5, 1948, which forbade Catholics to take part in public discussion of religious questions without permission of the Holy See. Bishops were given permission for a period of three years to meet locally with non-Catholics for the purpose of discussing religious "reunion." However, the new instruction reserved to the Holy See itself the right to grant permission for all other conferences or meetings of a larger than local or diocesan scope.

In Africa the first local hierarchies in 14 centuries were formed in Nigeria, the Cameroons, Togoland, the Gold Coast and Sierra Leone.

Indonesia established diplomatic relations with the Vatican. The apostolic delegation in Jakarta was elevated to the rank of papal internunciature and Archbishop George de Jonghe d'Ardoye was named internuncio.

Czechoslovakia expelled Msgr. Ottavio de Liva, sole diplomatic

ROMAN CATHOLIC HOLY YEAR 1950 being ushered in at St. Peter's cathedral in Rome, It. Holy Year activities were climaxed on Nov. 1 by the announcement of a new Roman Catholic dogma: the bodily assumption into heaven of the Virgin Mary

representative of the Vatican, and failed to release Archbishop Josef Beran who was still confined to his palace. Bishop Stanislav Zela, Olomouc auxiliary, and eight other Catholic churchmen were imprisoned. The Communist regime established its own "seminaries" for training Catholic "priests." All old theological faculties and seminaries of Catholic dioceses were liquidated and replaced by new faculties under the supervision of the state office for church affairs and the ministry of education.

In Poland the Communists seized Caritas, Catholic charity organization, and church-held lands. Arrests of priests of religious orders continued.

England celebrated the 100th anniversary of the restoration

of the Catholic hierarchy of England and Wales.

In Moscow, Father Brassard, A.A., of Worcester, Mass., was denied the use of the church by soviet authorities. The only other Roman Catholic clergyman in Moscow, Father Jean de Matha Thomas of France, was denied a resident permit.

The bishops of the United States, at their annual meeting, issued a statement stressing the urgency of religion in child upbringing and condemned world apathy toward religious persecution behind the "iron curtain."

The dogma of the Assumption of the Blessed Virgin Mary was proclaimed Nov. 1. This was the first instance of a solemn dogmatic definition uttered by the pope alone since the definition of the doctrine of the Immaculate Conception of the Virgin Mary on Dec. 8, 1854.

The National Catholic Education association held its 47th annual convention in New Orleans, La., in April. The theme of the meeting was "Education for International Understanding." In March the National Catholic Conference on Family Life met for the 18th annual convention in Detroit, Mich. The Catholic Press association, at the 40th annual convention in Rochester, condemned the Communist conquest of China and called on "all religious-minded persons, irrespective of creed, to unite in a world-wide religious front against secularism, totalitarianism and all their evils." The 36th annual meeting of the National Conference of Catholic Charities was held in Washington; the 28th convention of the National Catholic Rural Life conference in Belleville, Ill.; and the 68th annual meeting of the Knights of Columbus in New York.

In March Pope Pius issued the *Anni Sacri* encyclical, calling Catholics to join him on Passion Sunday in prayers for renewal of Christian morals and a return to order based on truth, justice and charity. The *Summi Maeroris* encyclical urged all Christians to renew prayers for peace. An encyclical letter, *Humani Generis*, warned against compromises that might undermine church doctrine. The encyclical *Mirabile Illud* inaugurated a world-wide prayer for peace crusade.

The world population of Roman Catholics exceeded 400,000,000. In the United States, Hawaii and Alaska, it was estimated at 27,766,141. The number of U.S. dioceses was increased to 102 when the new diocese of Worcester, Mass., was created. There were 23 archdioceses and the vicariate apostolic of Alaska. Parishes totalled 15,292 and there were 42,970 priests, 73,377 brothers and 147,310 nuns.

General Joseph Lawton Collins, army chief of staff, was named 1950 Laetare medalist by the University of Notre Dame. Attorney General J. Howard McGrath and Lou Montgomery, Negro lay leader, were awarded the James J. Hoey Medal for Interracial Justice. The medal "Pro Ecclesia et Pontifice," conferred by Pope Pius XII, was awarded for interracial work to George K. Hunton, executive secretary of the Catholic Interracial council, New York, Emmanuel A. Romero, Elmo M. Anderson and Maceo A. Thomas, all active in the council.

Bishop John J. Wright was appointed first bishop of the new diocese of Worcester, Mass.; Bishop Christopher J. Weldon was appointed in Springfield, Mass.; Bishop George W. Ahr in Trenton, N.J.; Bishop Stephen S. Woznicki in Saginaw, Mich.; Bishop John J. Russell in Charleston, S.C.; Bishop George J. Rehring in Toledo, O.; Archbishop Karl J. Alter in Cincinnati, O.

The College of Cardinals was reduced by the deaths of Luigi Cardinal Lavitrano, prefect of the Congregation of the Religious, and Konrad Cardinal von Preysing, head of the diocese of Berlin. Father Mariano Cordovani, O.P., personal theologian to Pope Pius XII, died in April. (See also CHURCH MEMBERSHIP; RELIGIOUS EDUCATION; PIUS XII; POLAND; SOCIETIES AND ASSOCIATIONS; VATICAN CITY STATE.)

FILMS OF 1950.—*Holy Year of 1950* (Castle Films); *Holy Year Pilgrimage to Rome* (World in Color Productions). (J. LAF.)

**Rome.** Capital and largest city of Italy. Area: 38.6 sq.mi. Pop.: (1936 census) 1,562,580; (1950 est.) 1,700,804. Mayor: Salvatore Rebecchini.

In connection with the Holy Year, Rome expected about 5,000,000 pilgrims, but only 3,000,000 came and two-thirds of them were Italian. The proprietors of Roman hotels and restaurants were disappointed, blaming the "cold war," the "iron curtain" and the currency regulations. Still, 3,000,000 pilgrims was ten times the number of the Holy Year of 1900. Another reason for bad temper among the hoteliers was the gift of \$2,800,000 by the Economic Cooperation administration for building and equipping hotels and hostels to provide pilgrims with food and lodging at nonprofit prices. Rome became the cleanest city of Italy for the Holy Year.

The decoration of the Spina di Borgo, the avenue leading to St. Peter's basilica, with a double row of 28 obelisks aroused many protests, but all Romans were proud of their new central railway station, a beautiful stone building with a rubber floor in the main hall. The new station was built further back than the old Stazione Termini (the only victim of a single Allied air raid on Rome), and the new station's square became the largest in Europe.

The F.A.O. (Food and Agriculture organization) established its headquarters in Rome, taking over the building of the former Italian ministry of colonies. (See also ITALY; VATICAN CITY STATE.)

FILMS OF 1950.—*Holy Year Pilgrimage to Rome* (World in Color Productions). (L. FE.)

**Rosenberg, Anna M.** (1902— ), U.S. assistant secretary of defense, was born on June 19 in Budapest, Hungary, the daughter of Mr. and Mrs. Albert Lederer. She was taken to the U.S. in 1912 and naturalized in 1917. She was married to Julius Rosenberg, New York businessman, in 1919.

Mrs. Rosenberg became a labour and public relations consultant and after 1935 served in a succession of important government positions, including: regional director of the National Recovery administration; regional director of the Social Security administration; regional director of the Office of Defense, Health and Welfare Services; regional director of the War Manpower commission, and a member of the Advisory Committee on Policy of the Office of the Co-Ordinator of Inter-American Affairs.

As personal representative of Pres. Franklin D. Roosevelt in 1944, and of Pres. Harry S. Truman in 1945, Mrs. Rosenberg visited the European theatre of war during World War II. From 1942 to 1945 she served as secretary of President Roosevelt's Labor Victory board. From 1944 to 1947 she served as a member of the Advisory board of the Office of War Mobilization and Reconversion. She was appointed assistant secretary of defense by President Truman, at the request of the secretary of defense, Gen. George C. Marshall, on Nov. 9, 1950. She received the oath of office on Nov. 15, under a recess appointment, and was confirmed in the office by the U.S. senate on Dec. 21, 1950.

**Rotary International:** see SOCIETIES AND ASSOCIATIONS.

**Rowing.** The year 1950 had its rowing preview on New Year's day at the third Palm Beach regatta. Yale won over the University of Pennsylvania by three feet—6 min. 42.2 sec. to 6 min. 42.8 sec.

In England, the usual throng saw Cambridge defeat Oxford by 3½ lengths in the 96th rowing of this event over the wind-

START of the feature race in the Intercollegiate Rowing association regatta held at Marietta, O., June 17, 1950. The University of Washington crews won all three events of the day: the freshman, junior varsity and varsity races

ing 4½-mi. Putney-to-Mortlake course. The Cantabs' time was 20 min. 15 sec.

In the United States in the more important college cup races of the year, Navy was victorious over Columbia for the Stephenson cup. Pennsylvania swept the ancient Childs cup regatta over Princeton and Columbia, as well as the Blackwell cup from Yale and Columbia. Harvard foiled Penn's designs for the Adams cup by winning at Annapolis, Md., with Navy third, and won the Compton cup by three feet from the Massachusetts Institute of Technology with Princeton and Rutgers trailing. Cornell beat Syracuse and Boston university at Ithaca, N.Y., and upset Princeton and Yale at Derby, Conn., for the Carnegie cup. Columbia made a clean sweep over Rutgers on the Harlem river and Washington defeated the University of California Golden Bears at Oakland, Calif.

These regattas culminated in the fifth annual Eastern Association of Rowing Colleges sprint championships at Annapolis. A new champion was crowned when a M.I.T. varsity crew, coached by James B. McMillin, nipped Harvard by four feet. Harvard retained the Rowe cup for the point score and Princeton won the junior varsity race and took second in the freshman and third in the varsity events. Thirty-four crews raced in the three events. The times and order of finish of the leaders were: varsity: M.I.T. 6 min. 28.8 sec., Harvard 6 min. 28.9 sec., Princeton 6 min. 34 sec.; junior varsity: Princeton 6 min. 33 sec., Harvard 6 min. 36.2 sec., Navy 6 min. 39.4 sec.; freshman: Harvard 6 min. 47.1 sec., Princeton 6 min. 50.2 sec., Boston university 6 min. 50.7 sec.

In a final sprint regatta, Harvard beat Cornell on the Charles river by 2½ lengths in the fast time of 8 min. 55.3 sec.

Yale's lightweights swept the Charles, winning the varsity to wrest the Wright cup from Cornell. Penn, Harvard, Princeton and Columbia followed. The times were: Yale 6 min. 52 sec.; Cornell 6 min. 53.7 sec. Yale also won the junior varsity and freshman events.

The eighth annual Dad Vail Rowing association regatta was held at Poughkeepsie, N.Y. Eleven colleges and 21 crews participated. Boston university won the Dad Vail trophy in the varsity for the fourth straight year, with Rollins college, Winter Park, Fla., second. The times were 5 min. 57.2 sec. to 5 min. 59.1 sec. Dartmouth won the junior varsity and Boston university the freshman event.

In the 16th Interscholastic championships at Princeton, N.J.,

Washington and Lee High school of Arlington, Va., kept its 1949 crown. The championship singles went to John Guest, Jr., of Canada.

The 48th Intercollegiate Rowing association regatta, transferred from Poughkeepsie, N.Y., to Marietta, O., for the first time, found the Ohio river on a rampage because of heavy rains. All races had to be shortened and times meant little. In the varsity race the first four crews to finish were Washington, California, Wisconsin and Stanford. The Washington Huskies also led the University of California Golden Bears in the junior varsity race, followed by Navy and Princeton, and won the freshman race, followed by Princeton, Cornell and Pennsylvania.

Harvard won from Yale at New London, Conn., in the only four-mile race in the U.S. The times were 21 min. 36.4 sec. to 21 min. 37.2 sec. Harvard's junior varsity and freshmen also beat Yale, both at two miles.

In the Henley Royal regatta, Harvard won the Grand Challenge cup from the Njord Rowing club of the University of Leyden in 7 min. 23 sec. It was Harvard's third victory in this event. The Thames cup went to Kent school, U.S., for the fourth time, with the Thames Rowing club second. Anthony Rowe won the Diamond Sculls for Great Britain from Robert van Mesdag of the Netherlands. Denmark won the Double Sculls and the Stewards' cup for fours and Belgium the Silver Goblets for pairs.

In the 76th championships of the National Association of Amateur Oarsmen, held at Philadelphia, Pa., the Vesper Boat club of Philadelphia, sparked by John B. Kelly, Jr., won six championships and the Julius H. Barnes trophy. Kelly won the dash and the single sculls and stroked the Vesper eight and the senior quadruple sculls. Joseph Angyal of the New York Athletic club won the lightweight dash to add to his club's intermediate eight victory. The Kieffer brothers, John and Larry, of the Fairmount Rowing association of Philadelphia, won the pair shell races.

At the 68th Royal Canadian Henley at Port Dalhousie, Ont., the point score went to St. Catharines, the host club, with the West Side Rowing club of Buffalo, N.Y., second and the Toronto Argos third. U.S. champion Kelly regained his singles title and crewed to win the doubles as well. U.S. crews won 9 of the 14 championship events.

The European championships were held at Milan, It. There were 15 countries represented. Denmark won the fours with coxswain, the singles and doubles; Italy the pairs with coxswain, fours without coxswain and the eights; and Switzerland

the pairs with coxswain.

Mervyn T. Wood, Australian constable and 1948 Olympic singles champion, successfully defended his world sculling title in the Philadelphia Gold Challenge cup regatta from John B. Kelly, Jr., U.S. and Canadian champion and 1949 European champion, and Anthony Rowe of England, who was the 1950 Diamond Sculls winner. Wood rowed the  $\frac{1}{4}$ -mi. course in 7 min. 14.2 sec. and Kelly in 7 min. 16.3 sec. Rowe trailed Kelly by one length at the finish.

(C. L. Bt.)

**Ruanda and Urundi:** see BELGIAN COLONIAL EMPIRE; TRUST TERRITORIES.

**Rubber.** The confused situation in the world's commercial supply of new rubber made 1950 the most chaotic year in this respect since 1941. Natural rubber spot prices (New York) fluctuated from about 18 cents (Jan. 16) to 86 cents (Nov. 8) per pound. The new supply of natural rubber for the United States through Sept. 1950 was 584,479 long tons as against 478,421 long tons for the same period in 1949. The invasion of South Korea on June 25 led to scare-buying of finished products by consumers and to heavy purchases of the raw material for the U.S. strategic stock pile and by foreign manufacturers for stock. Heavy purchases of rubber by the U.S.S.R. and large shipments to Chinese ports which may have been destined for soviet consumption aggravated the demand. Despite continued slow-down and guerrilla tactics which continued to plague production of crude rubber in Malaya and Indonesia, these sources materially increased their rates of production during 1950. In Indochina, however, the Communist infiltration lowered 1950 rubber production appreciably below 1949 levels. World figures for the first nine months of 1950 showed crude rubber production of 1,332,500 long tons and consumption of 1,215,000 long tons against the corresponding 1949 figures for production 1,082,500 and consumption 1,057,500 long tons.

**Natural Rubber.**—World production of natural rubber in 1949 was 1,487,500 long tons and exceeded world consumption of 1,437,500 tons by only 50,000 tons. In synthetic rubbers, 1949 world production of 440,332 long tons and consumption of 450,000 long tons actually resulted in a deficit of 10,000 long tons. In 1949, U.S. consumption of new rubbers comprised 574,522 long tons of natural and 414,381 long tons of synthetic rubbers—a total of 988,903 long tons. November estimates were for a record 1950 consumption total of 1,240,000 long tons. Net imports of natural rubber latex, Jan. through June 1950 into the United States, were 23,015 long tons dry rubber content, and into the United Kingdom 6,902 long tons. Malaya continued to supply more crude rubber than any other source; with Indonesia it supplied about 70% of the world's total.

**Synthetic Rubber.**—The general purpose synthetic rubber (GR-S) produced in U.S. government plants in Jan. 1950 was only 18,124 long tons, the lowest level since the plants were

started in 1943. With crude rubber available at 18 cents a pound, the level market price of 18½ cents a pound for GR-S gave manufacturers no great incentive to increase the use of man-made rubber. It was not apparent until the spring quarter 1950 that the industry was going to require more new rubber than in any previous year. On June 12, congress extended the Rubber act of 1948 to be operative until June 30, 1952, largely because of the "systematic disruption of rubber production" in Malaya by guerrilla forces and the "internal strife and virtual anarchy" affecting Indonesia, and the "obvious Communist control of rubber-producing countries." On July 7 the government authorized the reopening of one GR-S plant, one Butyl production unit and one butadiene plant. Three weeks later additional facilities sufficient to bring the total output of GR-S and Butyl up to 675,000 long tons a year were ordered reopened. On Sept. 13 reopening all remaining government facilities, including plants deriving butadiene from alcohol, was directed. In December the Reconstruction Finance corporation announced that the prices of synthetic rubber were to be advanced from 18½ cents a pound to 20¾ cents a pound for Butyl and to 24½ cents a pound for GR-S.

**Reclaimed Rubber.**—Except for the two war years of 1942 and 1943, the percentage of reclaimed to new rubber consumed by the United States in transportation items remained remarkably constant after 1939. It thus became prevailing practice in transport items to use about one pound of reclaimed for six to seven pounds of new rubber. While the tonnage consumption of reclaimed rubber in nontransportation items was fairly level each year after 1939, between 111,641 long tons in 1949 and 174,208 long tons in 1944, the percentages of reclaimed to new rubber showed considerable variation, 33.9% in 1949 minimum to 132% maximum ratio in 1942. This data revealed that the levelling effect of reclaimed rubber on the economics of rubber goods manufacture in industrial products was no more marked than for tires, repair gums and auto accessories.

**Tires and Tubes.**—More than 8,000,000 new passenger cars made in 1950 in the United States each required new tires and tubes. The replacement shipments of tires were unusually heavy. It was estimated at year-end that about 250,000,000 tires were

in service. Total U.S. shipments of tire casings in the year ending July 30, 1950, were 89,013,000 (75,819,000 passenger car and 13,194,000 truck and bus). During the year brisk buying of automotive rubber goods was accompanied by four price increases for passenger car casings, and five increases in the prices of truck and bus tires. Despite these price advances and an active market all year, there was a spurt of scare-buying of tires during July and August which subsided in September.

**Rumania.** A people's republic of southeastern Europe, bounded north and northeast by the U.S.S.R., east by the Black sea, south by Bulgaria and west by Yugoslavia and Hungary. Area: (1939) 113,889 sq.mi.; (1947, without Bessarabia, northern Bukovina and southern Dobruja) 91,654 sq.mi. Pop.: (Jan. 25, 1948, census) 15,872,624. Language (1948 census): Rumanian 85.7%; Hungarian 9.4%; German 2.2%; Yiddish 0.9%; other 1.8%. Religion (1947 est.): Greek Orthodox 81%; Greek Catholic 9%; Roman Catholic 7%; other 3%. Chief towns (pop., 1945 est.): Bucharest or Bucuresti (cap., 1948 census, 1,401,807); Cluj (110,956); Jassy or Iași (108,987); Timișoara (108,296); Ploesti (105,114); Brăila (97,292); Galați

(93,229). Chairman of the presidium of the grand national assembly: Constantin Parhon; prime minister: Petru Groza.

**History.**—On March 16, 1950, a government reshuffle led to the appointment as vice-premiers of Teohari Georgescu, Iosif Chișinevski (Kishinevsky) and Chivu Stoica. All three were prominent and veteran Communists. Georgescu was an expert in police affairs, Chișinevski in education and propaganda, Stoica in industrial and trade union matters.

The "verification" of membership of the Communist party, which began in 1949 and continued into 1950, resulted in the removal of 192,000 members, or 20% of the party's strength. After it was concluded, the party had 720,000 members. According to an official statement at the end of July 1950, the party was to make greater efforts to recruit industrial workers. The aim for two or three years was to ensure that 60% of the party's members should be workers. In future the conditions of admission to the party were to depend on the candidate's social origin. Four-fifths of all new candidates must be workers. A worker in heavy industry would have a period of probation of only six months, and would need to be recommended by two party members who had been in the party not less than three years. For workers in other branches of industry, at machine-tractor stations and on state farms, and for members of collective farms, agricultural labourers and working peasants the period of probation was to be one year, and there must be three sponsors who had been in the party not less than three years. For members of other social classes the period of probation would be one and a half years, and there must be four sponsors all of whom had been party members for not less than four years. It was also stated that during the previous year 249,000 party members had attended courses of instruction in party training centres and that in the coming year 324,000 persons would do so.

On Sept. 6 a new law was passed on the administrative divisions of the country. Many of the old counties, which had arisen for various historical reasons and did not represent economic units, were abolished. In the place of 58 provinces and 424 districts, 28 regions subdivided into 177 districts were created. The new subdivisions resembled those in the Soviet Union. The principles of integration of local with central authority and of the responsibility of each administrative unit, not only to its own electors and population but also to the administrative unit at the level above it, were also stressed. It seemed unlikely that the reorganization would have much importance, as the old units

ONE OF THE FIRST HARVESTING COMBINES manufactured in Rumania, shown receiving finishing touches early in 1950

were in fact as completely controlled by members or nominees of the Communist party as the new units would be. Its significance was perhaps as a symptom of the growing subordination of the country to soviet models, formal as well as real.

Collectivization of agriculture had not yet gone far. The first Rumanian collective farm was set up on July 24, 1949. A year later there were 670, and by mid-September there were about 1,000.

It was officially claimed that the economic plan for 1949 had been achieved to the extent of 108%. Production of tractors was claimed to have been double the proposed target, of steel 27% above the target and of crude oil 9% above. It was also stated that the land held by state farms had been more than trebled (from 220,000 ha. to 720,000 ha.). The targets for the 1950 plan showed a proposed increase over 1949 output of oil by 32%, of electric power by 13%, of steel by 19% and of machinery by 40%. The number of machine-tractor stations was to increase by one-third, and of tractors in them by one-half. In March 1950 a number of criticisms of the Baia Mare mines by a committee of investigation were published. Health services and educational facilities for the miners were insufficient, and technical methods were backward. One of the management's faults was failure to popularize soviet methods. The Stakhanovite system however was pushed ahead in Rumanian industry as a whole. A State Planning commission report of July 28 stated that in the second quarter of the year 67% of all industrial workers had been engaged in "Socialist competition."

A law for the nationalization of all house property belonging to landowners, businessmen, bankers and any of the exploiting class was a further blow against the remnants of the old middle class. The vagueness of its phrasing enabled the government to interpret it as it wished. Removal or damage to any object in the property before the authorities took it over was to be punishable by imprisonment for 5 to 10 years.

The Rumanian government closed the British and U.S. information offices in March 1950. Before this Rumanian personnel employed in these offices had been threatened, and in some cases arrested and maltreated by the political police. At the end of April another spy trial was staged. A woman employee of the British information office was sentenced to 20 years' imprisonment. The well-known newspaper editor, Liviu Nasta, was among the accused at the trial, and also received a 20-year sentence. In July another spy trial was held, which "implicated" the Turkish legation and the papal nunciatura. In August there was a trial of Yugoslavs accused of espionage on behalf of Tito. On Oct. 23 another spy trial included four French subjects, who received long prison sentences.

(H. S.-W.)

**Education.**—Schools (1949-50): elementary, pupils 1,790,000; secondary, pupils 224,000; higher education, students 48,500. Illiteracy (1948) 23.1%.

**Finance and Banking.**—Budget: (1950 est.) revenue 353,880,000,000 lei, expenditure 350,680,000,000 lei. Currency circulation (July 1948) 32,000,000,000 lei. Monetary unit: leu (pl. lei) with an official exchange rate of 153 lei to the U.S. dollar.

**Foreign Trade.**—(1948) Imports U.S. \$96,000,000; exports U.S. \$160,000,000.

**Transport and Communications.**—Roads (1945) 43,163 mi. Licensed motor vehicles (Dec. 1949): cars 14,000; commercial vehicles 12,000. Railways (1949): 7,363 mi. Shipping (1948): merchant vessels 15; total tonnage 32,962. Telephones (1949) 135,000.

**Agriculture.**—Main crops (metric tons): wheat (1948) 2,600,000; maize (1947) 5,279,000; barley (1947) 364,000; oats (1946) 280,000; rye (1947) 66,000; potatoes (1949) 1,090,000; sugar, raw value (1948) 112,000. Livestock: sheep (Dec. 1948) 7,300,000; pigs (March 1947) 1,406,000; cattle (Dec. 1947) 3,048,000; horses (Dec. 1948) 939,000.

**Industry.**—Industrial establishments (1947): 28,295; persons employed 462,305. Fuel and power (1947): coal 162,000 metric tons; lignite 2,108,000 metric tons; natural gas 2,106,000,000 cu.m.; electricity 712,000,000 kw.hr.; crude oil (1949) 4,500,000 metric tons. Raw materials (metric tons, 1947): pig iron 91,000; steel 183,000; lead 3,000; zinc 2,000; gold 2,231 kg.; silver 481,000 fine troy oz. Manufactured goods (metric tons, 1947): refined petroleum products 3,450,000; cotton yarn 11,300; cotton fabrics 3,200; cement 418,000.

**Running:** see TRACK AND FIELD SPORTS.

**Rural Electrification.** The Rural Electrification administration estimated that 5,053,676 farms, or 86.3% of all U.S. farms, had central station electric service as of June 30, 1950. This compared with 78.2% on June 30, 1949; 30.4% in 1940; and 10.9% at the start of the federal rural electrification program in 1935. According to the REA estimates, by the end of 1950 fewer than 800,000 farms were still unelectrified. The percentages and estimates were based on the total number of farms reported in the agricultural censuses of 1935, 1940 and 1945.

The cumulative total of REA loans approved passed the \$2,000,000,000 mark in 1950, and REA-financed lines in operation reached 1,000,000 mi. The borrowers had added about 115,000 mi. of line and 311,315 consumers to their systems by Sept. 30, 1950. At that time the borrowers were serving a total of 3,342,415 consumers and operating a network of 1,054,500 mi. of line in rural areas of 46 states.

REA marked the first anniversary of the rural telephone lending program Oct. 28, 1950, with assurance to more than 50,000 farms and other rural establishments of new or improved telephone service. Under an amendment to the basic REA legislation enacted in 1949, congress authorized REA to undertake a rural telephone loan program to provide for the improvement and expansion of telephone service. As in the electrification program, the loans were to bear 2% interest and be amortized over a period of 35 years. At the close of the first year of this program, REA had approved more than \$12,000,000 in loan allocations to 27 commercial companies and 14 co-operatives for extending and improving service on an area coverage basis in rural areas of 21 states. The first REA-financed telephone facilities went into operation on Sept. 20, 1950, when the Fredericksburg and Wilderness Telephone company of Chancellor, Va., placed its modernized and expanded telephone system in operation.

Under the electrification program, REA borrowers in 1950 included 980 rural electric co-operatives, 41 public power districts, 24 other public bodies and 25 commercial power companies. They had 1,004 rural power systems in operation, an increase of 11 over 1949. During the first nine months of operation, REA had approved \$220,276,951 in electrification loans to its borrowers, increasing the cumulative total to \$2,219,556,657, as compared with \$1,996,000,000 at the close of 1949. Loan funds advanced to borrowers from Jan. 1 to Sept. 30, 1950, to pay for completed construction totalled \$172,712,654. This brought loan funds advanced to \$1,615,882,456 at the end of Sept. 1950.

REA borrowers increased their financial stability during 1950 as was indicated by payments of principal in advance of due date by Sept. 30, 1950, of \$23,500,000. Their payments of principal and interest cumulatively totalled \$255,774,928, which was more than the total amount of funds advanced by REA during the first five years of the electrification program.

REA borrowers distributed about 20% more power in 1950 than in 1949. They sold almost 7,800,000,000 kw.hr. of electric energy, exceeding sales of 1949 by 1,600,000,000 kw.hr. The average annual consumption of electricity per consumer on REA-financed lines increased 175 kw.hr. from 2,240 kw.hr. to 2,415; for 1949 the increase was from 2,084 to 2,240 kw.hr.

During the first nine months of 1950, about 11% of the total amount of power distributed by REA borrowers came from REA-financed generating facilities. The installed capacity of REA-financed generators increased from 335,000 kw. in 1949 to 396,000 kw. in 1950.

At no time in the history of REA had the problem of where to buy additional power been more serious than at the end of 1950. During the year, REA approved loans for the purpose of alleviat-

ing this power shortage in areas lacking transmission facilities or generating capacity or both.

(G. W. Hb.)

**Canada.**—During 1950 the Saskatchewan Power corporation spent \$5,000,000 on expansion and served an additional 2,400 farms. By the beginning of the year 17,000 Manitoba farmers had electricity. During 1950 an additional 5,000 farmers and 37 villages and hamlets were added to the power lines. Alberta added nearly 5,000 farms to rural lines in 1950.

Ontario developments in 1950 included the construction of 2,500 mi. of rural lines and the addition of 1,100 customers on new lines and 2,300 on existing lines. By mid-1950 the provincial government's hydro had 257,000 rural customers, including 100,000 farmers.

The Quebec provincial legislature voted a \$3,000,000 increase for rural electrification programs.

## Russell, Bertrand Arthur William Russell,

3RD EARL (1872— ), British philosopher, mathematician and sociologist, was born at Trelleck, Monmouthshire, Eng., May 18. He was educated privately and at Trinity college, Cambridge. (For his early career and an account of his philosophical and mathematical theories, see *Encyclopædia Britannica*.)

In 1944 Russell returned to England from the United States, where he had lectured at various institutions since 1938, and was elected to a fellowship of his college for the second time. In 1946 *A History of Western Philosophy* was published; he had been engaged in writing this work for many years. In late 1948 and early 1949 he gave the first series of Reith lectures, which had been initiated by the British Broadcasting company and were broadcast in its Third program; his subject for the six lectures was "Authority and the Individual." In Nov. 1950 he was awarded the Nobel prize for literature "in recognition of his many-sided and important work in which he has constantly stood forth as a champion of humanity and freedom of thought." Also in 1950 his *Unpopular Essays* were published.

**Russell Sage Foundation:** see SOCIETIES AND ASSOCIATIONS.  
**Russia:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Russian Literature.** Literature in the Soviet Union continued to suffer from creative drought in 1950. In thought control, the Zhdanov era, inaugurated in 1946, had left all earlier restrictions on artistic creation far behind. If the campaign against "homeless cosmopolitans" abated in 1950, it was because by the end of 1949 all nonconformists had either been silenced or made to toe the line. The stress was therefore shifted to attacks on the "enemies" of the Soviet Union. Most of the older soviet writers were either silent or actively engaged in the campaign against "American warmongers" and in the defense of the soviet version of world peace. The *Literary Gazette*, official organ of the Union of Soviet Writers, had completely lost its literary character and served almost exclusively the cause of Communist political propaganda.

Among individual works by well-known soviet writers may be mentioned Fyodor Gladkov's *Volnitsa* (*Freebooters*), a sequel to his autobiographical *Tale of My Childhood*. Like Maxim Gorky's autobiographical series, which it resembled, it seemed likely to remain the author's most memorable work. Mikhail Slonimsky's novel *Inzheneriy* (*Engineers*) was inferior to most of his earlier works. None of the newcomers to literature was likely to be remembered for work published in 1950. Obeying the party line,

most of the writers concentrated on the portrayal of the heroic features of soviet life (in which the cult of Stalin played an ever-growing part), or on the unmasking of the "warmongers." In poetry the only notable event was a new translation of Goethe's *Faust* by Boris Pasternak, criticized by some Communist pundits for a tendency to read into Goethe his own mood of romantic disillusionment. The pathetic reappearance of Anna Akhmatova, who was hounded off the literary stage in 1946, with a series of poems glorifying Stalin and the Soviet Union as the only champion of peace, was of psychological rather than literary interest. It may even be doubted whether Akhmatova really wrote those trite, mediocre poems.

Outside the U.S.S.R. the most notable event was the book of literary memoirs (*Vospominaniya*) by the octogenarian Ivan Bunin. Full of venomous spite, it exploded—often with gross unfairness—many literary reputations. Mark Aldanov's *Istoki*, published earlier in English as *Before the Deluge*, at last made its appearance in Russian. Boris Zaytsev's *Yunost* (*Youth*) was another instalment of his autobiographical novel *Gleb's Journey*. There were also several interesting volumes of poetry, both by the poets of the older generation (Sergey Makovsky, Georgy Ivanov) and by the younger ones.

Sergey Maksimov's novel *Denis Bushuyev* was acclaimed by critics as the first major literary work by a new *émigré*, a former soviet citizen and "displaced person." A work of uneven quality, somewhat in the Gorky tradition, it gave the first unbiased picture of life on the Volga under the soviet regime. Maksimov showed an undoubted talent for description and characterization, but intellectually often found himself out of his depth. Another displaced person writer, D. Klenovsky, proved a valuable acquisition to the ranks of *émigré* poets.

Ivan Shmelyov died in Paris at the age of 75. He would be best remembered for his first novel *The Waiter*, his *Sun of the Dead*, a grim and powerful picture of the early years of the Revolution, and his semifictional recollections of the old Russian mode of life, now irrevocably gone, in *The Lord's Year*, which is imbued with a strong feeling for the national-religious traditions. Valentin Kostylyov, author of a long historical novel about Ivan the Terrible, and Pavel Bazhov, who turned to account popular legends of the Urals (one of which, *The Stone Flower*, was made into a successful film), died in the Soviet Union. (G. St.)

**Rye.** The U.S. rye crop of 1950, amounting to 22,977,000 bu., was far smaller than the 32,155,000-bu. average of the years 1939-48. Of 3,720,000 ac. sown, 1,822,000 ac. were harvested for grain, as compared with the record low harvested acreage of 1,560,000 in 1949. The yield was slightly above normal at 12.6 bu. per acre against 12.0 bu. in 1949. South Dakota made a particularly favourable showing in producing 5,250,000 bu., compared with only 2,470,000 bu. in 1949; other major producing states were North Dakota (2,808,000 bu.), Nebraska (2,415,000 bu.) and Minnesota (2,349,000 bu.).

Average prices received by farmers for rye fluctuated a few cents above the February low of \$1.19 per bushel in the earlier part of the year, then rose to \$1.37 per bushel in December. The value of the 1950 crop was preliminarily estimated at \$28,937,000, compared with \$22,807,000 for the previous crop. A non-recourse government price support loan was available to farmers on the 1950 crop at an average rate equal to 75% of parity or \$1.28 per bushel. The year end carry-over on July 1 of 9,500,000 bu. was substantial in view of the fact that imports from Canada appeared likely to continue to exceed exports from the U.S.

World rye production in 1950 was estimated preliminarily at 1,665,000,000 bu., moderately below the 1,715,000,000 bu. of 1949, also below average. The Canadian crop, estimated at 13-

346,000 bu., was larger than the 10,071,000-bu. crop of 1949 and the prewar average of 9,191,000 bu. The European crop of 685,000,000 bu. was below 1949 and well below prewar. The estimated production of 910,000,000 bu. in the U.S.S.R. was 40,000,000 bu. below 1949, but exceeded the prewar average.

(J. K. R.)

**Saar.** A German state (*Land*), the Saar was united with France by monetary (from Nov. 20, 1947) and customs (from April 1, 1948) union. Area: 734 sq.mi. Pop. (1948 est.): 914,000. Language: German. Religion: Roman Catholic 75%, Protestant 24%. Capital: Saarbrücken (pop., June 1947 est.) 97,752. High commissioner of the French republic, Gilbert Granval; prime minister (from Dec. 20, 1947), Johannes Hoffmann.

**History.**—An agreement was signed on March 3, 1950 by Johannes Hoffmann, for the Saar government, and Robert Schuman, French foreign minister, regulating the political and economic relations between France and the Saar. A general convention reaffirmed the legislative, administrative and judicial autonomy of the Saar but accorded to the French representative the right of intervention if legislative or executive acts threatened to compromise the economic and customs union with France or the political independence or the external security of the Saar. A Saar representative was to be appointed to France. By an agreement to run 50 years unless the peace treaty determined otherwise France was to manage the coal mines of the Saar but not to become their owner. France promised to support the Saar claim to ownership. A consultative mines council, half of Frenchmen and half of Saarlanders, was to be created. The mines management would pay to the Saar government 30 fr. for each of the first 2,000,000 tons extracted annually irrespective of profits and loss, and the same sum for each further ton provided there would be a profit. It was calculated that the Saar would probably receive 70,000,000 fr. a year. The Saar railways were to remain an independent organization; half the council of administration was to be French, but the director-general a Saarlander. In principle, fares and freight would be the same as in France.

A resolution passed on Dec. 1 by the *landstag* (unanimously except for the one Communist deputy) asked that the Saar should be admitted to the Schuman plan negotiations on an equal footing with the six powers already engaged in them and that the Saar should be granted a substantially larger share of ERP aid by France. It was claimed that it had so far received only 3,500,000,000 fr. Three Saar delegates participated in the European consultative assembly, and a Saar minister, with a consultative voice like the German minister, participated in the committee of ministers at Rome.

During the May day demonstrations organized by the Social Democrats, Communists tried to provoke demonstrations of their own. They carried both the German republican and the red flags. Arrests were made, followed by a trial at the beginning of October. The Communist leaders were condemned to terms of imprisonment for breaches of the peace and violence to the police but they were released pending appeal.

The congress of the Democratic party at the end of October led to the predominance of German nationalists in this party. The party's three deputies declined to accept the new platform and resigned from the party, but retained their seats.

Coal and steel production, in thousand metric tons, was:

	1950	1949	1948	1947	1936-38
Steel : : : :	1,837	1,756	1,216	704	2,418
Coal : : : :	14,700	14,236	12,474	10,500	12,500

**Safety:** see ACCIDENT PREVENTION.

**St. Christopher:** see LEEWARD ISLANDS.

**St. Croix:** see VIRGIN ISLANDS.

**St. Helena.** This British colony includes St. Helena with the dependencies of Ascension and Tristan da Cunha, all islands in the South Atlantic; also the uninhabited islands of Nightingale, Inaccessible and Gough and dependencies. Areas and pop. (1946 census): St. Helena 47 sq.mi. (4,748); Ascension 34 sq.mi. (292); Tristan da Cunha 45 sq.mi. (230). Capital: Jamestown (pop. 1,547). Governor: Sir George Joy.

**History.**—Considerable progress was made during the year 1950 with a £200,000 development scheme which included agricultural development, soil conservation, reforestation and housing. The rebuilding of the flax mills, financed by a tax on hemp exports, was nearly completed. The Colonial Development corporation in co-operation with a South African company opened a factory on the isolated dependency of Tristan da Cunha for the canning of crawfish, and a shop. The islanders were thus able to obtain employment and the island entered upon a cash economy.

**Finance and Trade.**—Currency: the pound sterling. Budget (1950 est.): revenue £111,071; expenditure £111,071. Foreign trade (1949): imports £135,080; exports, incl. re-exports, £106,881. Principal exports: flax, lily bulbs. (K. G. B.)

**St. John:** see VIRGIN ISLANDS.

**St. Kitts-Nevis:** see LEEWARD ISLANDS.

**St. Laurent, Louis Stephen** (1882— ), Canadian prime minister, born on Feb. 1 at Compton, Que., was educated at St. Charles college, Sherbrooke, and Laval university, Quebec, Que. He practised law until Dec. 10, 1941, when he entered federal politics as minister of justice and attorney general. From Sept. 4 to Dec. 10, 1946, he held the additional post of secretary of state for external affairs, but on the latter date relinquished the portfolio of justice. He was elected as Liberal member for Quebec East on Feb. 9, 1942, and re-elected in 1945. In 1948 he succeeded W. L. Mackenzie King as leader of the Liberal party and on Nov. 15, when King laid down the office of prime minister, St. Laurent became the 17th prime minister of Canada.

During 1950, St. Laurent led the government in a regular session of parliament and in a special session called to settle the railway strike and to approve the United Nations special force for Korea. He also presided over two federal-provincial conferences, one for the purpose of devising a method of amending the constitution in Canada, and the other dealing with fiscal and social security matters.

St. Laurent twice visited New York city, once to address the Canadian society there and the second time to attend the United Nations. (See also CANADA.) (C. Cy.)

**St. Louis.** St. Louis, Mo., had a population of 852,623 by the 1950 federal census, preliminary figures, with an additional 820,844 in the greater metropolitan area. Its mayor in 1950 was Joseph M. Darst, a Democrat.

A trend, begun in 1948, continued at the Nov. 7, 1950, election with the Democrats winning the seven municipal administrative offices at stake. At the August primary St. Louisians soundly voted down a new city charter chiefly because it permitted imposition of a city earnings tax.

Completed at the end of the year was a new \$11,000,000 vehicular toll bridge over the Mississippi river connecting St. Louis and East St. Louis. It was the eighth bridge, vehicular or railroad, crossing the river at or near St. Louis.

Housing remained a problem though building permits valued at \$73,824,395 broke all records and added 3,670 dwelling units. An ordinance opened the way for a \$50,000,000 slum clearance project for middle income housing to be financed mostly from

private capital.

Streetcar and bus fares were increased by the privately owned transit system from 12 to 15 cents, with the passenger having the option of buying a \$1 weekly pass permitting nickel-a-ride travel.

The 1949-50 fiscal year (ending April 10) showed an operating surplus of \$875,995.78, the first surplus since 1946. This was largely the result of a city earnings tax in effect since Sept. 1, 1948, which yielded \$7,000,000 annually. State authorization of this tax ended July 17, 1950, putting a severe strain on city finances and requiring a shifting of funds. Another operating deficit was in prospect for the 1950-51 fiscal year.

To boost revenue about \$1,096,000, the city increased the assessed valuation of real and personal property by \$42,110,614, bringing the total to \$1,291,626,635. With the tax rate at \$2.74 on \$100 valuation, aggregate real and personal tax bills sent out at the end of 1950 amounted to \$34,737,987.

During the fiscal year ended April 10, 1950, total receipts for operating the municipal government were \$38,984,386.40 and total expenditures \$38,108,390.62. With a deficit of \$2,804,995 at its beginning, the 1950-51 fiscal year budget was fixed at \$39,676,082.85.

(E. L. R.)

**St. Lucia:** see WINDWARD ISLANDS.

**St. Pierre and Miquelon.** This group of eight small islands off the south coast of Newfoundland was a former French colony the status of which was changed in 1946 to that of an overseas territory. Area: 93 sq.mi. Pop. (1945 census): 4,354. Language: French. Religion: Roman Catholic. Chief town: Saint Pierre (pop., 1945, 3,636). Administrator: Alain Alaniou.

**History.**—The cod fishing, which was the territory's only source of wealth, was poor in 1949 (903 metric tons compared with 1,023 tons in 1948, which was a bad year). The greater part of the catch was exported to the West Indies. In spite of opposition by the small-boat owners, the territory in 1950 purchased a trawler in experimental preparation for deep-sea fishing, which, with the inception of a cold-storage warehouse, was likely to revolutionize the local economy. From the time of the first trawl the Development company unloaded by the end of the year 320 metric tons of codfish worth 6,000,000 fr. C. F. A.

**Finance.**—Budget (1949 actual): balanced at 173,300,000 fr. C. F. A. Monetary unit: franc C. F. A.=2 fr. The exchange rate in 1950 for the metropolitan franc was 350 fr. to U.S. \$1.

**Foreign Trade.**—(1949) Imports 330,700,000 fr. C. F. A.; exports 359,900,000 fr. C. F. A. Main exports (1949, metric tons): dry cod 2,583; fresh cod 4,767; cod-liver oil 96.

**Transport and Communications.**—Ships entered (1949) 195; cargo (metric tons): unloaded 25,800, loaded 7,600.

**Sales, Retail:** see BUSINESS REVIEW.

**Salt:** see MINERAL AND METAL PRODUCTION AND PRICES.

**Salvador, El.** A republic on the Pacific coast of Central America, the smallest but most densely populated country on the isthmus, El Salvador has an area of 13,176 sq.mi. and a population (1949 est.) of 2,150,000. Capital: San Salvador (pop., 1948: 124,266). Other principal cities are: Ahuachapán (14,666), Chalchuapa (10,300), Cojutepeque (16,210), Nueva San Salvador (25,684), San Miguel (19,339), San Vicente (14,623), Santa Ana (51,351), Sonsonate (18,898), Suchitoto (10,619), Usulután (9,590) and Zacatecoluca (11,684). Language: Spanish. Religion: predominantly Roman Catholic. President in 1950: Lieut. Col. Oscar Osorio.

**History.**—The year 1950 marked a return to democratic government in El Salvador for the first time since the constitution of 1896 was abolished in 1931. A national election held March 26-28 employed the secret ballot and, for the first time, allowed woman suffrage. The result was a decisive victory for the moderate Revolutionary party. Oscar Osorio was elected president over Col. José Asensio Menéndez of the leftist Reform Action party, and Osorio's partisans won a majority of the seats in the national constituent assembly. The latter enacted a new constitution for the country, which went into effect on Sept. 14, when Osorio was inaugurated. Among other provisions the new basic law contained enabling clauses for social and economic reform and guarantees for democratic government.

Contracts for the construction of the Lempa river dam, part of the 30,000-kw. hydroelectric power project, were let in September. The project was being financed by a loan of \$12,545,000 from the International Bank for Reconstruction and Development and a government bond issue of \$5,200,000.

Social reforms were a major consideration of the new administration. In August it authorized the creation for the first time of labour unions and established machinery for collective bargaining.

In foreign affairs, El Salvador took an affirmative stand on the United Nations' decision to oppose the invasion of South Korea, and in November offered volunteers, economic assistance and 220,000 lb. of rice for the cause.

**Education.**—In 1948 there were 1,986 primary schools with 4,368 teachers and 144,056 students; 53 secondary schools with 636 teachers and approximately 5,000 students. Illiteracy was officially estimated at 87.3%. In 1947 the government appropriated 2,903,040 colones for public education.

**Finance.**—The monetary unit is the colón, valued at 40 cents U.S. The 1950 budget called for expenditures of \$27,000,000; the proposed budget for 1951, a record \$44,000,000. At the end of 1949 the Central bank held gold reserves and foreign exchange amounting to 92,700,000 colones, and money in circulation totalled 117,800,000 colones.

**Trade and Resources.**—Exports in 1949 amounted to \$55,000,000, including gold, silver and specie (\$45,600,000 in 1948); imports, including gold, silver and specie, \$39,600,000 (\$41,500,000 in 1948). More than 70% of the trade was with the United States. Coffee (1,259,939 bags of 132 lb. in 1949) accounted for about 90% of the value of all exports. Other important crops (with 1948-49 production figures) were: corn (247,277 short tons), cotton (5,150 short tons), sugar (25,450 short tons) and sesame seed (19,952 short tons). There were 764,778 head of beef cattle in the country in 1948.

**Communications.**—In 1948 there were two major railroads with 377 mi. of main lines; 700 mi. of surfaced highways and 1,250 mi. of all-weather roads; 2,237 mi. of telegraph lines; 5,093 mi. of telephone lines; 4,900 telephones; and approximately 14,500 radio receiving sets. At the end of 1948 there were 4,296 automobiles and 1,886 trucks and buses registered.

(M. L. M.)

**Salvation Army.** The Salvation Army, a world-wide religious and charitable organization, had corps and outposts in 92 countries and territories throughout the world in 1950. Its 16,847 corps (local units) included 26,799 commissioned officers, 97,218 local officers (laymen) and thousands of soldiers (members) and adherents.

The International Salvation Army was commanded in 1950 by Gen. Albert Orsborn, the sixth general, elected on June 21, 1946, with headquarters in London. In the United States, Com. Ernest I. Pugmire was the national commander, with headquarters in New York city. During the year the organization emphasized its activities and scope in the child welfare and youth field. More than 1,200 Salvation Army young people from all over the world met in London in August to discuss problems and situations facing youth and to re-emphasize and restate the basic convictions inherent in Christian beliefs. One of the high lights of the conference was the extensive exhibit prepared especially for the delegates. This depicted various phases of Salvation Army youth activities, including handiwork, visual aid material, pamphlets, etc.

In connection with the Mid-Century White House Conference

RE-ENACTING the arrival of Salvation Army members in New York city in 1880, during ceremonies marking the 70th anniversary of the organization in the United States

on Children and Youth which was called by Pres. Harry S. Truman in December, the Salvation Army in the United States made extensive plans for its effective participation in the actual meetings and in the important follow-up work after the conference. Its report to the conference, *Testament to Youth*, a thorough analysis of the Salvation Army's youth program and activities and an examination of the problems and needs, was published and widely distributed.

In the United States during 1950 the Salvation Army held 95,187 meetings on street corners. In its social-service program, 22,898 patients were treated in five clinics and dispensaries; 1,258 missing persons were located; 34 maternity homes and hospitals for unwed mothers cared for 11,123 women and children; 45,735 mothers and children were sent to summer camps. A total of 106 men's social-service centres provided shelter and work for 29,216 men.

In the field of prison work, 10,960 prisoners were assisted on discharge and given employment; 1,790 prisoners were paroled in care of the Salvation Army, whose officers devoted 7,988 hours to prison visitation. (See also CHURCH MEMBERSHIP.)

(E. I. P.)

**Samoa, American.** The Samoan Islands extend from 13° 26' to 14° 22' S. latitude and from 168° 10' to 172° 48' W. longitude, and are about 2,700 mi. E. of Australia and 2,200 mi. S. of the Hawaiian Islands. American Samoa consists of the inhabited islands of Tutuila, Tau, Olosega, Ofu and Aunu'u, and the uninhabited coral atoll, Rose Island. Swain's Island, 210 mi. N.W. of Tutuila, was made a part of American Samoa in 1925. Total area of American Samoa is 76 sq.mi. and total population in 1950 was 18,937 with about four-fifths of the population on the main island of Tutuila. Pago Pago, on Tutuila, is the capital. Pago Pago is a well-protected, deepwater harbour that can handle the largest ships.

**History and Government.**—A tripartite treaty signed by the U.S., Great Britain and Germany in 1899 divided Samoa into two possessions, with the U.S. receiving what is now American Samoa and Germany the rest. American Samoa is an unorganized U.S. possession governed by a naval officer appointed by the president. Capt. Thomas F. Darden, Jr., was appointed governor in 1949. By order of Pres. Harry S. Truman, administration of American Samoa was to be transferred to the jurisdiction of the department of the interior on July 1, 1951. In

contemplation of this change, the U.S. naval station at Tutuila was disestablished on Dec. 31, 1949, and replaced by a naval government unit.

American Samoa has a bicameral legislature, known as the Legislature of American Samoa, consisting of the house of representatives, with 54 members popularly elected for two-year terms, and the House of Alii, with 12 members who hold the highest-ranking titles. The legislature has only advisory powers. The governor also has an advisory council consisting of from five to seven Samoans. Each of the three administrative districts has a native governor appointed by the governor of American Samoa. They in turn appoint village chiefs. The judiciary consists of a high court, district courts and village courts.

**Education.**—Education is compulsory for all children from 7 to 15 years of age, inclusive. It was estimated in 1950 that 93% of all persons ten years of age or older were literate. In 1950 there were 5,093 children enrolled in public and private schools, with a total of 161 teachers.

**Production and Trade.**—The main products of American Samoa are copra and native handicrafts, principally mats and rugs woven from grass. The leading crops in 1950, with estimated production, were copra (2,403 metric tons), breadfruit (7,700 metric tons), bananas (19,492 metric tons) and taro (2,900 metric tons). There were approximately 200 cattle and 200 horses in American Samoa in 1950. Imports in the fiscal year ending June 30, 1950, totalled \$886,961; the major imports by volume were preserved meat and textiles. Exports totalled \$313,070, two-thirds of which were copra. Total revenues collected during the 1949-50 fiscal year amounted to \$407,713 in addition to a U.S. government appropriation of \$55,000; expenditures amounted to \$661,143.

**Transportation.**—Tutuila has 65 mi. of roads, 50 mi. of footpaths and a 6,000-ft. coral-surfaced airstrip, no longer in use.

**BIBLIOGRAPHY.**—Rupert Emerson *et al.*, *America's Pacific Dependencies* (1949); U.S. Navy Department, *American Samoa; Information Transmitted by the U.S. to the Secretary-General of the U.N. Pursuant to Article 73(e) of the Charter* (June 1950). (S. Nr.)

**Samoa, Western:** see NEW ZEALAND; TRUST TERRITORIES.

**San Francisco.** The population of the city of San Francisco, Calif., on April 1, 1950, was 760,753, according to the preliminary U.S. census, compared with 643,536 in 1940 and a war-swollen 827,400 on Aug. 1, 1945. Mayor Elmer E. Robinson of San Francisco began his four-year office term Jan. 8, 1948.

General business activity in San Francisco, based on actual reports for the first 11 months of 1950 compared with the same period of 1949, revealed substantial growth. New long-range annual highs appeared possible in several fields including: general business, up 7%; total construction permits, 21%; real estate deeds recorded, 17%; department store sales, 6%; financial transactions based on bank debits, 9%; employment placements, 21%; bridge traffic, 6%; waterborne commerce arrivals, 6%; electrical energy sales, 3%; and airport traffic (10 months), 14%. Gains were also in evidence in San Francisco stock exchange transactions—shares, 40%; postal receipts, 7%; and freight car movements, 8.5%.

The number of outlets licensed to sell tangible personal property at retail during 1950 was 24,001. Estimated 1950 retail sales amounted to \$1,350,000,000.

The consumers' price index three-quarterly average for San Francisco of 173.8 (1935-1939=100 base) was only 0.1% above a like period of 1949. New industries and expansions in San Francisco during 1950 (preliminary) totalled 149 with outlays of \$13,500,000 compared with 113 and outlays of \$6,077,000 in 1949.

Since Nov. 1947, \$164,000,000 of bonds for long-range public improvements in San Francisco had been approved by the voters. They included: \$87,000,000 for Progress bonds; \$48,000,000 for schools; \$15,000,000 for sewage treatment works; \$10,000,000 for airport; and \$4,000,000 for water department storage facilities. As of Sept. 30, 1950, about one-half of these authorized bonds remained unsold.

San Francisco's bonded debt limit, based on 12% of the 1950-

51 assessment roll of \$1,557,848,343, would be \$186,941,801. The bonded debt outstanding on Sept. 30, 1950, was \$179,180,000, of which \$84,146,000 was self-liquidating and exempt from this limitation. The margin remaining within the bonded debt limit as of Sept. 30, 1950, was \$91,907,801 against the authorized but unsold bond total of \$81,860,000.

The tax rate for the 1950-51 fiscal year was \$6.29 per \$100 assessed valuation. The estimated revenue receivable during the 1950-51 fiscal year was \$152,507,425, of which \$66,165,295 was from taxes.

(R. B. KR.)

**San Marino.** A small republic in central Italy, San Marino is entirely surrounded by the province of Emilia and is situated on the slopes of Mt. Titano, 14 mi. S.W. of Rimini. Area: 38 sq.mi. Pop. (June 30, 1950 est.): 12,780. Language: Italian. Religion: Roman Catholic. San Marino is governed by two *capitani reggenti* appointed every six months by a grand council of 60 members elected by universal suffrage every four years. Regents: (April-Sept. 1950) Giuseppe Forcellini and Primo Taddei; (Oct. 1950-March 1951) Marino Della Balda and Luigi Mortironi.

**History.**—On May 16, 1950, the Italian chamber of deputies, on the government's advice, postponed sine die the ratification of a financial agreement concluded between Italy and San Marino according to which the former would pay to the latter an annual sum of 90,000,000 lire as from 1946. As it was explained to the Italian parliament, the reason for this postponement was because Italian businessmen, to avoid Italian taxation, had registered more firms in San Marino than the republic had inhabitants.

**Education.**—In May 1950 there were 1,243 pupils in primary schools and 191 in secondary schools.

**Finance.**—Budget for the financial year April 1, 1949-March 31, 1950, was balanced at 497,737,496 lire and for the year 1950-51 at 551,647,786 lire. San Marino uses Italian currency.

**Santo Domingo:** see DOMINICAN REPUBLIC.

**São Tomé:** see PORTUGUESE COLONIAL EMPIRE.

**Sarawak:** see BRITISH BORNEO.

**Saskatchewan.** Central of three prairie provinces of Canada, Saskatchewan was created in 1905. Area: 251,700 sq.mi. Pop.: (1941) 895,922; (1950 est.) 874,000. Capital: Regina (pop. 1941) 58,245.

**History.**—In a 38-day session of the 1950 legislature, the Saskatchewan Co-operative Commonwealth Federation (Socialist) government was largely occupied defending its estimates from Liberal opposition charges that it was spending more than the province could afford. Significant legislation of the session provided: provincial rent controls to replace federal rent controls on April 1, 1951; authorization for the provincial government to order a municipality to build or extend sewage systems in the interest of public health; an enabling law for federal-provincial housing co-operation; eligibility of women for jury duty (third Canadian province so to act); replacement of the 2% education tax with a 3% education-hospitalization direct tax on various retail purchases, with two-thirds of the expected \$9,600,000 annual revenue to be spent for education and the rest for the provincial hospitalization scheme.

**Education.**—School grants for 1950-51 were \$6,445,300, or \$1,192,000 more than for 1949-50. In the 1945-50 period the government spent \$13,250,000 on rural schools, including 900 new classrooms and 750 new teacherages. The latest revised statistics available in 1950 for provincially controlled schools were for 1947: total enrolment 170,329; average daily attendance 135,038; teachers 7,066; total revenues \$17,787,810.

**Communications.**—Provincial 1950-51 grants included \$3,000,000 for construction of highways and bridges, and \$2,000,000 for improvements on provincial highways designated part of the trans-Canada highway. During 1950, 414,000 tourists used Saskatchewan roads.

**Finance.**—Provincial estimates for the 1950-51 financial year were: revenues \$55,053,910; expenditures \$55,020,760, including \$17,973,000

on capital works. The provincial debt on Dec. 31, 1949, was \$171,234,376 gross and \$147,913,814 net. On June 30, 1949, assets of credit unions totalled \$10,173,592.

**Health and Welfare.**—The 1950-51 provincial appropriation for health services was \$12,320,460 (1949-50: \$10,398,720). With revenues from the hospitalization tax running at \$6,000,000 annually, and expenses at \$10,000,000, the provincial hospitalization scheme had to be assisted by special taxation. New legislation established juvenile courts and made provision for the rehabilitation of delinquents. Amendments to the Workmen's Compensation act extended its provisions, increased benefits and shortened the waiting period.

**Agriculture.**—The 1950 crop year began promisingly with more than average moisture conditions by June, but summer insect damage and autumn frosts cut into the returns. Plans for poultry and honey marketing boards were approved. Production of 1949 field crops included: wheat 183,000,000 bu. worth \$279,990,000; oats 85,000,000 bu., \$44,200,000; barley 33,000,000 bu., \$25,740,000; rye 4,400,000 bu., \$5,368,000; flax 650,000 bu., \$2,158,000. Cash farm income for the first six months of 1949 was \$277,813,000, compared with \$177,153,000 for the same period of 1948, and \$537,267,000 for all of 1948.

Under the 1950 forest management policy, the annual provincial cut was reduced from 150,000,000 bd.ft. to 60,000,000 bd.ft.

**Industry.**—Retail trade during 1949 was 13% greater than in 1948. The employment index in Sept. 1950 stood at 136.5, compared with 133.4 in Sept. 1948 and a monthly average of 99.1 in 1942. The aggregate pay rolls index, Sept. 1950, was 213.5; Sept. 1949, 217.6; 1942 monthly average, 110.1. Average weekly wages for Sept. 1950 were \$40.58; Sept. 1949, \$42.40; 1942 weekly average, \$27.58.

**Minerals.**—In 1950 oil companies spent \$6,000,000 on exploration, 31 geophysical crews were active over 70,000,000 ac., and 55 wells were drilled. During the year, more than 1,500 prospectors searched for uranium, 30 companies spent \$2,000,000 developing claims and the provincial government built roads to accessible deposits (a total of 50 discoveries by mid-1950). Exploitation of Canada's only known source of potash was begun. Total mineral production for 1949 was valued at \$33,969,000.

**Sawyer, Charles** (1887- ), U.S. secretary of commerce, was born on Feb. 10 in Cincinnati, O. He studied at Oberlin college, Oberlin, O., and at the University of Cincinnati, and was admitted to the bar in Ohio in 1911. That same year he was elected to the Cincinnati city council. From 1921 on he was a member of the firm of Dinsmore, Shohl, Sawyer and Dinsmore. He served as lieutenant governor of Ohio beginning in 1933, and won the Democratic nomination for governor in 1938, but he was defeated in the election by John W. Bricker. In 1944-45 he served as U.S. ambassador to Belgium and minister to Luxembourg. He became secretary of commerce on May 6, 1948.

After the outbreak of the Korean war in June 1950 Sawyer was occupied with details of the U.S. remobilization program. On Aug. 25 he ordered the first cuts in civilian use of new rubber, the first production curb to result from the war. By the terms of the Defense Production act of 1950, signed Sept. 8, Secretary Sawyer was charged with the duty of controlling all materials and facilities. On Sept. 10 he set up the National Production authority, headed by William Henry Harrison (q.v.), and at the same time instituted controls over the export of critical materials. He also conferred with steel industry officials on plans for expanding steel production within the next two years.

**Schuman, Robert** (1886- ), French foreign minister, was born at Luxembourg. June 29. of Lorraine stock. He was elected deputy of the recovered *département* of Moselle in 1919 and was afterward continually re-elected. On March 21, 1940, he was appointed undersecretary of state in Paul Reynaud's cabinet; in April 1941 he was arrested by the Germans and sent to Germany, but he escaped in Aug. 1942 and went into hiding in France. Again elected deputy of the Moselle in Oct. 1945, and later re-elected, he joined the M.R.P. (Mouvement Républicain Populaire). He was minister of finance in the cabinets of Georges Bidault (June-November 1946) and Paul Ramadier (Jan.-Nov. 1947). On Nov. 22, 1947, he was nominated by the national assembly to form a new government. He resigned

on July 19, 1948, and joined the André Marie cabinet as foreign minister. On Aug. 31 he was again the head of a government that lasted only seven days. On Sept. 11 he became foreign minister in the Henri Queuille cabinet and was reappointed to this post in the Bidault (Oct. 28, 1949), Queuille (June 30, 1950) and René Plevin (July 11) cabinets. In a statement published on May 9, 1950, he launched what was described as the Schuman plan which was aimed at the formation of a European coal and steel pool. (See EUROPEAN UNION.) In Sept. 1950 he visited New York city to take part in the discussions on the international situation with his U.S. and British colleagues and in the meeting of the North Atlantic council.

**Sculpture.** During 1950 the most significant feature in the field of sculpture was the still methodical revision of process in the development of new concepts of expression. Two main approaches nevertheless were evident: the classical or humanistic and the abstract or experimental—both remaining in wide practice. But while the first was employed for the traditional requirements of portraiture and memorials, the latter became the goal of the greater number of aesthetically ambitious creative artists.

As one authority pointed out, such varied expressions revealed the inadequacy of the word "sculpture," for it was seen in one form as created by the building up and in another by the

breaking down of the material; concepts of solid sculptural mass were opposed by concepts of space achieved, often, in metals by mechanical aids never before intended for modelling or chiselling. In the newer process, whether the results were abstract or "surreal," a relentless search was pursued by artists for a new reality.

A great amount of new work followed the symbolical trends disclosed in England by Henry Moore, in Europe by Alberto Giacometti and in the United States by Theodore Roszak, David Smith and others, in a degree bridging natural forms or ideas and the abstract. As heretofore, Moore found the female figure an ample field for the expression of his great sense of rhythmically ordered forms. Roszak, whose sense of fantasy was admirably fostered by means of fusing or brazing, and Smith, by forging and welding, developed their work in reasonable harmony with Giacometti, who (in his first important New York exhibition) formulated new propositions with spindly forms in amply spaced designs in order to open up fresh perspectives on the problem of a new reality. In the work of Barbara Hepworth the nonfigurative was emphasized and represented British sculpture at the Venice Biennale, where Hans Arp, leader of the still active French exponents of this idiom, exhibited five new works.

In objective sculpture, the more vital examples derived much from Auguste Rodin, Aristide Maillol and German expression, the wooden figures of Ernst Barlach at Venice showing that the latter movement had not lost significance for a later generation. Classical traditions were drawn upon by José de Creeft and Oronzio Maldarelli in the U.S., where William Zorach showed his Renaissance-inspired work retrospectively and where Koren der Harootian progressed with work of a striking and restrained expressiveness; but these maturer talents were generally less prominent before the public during 1950 than were younger experimental sculptors.

Jacob Epstein, at 70, added another to his great stone figures, the controversial "Lazarus," whose power in carving contrasted with that of his 25 modelled portraits (including a magnificent "Dr. Vaughan Williams") exhibited. Karin Jonzen, in England, with her terra-cotta figures, Giacomo Manzù in Italy and Henri Laurens in France with personal variations continued the neoclassic traditions of Charles Despiau and Maillol, along with Frank Dobson, who showed a distinguished head of Lydia Lupkova. Ossip Zadkine, who was seen with his bronze "Orpheus" at Venice, demonstrated that abstract formalism may be shown with the impressive sense of arrested movement which characterizes his sculpture. Returning to Italy after his successful U.S. tour, Marino Marini was still accounted exceptional in assimilation of Chinese T'ang pottery and Etruscan sources in his work, distinguished alike for equestrian forms and portraits.

A strong impetus was given, nevertheless, by the formal concepts of sculpture which were seen in experiments deriving from Pablo Picasso and the pioneer Alexander Archipenko. These were again demonstrated by Jacques Lipchitz's powerfully expressionist work, of which "Mother and Child" was a recent example, in the work of the Italian Mirko Basaldella and the Englishman Charles Adams, whose "Horned Beast" owed much to Picasso. The concepts were opposed to mass expressions of the void, and went on to adopt the mechanistic form of fabrication, contrary to carving and modelling, that was seen in the iron work of Reg Butler in England and Roszak in the U.S.

Important though not numerous acquisitions of modern sculpture were made in the U.S., among them the addition of the abstract "Fish," in gray marble, by Constantin Brancusi to the Museum of Modern Art collection (New York city). One of the larger works of the Rumanian-born sculptor (now in semiretirement), it was joined there by new work by Marini and Giacometti. Projects for sculpture included exhibitions of religious work,

"PIETA," by Joseph P. Pollia, third prize-winner in an ecclesiastical sculpture competition sponsored by the National Sculpture society and exhibited in New York city in the spring of 1950

which were organized as signs of a new spiritual revival in the western world and one of which brought together 100 traditional works by contemporaries. In France organized sculptors strove for a closer rapport among the fine arts, passing resolutions in Paris which called for the inclusion of sculpture with mural painting in all the structures to be built or rebuilt by the state, together with an increase of the fine arts budget.

New monumental sculpture production was somewhat less extensive than in 1949. But the tightening of demand upon materials, already forecast by developments in Korea and the expanding defense program, did not materially affect this activity, or the field of metal sculpture in general. The monumental work was traditional and included, in the U.S., a statue of Brigham Young. It was completed in marble by Mahonri Young, distinguished elder sculptor, a grandson of the Mormon leader, and was unveiled in the rotunda of the national capitol in Washington, D.C.

A bronze equestrian statue of British Field Marshal Sir John Dill was completed by Herbert Haseltine, prominent in the field of animal sculpture. It was unveiled in Arlington National cemetery, near Washington, D.C., in which city Marshal Dill had served with the combined chiefs of staff during World War II, and was the outstanding memorial of its kind in the year—a monumental portrait of a military leader in field costume.

It was an active year also for museums, art schools, universities and exhibiting groups, all of which devoted a proportionate share of their art interests to sculpture. (See also ART EXHIBITIONS.)

\*Secondary metal recovered from old materials, the remainder having come from the reworking of new plant scrap. †Other platinum group metals.

are shown in Table I, as reported by the U.S. bureau of mines. That portion of the totals which comes from the reworking of plant scrap is new metal not yet put into use. Only recoveries from old scrap represent an increase in supply.

There was a sharp decline in the recoveries of secondary non-ferrous metals in 1949. Total recoveries were 2,152,394 tons in 1948 and 1,598,505 tons in 1949.

**Iron and Steel Scrap.**—Nearly half of the charge in a steel furnace is scrap, so that scrap supply in the industry is a major factor.

Table II.—Scrap in the U.S. Iron and Steel Industry

(In thousands of short tons)

	Pig iron output	Steel output	Plant	Scrap consumption Purchased	Total
1939 . . . . .	34,895	46,079	19,622	16,705	36,327
1945 . . . . .	53,224	79,702	30,861	25,230	56,091
1946 . . . . .	44,842	66,603	26,134	23,350	49,484
1947 . . . . .	58,327	84,894	31,579	29,285	60,864
1948 . . . . .	60,073	88,640	32,420	32,544	64,964
1949 . . . . .	53,323	77,978	29,166	25,172	54,338

The relation between scrap consumption and steel output is shown in Table II. About three-quarters of the scrap supply is used in steel furnaces and one-fifth in cupolas and other types of iron furnaces; the remaining 5%, usually material too small to work well in steel or iron furnaces, goes back to the blast furnace. All told the scrap supply averages about 5% greater than the pig iron output, and the purchased scrap portion adds to the supply an amount equivalent to about one-half of the pig iron output and one-third of the steel output.

(G. A. Ro.)

**Secret Service, U.S.** An agency of the treasury department, the United States secret service has three major functions: the protection of the president of the United States, of members of his family and of the president-elect; the suppression of counterfeiting; and the suppression of the forgery of checks, bonds and other government obligations.

In connection with the protection of the president, special agents of the secret service and officers of the White House police force, a unit of the secret service, defeated an alleged attempt by two Puerto Ricans to assassinate the president at Blair house on Nov. 1, 1950. One of the would-be assassins was shot and killed; the other was seriously wounded. Pvt. Leslie Coffelt of the White House police was killed, and two other officers were wounded in the gun battle. At no time was the president in danger.

Although counterfeiting continued to increase, the force of less than 200 secret service special agents captured \$1,289,281.26 in counterfeit bills and coins, \$554,154.20 of which was seized before it could be passed on the public. Counterfeit bills and coins seized in 1949 totalled \$957,764.

Of the 208 new counterfeit note issues which appeared during the year, 58 were of foreign origin. Special agents captured 542 counterfeiting offenders and 13 plants for the manufacture of bogus bills. Arrests for counterfeiting were 161.8% greater than in 1949.

Government checks and bonds were forged so extensively that the secret service was confronted with one of the heaviest work loads in its 85 years of existence. Agents investigated 30,059 forged government checks worth \$2,066,225.97, and 6,162 forged bonds, and arrested 2,336 check and bond forgers. Convictions in forgery cases totalled 2,080, including convictions on cases pending from prior years. As of Nov. 30, 1950, there were approximately 19,000 cases of all types awaiting investigation.

Arrests for all offenses during the fiscal year 1950 totalled 3,168, with 2,667 convictions, representing 97.3% of convictions

in the cases which went to trial. Prison sentences aggregated 3,245 years and additional sentences of 2,737 years were suspended or probated. Fines in criminal cases totalled \$30,592.70.

(U. E. B.)

**Securities:** see STOCKS AND BONDS.

## Securities and Exchange Commission.

The Securities and Exchange commission (SEC) is a bipartisan, quasi-judicial agency of the U.S. government. It administers several statutes designed for the protection of investors and the public. The following discussion covers the fiscal year ended June 30, 1950, as of which date the members of the commission were Harry A. McDonald (chairman), Richard B. McEntire, Paul R. Rowen, Donald C. Cook and Edward T. McCormick.

**Securities Act of 1933.**—This law requires prior registration with the commission of securities offered for public sale by the issuer or by controlling interests; prohibits misrepresentation or other fraudulent practices in the sale of new or outstanding securities; and empowers the commission to investigate securities frauds or other violations and enforce statutory sanctions when violations are discovered.

During the year, 487 companies registered \$5,000,000,000 of securities comprising 647 separate issues. This increased the total of registered securities to \$60,000,000,000.

The only purpose of the registration requirement is to provide disclosure of financial and other information concerning the issuing company and the securities to be offered for public sale. Purchasers or persons who receive offers through the mails must be supplied with a prospectus (selling circular) reciting the salient factual disclosures contained in the registration statement. Registration is not a "screening" device whereby securities of questionable value may be barred from public sale, nor does it in any sense guarantee investors against loss in the purchase of registered securities. Rather, it is a means of enabling investors to protect themselves against imprudent investments by supplying the data upon which they may make informed and discriminating investment decisions. Although registration does not assure the accuracy of the facts disclosed, certain penalties attach to the filing of false information and investors who suffer losses in the purchase of registered securities have important recovery rights if material facts have been misrepresented.

**Securities Exchange Act of 1934.**—The disclosure doctrine of investor protection extends under this law to outstanding securities which are listed and traded on the securities exchanges throughout the United States. Issuers of such securities must register with the commission and file subsequent annual and other periodic reports containing financial and other information essential to informed investment analyses. At the year-end, 3,544 security issues of 2,182 companies were so registered. Trading volume therein approximated \$17,300,000,000 for the year. A similar periodic reporting requirement applies to more than 600 additional companies which had registered new security offerings under the Securities act.

This law also provides that, in the solicitation of proxies (votes) from holders of listed securities, whether by the management or minority groups, disclosure must be made of all material facts concerning the proposals upon which the security holders are asked to vote. During the year, 1,668 proxy statements were processed by the commission. Another provision seeks to curb misuse of "inside" information by management officials of listed companies (or by 10% owners thereof). To that end, such persons must report their holdings of and transactions in all equity securities of companies having listed equity securities (19,809 reports were filed during the year). They also are prohibited from

making short sales of such equity securities, and are accountable to the issuing company for their short-term trading profits therein.

Other provisions of the statute provide for the regulation of securities trading practices, both on national securities exchanges and in the over-the-counter markets, in the interests of establishing and maintaining just and equitable principles of trade and curbing misrepresentation, market manipulation and other abusive practices. The commission is empowered to promulgate rules designed to implement the statutory objective of free and open competitive markets unaffected by manipulative or other abusive practices, and to investigate securities violations and enforce statutory sanctions against those responsible therefor.

There were registered with the commission at the year-end 16 national securities exchanges, 4,000 over-the-counter brokers and dealers, and one association of over-the-counter dealers organized under the law for self-policing purposes. All are required to observe the prescribed standards of the law and SEC regulations thereunder in the conduct of their business activities; and any wilful infraction may be cause for the issuance of an order by the commission barring their continued conduct of a securities business.

This law and the Securities act each provide as additional sanctions that the commission may apply for court orders enjoining securities violations or seek criminal prosecution through the department of justice.

In the 17 years of administration of the securities laws, there had developed new and improved concepts of practice, not only in the conduct of the securities business but also in the financial, accounting and other related phases of corporate activity, including management's relationship to stockholders.

**Public Utility Holding Company Act of 1935.**—This law establishes special regulatory measures governing the financial and related activities of interstate electric and gas public-utility holding company systems.

One provision, for example, requires that in the issuance and sale of securities by system companies certain minimum standards designed for the protection of investors, consumers and the public must be met. During the year, the commission authorized the sale of more than \$1,000,000,000 of securities as conforming thereto. The sale of an additional \$265,000,000 of portfolio securities was authorized as conforming to other, applicable standards.

The major thrust of the law is directed at the problems created by the abusive practices which attended the creation of huge utility empires during the 15 or so years prior to its enactment. It calls for thoroughgoing readjustments (1) to limit the operations of each holding company system to a co-ordinated group of properties confined in their operations to a single area or region (and to that end requires divestment of companies and properties having no economic or functional relationship to the integrated system); and (2) to simplify the corporate and capital structures of holding companies and to provide for a redistribution of voting power among security holders on a fair and equitable basis in light of existing equities.

This program of integration and simplification had resulted in a reduction from 212 to 67 in the number of registered holding companies and subholding companies; and from 919 to 223 in the number of utility subsidiaries and from 1,034 to 251 of nonutility subsidiaries subject to the act.

**Investment Company and Investment Advisers Acts of 1940.**—These laws provide special regulatory measures governing the activities of investment companies and investment advisers, of which 366 and 1,043, respectively, were registered at the year-end.

The commission also (1) administers the Trust Indenture Act of 1939, under which indentures covering \$18,700,000,000 of debt

securities had been qualified; and (2) serves as adviser to federal courts in proceedings for reorganization of debtor corporations under chapter X of the National Bankruptcy act.

**Seeing Eye, The:** see SOCIETIES AND ASSOCIATIONS.

**Seismology.** One of the three greatest earthquakes of the century, and accelerated progress in certain specialized fields of research made 1950 a year of more than average interest in seismology.

The great earthquake on Aug. 15 in northern Burma and adjoining areas was, according to seismographic records, as great as any ever recorded on modern seismographs. While the toll of 574 deaths and an early damage estimate of \$20,000,000 in India seems light in comparison with the losses in scores of other great earthquakes, the extent of the upheaval was verified by airmen who reported that entire mountain chains in the eastern Himalayas had changed form. The damming of rivers by landslides caused many deaths. According to a recently developed formula for measuring earthquake energy, the Aug. 15 shock represented an energy release approximately equivalent to that of all the earthquakes of the world for a normal two-year period.

On July 9, an estimated 150 persons were killed in northeastern Colombia, and on May 21 a highly localized shock at Cuzco, Peru, killed at least 83. Between 15 and 20 persons were killed in each of three shocks that struck eastern Turkey; near Soerabaja, Java; and El Tocuyo, Venez. In Hawaii, a strong shock on May 29 that caused damage in Hilo was the prelude to Mauna Loa's greatest lava flow.

In the field of research new data on the extent and depth of the continental shelf sediments and the depths of other sedimentary layers on the bottom of the Atlantic ocean were obtained by running seismic refraction profiles. A new theory of seismic surface wave propagation was used to postulate the geologic structure of sedimentary layers and basement rocks beneath the oceans from ordinary seismograph records. On land further investigation of the depth of continental structure led

to the conclusion that the basement transition is not well defined in California but in the eastern Appalachian area it is sharply defined with the depth varying from 40 km. to 60 km.

The publication of B. Gutenberg and C. F. Richter's book *The Seismicity of the Earth and Associated Phenomena* (1949) gave for the first time, and under one cover, the magnitudes of several thousand of the strongest shocks recorded on modern seismographs. From this first extensive catalogue evaluating the energy of earthquakes as well as their location and depth, Hugo Benioff concluded that since 1907 the strains accumulated from the slow movements of magmatic rock were released in five active periods of decreasing length separated by quiescent intervals.

Through a world-wide telegraphic service reporting seismographic data the U.S. coast and geodetic survey gave authentic reports on the locations of 600 earthquakes. The great Himalayan earthquake in August was located within five hours. In the United States nine new seismological stations were established in 1950, four of them temporary; several old installations were modernized. (See also COAST AND GEODETIC SURVEY, U.S.; DISASTERS.)

(F. NN.)

**Selective Service.** U.S. Selective Service was a skeletonized organization at the beginning of 1950. It had inducted no men for the armed services for nearly a year and was "doomed" by statute and predictions to expire June 24. Before the end of the year, however, the Selective Service act of 1948 had been extended by congress and the system had been revitalized; it had inducted more than 210,000 men during September, October, November and December, and it was in the process of inducting another 240,000 before March 31, 1951. Committees of both houses of congress were unanimous in favourably reporting out extension measures even before the Korean crisis had developed. The respective houses passed somewhat different versions of extension measures by overwhelming majorities. After differences had been ironed out in the con-

DRAFTTEES called to military service under the Selective Service Extension act signed on June 30, 1950, waiting to fill out pre-examination forms at a local board office in New York city

ference committee, the measure was finally approved as a simple one-year extension, extending the act in its entirety, with only one important amendment. That amendment authorized the president to order to active duty, with or without their consent, units or individuals of the national guard and other reserve components. An amendment subsequently adopted removed the ceiling which the 1948 act had placed on the numerical strength of the armed forces. Authority to draft men for the coast guard was provided for in another amendment. Still another authorized the registration, classification and induction of "certain medical, dental, and allied specialist categories." Although Selective Service had inducted no men since Jan. 1949, the 3,700 local boards had been kept intact. The boards had continued to register men between the ages of 18 and 25, inclusive, and to classify those between the ages of 19 and 25, inclusive. On July 10, 1950, the department of defense issued the first 1950 call for 20,000 men before Sept. 30. Subsequently, the September call was raised to 50,000. The local boards delivered the 50,000 to the army induction stations, with about 930 to spare and on schedule. Subsequent calls were as follows: October 50,000; November 70,000; December 40,000. All were for the army; the navy and air force thus far had depended upon enlistments and re-enlistments.

Following is a brief résumé of the Selective Service act as it existed in Jan. 1951:

Period of service, 21 months, with a maximum five-year reserve obligation subsequent to discharge.

Exemptions or deferments were provided for most World War II veterans under specified conditions. Exempt also were ministers, ministerial students, conscientious objectors and certain public officials and certain aliens. The act was specific in defining those who could qualify for exemption under those provisions.

The act provided that a sole surviving son of a family who had lost one or more sons or daughters in war—either in action or of wounds, injury or service-connected disease—could not be inducted.

Deferments were provided for men who were members of organized units of reserve components at the time of the law's enactment and for certain Reserve Officers Training corps members and other R.O.T.C. members designated by the secretary of defense.

High school students, under the law, could continue their course, if their scholastic work was satisfactory, until graduation, or until they reached the age of 20, whichever was first. College and university students satisfactorily pursuing a full-time course at a college or university ordered to report for induction could have their induction postponed until the end of the academic year.

The act provided substantially the same procedure for occupational deferments as was followed in the World War II act. It authorized the president to issue regulations under which persons whose employment in industry, agriculture or other occupations or employment was found necessary to the maintenance of the national health, safety, or interest could be deferred by their local boards. The president was given authority to issue regulations providing for deferment by local boards of persons whose continued activity in study, research or medical, scientific or other endeavours was found to be necessary to national health, safety or interest.

Provisions authorized the president to issue regulations deferring men who were married or with other dependents.

All males between 18 and 26 residing in the United States were required to register on dates proclaimed by the president, with very few exceptions.

"Blanket deferments" were prohibited. The local boards were required to determine every registrant's case as an individual case and classify him on the basis of his individual status and the law and regulations.

No one could be inducted after reaching his 26th birthday anniversary.

Re-employment rights were substantially the same as under the old Selective Service act, but administration was given to the department of labour.

Regulations in effect, promulgated by the president under authority of the act, established the following classifications:

#### CLASSIFICATIONS

##### Class I

- Class I-A: Available for military service.
- Class I-A-O: Conscientious objector available for noncombatant service only.
- Class I-C: Member of the armed forces of the United States, the coast guard, the coast and geodetic survey or the public health service.
- Class I-D: Member of reserve component or student taking military training.

##### Class II

- Class II-A: Deferred because of civilian employment (except agriculture).
- Class II-C: Deferred because of employment in agriculture.

##### Class III

- Class III-A: Deferred because of dependents.

##### Class IV

- Class IV-A: Registrant who has completed service; sole surviving son.
- Class IV-B: Official deferred by law.
- Class IV-D: Minister of religion or divinity student.
- Class IV-E: Conscientious objector opposed to both combatant and noncombatant military service.
- Class IV-F: Physically, mentally or morally unfit.

##### Class V

- Class V-A: Registrant over the age of liability for military service.

Deferments and exemptions provided specifically in the act could be changed only by an act of congress.

Any registrant might appeal his classification from his local board to the state board of appeals, as might any other interested party, such as his employer, a dependent or the government appeal agent. The state director or the national director might also appeal, either in behalf of the government or the registrant.

The registrant (or interested party) was given ten days to appeal his classification from the date of its mailing by the local board. He filed this appeal in writing with the local board, which forwarded his complete file to the state board of appeal. If the decision of the state board of appeal was not unanimous he might appeal to the national appeal board, which was directly responsible to the president.

During 1950 much study and attention was given to the question of student deferment. In August Maj. Gen. Lewis B. Hershey, director of Selective Service, advised local boards that they could defer students in colleges and universities who were in the upper half of their classes and who had announced their intention to enter, or made arrangements for entering colleges or universities in the autumn.

In the meantime, six scientific advisory committees appointed by General Hershey and composed of noted educators and users of scientific personnel manpower were making exhaustive studies of the problem. On Dec. 18 they submitted a report, recommending a yardstick for student deferment which would be based on an aptitude test, combined with scholastic standing. Stating that he approved of the principle involved in the establishment of a flexible yardstick, General Hershey said the matter was one in which he believed congress would be interested.

General chairman of the six committees was M. H. Trytten, of the National Security council.

Approximately 21,000 physicians, dentists and veterinarians in priorities one and two were registered by local boards on Oct. 16, 1950, under the authority of the so-called Doctor's and Dentist's Draft law passed as an amendment to the Selective Service act of 1948. These were the physicians, dentists and veterinarians who received part or all of their training during World War II at government expense under army and navy programs—or who were deferred to complete their training—and who served less than 21 months subsequent to completion or release from training.

Registration of physicians, dentists and veterinarians in priorities three and four—generally speaking those not included in priorities one and two and under 50 years of age—was scheduled for Jan. 16, 1951. (See also LAW.) (I. W. H.)

**Seventh-day Adventists.** The most notable event of 1950 was the holding of the quadrennial session of the general conference, the controlling organization of the whole world work of the denomination. This session held in San Francisco, Calif., July 10 to 22, elected the following officers for the ensuing quadrennium: W. H. Branson, president; E. D. Dick, secretary; C. L. Torrey, treasurer. World membership figures reported at this session were 716,538. Of this total, 243,193 reside in the United States and Canada. World membership had increased 100,000 in three years, the most rapid growth for any such period in the history of the church. Total contributions to the church from members in the United States and Canada in 1949 were \$33,627,877. Missionaries sent out during 1949 were 1,235.

At the quadrennial session the following actions, among others, were taken: to authorize a conference for European Adventist youth to be held in Europe in 1951; to approve the revised church manual submitted by a special committee, which manual vigorously reaffirmed the position that divorce is considered valid only if secured on the ground of marital infidelity; to realign, geographically, the boundaries of the northern European division to include the British Isles and certain mission territory in Africa; to create a new division, the east Mediterranean, to administer the church's mission activities in the middle eastern countries; to place special emphasis on evangelism with a view to doubling the membership in four years.

The annual autumn council of the executive committee was held at Grand Rapids, Mich., Oct. 28 to Nov. 1. It was decided to hold the 1952 autumn council in Europe, the first such meeting outside the United States. (See also CHURCH MEMBERSHIP.)

(F. D. N.)

**Seychelles.** Seychelles consists of a British colony and dependencies in the Indian ocean, comprising 92 islands, Mahé being the largest. Area: 156 sq. mi. Pop. (1949 est.): 35,000, mainly Negro. Capital: Victoria (pop. c. 7,000). Governor (1950): Percy Selwyn Selwyn-Clarke; J. D. Bates (temporary, from August).

**History.**—Work on the new transisland road on Mahé from Victoria to Grand Anse was more than half completed by Oct. 1950 and it was already proving possible to exploit the timber resources of considerable areas of hitherto inaccessible crown land. The scheme for improving water supplies was held up by delay in acquiring the necessary catchment areas.

**Finance and Trade.**—Currency: Seychelles rupee divided into 100 cents and valued in Oct. 1950 at 21 cents U.S. Budget (1950 est.): revenue Rs. 3,612,932; expenditure Rs. 3,511,592. Foreign trade (1949): imports Rs. 5,089,418; exports Rs. 5,431,751. Principal exports: copra, guano, oils, tortoise shell, vanilla, calipee.

**Sherman, Forrest Percival** (1896— ), U.S. chief of naval operations, was born on Oct. 30 in Merrimack, N.H. He studied a year (1913-14) at Massachusetts Institute of Technology, Cambridge, Mass., and entered the U.S. Naval academy at Annapolis, Md., graduating in 1917. During World War I he saw duty in European waters, and after that war he became a naval aviator. Early in World War II he served with the war plans division in the office of the chief of naval operations. Later he commanded the carrier "Wasp," which was sunk by the Japanese in 1942. He then served as chief of staff to Vice-Adm. John H. Towers, commander of the navy's Pacific air forces, and as deputy chief of staff to Adm. Chester W. Nimitz, commander in chief of the Pacific fleet. He became chief of naval operations Jan. 27, 1950, succeeding Adm. Louis E. Denfeld, who had been an outspoken critic of the effect of military unification on the navy.

One of Admiral Sherman's first tasks was to issue an order to Capt. John G. Crommelin, who had spoken out against the operation of the unification act, to refrain from criticizing defense policy. Sherman himself on Feb. 20 told the house appropriations committee that the economy budget would not give the navy adequate antisubmarine defense or air power. In the remobilization effort after the outbreak of war in Korea, Admiral Sherman reported on Oct. 2 that 62 ships had already been reactivated and 296 others would be in action by July 1951. On that date, he said, the navy expected to have on active duty 20 carriers, 2 battleships, 15 cruisers, 200 destroyers, 75 submarines, 118 mine-control craft, 256 amphibious craft, 255 auxiliaries and 7,355 planes, including those in the U.S. marine corps.

**Shipbuilding.** The world tonnage of merchant ships of 1,000 gross tons or more, as of June 30, 1950, was distributed as follows among the principal maritime nations:

Country	Number of vessels	Gross tonnage (in thousands)	Country	Number of vessels	Gross tonnage (in thousands)
United States*	3,516	26,114	Sweden	539	1,794
British Commonwealth	3,109	18,869	U.S.S.R.	437	1,365
Norway	945	4,988	Greece	227	1,268
Panamá	485	3,417	Japan	308	1,214
France	511	2,825	Denmark	303	1,082
Netherlands	493	2,775	Other countries	1,771	6,875
Italy	406	2,413	Total	13,050	74,999

\*Excludes vessels operating on the Great Lakes.

The total of 74,999,000 gross tons of vessels in the world fleet was an increase of 4,400,000 gross tons since June 30, 1948, but the United States fleet during the same period decreased by 128 vessels, aggregating 576,000 gross tons. The remainder of the world, however, gained more than 4,900,000 gross tons of shipping. The Shipbuilders Council of America reported, as of Oct. 1950, 951 merchant vessels each of 1,000 gross tons or more, aggregating 7,186,763 gross tons, under construction in the various maritime nations of the world.

At a meeting of the United States, British and French foreign ministers in Sept. 1950, it was decided to instruct the high commission in Germany to remove forthwith all restrictions on size,

Merchant Ships under Construction in the World, Oct. 1950

Country of Building	Number of vessels	Gross tonnage
Great Britain	323	2,965,920
Sweden	129	1,050,980
France	77	473,819
Netherlands	58	446,320
United States	30	420,270
Japan	58	355,570
Italy	39	353,188
Germany	82	280,793
Denmark	45	273,274
Norway	52	266,724
Spain	23	109,668
Belgium	19	101,557
Australia	7	39,330
Canada	3	39,300
Finland	5	8,750
Ireland	1	1,300
	951	7,186,763

speed and number of commercial vessels that might be built in Germany for export. Opening up of German shipyards with ready facilities and an unlimited opportunity to construct any types of ships for export was protested by shipbuilding interests in the United States and some other countries because it undoubtedly would have an effect on the shipbuilding industries of all maritime countries, and moreover would reduce the possibility of any construction contracts being placed in the United States for foreign account.

**United States.**—On Jan. 1, 1950, 38 seagoing commercial vessels were under construction in private seaboard shipyards of the United States as follows: 2 bulk ore carriers, 6 combination passenger-cargo vessels, 1 cargo vessel and 28 tankers, aggregating 620,000 gross tons, and 1 dredge with a displacement of

21,572 tons.

At the same time there were contracted for or under construction in the Great Lakes shipyards two vessels having a combined gross tonnage of 20,149. These consisted of one ore carrier of 12,729 gross tons and one passenger and auto ferry of 7,420 gross tons.

The oil tanker construction program of 62 vessels, contracts for which were awarded during 1948, still constituted a substantial part of the shipbuilding program in the seaboard shipyards in 1950. These tankers, ranging from 26,000 to 32,000 dead-weight tons as compared with the 16,600-dead-weight-ton World War II tankers, would carry the volume of 1,000 tank cars—a train eight miles long.

On Jan. 1, 1950, U.S. naval construction in private yards consisted of only 11 vessels totalling 45,265 displacement tons. During the first 11 months of 1950, orders were placed for 410 non-propelled barges, car floats, etc., aggregating 245,000 gross tons, and for 91 self-propelled craft, such as trawlers, tuna clippers, ferryboats, tugs, towboats, etc., aggregating 19,000 gross tons.

The volume of repair work in U.S. yards continued to taper off; among the reasons was the low average age of vessels in the active fleet. Another factor was that ship repair yards of other countries had gradually been rehabilitated. Increased activity in ship repair yards, however, resulted from the U.S. maritime commission's breaking out of the reserve fleet approximately 200 vessels for repair and overhaul prior to use in the Korean war. (See also SHIPPING, MERCHANT MARINE.) (H. G. S.)

**Great Britain.**—British shipbuilding ended the year 1950 with prospects brighter than they had appeared at the beginning. After something of a lull in contracting for new shipping in 1949 there was a marked improvement in the early months of 1950 which was maintained throughout the year. About half the orders during the year were for tankers, but there was also a revival in the ordering of dry-cargo tramps and liners.

For the first three months of the year contracts were received by British builders for shipping representing 420,000 gross tons. This compared with orders for 438,000 tons received during the whole of 1949. At the end of the third quarter British shipbuild-

ers had under construction, or had orders for 427 British vessels, representing 2,150,000 gross tons and an estimated value at current prices of £180,000,000. There were also orders from abroad for 148 ships of 1,162,000 tons representing £90,000,000, making a total for all the shipyards in the United Kingdom of 575 vessels of 3,312,000 gross tons and an estimated value of £270,000,000.

On Sept. 30, 174 oil tankers of 1,974,000 tons were on the order books of British shipbuilding companies out of a total of 575 vessels of 3,312,000 tons, representing 59.5%. The number of tankers ordered by British owners was 97 of 1,038,000 tons, while 77 tankers of 936,000 tons had been ordered by foreign owners. The heavy contracting for this type of ship reflected the continually expanding demand for oil transport. The great oil-producing and distributing companies had lost ships heavily during World War II. In 1949 these were replaced. The companies continued to enlarge their fleets. They had many uses for their funds, including the construction of large refineries ashore, and their policy had been not to build their tanker fleets up to maximum requirements but to rely for a proportion of their needs on the chartering of free vessels. Thereby they limited the problem of manning immense fleets. They had been willing to charter ships for a period of years. Norwegian owners had been accustomed to expand their tanker fleets by negotiating long-term charters when they contemplated construction. British owners were slow to do likewise. In 1950 several British firms that had previously restricted their activities to the ownership and management of dry-cargo ships embarked on the ownership of oil tankers. (Ct. M.)

**Shipping, Merchant Marine.** United States flag ocean-going merchant vessels of 1,000 gross tons and over in active operation on Sept. 30, 1950, totalled 1,082 of 13,152,000 dead-weight tons, not including those under military control. This was more than 1,000,000 tons less than the active fleet on Sept. 30, 1949. Privately owned vessels numbered 1,026 of 12,608,000 dead-weight tons; government-owned vessels chartered to private operators numbered 56 of 544,000 dead-weight tons, excluding those chartered to the military sea transportation service. There were 57% of the vessels in foreign trade; United States flag vessels carried 45% of United States cargo in 1949.

Until the Korean emergency, chartering of government-owned ships had been steadily declining. The drop in relief cargoes, the greater activity of foreign fleets, rising costs and falling freight rates had led to the withdrawal of most of the government-owned ships, until only 54 were active on June 30, 1950.

The need to supply United States troops and weapons to support the United Nations action in Korea put a heavy demand on United States shipping. Some of the needed vessels were supplied by private operators, but 152 of them were withdrawn from the government's national defense reserve fleet of laid-up vessels, which had been preserved for such an emergency. Of these vessels 22 were turned over directly to the navy's military sea transportation service for use as troop ships and for other special military needs; the other 130 were bareboat-chartered to private United States operators, who supplied crews and stores and time-chartered the ships to the military sea transportation service.

Other vessels in the reserve fleet were being repaired under an \$18,000,000 program to put the best of the reserve vessels in a state of readiness for any future emergency. The nine reserve fleet sites held a total of 2,098 vessels on Sept. 30, 1950, of which more than 1,600 were slow Liberty ships. Up to Sept. 30, 1,813 ships of the government-owned war-built fleet had been sold, 1,113 to other countries, 700 to United States operators.

There were 22 ocean-going ships of 558,790 dead-weight tons

LAUNCHING of the aircraft carrier "Ark Royal" at Birkenhead, Eng., in May 1950. The 36,800-ton vessel was second in size only to the battleship "Vanguard" in the royal navy

built in the United States from Jan. 1 to Sept. 30, 1950. All of these were privately constructed; 20 of them were tankers. Six passenger or combination passenger-cargo vessels, contracted for with the aid of government subsidies, were under construction. Three of these vessels, however, were to be completed as troop ships at the request of the national defense establishment. Two new-type cargo vessels were being planned by the government; one, which was under construction and nearing completion, was expected to serve as a replacement type for vessels becoming obsolete. The other was intended to serve as a model for a cargo vessel suitable both for peacetime service and as a military auxiliary. A total of \$126,000,000 in contract authority had been requested for construction of vessels of this design.

(E. L. Co.)

**Other Countries.**—Further progress was made during 1950 in the resumption of services interrupted by World War II. The French line commissioned the "Liberté" (49,000 tons gross), previously the German liner "Europa" which was delivered to France as reparations. She returned to the North Atlantic route in time to participate in the closing weeks of the busiest North Atlantic season ever experienced. The appearance of the turbine liner "New Australia" in the special fleet of ships fitted to carry migrants from the United Kingdom to Australia marked the completion of one of the greatest feats of reconstruction ever undertaken. The ship was originally the "Monarch of Bermuda," owned by the Furness lines, and was so seriously raked by fire when she was about to be refitted after war duties that the marine underwriters settled a claim for constructive total loss.

Spokesmen for the leading British companies emphasized in their annual statements during 1950 the seriousness of the great rise in cost in the replacement of ships which had become obsolescent or were approaching that stage. With ageing ships, owners found that the depreciation allowances calculated over the years on ships which cost far less to build went only part of the way to meet the cost of new tonnage. Recourse was had by some shipping companies to building fewer, but larger and faster, ships which would be able to carry at least as many passengers as a larger number of smaller, slower ships, but would provide fewer opportunities of sailing. This plan assumed, however, that handling of the ships in port would be as speedy as before World War II, and the assumption was not justified. In many ports throughout the world working was slower and in some countries and ports it was more unfavourable than in others. All kinds of attempts were made to improve the rate of discharging and loading cargo and in the absence of success, companies raised freight rates either by means of temporary surcharges or by a general upward revision with a view to recouping part of the losses caused by the waste of ships' time in ports.

Beginning June 1 the British lines serving New Zealand imposed a levy of 7.5% on all cargo discharged at Auckland, where delays had been particularly long. The lines serving the trade between the United Kingdom and the continent of Europe and Australia levied a surcharge of 10% on all cargo because of continued delays in ports and increased working expenses.

Notice was given by the Union of South Africa conference that freight rates between the U.S. and South African and East African ports would be raised by 15% from Jan. 1, 1951. Later the U.S. and British lines in the conference concerned with services between the U.S. and India, Pakistan, Ceylon and Burma stated that rates would be raised by from 6% to 10% from Jan. 16, 1951.

Higher rates between the United Kingdom and Brazil, Uruguay and Argentina were announced by nine British and Argentine lines to take effect on Feb. 1, 1951.

Active export trade from the United Kingdom meant that throughout 1950 the regular lines in various routes had to charter tramp tonnage to supplement their own services. This applied

THE S.S. "INDEPENDENCE," 1,000-passenger liner of the American Export Lines, Inc., being launched at Quincy, Mass., on June 3, 1950. The 25-knot liner was scheduled for express service between New York city and the Mediterranean.

particularly to the Australian, New Zealand and West African trades. Consequently, charter rates advanced. The beginning of the war in Korea toward the end of June gave an impetus to the demand for cargo ships. One of the few directions in which freight space was not put to good advantage was in the homeward route from South America where, during the second half of the year, valuable refrigerated ships returned to Europe with their insulated holds bare of meat, resulting from a deadlock in negotiations between the United Kingdom and Argentine governments over the purchase of meat.

FILMS OF 1950.—*Freighter at Sea* (Academy Films).

(Ct. M.)

**Shoe Industry.** U.S. shoe production in 1950 reached 486,000,000 pairs—a gain of 15,000,000 pairs over 1949. Women's shoes accounted for most of this gain, with an increase of about 8,000,000 pairs. This gain is almost insignificant for it raised the per capita production merely from 3.17 in 1949 to 3.21 in 1950. One of the reasons for the almost static position in women's shoe production was that no new nor startling change in pattern, style or design was introduced to create a demand for extra pairs. The opera pump became the number-one shoe at the manufacturing and retail level. There were variations in treatment, from the shell silhouette to the lattice or stripping effects on the vamp; heights of heels varied from flat to high. Platforms and sandalized patterns shared in the popularity, while casual shoes continued to be the choice for leisure and outdoor wear. Comfort and price remained important features in casuals and accounted for the continued success of this type of shoe.

Men's shoe production totalled about 100,400,000 pairs or a per capita rate of 1.84. Specialized promotions and concentrated efforts were put forth to make men more conscious of their shoe wardrobe and the desirability of seasonal changes—heavy and weatherproofed types for winter, lighter weights and ventilated types for spring and summer, plus all the casual, leisure types with nylon mesh and various treatments to make them light and comfortable. In a year of unprecedented prosperity and peak employment, it was difficult to account for the less than two pairs per capita production.

The continued high birth rate and the swiftly growing population under the age of 16 seemed to indicate a rising demand for

\*Revised.

†Preliminary.

shoes for infants to misses, children and boys, yet the total production amounted to 110,700,000 pairs, with a per capita rate of 2.70 annually—a decrease from the 2.72 of a year earlier. The miscellaneous category showed a decline in total output which could be traced to the relatively high production of slippers in 1949 which carried over into 1950.

A reasonably favourable balance in U.S. leather supply and demand was achieved by the end of 1950. Domestic slaughter fluctuated from decline in the first six months to a good position in the closing months of the year. Imports during 1950 were sufficient to augment domestic supplies and there was enough leather available for shoes, although at higher prices caused by sharp advances in raw materials, tanning agents and chemicals.

In addition to leather, there was a wide variety of tested substitute materials available for shoemaking, including fabrics, improved plastics and large supplies of synthetic rubber.

**Canada.**—Canadian shoe production for the first eight months of 1950 totalled 21,706,002 pairs compared with 24,167,327 pairs in 1949.

**Other Countries.**—Many countries in Europe, notably Scandinavian nations, Britain and France, sent visiting groups of shoemen to the United States to study tanning and manufacturing techniques with a view to improving their own methods. Great Britain continued to develop export trade of men's shoes to the United States. These shoes had attained a wide acceptance in the U.S. because of their good quality, workmanship and reasonable prices. (See also LEATHER.) (E. G. AN.)

**Shooting.** Trapshooting.—At the 51st Grand American trapshooting tournament, held in 1950 at Vandalia, O., Oscar Scheske, Jr., of Belleville, Ill., smashed 100 straight targets for a perfect score to win the Grand American handicap. Mrs. Anna Linn of Maupin, Ore., captured the women's handicap; Philip J. Luttrell of Alexandria, Va., was first among the juniors and George Heaney of Indianapolis, Ind., led the professionals.

Joe Devers, 19-year-old star from Dayton, O., broke 200 consecutive targets and then 25 more in a shoot-off to win the North American Clay Target championship. Mrs. Cal Ray of Eugene, Ore., paced the feminine contestants with 199 out of

200. The professionals were led by Thomas R. Frye of Findlay, O., also with 199 out of 200.

Vic Reinders of Waukesha, Wis., performed one of the outstanding feats in the history of the championships when he broke 200 straight targets to tie four rivals and then shattered 150 in a row in the shoot-off for the class AA crown. Joan Pflueger of North Miami, Fla., set a new mark in becoming the first woman ever to win the champion of champions feature. Miss Pflueger also captured the women's high-over-all title. The women's champion of champions (closed) title was annexed by Blanche Bowers of Benkelman, Neb.

Rudy Etchen of Bellevue, Wash., professional-class victor, set a high-over-all record for professionals by breaking 980

out of 1,000 during the week's competition. Etchen bettered his own standard of 969 set the year before on 600 targets at 16 yd., 300 at handicaps and 100 at doubles. Reinders and Ned Lilly of Stanton, Mich., with 977 out of 1,000, tied a meet record to share the high-over-all award for amateurs. Among the other major winners was Julius Petty, Stuttgart, Ark., who won the all-around title and national doubles crown.

**Skeet Shooting.**—In skeet shooting, Mrs. Ann Martin of San Antonio, Tex., was the big star, sweeping the women's national championships, all-gauge, high-over-all, 20-gauge, small-gauge and subsmall-gauge. Other leading national winners were: all-gauge, Francis Ellis, Jacksonville, Fla.; high-over-all, Alex H. Kerr, Beverly Hills, Calif.; small-gauge, Grant Ilseng, Houston, Tex.; subsmall-gauge, Ilseng; service individual, Sgt. C. B. Jones, Hensley field, Dallas, Tex.; intercollegiate, Mickey Michaelis, University of Texas, Austin; champion of champions, Ilseng; industry all-gauge, George Heaney; industry high-over-all, D. Lee Braun, Dallas; industry subsmall-gauge, Braun.

**Rifle Shooting.**—The National Rifle association cancelled its rifle and pistol championships in 1950 because of the crisis in world affairs. Maj. P. C. Roettinger of Alexandria, Va., scored 562 out of 600 in the pistol matches of the eastern division meet, while marine corps school's Sgt. T. R. Mitchell of Lubbock, Tex., set a marine corps rifle mark of 573 out of 600 in the same meet. Sgt. H. L. Benner of the U.S. army established a world record with the 45-calibre pistol at Quantico, Va., with 197 at 50 yd. with 20 shots slow fire. Maj. T. J. Sharpe took the national match course pistol title with 282 and Pete Romcovitz of West Newton, Pa., broke three world records in winning the small-bore rifle laurels with 3,198 out of 3,200 at Camp Perry, O. (T. V. H.)

**Shows.** This article covers horse and dog shows, livestock exhibitions and such travelling shows as circuses, carnivals, ice skating shows and rodeos. For musical, dramatic, and terpsichorean events of 1950, see the articles MUSIC, THEATRE and DANCE. (See also MOTION PICTURES.)

**Horse Shows.**—Probably the largest and most representative horse show in the United States is the International Horse show, which was held from Nov. 25 to Dec. 2, 1950, in connection with the International Live Stock exposition at Chicago, Ill. In a

similar class is the American Royal Horse show in Kansas City, Mo., which was held Oct. 14 to 21, 1950.

The two largest shows of quarter horses were the National Western Stock show in Denver, Colo., Jan. 13 to 21, 1950, and the Southwestern Exposition and Fat Stock show in Fort Worth, Tex., Jan. 27 to Feb. 5. The Fort Worth show was also the outstanding one of the year for its cutting horses—competitions that feature horses trained in the quick responses required for range work.

The Grand National Live Stock exposition in San Francisco, Calif., Oct. 27 to Nov. 5, 1950, was the year's outstanding show of reined horses—stock horses that are extremely agile and responsive to rein signals. Another show of national importance was the five-gaited saddle horse show at the Kentucky state fair, Sept. 10 to 16. The Kentucky show ranks at the top as a competition of American saddle horses. Another Kentucky showing of saddle horses, of major rank, was held at Lexington, July 10 to 15.

The National Horse show, held Oct. 31 to Nov. 7, 1950, at Madison Square Garden in New York city was the year's top show of hunters. Other leading horse shows in the general class were the Harrisburg (Pa.) show and those held in conjunction with the Illinois, Indiana, Missouri and Ohio state fairs.

(W. E. O.)

**Livestock Shows.**—Traditionally, the livestock show year of 1950 in the United States started with the top annual event of the range country, the National Western Stock show in Denver, Colo., Jan. 13 to 21. It is the largest show of purebred Hereford cattle held in the United States. It is also famous for its contests featuring purebred Hereford bulls and is the country's leading show source of Whiteface bulls. The 1950 Denver show also featured large classes of quarter horses and Palominos, popular types in ranch work.

Another January show, and the oldest established livestock show in the United States, was the Southwestern Exposition and Fat Stock show, at Ft. Worth, Texas, Jan. 27 to Feb. 5, 1950. The Ft. Worth show includes classes for dairy breeds but is distinguished principally for its excellent exhibits of Herefords, and, to a lesser extent, the other two beef breeds—Aberdeen-Angus and Shorthorns. It also features large exhibitions of purebred Brahman cattle. Another Texas show of growing stature immediately followed in Houston, the Houston Fat Stock show.

County fairs began as usual in July in all the north central states and continued through September, climaxed in each state by the state fairs, the earliest of which was the North Dakota state fair, at Minot July 22–25, 1950. The Wisconsin state fair, held in Milwaukee, Aug. 19 to 27, 1950, was the setting of the country's largest show of the dairy breeds.

One of the major swine shows of 1950, which was confined to the exhibition of all breeds in the slaughter class (barrows), was held in Austin, Minn., in mid-September 1950; and two shows of national rank exclusively devoted to the dairy breeds were held in Iowa and Indiana—the long-established National Dairy Cattle congress in Waterloo, Ia., Sept. 30 to Oct. 7, 1950, and the second International Dairy exposition which took place at Indianapolis immediately thereafter.

First of the sectional livestock exhibitions, which attract top herds and flocks from states within their areas, was the Eastern States exposition, in Springfield, Mass., Sept. 17 to 23. Emphasis was on the dairy breeds from the North Atlantic states. Another in this class was the Ak-Sar-Ben Live Stock show in Omaha, Neb., Sept. 29 to Oct. 7, where the showing consists of meat animals only, and a horse show. Leading show of the northwest was the Pacific International Live Stock exposition in Portland, Ore., Oct. 6 to 14, and, shortly after, the Grand National Live Stock exposition was held in the new Cow Palace in San

Francisco, Calif., Oct. 27 to Nov. 5, 1950.

A newer eastern show, particularly strong in its exhibits of Aberdeen-Angus and Hereford cattle, was the Eastern National Live Stock show, held in Timonium, Md., Nov. 11 to 22. The American Royal Livestock show in Kansas City was held Oct. 14 to 21.

Climaxing them all, in its perennial position at the close of the livestock show year, was the 51st annual International Live Stock exposition, held Nov. 25 to Dec. 2 in the International amphitheatre at the Union Stock Yards, Chicago, Ill. With exhibits from more than 40 states and 5 Canadian provinces in 1950, it reaffirmed its rank as the country's, if not the world's, leading livestock and farm crops show. Its entry comprised 11,008 head of livestock, representing 35 different breeds of meat animals and draft and pleasure horses.

Chicago was also the locale of the country's largest feeder cattle show of 1950, when the 6th annual Chicago Feeder Cattle show and sale was held in the pens of the Chicago stockyards Oct. 26 and 27, 1950.

The Calgary Exhibition and Stampede, the principal event in Canada in the early summer, was held July 10 to 15, 1950; and the largest Canadian summer show was the Canadian National exhibition in Toronto, Ont., Aug. 25 to Sept. 9. The country's principal livestock event, the Royal Agricultural Winter fair, took place in Toronto Nov. 14 to 22.

South America's foremost livestock show is the Palermo, held in Buenos Aires, Arg., in August. It is distinguished as the world's largest showing of purebred Shorthorn cattle.

Scotland's oldest show—that of the Highland and Agricultural

**LIPIZZAN HORSES**, their gold trappings gleaming, shown in a classic quadrille manoeuvre. The historic white horses of Austria were the featured attraction at the National Horse show at Madison Square Garden, New York city, in 1950

society, marked its 111th annual renewal in Paisley June 20 to 23; and the British Royal Agricultural Society show, held July 3 to 7, 1950, at Oxford commemorated its 102nd anniversary under the sponsorship of the English Royal Agricultural society. (W. E. O.)

**Dog Shows.**—Show ring and field trial competition in dogs maintained a high level in 1950; 634 championship and 586 match shows were held with the Morris and Essex show at Madison, N.J., in May having the largest entry, 2,587 dogs competing; the top winner was Jack Spear's Irish setter Champion Clancy. The largest show on the Pacific coast was that at Long Beach, Calif., in June when the imported shepherd from Germany, Korbel and Newman's Champion Quell vom Fredeholz took best of 2,159 dogs.

Field trials simulating actual hunting conditions in the field totalled 880 formal trials. These were made up of 305 bird dog trials, which included the pointing spaniel, the Brittany; 281 beagle trials (on rabbits); 57 retriever trials; 53 spaniel trials; 175 foxhound and coonhound trials; and 9 greyhound trials (these last mentioned do not include the 30 dog racing tracks with seasons varying from 30 to 117 nights).

The winner of the Grand Junction, Tenn., trial in March, considered the bird dog champion of the year, was Gerald M. Livingston's liver and white male pointer Champion Shore's Brownie Doone. His male pointer Kilsyth Brownie's Son also won the national pheasant championship. The national retriever field champion was L. M. Evan's golden retriever Champion Beautywood's Tamarack. The national springer field trial champion was Philip D. Armour III's springer spaniel Champion Whittlemoor George, an English import.

In breed popularity, as evidenced by registrations in the stud book of the American Kennel club, New York city, the first ten in order were: American cocker spaniel, beagle, boxer, collie, dachshund, Boston terrier, Chihuahua, Pekingese, German shepherd and Pomeranian. Total registrations for all stud books amounted to approximately 295,000 of which the American Kennel club had 252,021. (W. Jv.)

**Circuses, Carnivals, Rodeos and Other Travelling Shows.**—Travelling outdoor shows had a poor season in 1950 because of unfavourable weather, unsettled conditions and increased costs of operation. Circuses, which, with the exception of a few well-managed and well-financed organizations, had been declining for a decade, encountered many difficulties and few wound up the season with a profit. In 1950 there were only four circuses travelling on rails, as against 16 on rails in 1925. There were about 30 circuses travelling by motor truck as against 46 on the road 25 years before. Of the four railroad shows operating in 1950, the largest travelled on 80 railroad cars; the other three on 30 cars or less. Truck shows ranged from 4 to 40 trucks. Two of the railroad shows closed in midseason because of poor business. Cole Bros. circus, purchased early in the season by Sonja Henie, Arthur Wirtz, one of the owners of the Sonja Henie ice show, and William Boyd ("Hopalong Cassidy"), closed after a few weeks on the road, and Dailey Bros. circus closed in September after a disastrous season. Ringling Bros.-Barnum & Bailey played to record attendance for 33 days in Madison Square Garden, then after a week in the Boston (Mass.) Garden went under canvas and wound up its season Nov. 19 at Miami, Fla., with profits smaller than those of 1949. The Clyde Beatty circus closed early in November after a fair season. Few of the truck shows wound up with a profit. Indoor circuses, which had increased in number in recent years, had an excellent year. Largest of these organizations were the Hamid-Morton circus and the Polack Bros. circus, which play indoors under auspices, usually of the Shrine. These and other similar organizations conduct intensive promotional campaigns with

telephone crews selling tickets and soliciting program ads, and usually have an advance sale that more than covers the expense of the show. Their profits in 1950 were comparable to those of the previous year.

Conditions in Europe were difficult for circuses. However, the Bertram Mills circus, only large show in Great Britain, had a successful year. On the continent, all circuses faced difficulties resulting from unsettled political and economic conditions, but most of them had fairly successful seasons. In Copenhagen, Denmark, Circus Schumann played continuously in an indoor arena from May to mid-September. Circus Moreno-Reinsch, Circus Louis Schmidt and Circus Belli all played extended engagements in Copenhagen in addition to making road tours.

There were about 300 carnivals operating in the United States, about 12 travelling by rail, the others by motor truck. The largest rail show, the Royal American, travelled on 60 cars, carried 30 amusement rides, a dozen shows and about 30 concessions. Truck shows ranged from the larger shows carrying as many as 20 rides to small outfits with 3 or 4 rides and a number of concessions (games). Few of them showed a profit in 1950, and many closed with a loss.

Rodeos retained their popularity throughout the west and 1950 was an excellent year for them. Those held at Calgary, Alta., Can., Cheyenne, Wyo., and Pendleton, Ore., were among the most famous of these events, but from Kansas and Oklahoma west they were a favourite entertainment. In the central and eastern states comparatively few rodeos were held, and these were minor events and drew small attendance, with one exception. The annual championship rodeo held in Madison Square Garden was the largest and most colourful rodeo in the country. Offering \$100,000 in prize money, it drew the top cowhands from the west and attracted huge crowds. The 25th annual event, in 1950, with Gene Autry as star attraction, set a new attendance record.

For several years ice skating shows had been popular, partly because of vigorous promotion on the part of two leading shows, the *Sonja Henie Ice Show* and Shipstad and Johnson's *Ice Follies*, both spectacular scenic productions. A dozen other ice shows had entered the field, but few were successful. "Wild Life" shows, exhibiting native wild animals, had multiplied since 1940. Showing under canvas and in buildings, most of them were "ding" shows: no admission price was charged but customers were expected to make a cash donation when leaving. High-pressure methods to force donations and activities of subscription solicitors on some of the shows had put them in bad repute, and their 1950 business was not good.

In spite of a multiplicity of attractions, showmen were still willing to take a gamble, and hundreds of small shows of various sorts were travelling about the country, most of them eking out a precarious existence. Puppet shows, miniature circuses, freak shows, mechanical shows, magic shows and others, travelling by truck, played in villages that were not large enough to support larger shows and managed to attract sufficient patronage to keep going.

**Siam:** see THAILAND.

**Sierra Leone:** see BRITISH WEST AFRICA.

**Sikkim.** Semi-independent state in the eastern Himalayas lying between Nepal to the west and Bhutan to the east on the southern border of Tibet. Area: 2,745 sq.mi. Pop. (1941): 121,520, of whom the majority are Nepalese by origin; the other races are chiefly Bhotias of Tibetan extraction (10,980) and Lepchas or Rongpa (13,060) of Indochinese origin, believed to be the earliest inhabitants of the country. The state

religion is Buddhist of lamaistic type, but most of the Nepalese are Hindu. Capital: Gangtok. The ruling family is Tibetan, and the maharaja (from 1914) is Tashi Namgyal.

**History.**—During the year 1950 the government of India formally succeeded the British government as the protector of Sikkim. On the transfer of power to India in Aug. 1947, a standstill agreement had been negotiated, whereby Sikkim's external affairs, communications and defense became Indian responsibility, pending a permanent settlement. In 1949 internal disorder led the maharaja to call upon India for assistance. Troops were sent to Gangtok and negotiations began for stabilizing relations between India and Sikkim. This was accomplished in the new treaty signed at Gangtok on Dec. 5, 1950. Sikkim secured autonomy in internal affairs but India assumed responsibility for its defense and territorial integrity and would have the right to take such measures as it considered necessary for the defense of Sikkim including the stationing of Indian troops there. The treaty stipulated that the government of Sikkim would have no direct dealings with any foreign power and that India would pay to the government of Sikkim Rs. 300,000 annually. The first payment was made before the end of the year. (E. Hd.)

**Silk.** The second International Silk congress was held Oct. 16–21, 1950, in New York, N.Y. Sixteen silk producing or manufacturing countries were represented by 136 delegates. The conference covered a week of technical, economic and promotional discussions. The raw silk classification system for grading the fibre on the basis of mechanical tests, as developed primarily in the United States, was adopted. Also adopted was a standard of washing practice for silk fabrics and an agreement on a fastness test for underwear silks in pastel colours. Improvement in the put-up of raw silk was strongly recommended for decreasing the cost of fabric manufacture and making the silk yarn practicable for use on modern automatic machinery.

Because of the price fluctuations which had taken place following the removal of controls by the occupation authorities in Japan as of Jan. 1, 1950, there was much discussion of price stabilization. It was pointed out that silk dealers were not so much concerned with the final price at which silk was set, whether high or low, as they were with limiting its tendency to violent shifting. The Japanese delegates proposed that a private corporation be formed in Japan for the purchase and sale of raw silk in which a minimum-maximum price range for raw silk would be established for a fixed period, such as a year. The standard prices would be governed by the cost of cocoon and raw silk production, existing market conditions, prices of rayon and nylon and relative consumption. The U.S. government representative at the conference pointed out that such a plan would be inconsistent with the U.S. antitrust laws, the principle of which governed Japanese trade. The congress, however, voted officially to request the Japanese to study the situation again and prepare a plan, in co-operation with the occupation authorities, which would control the wide fluctuation of prices and yet permit some flexibility. Raw silk prices in the U.S., as reported by the bureau of labour statistics, remained at \$2.70 a pound from Jan. 3 to July 28, 1950. Between July 28 and Aug. 10 the price rose to \$2.90. By Aug. 11, however, it jumped to \$4.00. It dropped again on Sept. 26 to \$3.90 but rose rapidly from Nov. 8 to the end of the year. On Dec. 8 it was \$4.50 a pound.

Proposals to create an international fund for world promotion of silk were discussed and Switzerland reported its agreement on a tax of 25 centimes per pound on raw and thrown silk imported into Switzerland, beginning Oct. 1, 1950, with the understanding that the international body would be in a position further to subsidize such a campaign in the near future. The Japanese, it was announced, were not yet in a position to participate in the

proposed plan of a levy on each pound of raw silk exported.

Raw Silk Domestic Consumption

**Silver.** The post-World War II recovery in silver production was halted in 1949 by a 5% decline in world output, mostly in Mexico. The outputs of the more important producers, as reported by the U.S. bureau of mines, are shown in Table I; these countries usually produce about 85% of the world total.

**United States.**—The salient features of the industry are presented in Table II, as reported by the U.S. bureau of mines.

Table II.—Silver Industry in the United States

	(In thousands of fine ounces or of dollars)					
	1944	1945	1946	1947	1948	1949
Mine production . . . . .	34,474	29,024	22,914	35,824	38,096	34,675
Imports . . . . .	\$23,373	\$27,278	\$57,578	\$68,140	\$70,884	\$73,536
Exports . . . . .	\$126,915	\$90,937	\$36,455	\$30,649	\$12,400	\$23,281
Industrial use . . . . .	176,289	184,661	123,647	126,366	129,186	110,660
Secondary recovery . . . . .	56,189	58,361	36,647	27,866	23,897	22,660
Net consumption . . . . .	120,100	126,300	87,000	98,500	105,289	88,000

Following a decline of 11% in 1949, the mine production stepped up to 34,772,048 oz. in the first ten months of 1950—a rate which if continued would result in the largest output since 1942.

**Canada.**—Mine output rose from 16,109,982 oz. in 1948 to 17,641,943 oz. in 1949 and 14,086,898 oz. in the first eight months of 1950. (See also MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

**Singapore:** see MALAYA (FEDERATION OF) AND SINGAPORE.  
**Skating:** see ICE SKATING.

**Skiing.** In 1950 the world championships of the Fédération Internationale de Ski were held in the United States for the first time in history. Skiers from 14 countries took part.

The Nordic events, scheduled for Lake Placid, N.Y., found the athletes moving between there and Rumford, Me., in quest of good snow conditions. After a two-day delay, the jumping was held at Lake Placid with Hans Bjornstad of Drammen regaining the title for Norway. Simon Slaattvik, also of Norway, captured the jumping part of the combined event, which included the 18-km. cross-country test at Rumford. Karl-Erik Aastrom of Sweden

won that race, but the combined title went to Heikki Hasu, Olympic champion from Finland, who was sixth in the jump and tenth in cross-country for a total of 455.2 points.

Gunnar Ericksson of Sweden was first in the 50-km. cross-country at Rumford while the Swedish team—by dint of a great third lap by Martin Lundstroem—took the 40-km. relay. Skiing with Lundstroem were Nils Taepp, Aastrom and Enar Josefsson.

Zeno Colo of Italy and Dagmar Rom, graceful Austrian girl, dominated the Alpine championships at Aspen, Colo. The former captured the downhill and giant slalom and just missed winning the slalom which went to Georges Schneider of Switzerland. Schneider triumphed with a combined time of 2 min. 6.4 sec. for two runs, only three-tenths of a second better than that for Colo. Austrians monopolized the women's titles, Trude Beiser-Jochum taking the downhill and Miss Rom the slalom and giant slalom.

Colo also proved the outstanding figure in the North American championships at Banff, Alta., Can., sweeping to downhill, slalom and combined honours. Arthur Devlin of Lake Placid won the jump, Hans Hoolaas of Eugene, Ore., won in cross-country and Noel Paul of Kimberley, B.C., Can., took combined laurels. Devlin established a North American record by leaping 307 ft. at Steamboat Springs, Colo., later in the season.

Janette Burr of Seattle, Wash., took the North American downhill contest while Miss Rom added two prizes to her collection with firsts in the slalom and combined tests.

United States champions for 1950 were: men—Olavi Kuronen, Finland, jumping; O. Alakulppi, Berlin, N.H., cross-country; Gordon Wren, Steamboat Springs, Colo., combined; John Lie, Norway, four-event; Jim Griffith, Sun Valley, Ida., open and closed downhill; Jack Reddish, Salt Lake City, Utah, and Ernie McCullogh, Three Rivers, Que., Can., tie in open slalom; Reddish, closed slalom and combined; McCullogh, open combined; Hans Senger, Austria, giant slalom; women—Janette Burr, open and closed downhill; Mme. Georgette Thiolier-Miller, France, open slalom; Norma Godden, Salt Lake City, closed slalom; Lois Woodworth, Banff, open and closed combined; Resi Ham-

merer, Austria, giant slalom.

National intercollegiate champions were Gustav Raaum, Washington, jumping; Don Johnson, Denver, cross-country; Colin Stewart, Dartmouth, downhill; Brooks Dodge, Dartmouth, slalom; Crosby Perry-Smith, Western State, combined; Dartmouth, team.

**Smithsonian Institution.** This institution, located on the Mall in Washington, D.C., was established in 1846 through a bequest from James Smithsonian, an English scientist. Its purpose is "the increase and diffusion of knowledge among men"; this is carried out by means of scientific researches and explorations, publications and museum and art gallery exhibits. The institution is governed by a board of regents, composed of the vice-president of the United States, the chief justice, three senators, three representatives and six citizens from various parts of the country. The executive officer is the secretary, who in 1950 was Alexander Wetmore. The institution has 10 branches: United States National museum, National Gallery of Art, National Collection of Fine Arts, Freer Gallery of Art, Bureau of American Ethnology, International Exchange service, National Zoological park, Astrophysical observatory, National Air museum and Canal Zone biological area.

The National museum collections were increased during 1950 by 793,000 specimens, a large increase over 1949. The total number in the collections reached 32,375,597. Field expeditions took National museum staff members to distant parts of the world.

The National Gallery of Art received 2,354 accessions. It held 10 special exhibitions during the year, including a showing of "Art Treasures from the Vienna Collections," lent by the Austrian government. The National Collection of Fine Arts accessioned a number of paintings accepted for it by the Smithsonian Art commission. Featured was a "Centennial Exhibition of Paintings" by Abbott Handerson Thayer (1849-1921) and an exhibit of paintings of "Ancient Egyptian Monuments" by Joseph Lindon Smith. The Freer Gallery of Art acquired choice specimens of Egyptian, Chinese, Armenian, Indian, Persian and Japanese arts.

The Bureau of American Ethnology continued archaeological research in Panamá and the Canadian arctic, carried on ethnological studies among the Seneca of New York, and collected linguistic data on the Abnaki in Maine and the Maya in Yucatan. The River Basin surveys, a unit of the bureau, continued its archaeological work at sites threatened by construction of dams and reservoirs in connection with various river-basin projects in the United States. Another unit of the bureau, the Institute of Social Anthropology, conducted co-operative field work and teaching in Brazil, Colombia, Mexico and Peru.

The Astrophysical observatory continued its daily measurements of the solar radiation at its two field stations on Mount Montezuma, Chile, and Table mountain, Calif. The observatory's Division of Radiation and Organisms completed its reconstruction of laboratory facilities, and was ready for the undertaking of new photochemical research on plants.

The National Air museum carried forward its preliminary plans for the construction of a building for the national aeronautical collections and presented its report to congress making recommendations on this subject. Notable accessions to the collections included the B-29 Superfortress "Enola Gay," the first aircraft to drop an atomic bomb in warfare, and the original Whittle W-1-X turbojet engine.

The collection of animals in the National Zoological park num-

GEORGES SCHNEIDER, Swiss skier, flashing down the 3,000-ft. course at Aspen, Colo., on Feb. 16, 1950, to capture the men's world slalom title in the Fédération Internationale de Ski Alpine championships

bered 2,820, representing 770 different species. An outstanding accession was the gift of a pair of baby elephants from the government of India through Prime Minister Jawaharlal Nehru.

The Smithsonian's International Exchange service handled 1,009,675 packages of scientific and governmental publications, serving as the U.S. agency for the interchange of such material with other countries.

The institution issued 72 publications during the year, including the 18th vol. of A. C. Bent's *Life Histories of North American Birds*, and vol. 5 of the *Handbook of South American Indians*. The Smithsonian library, including its various branches, numbered about 927,000 vol.

Recorded visitors to the Smithsonian group of buildings totaled 2,600,758, to the National Gallery of Art 2,187,293 and to the National Zoological park 3,437,669. (A. Wt.)

**Snyder, John Wesley** (1896— ), U.S. government official, was born on June 21 in Jonesboro, Ark. He attended Vanderbilt university, Nashville, Tenn. (1914–15), joined the army in 1917, and after World War I entered the banking business in Arkansas and Missouri. In 1930 he joined the field service of the comptroller of the currency of the U.S. and served with this office until 1937, when he became head of the St. Louis, Mo., agency of the Reconstruction Finance corporation. During World War II he helped organize the Defense Plant corporation, an RFC subsidiary, and as its operational vice-president and director administered the agency's commitments of more than \$10,000,000,000 to finance war plants. He was vice-president of the First National bank of St. Louis from Jan. 1943 to April 1945 when he became federal loan administrator.

Snyder was made director of the Office of War Mobilization and Reconversion July 17, 1945, and secretary of the treasury in the cabinet of Pres. Harry S. Truman, June 25, 1946.

During 1950 Secretary Snyder led the administration campaign for tax revision to finance remobilization. On Oct. 4 he reported that U.S. industry was better equipped for war than at the end of World War II because of a peacetime investment of more than \$1,000,000,000 in plant expansion and modernization. He predicted wage-price curbs and an even higher tax burden for 1951 to prevent "damaging inflation," and led the drive for passage of an excess-profits, or "defense profits" tax.

**Soccer.** The sport hit a new high in the United States during 1950 with a heavy schedule of league contests and the invasion of six foreign squads for exhibition games, and then it received tremendous impetus from the surprise 1-0 victory of the United States over England in the world championship matches at Rio de Janeiro, Brazil. The U.S. later was eliminated from the tourney, which was won by Uruguay.

Teams that visited the United States and their records there follow: Manchester United—eight won, two lost, two tied; Hamburg Sport Verein—six won; Besiktas F.C.—five won, one lost, one tied; Jonkopping F.C.—six won, three lost, one tied; Atlas Guadalajara—three won, two tied; English National—ten won, one tied.

The Simpkins S.C. of St. Louis, Mo., took the National Challenge cup by winning from Ponta Delgada of Fall River, Mass., 3 goals to 1. Ponta Delgada had carried off the National Amateur cup by beating the Eintrachts of Astoria, N.Y., 9-7, in the play-offs. The Philadelphia Nationals won in the American league; the Paterson-Dover F.C. of Paterson, N.J., triumphed in the National league and took the New York and New Jersey challenge cups; the New York Americans annexed the Lewis cup and the Eintrachts led the German-American league. (See also FOOTBALL.) (T. V. H.)

BATTLING FOR THE BALL in the first half of the soccer match between British and U.S. all-star teams played at Randall's Island, New York city, on June 18, 1950. The British squad turned in a 1-to-0 victory

**Socialism.** The main strength of the world Socialist movement during 1950 continued to reside in western Europe, with the British Labour party the most powerful of the various Socialist groups. On Feb. 23, 1950, after nearly five years in power, the Labour party was returned to office by winning a slight majority of seats in the house of commons—315 out of 625—as against 393 in 1945. (See GREAT BRITAIN.)

On the continent, the Socialists continued as a dominating force in the Scandinavian countries. In Sweden, the Social Democrats, in control of the federal government, received 49% of the votes cast in the municipal and city elections of Sept. 17, as compared with 46.1% in 1948. During the campaign, the Social Democrats promised to introduce legislation providing for three weeks' vacation for all workers, and for the strengthening of the country's military defenses. The Social Democratic government, however, held to its policy of neutrality during the year, and, while taking an active part in the United Nations, remained outside of the North Atlantic pact nations group.

The Norwegian Labour government, on the other hand, continued its co-operation with the other Atlantic pact nations in joint planning for military defense, though it refused to permit the establishment of Allied bases in Norway. It expanded the nationalized electrical and iron industries, took steps toward the nationalization of concentrated fodder and pharmaceutical products and studied the desirability of transferring the banking, mining and brewery industries to public hands.

In Denmark, the Social Democratic government resigned on Aug. 9 over differences between it and the opposition parties on the problems of taxation and of ways and means of overcoming an unfavourable balance of trade. In the ensuing parliamentary elections, the Social Democrats won 59 seats out of 149, an increase of 2, although its popular vote dropped slightly from 40% to 39.6% of the total. After the elections, Socialist Premier Hans Hedtoft again formed an all-Socialist government, but in late October, after a defeat over the question of rationing (by a vote of 68 to 69), the Socialist government again resigned, and a non-Socialist government was formed.

In Austria, Belgium, Finland, Germany and Switzerland, the

Socialist parties constituted throughout 1950 the second largest parties in their respective countries. The Austrian Socialist party sustained a loss on Dec. 31 in the death of Karl Renner, Socialist president of Austria since the end of World War II, and chancellor of that country after World War I. The party, which participated in Chancellor Leopold Figl's coalition cabinet, co-operated vigorously with the trade unions and other democratic forces in defeating all attempts of the Communist party to seize power.

The Belgian Labour party during the year spearheaded the forces opposing the return of King Leopold to the throne. (*See BELGIUM.*) In the general elections of June 4, held to determine the future status of the king, Labour won 77 seats out of 212, a gain of 11. The Christian Social party returned 107 members. In the Netherlands, Willem Drees, minister-president and leader of the Labour party, continued to head the coalition cabinet. Under his presidency, the Netherlands on July 25 disbanded its 120-year-old colonial army in Indonesia.

In Finland, Socialists constituted the government at the beginning of 1950, with Premier Karl August Fagerholm head of an all-Socialist minority government. In the mid-January elections, the Social Democrats elected 65 out of 300 (as against 55 out of 200 in 1948). Refusing to join the cabinet of the Agrarian leader, Urho Kekkonen, after the elections, the Socialists remained in opposition throughout the remainder of the year.

The most active Socialist party on the continent of Europe during 1950 was that of western Germany. The Social Democratic party, under the leadership of Kurt Schumacher, agitated throughout the year against the remilitarization of western Germany except on the conditions (1) that the German people approve, (2) that Germany be granted full equality in the constitution of the armed forces, and (3) that the United States be willing to furnish a sufficiently large force to withstand (in co-operation with German units) a possible Russian attack. On the domestic front, the Socialists urged a program of socialization, land reform and labour-management co-operation. In elections held early in the year, the Social Democrats came out a close second in North Rhine-Westphalia, although their proportional vote in Schleswig-Holstein in July dropped from 43.8% to 27.5%. In the November elections, when the issue of remilitarization was more intense, Schumacher's followers scored a number of successes. In the December elections in west Berlin, however, the Social Democrats, while retaining their place as the largest single party, received only 43.4% of the total vote as compared with more than 60% in the previous elections.

In France, early 1951 found the Socialist party the third strongest in the national assembly, participating in the Georges Bidault coalition cabinet. In February, however, the party leaders resigned from the cabinet in a dispute with Bidault over the question of a workers' wage bonus. During the following five months, the party remained in the opposition. On July 12, the party's steering committee consented to Socialist participation in the cabinet being formed by René Pleven after the latter had accepted part of the party's program on housing, social insurance and higher wages.

The Italian Socialist party under Pietro Nenni continued under the domination of the Communist party in 1950. The Socialist Party of Italian Workers, led by Giuseppe Saragat, and the Unitary Socialist party, led by Matteo Matteotti, Ignazio Silone and Sen. Giuseppe Romita, continued their separate propagandas. The Saragat group voted at its January convention to rejoin the Alcide de Gasperi coalition government on condition that De Gasperi pledge his support to a number of social reforms.

In the near east, the one democratic Socialist government was that of Israel. Here the Mapai party, a moderate Socialist movement, headed the coalition government with David Ben-

Gurion, leader of the party, as premier. In the municipal and rural elections on Nov. 15, the Mapai party lost a part of its following to the parties of the right.

The Labour parties in Australia and New Zealand continued as the chief opposition parties in their respective countries during 1950. In Japan, the Socialist party remained the second largest, although its parliamentary representation was only about 10% of the total. The party split over right- and left-wing tactics in its January convention, but united again in April. In the June elections for the upper chamber, Socialists made considerable gains.

In India, the Socialist party reported a growth in membership from 12,000 in 1948 to 150,000. The party laid plans for increased political activity, and adopted a program for national survival.

The most active Socialist party of the western hemisphere was the Coöperative Commonwealth Federation (C.C.F.) of Canada, of which M. J. Coldwell was president. The party was represented in parliament by 13 members, constituted the government in Saskatchewan and was the chief opposition in three other provinces. In its July convention, it urged support of the U.N. action in Korea and greater economic aid to undeveloped countries. It also appointed a committee to revise its basic statement of principles, the Regina manifesto.

In the United States, the Socialist party, at its Detroit, Mich., convention, defeated a resolution submitted by the National Executive committee favouring emphasis on Socialist education and the running of candidates for political office "only where specific circumstances present affirmative reasons for considering such campaigns advantageous." Harry Fleischman, the party's secretary, resigned following the convention.

Socialist Mayor McLevy of Bridgeport, Conn., and the Socialist party of Connecticut severed their affiliation with the U.S. Socialist party, following the latter's criticism of McLevy for accepting the endorsement in his campaign for governor of the "ultra-reactionary Independence party" of that state.

The party co-operated during the year with the Social Democratic federation in a number of its undertakings, including the task of organizing an international Socialist information bureau. The party also generally supported the U.N. position in Korea and urged a new drive to halt a world arms race.

In the international field the C.O.M.I.S.C.O. (Committee for International Socialist Conferences) held several meetings at London, its headquarters, and on the continent, to exchange views and formulate programs for Socialist parties to consider. Socialist refugees from "iron curtain" countries likewise met, as the Socialist Union of Central-Eastern Europe, to consider ways and means of promoting Socialist propaganda in countries of eastern Europe. The International Union of Socialist Youth federation, with headquarters in Copenhagen, Den., continued its activity among the youth of Europe and other continents. (*See also COMMUNISM.*)

FILMS OF 1950.—*Two Views on Socialism* (Coronet Instructional Films). (H. W. L.; N. T.)

**Socialist Soviet Republics:** *see* UNION OF SOVIET SOCIALIST REPUBLICS.

**Socialized Medicine:** *see* PUBLIC HEALTH SERVICES.

**Social Security.** Social security systems in several countries were strengthened and extended in 1950, and a few countries established new programs. In addition, the United Nations set up programs of technical assistance in social welfare, in which the federal agencies of the United States participated. Similar programs were operated under bilateral agreements between the United States and other

countries.

**United States.**—The most important development was the enactment by congress of the Social Security Act amendments of 1950, signed by Pres. Harry S. Truman on Aug. 28. The new provisions—some effective immediately after adoption of the legislation and almost all effective before June 1951—made substantial revisions in old-age and survivors insurance and strengthened public assistance and the maternal and child health and child welfare services.

Benefits under the old-age and survivors (administered by the Federal Security agency) program were being paid at the end of June 1950 to 2,900,000 persons at a monthly rate of \$60,700,000. The average monthly benefit for a family of a widowed mother and one child beneficiary was \$36.70; for an aged widow, \$20.90; for a retired man, \$26.80; and for a man and his aged wife, \$41.90.

Effective Jan. 1, 1951, coverage—formerly limited in general to workers in industry and commerce—was extended to include the self-employed (except farmers and those in certain professions); regularly employed agricultural and domestic workers; and, under special arrangements, employees of non-profit institutions and employees of state and local governments not already under a retirement system. Certain civilian federal government employees not under a retirement system and workers in Puerto Rico and the Virgin Islands were included, as well as members of small occupational groups under a broader definition of employee.

Beginning in Sept. 1950, benefits for retired workers were increased by about 77.5% on the average; the minimum primary benefit was \$20 but not less than \$25 for those with average monthly wages of at least \$35; the maximum family benefit was \$150 (but not more than 80% of the average monthly wage). The insured status requirement was also liberalized; a beneficiary might earn as much as \$50 a month in covered employment without loss of benefits and after age 75 would receive benefits regardless of his earnings. Benefits were made payable for the first time to the dependent aged husband of a deceased or retired insured woman worker. The surviving children of a woman currently insured at her death might receive benefits whether or not the father also contributed to their support. Benefits were payable to the wife of a retired worker, regardless of her age, if she had his entitled child in her care. Benefits for dependent parents and for the first survivor child were raised to 75% of the primary amount. World War II veterans were allowed wage credits of \$160 for each month of military service during the war period with a lump sum to be paid for all insured deaths.

A new formula yielding benefits about double existing amounts was to become effective in the second calendar quarter of 1952; until that time the old formula was to be used and increases added as for existing beneficiaries.

Under unemployment insurance (administered in its federal aspects by the department of labour) about 7,000,000 unemployed persons drew one or more benefit checks during the fiscal year ended June 30, 1950. The average beneficiary drew benefits for about 13 weeks, and his average check amounted to \$20.86. The state unemployment insurance systems paid out a total of \$1,862,000,000, which represented partial compensation for wages lost during 91,400,000 weeks of unemployment. Under the three state-federal public assistance programs established by the Social Security act, 2,800,000 needy persons received old-age assistance in June 1950. Nearly 1,700,000 children in 650,000 families received aid to dependent children, and 77,000 persons received aid to the blind. About 526,000 cases (some 1,100,000 persons) received general assistance, financed by states and localities without federal funds. The

average payments throughout the country were \$44 per aged recipient, \$70 per family receiving aid to dependent children, \$48 per blind recipient and \$46 per general assistance case.

The 1950 amendments made federal grants-in-aid available, beginning Oct. 1, 1950, for a fourth category of assistance—aid to the needy permanently and totally disabled, and extended all four categories to Puerto Rico and the Virgin Islands. In the program for aid to dependent children, the relative with whom the child lives could now be included as a recipient for federal matching purposes, except in Puerto Rico and the Virgin Islands.

Under the amendments the federal government could match payments made by the states directly to doctors or others supplying medical care to assistance recipients within the maximums on the individual monthly payments; and it could share in payments to persons in public medical institutions except mental and tuberculosis hospitals.

The annual federal grants to states for maternal and child health services were increased by the 1950 amendments from \$11,000,000 to \$15,000,000 for the fiscal year ending June 1951 and to \$16,500,000 thereafter. Federal grants for services for crippled children were raised from \$7,500,000 to \$12,000,000 annually for the fiscal year ending June 1951 and to \$15,000,000 thereafter. Grants of \$10,000,000 (\$3,500,000 before the amendments) were authorized for child welfare services for the protection and care of homeless and neglected children and children in danger of becoming delinquent.

Federal credit unions, co-operative associations organized to promote thrift among their members and to create a source of loans for provident and productive purposes continued to be an active part of the Social Security program. At the end of June 1950, 4,700 credit unions had been chartered; they were serving 2,000,000 members and had assets of \$363,200,000. (See also RELIEF.)

(A. J. A.)

**Canada.**—On June 30, 1950, there were 287,017 old-age pensioners in Canada, compared to 282,584 on March 31, 1950. Federal contributions for the quarter ended June 30, 1950, amounted to \$24,212,060 (\$23,932,950 for the previous quarter). Total federal commitments for the 1949-50 fiscal year were \$93,188,967. The average monthly pension per province was \$36.44; in only four provinces was the number of pensioners greater than 3% of the total population.

In March parliament set up a joint committee to study the whole question of security for the aged. Federal and provincial authorities met in December to consider the committee's proposals, and recommended early action on constitutional amendments to inaugurate a contributory pension system and to permit provinces to impose an indirect tax to finance their share of the new plan.

On June 30, 1950, pensions were being paid to 10,711 blind persons (March 31, 1950: 10,517) at a total expenditure of \$951,768 for the second quarter of 1950 (\$941,934 for the first quarter). Federal family allowance payments for the 1949-50 fiscal year were \$297,514,033. In March 1950 a government report stated that in 1948 allowances of \$12,804,057 were paid to 32,669 mothers (1947: \$11,009,889 to 29,540). Unemployment insurance statistics for 1949-50 were as follows: employer-employee contributions \$104,432,415; government contributions \$20,094,332; fund revenue (fines and investment interest) \$14,408,988; benefit payments \$85,824,202; balance in fund \$582,646,972. During 1949 workmen's compensation benefits totalled \$58,307,385.

(C. Cy.)

**Great Britain and Other Countries.**—There were no major amendments in the national insurance scheme during the year but in some directions the administrative procedure was simplified, such as for claiming sickness benefit and as to entitlement

to benefit. New regulations were made so that students from other countries who go to Great Britain during their vacations and take up temporary employment relating to their studies are not required to pay national insurance contributions until they have been continuously resident in Great Britain for 26 weeks unless they are ordinarily resident in the United Kingdom, or are already insured. Apprentices from abroad are similarly excused if they have not reached the age of 25 when they take up work in Great Britain which is related to their work abroad and their employment is not expected to last, or does not last for more than three months. Both students and apprentices must, however, pay industrial injury contributions.

It was estimated that 795,000 insured persons in Great Britain were absent from work because of sickness and received national insurance benefits on July 18, 1950, the highest number being in March 1950 when the figure was 1,074,000. On July 18, 1950, 60,000 were absent because of industrial injury. The number was fairly constant during the year, the highest being 67,000 in February.

Agreement was reached between France and Northern Ireland for reciprocity as regards social security measures on the lines previously agreed between France and Great Britain. During the year, the French government co-ordinated the existing general and special schemes of social insurance. In Italy an act was passed introducing improved schemes of insurance against employment injury in agriculture. In Denmark, amending legislation affected a less stringent definition of invalidity and provided allowances on a more liberal basis. (See also INDUSTRIAL HEALTH; LAW.)

**Social Service:** see CHILD WELFARE; RELIEF; SOCIAL SECURITY.

**Societies and Associations.** The following is a selected list of U.S. societies and associations, with date of founding, membership, officers and chief activities during 1950. (See also the separate articles on RED CROSS; VETERANS' ORGANIZATIONS; etc.)

**Alcoholic Foundation, Inc. (Alcoholics Anonymous).**—This fellowship of men and women was organized in 1938 to help the sick alcoholic recover sobriety. There are no dues or fees, and the only requirement for membership is stated to be "an honest desire to stop drinking." The foundation itself is a nonprofit membership corporation serving as a general service board for the Alcoholics Anonymous movement. It publishes a book *Alcoholics Anonymous* and the monthly *The A. A. Grapevine*. There is no endowment, nor are there national officers. Headquarters: P.O. Box 459, Grand Central Annex, New York 17, N.Y.

**American Academy of Arts and Letters.**—The purpose of the academy, founded April 23, 1904, is to protect and further literature and the arts. On May 25, 1950, the academy held a special meeting followed by a joint public ceremonial with the National Institute of Arts and Letters at which members of both organizations were inducted. Medals for achievement and arts and letters grants of \$1,000 each were awarded to encourage creative work in the arts. Membership of the academy is 50, and its publications include art catalogues, a ceremonial program and the *Yearbook*. Officers, 1950: Paul Manship, president; Chauncey B. Tinker, chancellor; Mark van Doren, secretary; Deems Taylor, treasurer. Headquarters: 633 W. 155th St., New York 32, N.Y.

**American Academy of Political and Social Science.**—Founded in 1889 and incorporated in 1891, this organization acts as a forum for the discussion of social, political and economic questions through meetings and publications. Membership, 1950: 16,076. Publication: *The Annals*, a bimonthly journal. Officers: Ernest M. Patterson, president; Herbert Hoover and Carl Helsey, vice-presidents; J. P. Lichtenberger, secretary. Headquarters: 3817 Spruce St., Philadelphia 43, Pa.

**American Association for the Advancement of Science.**—Founded in 1848, this association seeks to further the work of scientists, facilitate co-operation among them, and improve public understanding of the importance of science in human progress. Its membership in 1950 was 45,000; endowment, \$250,000. The annual meeting was held in Dec. 1950 in Cleveland, O. Numerous scientific books and papers were published during the year, in addition to the weekly *Science* and *The Scientific Monthly*. Officers (1950): Roger Adams, University of Illinois, president; Howard A. Meyerhoff, Washington, D.C., administrative secretary; E. C. Stakman, University of Minnesota, chairman of the executive committee. Headquarters: 1515 Massachusetts Ave., N.W., Washington 5, D.C.

**American Association of Law Libraries.**—Founded in 1906 to cultivate the science of law librarianship and increase the usefulness of law

libraries, this association in 1950 numbered 595 members. Its activities during the year included development of time-saving methods, co-operation with publishers to improve the content and format of law books and the creation of a special committee to study cataloguing. Publications: *Law Library Journal*; *Index to Legal Periodicals*; *Law Libraries in the U.S. and Canada*, 1950. Jean Ashman was president and Margaret E. Coonan secretary in 1950. Headquarters: Bureau of the Law Library, State House Annex, Trenton, N.J.

**American Association of University Professors.**—This organization of college and university teachers was founded in 1915 to promote discussion and action on problems affecting education in institutions of higher learning, and to provide means for expression of its membership. Its members in Jan. 1950 totalled 37,524. Publication: the *Bulletin*, a quarterly journal. Officers, 1950, included: Richard H. Shryock, The Johns Hopkins University, president; Ralph E. Himstead, general secretary. Headquarters (1951): 1785 Massachusetts Ave., N.W., Washington 6, D.C.

**American Association of University Women.**—This organization was founded in 1882 as the Association of Collegiate Alumnae for "the uniting of the alumnae of different institutions for practical educational work." Membership in June 1950 totalled 115,402. The association gives fellowships to encourage women in creative research, and after World War II this program was extended to bring women from war-ravaged countries to the U.S. to study. The fellowship endowment funds totalled (June 1950) \$1,082,287. For 1950-51, 32 fellowship awards, ranging from \$1,500 to \$2,500, were made, and 52 women from 15 other countries were enabled to study in the U.S. Publications: *Journal*, quarterly; the *General Director's Letter*, handbooks, study guides and bibliographies. The association also sponsors circulating art exhibitions. Officers, 1950: Althea Kratz Hotel, president; Louise Troxell and Dorothy Kenyon, vice-presidents; Mrs. Arthur J. White, treasurer. Headquarters: 1634 I St., N.W., Washington 6, D.C.

**American Bankers Association.**—This U.S. banking organization had in 1950 a membership of 16,556 banks and banking offices. Founded in 1875, its objective is to promote the welfare and usefulness of banks and financial institutions. Its 1950 program emphasized "economic and social strength" and urged national policies to promote this goal and to avert inflation. In its four divisions it operates through more than 40 working groups. It is the parent organization of the American Institute of Banking, which conducts educational programs for bank personnel and in 1950 had 95,000 members, and the Graduate School of Banking, held at Rutgers university, New Brunswick, N.J., annually. In 1950 the latter's enrolment was 998 bank officers from about 40 states. Officers (1950): President, James E. Shelton, Security-First National bank, Los Angeles, Calif.; vice-president, C. Francis Cocke, First National Exchange bank, Roanoke, Va.; treasurer, Glenn L. Emmons, First State Bank of Gallup, N. Mex. Headquarters: 12 E. 36th St., New York, N.Y.

**American Bar Association.**—Founded in 1878 to advance the science of jurisprudence and promote the administration of justice in the U.S., the association numbered 42,121 members as of June 30, 1950. In 1950 the annual medal for conspicuous service to U.S. jurisprudence was awarded to Orrie L. Phillips of the U.S. court of appeals; the Ross prize went to Norman C. Melvin for his essay "The Use of Injunctions in Labour Disputes." Its publications include the *American Bar Association Journal*, an annual volume of reports and proceedings, and miscellaneous reports of committees. Officers, 1950: Cody Fowler, president; Roy E. Willy, chairman of the house of delegates; Joseph D. Stecher, secretary, and Harold H. Bredell, treasurer. Headquarters: 1140 N. Dearborn St., Chicago 10, Ill.

**American Bible Society.**—Founded in 1816, the society encourages the wider circulation and use of the Holy Scriptures without note or comment and without purpose of profit. In 1950 special aid was given in the field of translation to missionaries working in primitive languages of Latin America and also to the Revision committee of the Portuguese Bible in Brazil. The *Illustrated Gospel of Luke* was published in English, Japanese, Spanish and Indonesian, and about 10,000,000 copies of the Scriptures were distributed. Membership (1950): 175,000. Publication: *The Bible Society Record*. Officers (1950): Eric M. North, Frederick W. Cropp, Frank H. Mann and Robert T. Taylor, general secretaries; Francis C. Stifler, recording secretary; Gilbert Darlington, treasurer. Headquarters: 450 Park Ave., New York 22, N.Y.

**American Chemical Society.**—Founded in 1876, this society's purpose is to encourage the advancement of chemistry, promote research in chemical science and industry, maintain high professional and ethical standards, and promote the diffusion of knowledge on chemical subjects. In 1950 the society conferred a number of medals and awards for outstanding achievements in chemistry. Its membership was about 63,000. Publications include *Journal of the American Chemical Society*; *Industrial and Engineering Chemistry*; *Analytical Chemistry*; *Chemical and Engineering News* and *Chemical Abstracts*. Officers, 1950: E. H. Volwiler, president; Alden H. Emery, executive secretary; Robert V. Mellefont, treasurer. Headquarters: 1155 16th St., N.W., Washington 6, D.C.

**American College of Dentists.**—The association was formed Aug. 20, 1920, to advance the standards and efficiency of dentistry, stimulate graduate study in dentistry, confer fellowships in recognition of meritorious achievement in the science, and improve public understanding of oral health service. Membership in 1950 was 1,535. Meetings of the college and its regents, and the 27 sections of the college carried forward the objectives during 1950. The *Journal of the American College of Dentists* is published quarterly. Officers (1950): Walter H. Wright, New York, N.Y., president; Edward L. Thompson, Daytona Beach, Fla., vice-president; O. W. Brandhorst, secretary, at the 1950 headquarters address, 4952 Maryland Ave., St. Louis, Mo.

**American College of Life Underwriters.**—Founded in 1927 to establish an educational standard for the profession of life underwriters and to encourage formal training for this field, the organization awards qualified candidates a professional certificate of recognition. At the end of 1950, 3,765 had been awarded this certificate (C.L.U.) and 93 had received certificates of proficiency. In June 1950, 2,794 candidates took examinations

for the certificate at 155 universities and colleges, and a total of 3,839 tests were taken during the year. A total of 4,039 persons had completed the five examinations necessary for the certificate, and 5,735 others had credit for one or more of the examinations. Publications: *Annual Announcement*; *Annual Report*, and brochures. An endowment of \$42,000 was raised in addition to about \$63,000 received annually from contributing life insurance companies. Officers (1950): Julian S. Myrick, chairman of the board; S. S. Huebner, president; Joseph H. Reese, secretary. Headquarters: 3924 Walnut St., Philadelphia 4, Pa.

**American College of Physicians.**—This society was founded May 11, 1915, to bring together physicians of high standing for the maintenance and advancement of medical education, practice and research. Membership in 1950 totalled 6,937, and activities included the 31st annual session in Boston, Mass., plus 30 regional or state meetings in the U.S., Puerto Rico and Canada, and 16 short, postgraduate courses for internists and specialists. The college also awarded fellowships and memorial awards to outstanding practitioners. Publications include a directory and *Annals of Internal Medicine*, a monthly. Endowment funds totalled \$329,102. Officers (1950): William S. Middleton, Madison, Wis., president; Ernest H. Falconer, San Francisco, Calif., vice-president; William D. Stroud, Philadelphia, Pa., treasurer; George Morris Piersol, Philadelphia, secretary general; E. R. Loveland, Philadelphia, executive secretary. Headquarters: 4200 Pine St., Philadelphia 4, Pa.

**American College of Surgeons.**—Founded in 1913 to elevate the standards of surgery, the organization held its 36th clinical congress in Boston, Mass., Oct. 23-27, 1950. The total attendance of 9,000 included the 29th Hospital Standardization conference. Membership of the college in 1950 was 17,000. Publications: *Surgery, Gynecology and Obstetrics* and a quarterly bulletin. Officers (1950): Henry W. Cave, president; Alton Ochsner, president-elect; Warren H. Cole and G. Gavin Miller, vice-presidents; Paul R. Hawley, director. Headquarters: 40 E. Erie St., Chicago 11, Ill.

**American Dental Association.**—Founded in 1859 as a professional organization of dentists, this association in 1950 numbered 77,104 members. Its house of delegates approved the addition of small quantities of fluoride salts to community water supplies to reduce incidence of tooth decay, and by Dec. 1950, 50 U.S. cities and towns were fluoridating their water supplies. The association in February sponsored its second annual national children's dental health day and distributed more than a million pieces of literature and visual aids to teachers and parents during the year. A nation-wide system of aptitude tests for pre-dental students was instituted. The number of operating dental schools was increased to 42 with the opening of a dental school at the University of North Carolina, Chapel Hill. The association also approved creation of a new specialty board for the field of public-health dentistry. Officers, 1950-51: Harold W. Oppice, president; Harold Hillenbrand, secretary; H. B. Washburn, treasurer.

**American Economic Association.**—This association which in 1950 had 7,200 members and 2,600 library, corporate and individual subscriptions, was founded in 1885 to encourage economic research and freedom of economic discussion, and to issue publications on economic subjects. The annual meeting was held in Chicago, Ill., Dec. 27-30, 1950, and in September the organization's representatives attended the first meeting of the International Economic association in Monaco. Publications: *American Economic Review*, quarterly, and *Papers and Proceedings* of the annual meeting. Officers (1950): Frank H. Knight, The University of Chicago, president; James Washington Bell, Northwestern university, secretary-treasurer and editor of the annual proceedings; Paul T. Homan, University of California, editor of the quarterly. Headquarters: Northwestern university, Evanston, Ill.

**American Geographical Society.**—Founded in 1852 to promote geographical research and exploration and to disseminate geographical knowledge, the society in 1950 published a symposium by 20 leading authorities entitled *World Geography of Petroleum* and a *German-English Glossary of Geographical Terms*. Publication was also begun of *Focus*, a monthly periodical devoted to background facts and geographical interpretations of world problems. The long-term program of glacial studies was continued with expeditions to Alaska and the Canadian Rockies. A map showing distribution of poliomyelitis was published by the society's department of medical research, and a number of sheets of the map of Hispanic America, 1:1,000,000, were revised under contract with the U.S. army map service. Publications include: *Geographical Review*; *Current Geographical Publications*; monographs and maps. Membership: about 4,500. Officers, 1950: Richard Upjohn Light, president; George H. T. Kimble, director. Headquarters: Broadway at 156th St., New York 32, N.Y.

**American Historical Association.**—This association of professional and nonprofessional students of history was founded in 1884 to promote historical studies, collect and preserve historical manuscripts, and promote sound teaching of American history. It was incorporated by act of congress in 1889. Its membership in 1950 was about 5,800, and its endowment was \$279,000. It publishes the *American Historical Review*, and selected historical monographs. Officers (1950): Samuel E. Morison, Harvard university, president; Robert L. Schuyler, Columbia university, vice-president, and Guy Stanton Ford, executive secretary. Headquarters: Study Room 274, Library of Congress Annex, Washington 25, D.C.

**American Institute for Property and Liability Underwriters, Inc.**—Founded in 1942, this organization strives to establish an educational standard for the profession of property and casualty insurance underwriting. In 1950, 1,806 persons took examinations which are held by the institution for certification of underwriters. In addition, 1,383 persons had credit for one or more of the five examinations which were held at 112 universities and colleges in 44 states, the District of Columbia and Hawaii. At the end of 1950 a total of 491 examinees had received the C.P.C.U. designation. Publication: *Announcement*, annual. Officers (1950): S. S. Huebner, chairman of the board of trustees; Harold C. Conick, president; Arthur C. Goerlich, secretary. Headquarters: 3924 Walnut St., Philadelphia 4, Pa.

**American Institute of Accountants.**—A national professional society of certified public accountants, founded in 1887 to maintain high professional and ethical standards, to develop accountancy education and to provide for the examination of candidates for membership. In 1950 the institute had a membership of 16,200. The year's activities included the preparing

of the uniform C.P.A. examination given in 47 states, conducting of local and regional meetings, and the issuing of recommendations for improvement and simplification of federal income tax laws. Publications: *Journal of Accountancy* and *Certified Public Accountant*, both monthly. Officers: T. Coleman Andrews, president; Harold R. Caffyn, treasurer. Headquarters: 270 Madison Ave., New York 16, N.Y.

**American Institute of Chemical Engineers.**—This organization was founded in 1908 for the advancement of chemical engineering in theory and practice and the maintenance of a high professional standard among its members. Activities in 1950 included sponsorship of one annual and three regional meetings, plus an average of eight meetings by each of the approximately 33 local sections. As of July 31, 1950, the membership was 10,145. Publication: *Chemical Engineering Progress*, monthly. Officers (1950): Warren L. McCabe, president; Stephen L. Tyler, secretary and executive secretary. Headquarters: 120 E. 41st St., New York 17, N.Y.

**American Institute of Electrical Engineers.**—This association was founded in 1884 to advance the theory and practice of electrical engineering and to maintain high professional standing among its members. Its 1950 activities included the development of standards for electrical equipment, the publication of technical papers, the holding of numerous meetings on subjects within its cognizance, and the establishment of five technical divisions covering communication, general applications, industry, power, and science and electronics. Membership as of Oct. 1, 1950, was 37,792. Publications: *Electrical Engineering*, monthly; *Transactions and Year Book*, annually, and *Standards* and special publications, published irregularly. Officers (1950): T. G. LeClair, president; H. H. Henline, secretary. Headquarters: 33 W. 39th St., New York 18, N.Y.

**American Institute of Mining and Metallurgical Engineers.**—This society was founded in 1871 to promote the arts and sciences connected with the economic production of minerals and metals, and the welfare of those employed in these industries. Activities during 1950 included the conduct of the regular annual meeting in New York, N.Y., Feb. 12-16, plus branch and divisional meetings. Publications include *Mining Engineering*, *Journal of Metals*, and *Journal of Petroleum Technology*, all monthly, and transactions volumes and branch and divisional proceedings. Membership, 1950, was 16,500. The institute's 21 special funds and endowments totalled more than \$800,000. Officers (1950): D. H. McLaughlin, president; Edward H. Robie, secretary. Headquarters: 29 W. 39th St., New York 18, N.Y.

**American Iron and Steel Institute.**—In 1908 this organization was founded to promote the interests of the iron and steel industry, distribute information and promote discussion of problems relating to the industry. Its 1950 membership included about 2,400 individual, associate, corporate, and honorary and emeritus members. Publications: *Steelworks*, bimonthly; *Steel Facts*, bimonthly; and numerous booklets and pamphlets. Officers (1950) included Walter S. Tower, president; Harold L. Hughes, treasurer; George S. Rose, secretary. Headquarters: 350 Fifth Ave., New York 1, N.Y.

**American Law Institute, The.**—Founded Feb. 23, 1923, this organization is designed to promote the clarification and simplification of the law and its better adaptation to social needs. Its 1950 activities included work toward the completion of a draft of a uniform commercial code; promotion of courses of literature of importance to practising lawyers; drafting of a federal income tax statute; and development of such codes as that which the U.S. congress enacted into law in 1950—a statute providing for the scientific administration of criminal justice in the cases of youthful offenders. In 1950 there were 1,114 elected members. Publications include numerous statements bearing on the law. Headquarters, 1950: 133 S. 36th St., Philadelphia 4, Pa.

**American Mathematical Society.**—Established in 1888 to encourage and maintain an active interest in mathematical science, the society held the first International Congress of Mathematicians since 1936 at Harvard university, Aug. 30-Sept. 6, 1950, with more than 2,100 attending. Publications: *Bulletin of the American Mathematical Society*; *Transactions of the American Mathematical Society*; *Mathematical Reviews*; *Colloquium Publications*; *Mathematical Surveys*. Membership in 1950, 4,400; endowments \$71,000, plus prize and other special funds of \$33,000. Officers (1950): J. I. Walsh, Harvard university, president; J. R. Kline, University of Pennsylvania, secretary. Headquarters: 531 W. 116th St., New York 27, N.Y.

**American Medical Association.**—This federation of constituent state and territorial medical associations was founded in 1847 to promote the science and art of medicine and the betterment of public health. During 1950 the association continued to oppose plans for the federal control of medicine and public health, but encouraged the construction of hospitals, the extension of local medical care improvements and the application of medical advances, especially for children and the aged. Its house of delegates adopted a report authorizing a student American Medical association and another denouncing systems whereby hospitals hire salaried physicians for medical care and bill the patients for this care. Publications: *The Journal of the American Medical Association* and nine special journals. Officers elected in 1950 by the house of delegates were John W. Cline, San Francisco, Calif., president-elect; George F. Lull, Chicago, Ill., secretary and general manager. Headquarters: 535 N. Dearborn St., Chicago 10, Ill.

**American Prison Association, The.**—Founded in 1870, this association works for the improvement of laws governing public offenders; studies the causes of crime and the nature of offenders and their social surroundings, and works for the improvement of penal institutions and jobs for former prisoners. Work in 1950 especially emphasized rehabilitation of lawbreakers. Membership for 1950-51 was about 1,000, consisting of court, crime-enforcement and penal officials and citizens interested in crime problems. Publications include an annual directory of correctional institutions; a handbook on pre-release preparation; handbook on classification in correctional institutions; manual of criminal statistics and the bimonthly *The Prison World*. Officers (1950-51): Joseph E. Ragen, president; E. R. Cass, general secretary; John L. Schoenfeld, treasurer. Headquarters: 135 E. 15th St., New York 3, N.Y.

**American Society of Civil Engineers.**—The society was founded in 1852 for the purpose of advancing the sciences of engineering and architecture. Membership at the end of 1950 was about 31,200. Professional activities

of the society were directed through its headquarters, its professional committees, student chapters in 129 engineering colleges and the 14 following technical divisions: air transport, city planning, construction, engineering economics, engineering mechanics, highways, hydraulics, irrigation, power, sanitary engineering, soil mechanics and foundations, structural, surveying and mapping, and waterways. Publications: *Proceedings*, also several pamphlets each month; *Transactions*, yearly; *Civil Engineering*, monthly; and a *Yearbook*. Officers (1950): Ernest E. Howard, president; (1951) Gail A. Hathaway, president; William N. Carey, executive secretary. Headquarters: 33 W. 39th St., New York 18, N.Y.

**American Society of Composers, Authors and Publishers (ASCAP).**—Founded Feb. 13, 1914, the society collects performing right royalties for allocation to members whose copyrighted musical works are used in public performances for profit. Its 1950 activities included the extension of its licensing activities into the field of television. Its membership in 1950 totaled 2,589, comprising 2,174 composers and authors and 415 publishers. Officers (1950) included: Otto A. Harbach, president; Saul H. Bourne and Oscar Hammerstein II, vice presidents; George W. Meyer, secretary; Louis Bernstein, treasurer. The headquarters address, after March 1, 1951, was to be 575 Madison Ave., New York 21, N.Y.

**American Society of Mechanical Engineers.**—A national organization founded in 1880 to promote the art and science of engineering and mechanical construction for scientific purposes, the society in 1950 was grouped into 20 professional divisions, with 73 sections in the U.S. and Canada and student branches in 127 engineering schools. Membership totaled 34,000. Publications: *Mechanical Engineering*, monthly; *Journal of Applied Mechanics*, quarterly; *Applied Mechanics Reviews*, monthly review of world literature in applied mechanics. Officers (1950): James D. Cunningham, president; Clarence E. Davies, secretary. Headquarters: 29 W. 39th St., New York 18, N.Y.

**American Sunday-School Union.**—Founded in 1817, this corporation's aim is to maintain Sunday schools and publish and circulate moral and religious literature, especially among remote rural populations of the U.S. During 1950, 270 new Sunday schools were organized; 73 were reorganized, 1,687 vacation Bible schools were held; about 6,000 Bibles and 4,000 Testaments were distributed and nearly 200,000 families were visited in their homes. Active missionaries in 1950 numbered 180; retired missionaries, 37; the 2,671 Sunday schools enrolled 101,498 scholars. Publications included a full line of Sunday-school periodicals. The work is supported largely by contributions, plus a small endowment. Officers, 1950: Belding B. Slifer, president; Elliott D. Parkhill, secretary of missions; William J. Jones, editor of publications. Headquarters: 1816 Chestnut St., Philadelphia, Pa.

**Boy Scouts of America.**—This nation-wide youth organization with activities for boys of eight years and older was organized in 1910 and chartered by congress in 1916. Objectives are to teach patriotism and citizenship and the importance of religion in daily life. In 1950 the national scouting program emphasized the theme, "Strengthen Liberty." Twelve representative scouts presented a "Report to the Nation" on scouting service to Pres. Harry S. Truman. At a summertime boy scout jamboree at Valley Forge, Pa., 47,163 boys and leaders participated in camping and sightseeing. The scouts adopted a plan of co-operation on civil defense activities. Camping was promoted, and 3,000 older scouts took part in wilderness experiences at Philmont Scout ranch in New Mexico. Membership, Sept. 30, 1950, was 2,603,424 men and boys organized in 75,639 units, including 1,920,946 boys and 682,478 leaders. The world scout membership, as of 1949, was 4,416,306 in 46 countries.

**Brookings Institution.**—A nonprofit organization dedicated to public service through research and training in economics and government, the institution was founded in 1928 and is supported by income on its own endowment, grants from foundations, and the sale of publications. During 1950 the following studies were published: *Authoritarianism and the Individual*, by Harold W. Metz and C. A. H. Thomson; *The Cost and Financing of Social Security*, by Lewis Meriam, Karl Schlotterbeck and Mildred Maroney; *The United States and the Restoration of World Trade*, by William Adams Brown, Jr.; *Taxes and Economic Incentives*, by Lewis H. Kimmel; *The Right to Organize and Its Limits*, by Kurt Braun; *The Dynamic Economy*, by Harold G. Moulton. Officers (1950): William R. Biggs, chairman; Harold G. Moulton, president; Elizabeth H. Wilson, secretary. Headquarters: 722 Jackson Place N.W., Washington 6, D.C.

**Buhl Foundation, The.**—Established in 1927, the foundation had by 1950 granted to existing (or especially established) agencies a total of \$6,265,440 for the promotion of nationally significant programs in the Pittsburgh, Pa., district. These programs were in regional economics, historical and social research, in higher education and in research in natural sciences. The foundation's \$1,700,000 Chatham Village, pioneering demonstration of a large-scale planned residential community built for long-term investment, had received international recognition. The \$1,100,000 Buhl planetarium, built and maintained as a memorial to the founder, had conducted since 1939 a program of popular science education from elementary school to adult level. Foundation assets in 1950 were \$12,997,721. Director: Charles F. Lewis. Headquarters: Farmers Bank building, Pittsburgh 22, Pa.

**Camp Fire Girls, Inc.**—This youth organization was founded in 1910 to help girls develop into alert citizens, homemakers and professional women, and its program operated through seven crafts—home, outdoors, creative arts, science, business, sports and games and citizenship. In 1950 more than 360,000 girls were reported enrolled in its three groups: Blue Birds, 7 to 10 years old; Camp Fire Girls, 10 to 15 years old; and Horizon club members, of senior high school age. The Camp Fire law bids girls to "Worship God, Seek Beauty, Give Service, Pursue Knowledge, Be Trustworthy, Hold on to Health, Glorify Work, Be Happy." In 1950 there were 281 local councils in the U.S., and groups met in seven other countries. National officers for 1951: Mrs. Richard W. Blalock, president; George W. Hearn, chairman of the board; Mrs. Bernard Gimbel, Mrs. James C. Parker and Mrs. Louis Zagoren, vice-presidents; Mrs. Frank C. Love, secretary, and Miss Martha F. Allen, national director. Headquarters: 16 East 48th St., New York 17, N.Y.

**Carnegie Trusts.**—Six autonomous and separately administered agencies in the U.S. were established by Andrew Carnegie for various philanthropic

purposes; in addition there are four Carnegie trusts in Great Britain, and Carnegie Hero funds operate in nine European countries.

**Carnegie Corporation of New York** (1911), with a basic endowment of \$135,000,000, had in 1950 assets of more than \$175,000,000; the income from \$12,000,000 of this is applicable in the British dominions and colonies. It included in its 1950 program the advancement of education through support of specific undertakings in institutions of higher education, in organizations and agencies devoted especially to the social sciences, and in enterprises which gave promise to new knowledge through research, studies which may point to better conditions, or demonstrations of how new knowledge may be effectively applied. President (1950), Charles D. Lard; secretary, Robert M. Lester. Headquarters: 522 Fifth Ave., New York 18, N.Y.

**Carnegie Institute of Pittsburgh** (1896) includes a department of fine arts, a music hall and a museum of natural history, and to it are closely related the Carnegie Library of Pittsburgh, the Carnegie Library school, and the Carnegie Institute of Technology. President (1950), James M. Bovard; secretary, Augustus K. Oliver. Headquarters: 4400 Forbes St., Pittsburgh 13, Pa.

**Carnegie Institution of Washington** (1902), with assets exceeding \$45,000,000 in 1950, conducts fundamental scientific investigation, particularly in astronomy, terrestrial magnetism, plant biology, embryology, genetics and historical research. President (1950), Vannevar Bush; executive officer, Paul A. Scherer. Headquarters: 1530 P St., N.W., Washington 5, D.C.

**Carnegie Hero Fund Commission** (1904), with assets in 1950 of approximately \$10,000,000 was established to recognize by medals and monetary awards heroic acts performed in the peaceful walks of life. President (1950), Thomas S. Arbutnot; manager, M. H. Floto. Headquarters: Oliver building, Pittsburgh 22, Pa.

**Carnegie Foundation for the Advancement of Teaching** (1905) was established to provide retiring pensions for teachers and to advance higher education, having received \$31,000,000 from Carnegie and substantial additional sums from the Carnegie corporation for a program to improve teaching in southern colleges. President (1950), Oliver C. Carmichael; secretary, Robert M. Lester. Headquarters: 522 Fifth Ave., New York 18, N.Y.

**Carnegie Endowment for International Peace** (1910) uses the income from its \$10,000,000 endowment to further friendly understanding among nations, its aim in 1950 being to support the United Nations by stimulating public education in foreign affairs and by conducting studies and seminars. President (1950), Joseph E. Johnson; secretary, Leslie Paffrath. Headquarters: 405 W. 117th St., New York 27, N.Y.

**Catholic Community Service, National.**—This service organization was founded on Nov. 13, 1940, as the agency designated by the Catholic bishops of the U.S. to mobilize and co-ordinate the Catholic resources of the country to assist in serving the spiritual, educational, recreational and welfare needs of the men and women in the armed forces, their families and patients in Veterans' administration hospitals. It served as a co-operating agency of the United Service Organizations, Inc., until the latter body was deactivated, Jan. 31, 1950. During 1950 the service conducted programs in 31 activities located near major military establishments in the U.S. and overseas; conducted volunteer programs in 134 VA hospitals, and loaned staff members to the president's committee on religion and moral welfare in the armed forces. Publications: *NCCS Program Bulletin*; *NCCS VA Hospital News*; and *Focus on Faith*, a religious pamphlet series. Thomas D. Hinton was executive director in 1950; headquarters were at 1312 Massachusetts Ave., N.W., Washington 5, D.C.

**Catholic Library Association.**—Founded in 1921 as a section of the National Catholic Educational association, it became an independent organization in 1929. Its aim is to disseminate knowledge of library service; compile bibliographical research aids to promote Catholic scholarship; and act as standardizing agent of Catholic library schools by co-operation with national and state standardizing agents. In 1950 new units were established in Nashville, Tenn., and Richmond, Va. Publications: *Catholic Library World*; *Catholic Periodical Index*; *The Catholic Booklist*. Officers (1950): Sister Mary Reparata, Rosary college, River Forest, Ill., president; John M. O'Loughlin, Boston college, Chestnut Hill, Mass., vice-president; Laurence A. Leavey, executive secretary, at the national headquarters address: P.O. Box 25, Kingsbridge Station, New York 63, N.Y.

**Catholic Organizations for Youth.**—These organizations generally are conducted within dioceses, with a central co-ordinating agency in the youth department of the National Catholic Welfare conference, of which the Very Rev. Joseph E. Schieder was the director in 1950. The purpose of the diocesan Catholic youth organizations is the fostering of the spiritual welfare of young people through religious, cultural, social and athletic activities. In addition, there are such national Catholic youth organizations as the National Federation of Catholic College Students, the National Newman Club federation, the Columbian Squires, the Junior Catholic Daughters of America, the Young Christian Workers, and the Daughters of Isabella. The total number of young persons reached by the various programs was estimated in 1950 at about 7,000,000. Diocesan groups have individual publications, and the youth department of the N.C.W.C. publishes *Newsnotes*, a monthly with material of interest to diocesan youth directors; *Program Service*, for parish youth directors; a *Catholic Youth Directory*; and pamphlets.

**Catholic Rural Life Conference, National.**—This organization was founded in 1923 to care for underprivileged Catholics in farming areas, and to encourage Catholics to settle and remain on the land. The 1950 convention endorsed the principles of Pres. Harry S. Truman's "Point Four" program for aid to backward and undeveloped countries, and also approved resolutions opposing curtailment of protection for soil, forest and water resources. *Christian Farmer*, monthly, is the organization's publication. Its president in 1950 was Bishop Albert R. Zuroweste of Belleville, Ill., and its executive secretary was Msgr. L. G. Ligutti. Headquarters: 3801 Grand Ave., Des Moines, Ia.

**Catholic Welfare Conference, National.**—This organization was founded in 1919 to organize and co-ordinate the Catholic residents of the U.S. in works of education, social welfare, immigrant aid and other activities. During 1950 its social action department published *Catholic Social Prin-*

**ciples**, a source book of authoritative documents from the pope and the hierarchy. War Relief Services distributed 38,945,659 lb. of relief material valued at \$18,788,493 and reported 31,899 persons brought into the U.S. under its auspices. The National Council of Catholic Men sponsored the radio Catholic Hour series against communism entitled "Operation Survival." The monthly publication is *Catholic Action*. Officers, 1950: Archbishop John T. McNicholas, Cincinnati, O., chairman; Bishop John F. Noll, Fort Wayne, Ind., secretary. Headquarters: 1312 Massachusetts Ave., N.W., Washington 5, D.C.

**Charles Hayden Foundation.**—This organization was established in 1937 under the will of its founder to assist young men to "receive proper training in boyhood and youth . . . in the manner of right and proper living." It concentrates on boys' clubs, boys' camps and similar projects for underprivileged boys, especially those of the New York, N.Y., and Boston, Mass., areas. By Sept. 30, 1950, the foundation had contributed \$15,270,000 for these purposes, and there was approximately \$55,000,000 in the fund. Officers: J. Willard Hayden, president; Edgar A. Doubleday, executive vice-president and treasurer, Erle V. Daveler, vice-president. Headquarters: 25 Broad St., New York 4, N.Y.

**Commonwealth Fund, The.**—Established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind," the fund at the end of the fiscal year 1949-50 amounted to approximately \$63,000,000. Appropriations for that year were \$2,001,833.31. Activities tending to promote or maintain health accounted for the larger part of this total. Grants for medical education, including fellowships in medicine and allied fields, amounted to \$693,370; for experimental health services, public health, and hospital activities, \$550,845.60; and for medical research \$380,002.09. During 1950, 39 men and 2 women held Commonwealth fund fellowships for students and civil servants from Great Britain and other parts of the British commonwealth. The Fund publishes an *Annual Report*. President, Malcolm P. Aldrich. Headquarters: 41 E. 57th St., New York 22, N.Y.

**Daughters of the American Revolution, National Society of the.**—Founded in 1890 for historical, patriotic and educational purposes, the society in 1950 had 167,846 members in 2,676 chapters. During the year it operated two schools and provided financial assistance to others; conducted programs for good citizenship; operated 11,232 Junior American Citizens clubs with 342,600 members; maintained a genealogical library, and conducted various educational programs of a patriotic nature. Publications: *Daughters of the American Revolution Magazine* and *Press Relations Digest*. President general (1950): Mrs. James B. Patton; headquarters: 1776 D St. N.W., Washington 6, D.C.

**Duke Endowment, The.**—By an indenture executed Dec. 11, 1924, by James B. Duke, this endowment was established as a common-law trust "to make provision in some measure for the needs of mankind along physical, mental and spiritual lines." The fund allocates payments to educational institutions, including Duke university, and also distributes funds to help support hospitals, orphanages and the Methodist church in rural areas. The amount distributed from Dec. 11, 1924 to Dec. 31, 1949, was \$81,782,235.46, in addition to a reserve fund and a retained balance that totalled \$85,471,367.62 net income earmarked as available for distribution. The fund is supervised by a self-perpetuating board of 15 trustees. Officers (1950): George G. Allen, chairman; Alex. H. Sands, Jr., secretary; Walter C. Parker, treasurer. Headquarters: Power building, Charlotte 1, N.C.

**Elks, Benevolent and Protective Order of.**—Founded in 1868, this service organization in 1950 had 1,025,000 members in 1,575 lodges. Its purpose: To practise charity, justice, brotherly love and fidelity; promote the welfare and enhance the happiness of its members; quicken the spirit of American patriotism and cultivate good fellowship. Activities in 1950 included veterans', children's and invalids' charities, totalling more than \$6,000,000, plus youth and patriotic programs. Publication: *The Elks Magazine*. Officers (1950): Joseph B. Kyle, grand exalted ruler, Gary, Ind., J. E. Masters, grand secretary, 2750 Lakeview Ave., Chicago 14, Ill., the national headquarters.

**Falk Foundation, The Maurice and Laura.**—Founded Dec. 14, 1929, this foundation's general purpose is the advancement of human welfare, and its field of concentration had largely been in basic economic problems, though in 1950 grants were made in the areas of psychiatry and mental health and education for participation in practical politics. Grants during 1950 totalled \$714,240. Publications: *The Cost and Financing of Social Security*; *Employment and Compensation in Education*; *Taxes and Economic Incentives*; and *The Dynamic Economy*. Funds as of Dec. 31, 1950, totalled \$10,889,224. Officers, 1950: Leon Falk, Jr., chairman; Eugene B. Strassburger, secretary; Arthur E. Braun, treasurer; J. Steele Gow, executive director. Headquarters: 1911 Farmers Bank Bldg., Pittsburgh, Pa.

**Ford Foundation.**—Founded Jan. 15, 1936, this foundation has as its purpose the receiving and administering of funds for scientific, educational and charitable purposes, all for the public welfare. Its assets as of June 30, 1950, amounted to approximately \$240,000,000. Officers (1950): Henry Ford II, president; B. J. Craig, secretary and treasurer. Headquarters: 2612 Buhl building, Detroit 26, Mich.

**Franklin Institute of the State of Pennsylvania.**—This is a nonprofit institution founded in 1824 for promotion of the mechanic arts. It devotes itself to interpreting science for nontechnical persons and to research for the benefit of industry and government. Activities include: maintenance of the Benjamin Franklin memorial, a museum of science and industry including Fels planetarium; a technical library of 131,000 volumes, 46,000 pamphlets and more than 4,000 maps; lectures on a wide variety of subjects; honour awards for distinguished achievements in science and technology; publication of *The Journal of The Franklin Institute*; the Franklin Institute Laboratories for Research and Development; the Bartol foundation and the Biochemical Research foundation. A new laboratory was built in 1950 for the Bartol foundation, housing a 10,000,000-v. Van de Graaf accelerator. Income is derived from dues of 5,900 members; museum and planetarium admissions; bequests and gifts; and industrial sponsorship of research and exhibits. Officers (1950): Richard T. Nalle, president; Henry B. Allen, executive vice-president and secretary. Headquarters: Benjamin Franklin Parkway at 20th St., Philadelphia 3, Pa.

**Freemasonry.**—The oldest and largest fraternal organization in the world, the Masonic Fraternity is nonsectarian, nonpolitical, and has no benefit or insurance provisions. Its purpose is the moral and spiritual elevation of its members and, through them, of mankind. Since the 18th century its lodges have been joined together in grand lodges, mostly on a territorial basis, each grand lodge being independent of every other. Masonic organizations based on lodge membership include the Royal Arch, the Knights Templar and the Scottish Rite. An outstanding event of the year 1950 occurred on Feb. 22, when the Order of DeMolay for Boys presented the heroic bronze statue which was to be the central figure in the \$6,000,000 George Washington Masonic National memorial at Alexandria, Va. Masonic membership in the United States was 3,552,982, in 15,406 lodges; world membership was in excess of 5,000,000. Publications: annual transactions by all grand lodges and by many of the related organizations.

**Future Farmers of America.**—This organization, founded Nov. 20, 1928, is a national organization of boys studying vocational agriculture in public secondary schools under the provisions of the national vocational education acts. The chief of the agricultural education service of the U.S. office of education is chairman of an adult national advisory council. The purpose of the Future Farmers is to develop competent, aggressive, rural and agricultural leadership; to nurture a love of country life; to help guide those following agricultural vocations, and generally to support scientific farming methods. During 1950 the organization held its national convention at Kansas City, Mo., with 7,000 members attending; continued an international exchange with the National Federation of Young Farmers Clubs of Great Britain, and promoted leadership and community betterment activities. Membership in 1950 was 319,261. Officers: Walter Cummins, Freedom, Okla., president; Wayne Staritt, Catawba, W.Va., student secretary. Headquarters: U.S. Office of Education, Washington 25, D.C.

**Georgia Warm Springs Foundation.**—This nonprofit organization was founded on July 28, 1927, to conduct a hospital for the after-treatment of poliomyelitis and to train physiotherapists for this work. In 1950 about 900 patients were treated. It has no endowment, its annual deficit being financed by appropriations from the National Foundation of Infantile Paralysis. Publications include annual reports and medical articles of the professional staff. Officers (1950): Basil O'Connor, president and treasurer; Henry K. Urion, executive vice-president and counsel; William F. Snyder, vice-president and secretary. Headquarters: 120 Broadway, New York 5, N.Y.

**Girl Scouts of the United States of America.**—Founded in 1912 by Juliette Low, this organization continued in 1950 to expand its work for international friendship. In March a congressional charter was conferred upon the Girl Scouts of the U.S. in recognition of 38 years of service to youth. Activities for the year included the distribution of 55 tons of schoolbags, made by Girl Scouts and filled with pens, pencils, paper and other supplies, to "Schoolmates Overseas" in 28 countries. In an international exchange of personnel sponsored by the Girl Scouts of the U.S. 15 young adults from the U.S. Girl Scout movement served as counselors in Girl Guide camps in seven European countries. Within the U.S., leaders of local Girl Scout units met in 12 regional conferences during October and November to discuss current problems and to plan for the future. The semiannual registration count of June 30, 1950, showed a total membership of 1,612,074, including 546,489 Brownie Scouts, 638,594 Girl Scouts, 56,911 Senior Girl Scouts and a total of 370,080 adult volunteers and professional workers. National executive director (1950): Dorothy Stratton. National headquarters: 155 E. 44th St., New York 17, N.Y.

**Guggenheim Memorial Foundation, John Simon.**—Founded in 1925 to improve the quality of education and the practice of the arts and professions in the U.S., to foster research and to provide for the cause of international understanding, the organization had in 1950 endowments of about \$30,000,000. Activities in 1950 included the granting of 183 fellowships, tenable in the U.S., to U.S. citizens, Canadians, citizens of the Latin American republics and of the Republic of the Philippines. Officers (1950): Mrs. Simon Guggenheim, president; Francis H. Brownell, vice-president; Henry Allen Moe, secretary-general; E. M. Lundell, Jr., treasurer. Headquarters: 511 Fifth Ave., New York 17, N.Y.

**International College of Surgeons.**—This organization was founded in Geneva, Switz., in 1935 for the creation of a common bond among surgeons of all nations and to promote high standards in surgery. In 1950 international, sectional and national meetings were held. Membership was about 7,500. Its publication is *The Journal of the International College of Surgeons*. Officers (1950): Herbert Acuff, president; Max Thorek, secretary-general. Headquarters: 1516 Lake Shore drive, Chicago 10, Ill.

**Jewish Welfare Board, National.**—Founded in 1913, this agency is authorized by the U.S. government to serve the religious, welfare and morale needs of Jews in the U.S. armed forces and Veterans' administration hospitals. In 1950 it founded the Associated Services for the Armed Forces, with the Y.M.C.A. and the National Catholic Community service, which early in 1951 was consolidated with the re-establishment of the United Service Organizations (U.S.O.). The 1950 activity also included reactivation of activities at military installations throughout the world and the launching of a recruiting campaign for 111 additional Jewish chaplains. The membership in 1950 included 331 Jewish community centres with 490,000 members; and 41 national Jewish organizations. Officers, 1950: Irving Edison, president; Frank L. Weil, honorary president; S. D. Gershovitz, executive director. Headquarters: 145 E. 32nd St., New York 16, N.Y.

**Kellogg Foundation.**—The W. K. Kellogg foundation was founded in 1930 to promote the health, education and welfare of mankind, but principally of children and youth. It functions through these divisions: general education, including public libraries, camping, youth organizations and character-building agencies; medical education; nursing education; public health; hospitals and dental education. It is administered by a board of nine trustees and its funds, June 30, 1950, totalled \$52,211,159.38. Officers 1950: W. K. Kellogg, chairman of the board; Bessie Rogers Young, secretary and treasurer. Headquarters: 250 Champion St., Battle Creek, Mich.

**Kiwanis International.**—Founded Jan. 21, 1915, in Detroit, Mich., this

service organization operates through Kiwanis clubs in local communities, comprising business and professional men. During 1950 Kiwanis clubs provided 560,343 luncheons for needy children; assisted 31,191 needy families, paid for medical examinations for 130,000 children; gave vocational guidance to 247,052 boys and girls; entertained 115,000 farmers at rural-urban meetings; counseled 23,704 veterans; and raised \$19,903,958 for public-welfare campaigns. Membership included more than 200,000 in 3,200 clubs of the U.S., Canada, Alaska, Hawaii and the Yukon territory. Publications: *The Kiwanis Magazine*, *The Monthly Club Bulletin*, and *The Keynote*, organ of the Kiwanis-sponsored Key clubs for outstanding high-school youths. Officers, 1950-51: Don H. Murdoch, Winnipeg, Man., Can., president; O. E. Peterson, Chicago, Ill., secretary; John R. Wright, Lakeland, Fla., treasurer. Headquarters: 520 N. Michigan Ave., Chicago 11, Ill.

**Knights of Columbus.**—This Roman Catholic men's organization was founded in 1882 for the mutual help of its members and to conduct educational, charitable, religious, social, war relief and public relief work. During 1950 the organization continued its series of radio broadcasts entitled "Render to Caesar." Its committee on religious information supplied pamphlets in answer to more than 564,000 requests inspired by newspaper and magazine advertisements, and sent mail instruction in the Catholic religion to 50,000 persons. Its membership in 1950 was 790,615. Publication: *Columbia*, a monthly, John E. Swift was supreme knight during 1950 and headquarters were at New Haven 7, Conn.

**League of Women Voters of the United States.**—Founded Feb. 14, 1920, to promote political responsibility through informed and active participation of citizens in government, the membership of this organization in 1950 was given as 100,000. It operates through state and local leagues, and its 1950 program emphasized strengthening of the United Nations and action against inflation. Its publications include numerous pamphlets and study guides on current political questions. Officers, 1950: Mrs. John G. Lee, president; Mrs. Walter Neale, secretary; Mrs. Bradford L. Patton, treasurer. Headquarters: 1026 17th St., N.W., Washington 6, D.C.

**Lions Clubs, The International Association of.**—Founded in 1917 as a nonpolitical, nonsectarian association of service clubs, this organization's purpose is to create international good will, promote good citizenship and good government, take an active interest in community welfare and provide for good fellowship and free discussion. In 1950 individual Lions clubs completed 116,276 activities designed to further these aims. Membership in 1950 was 420,000, in 8,400 clubs in 29 countries. Publication: *The Lion*, monthly. Officers (1950): H. C. Petry, Jr., Carrizo Springs, Tex., president; R. Roy Keaton, Chicago, Ill., director general. Headquarters: 332 S. Michigan Ave., Chicago 4, Ill.

**Milbank Memorial Fund.**—A membership corporation of ten members under the laws of the state of New York, this organization was founded April 3, 1905, to improve the physical, mental and moral condition of humanity and generally to advance charitable and benevolent objects. Its 1950 activities emphasized public health. Payments made on grants for the last available calendar year (1949) totalled \$291,815.31 paid on 1949 grants, and \$64,057.09 paid on grants of prior years. Its publication is the *Milbank Memorial fund Quarterly*. Total funds in 1950 amounted to \$10,467,226.26. Officers (1950): Morris Hadley, president; Frank G. Boudreau, executive director; Catherine A. Doran, secretary. Headquarters: 40 Wall St., New York 19, N.Y.

**Music Library Association.**—Founded in 1931, this association seeks to promote the establishment and growth of music libraries and collections in the U.S. Its 1950 membership was 875. Publications: *Notes*, quarterly, and its supplement. Officers, 1950: President, Edward E. Colby, music librarian, Stanford university, Stanford, Calif.; secretary, George R. Henderson, chief of the music division, Washington, D.C., public library. Headquarters: Music division, Library of Congress, Washington 25, D.C.

**National Academy of Sciences.**—Founded in 1863, by act of congress, to investigate and report upon any subject of science when called upon by any governmental department, the academy in 1949 numbered 439 members and had an endowment of \$3,550,000, in addition to funds for general and specific purposes. Publications: an *Annual Report*; and *Proceedings*. On April 25, 1950, the Henry Draper gold medal for 1949 was awarded to Otto Struve of Yerkes and McDonald observatories; the Daniel Giraud Elliot gold medal to Robert Broom of Transvaal museum, South Africa; the Mary Clark Thompson gold medal to Laue Koch, Copenhagen, Den. Detlev W. Bronk was elected president of the academy in April 1950. Headquarters: 2101 Constitution Ave., Washington 25, D.C.

**National Association for Advancement of Colored People.**—Founded in 1909, this organization directed its 1950 activities toward abolishing segregation and discrimination in housing, the armed forces, recreation facilities, employment and education. Membership in 1950 was 150,000; the association's annual convention was held in Boston, Mass., June 20-25, 1950. Publication: *The Crisis* magazine. Officers (1950): Arthur B. Spingarn, president; Walter White, executive secretary; Roy Wilkins, administrator. Headquarters: 20 W. 40th St., New York 18, N.Y.

**National Association of Manufacturers.**—The N.A.M. was founded in 1895 to promote the industrial interests of the U.S., foster domestic and foreign commerce, improve employer and employee relations, protect individual liberty and the rights of employer and employee, and support legislation in furtherance of these principles. Its activities in 1950 were exercised through about a dozen committees, and included emphasis on the dissemination of public information. Membership in 1950 was more than 15,000. Publications: *NAM News*, weekly; *NAM Law Digest*, quarterly; and others. Officers (1950): Claude A. Putnam, president; Earl Bunting, managing director; Noel Sargent, secretary; Kenneth R. Miller, treasurer. Headquarters: 14 W. 40th St., New York 20, N.Y.

**National Association of State Libraries.**—This association was founded in 1889 to provide active co-operation among state libraries and to facilitate the exchange of state laws, court reports and public documents. Its 1950 membership included 46 state libraries. Its national convention was held in Cleveland, O., in July. Publications include check lists of collected public documents, legislative journals, session laws and statutes. Officers (1950): Elinor M. Stephens, Salem, Ore., president; Alfred Decker Keator, Harrisburg, Pa., secretary-treasurer. Headquarters: State library, Harrisburg, Pa.

**National Education Association of the United States.**—Founded in 1857; held its 88th annual meeting and its 29th representative assembly at St. Louis, Mo., July 3-7, 1950. Progress in the activities of its committees, in public relations, in its work with state and local associations and in the field of standards for the preparation and certification of teachers continued. The theme for American Education week, Nov. 6-12, 1950, was "Government Of, By and For the People." It had in 1950 a membership of 453,797 and its affiliated state associations had a membership of 856,7502. Publication: *NEA Journal*. Officers (1950-51): Corma Mowrey, president; Willard E. Givens, executive secretary. Headquarters: 1201 16th St., N.W., Washington 6, D.C.

**National Temperance League, Inc., The.**—This federation of state temperance organizations was formed by the merger of the Temperance League of America (formerly the Anti-Saloon League of America) and the National Temperance Movement, Inc., at a meeting of the governing boards of both organizations, ratified in Des Moines, Ia., Nov. 20, 1950. Its purpose is to promote abstinence and to diminish and ultimately to eliminate the traffic in alcoholic beverages and the evils arising therefrom. Officers, 1950: President, Robert G. Lee, Memphis, Tenn.; secretary, James R. Swedenburg, Birmingham, Ala.; general counsel, Edward B. Dunford, Washington, D.C. The finance and publication department is at 1321 Chicago Temple, Chicago, Ill. The legal, legislative and research departments are at 131 Independence Ave., S.E., Washington 3, D.C.

**Parents and Teachers, National Congress of.**—This organization, founded in 1897, had in 1950 a membership of 6,167,079 parents, teachers and other citizens interested in its objectives, organized in about 35,000 individual local associations. Its purpose is to promote the welfare of children; raise the standards of home life; secure laws for care and protection of children and youth; bring the home and school into closer relationship; and develop plans for joint action along these lines by educators and the general public. Activities for the fulfillment of these aims are carried on in each local P.T.A. unit in the form of monthly programs. Local committee chairmen work in co-operation with corresponding chairmen in their state congresses, and these in turn with their opposite numbers in the national organization. Publications: the *National Parent-Teacher*, the *P.T.A. Magazine*; the *National Congress Bulletin*, a monthly news-sheet for local leaders; books and special publications. National headquarters: 600 S. Michigan Blvd., Chicago 5, Ill.

**Research Libraries, The Association of.**—Founded in 1931, this association of 48 institutions seeks by co-operative effort to develop and increase the resources and usefulness of the research collections in American libraries. Publications include *Doctoral Dissertations Accepted by American Universities and Newspapers on Microfilm: A Union Check List*. Charles W. David was executive secretary in 1950, and headquarters were at the University of Pennsylvania library, Philadelphia, Pa.

**Rockefeller Foundation, The.**—Founded in 1913 "to promote the well-being of mankind throughout the world," the foundation during 1950 made grants to institutions or agencies such as universities, research institutes or governmental agencies, in the following fields in which its program for the advancement and application of knowledge to human interest was currently concentrated: medical sciences; natural sciences; social sciences; humanities; and public health. The 21 trustees are the 21 members of the corporation. Assets, Dec. 31, 1949, totalled \$122,989,438. Officers: Chester I. Barnard, president; Lindsley F. Kimball, vice-president; Flora M. Rhind, secretary. Headquarters: 49 W. 49th St., New York 20, N.Y.

**Rotary International.**—This world-wide service organization comprises business and professional men devoted to "helpfulness to others in business and community life." The first Rotary club was organized in Chicago, Ill., Feb. 23, 1905, and in 1950 there were more than 7,200 Rotary clubs with more than 344,000 members. During 1950 Rotary activities included promotion of good citizenship among boys and girls, and advancement of international understanding. The Rotary foundation fellowships, under which graduate students are given grants to study in a country other than their own (begun in 1947), by 1950 totalled more than 195 fellowships and grants of almost \$500,000. Publications include the official monthly magazine, *The Rotarian*, also circulated in Spanish and French, plus such special publications as a monthly summary report on activities at the United Nations. For the fiscal year 1950-51, Arthur Laqueux of Quebec City, Can., was president of Rotary International and Philip Lovejoy of Chicago, general secretary. Headquarters office of Rotary International is in Chicago, and additional offices to serve Rotary clubs overseas are located in London, Eng., and Zürich, Switz.

**Russell Sage Foundation.**—Established in 1907 by Mrs. Russell Sage for "the improvement of social and living conditions in the U.S.," the foundation's program underwent a revision in 1948 when its library collection, relating chiefly to social work, was divided between the New York School of Social Work and the College of the City of New York. Its later program consisted of varied research and consultation projects, designed to bring into closer relationship research in the social sciences and the work of practitioners concerned with the problems of society. In 1950 were issued the publications, *Effective Use of Social Science Research in the Federal Services and Philanthropic Giving*, a report of present-day philanthropy in the U.S. Assets of the foundation, as of Dec. 31, 1950, were \$13,955,569. Officers (1951): president, Eli Whitney Debevoise; general director, Donald Young; treasurer, Dave H. Morris, Jr.; secretary, Ralph G. Hurlin. Headquarters: 505 Park Ave., New York 22, N.Y.

**Seeing Eye, Inc., The.**—A national philanthropy founded in 1929 and supported through annual memberships, public contributions and bequests. The society's purposes include the training of dogs to guide blind persons, teaching instructors the technique of training the guide dogs and training the blind in the proper use of their guide dogs. During 1950, 187 blind persons were provided with dog guides. Of this total, 124 received their first dog guide and 63 their second, third or fourth dog guides. Membership in 1950 was about 20,000; a total of 1,800 dogs had been trained for the blind since the organization's inception. Publications: *The Seeing Eye Guide*, published quarterly for the members of The Seeing Eye, and printed booklets on the organization and its policies. Officers (1950): Henry A. Colgate, president; W. H. Ebeling, executive vice-president; James Carey, treasurer. Headquarters: Morristown, N.J.

**Sloan Foundation, Inc., The Alfred P.**—Founded in 1934, the foundation's primary purpose is the increase and spread of economic knowledge; it also promotes interest in cancer research, primarily through the Sloan-Kettering Institute for Cancer Research of the Memorial Cancer centre in New York city. Economic activities include grants to research organizations and institutions of higher learning, and for the production and distribution of radio programs, motion pictures, pamphlets and related material in the field of economics. In 1950 its funds totalled \$18,162,250. Officers (1950): Alfred P. Sloan, Jr., president; Arnold J. Zurcher, vice-president and executive director; James F. Kenney, secretary and treasurer. Headquarters: 30 Rockefeller plaza, New York 20, N.Y.

**Sodality of Our Lady.**—This international Catholic body was founded in 1563 to foster devotion to Mary, the Mother of God. During 1950 it sponsored a Marian-Holy Year pilgrimage to European shrines on a chartered ship carrying 904 pilgrims from 46 states. Five sodality summer schools of Catholic Action were held with a total attendance of 6,551. A delegation of eight regional Jesuit secretaries participated in the first international meeting of sodality directors in Rome in April. U.S. sodalists sent to Pope Pius XII, as a spiritual Christmas gift, offerings of 941,526 masses and 790,039 communions. In the U.S., membership in 1950 comprised 16,565 affiliated units with from 6 to 2,000 members in each. Publications include *The Queen's Work*, *Action Now*, *Junior Sodalist* and pamphlets. Officers are a number of priests of the Jesuit order. Headquarters, 3115 S. Grand Blvd., St. Louis, Mo.

**Twentieth Century Fund.**—Founded in 1919 by Edward A. Filene, this is a nonprofit, nonpartisan foundation for research and public education on current economic problems. Activities during 1950 included publication of *America's Capital Requirements: Estimates for 1946-1960*, and completion, for release in Jan. 1951, of *Monopoly and Free Enterprise*. Also nearing publication were reports on wages and employment in the U.S., government finance and economic stabilization. Other economic problems were under study. Findings from two fund reports were used in a filmstrip, "Machine-Power Means Plenty," and in a documentary film to be released in 1951 entitled "Working Together: A Case History of Labor-Management Co-operation." The fund also collaborated with the National Broadcasting company in a 13-week series of programs, beginning in Dec. 1950, entitled "The People Act." Total assets, Dec. 31, 1950: \$7,547,270. Pres. John H. Fahey of the fund died Nov. 19, 1950; A. A. Berle, Jr., was treasurer; Evans Clark, executive director, and J. Frederic Dewhurst, economist. Headquarters: 330 W. 42nd St., New York 18, N.Y.

**Woman's Christian Temperance Union, National.**—This organization was founded in 1874 to unite Christian women of the U.S. to rally public sentiment for total abstinence from all alcoholic liquors and to abolish traffic in alcoholic liquors. Membership in 1950 was about 400,000; publications include *The Union Signal* (weekly) and *The Young Crusader* (monthly), primarily for children. During the year it conducted training schools in Illinois, Indiana and New York, and carried on its comprehensive educational program. Officers (1950): Mrs. D. Leigh Colvin, president; Mrs. B. Blanch Butts, corresponding secretary; Violet T. Black, treasurer. Headquarters: 1730 Chicago Ave., Evanston, Ill.

**Women's Clubs, General Federation of.**—Founded in 1890, this organization aims at uniting women's clubs throughout the world to promote education, philanthropy, public welfare, moral values, civics and fine arts. Its 1950 activities stressed an educational program on the United Nations; sending of relief supplies to war areas; co-operation of 2,895 clubs in a "Build a Better Community" contest; a scholarship program and programs to stimulate interest in the welfare of youth. Membership in 1950 included 770,000, with a total in affiliated organizations of about 11,000,000 in the U.S. and 38 other countries. Publication: *General Federation Clubwoman* (monthly). Officers (1950): Mrs. Hiram Cole Houghton, president; Mrs. R. I. C. Prout, treasurer; Mrs. Thalia S. Woods, executive secretary. Headquarters: 1734 N St. N.W., Washington, D.C.

**Young Men's Christian Association.**—Founded in London, Eng., in 1844, this is a world-wide fellowship seeking to improve the spiritual, social, recreational and physical lives of young people. During 1949 (latest

data available in 1950) there were 1,651 Y.M.C.A.s operating in cities and rural areas, with memberships of almost 2,750,000. More than 150,000 clubs, classes, teams, special-interest groups and councils met regularly with programs emphasizing physical, educational, social and religious features, plus emphasis on citizenship and world affairs. Among high school youth, 9,656 Hi-Y clubs for boys and 2,760 Tri-Hi-Y clubs for girls were functioning. During 1950, 24 states of the U.S. conducted "model legislatures" under a youth-and-government program. Publications included *National Council Bulletin* and *YMCA Year Book* for 1950. Endowments totalled \$48,990,500. Officers, 1950: Harper Sibley, president; Eugene E. Barnett, general secretary. The corporate body, the National Board of Y.M.C.A.s, had headquarters at 291 Broadway, New York 7, N.Y.

**Young Womens Christian Association of the United States of America.**—This organization was founded in England in 1855 and in the U.S. in 1858, to build a fellowship of women and girls devoted to the pursuit of Christian ideals in personal and social living. During 1950, 3,000,000 women and girls participated in its activities, which engage women from high school age on. Publications: *The Woman's Press* and *The Bookshelf*. Officers, 1950: Mrs. Arthur Forrest Anderson, president; Mrs. Roland P. Beattie, treasurer; Mrs. Harrison S. Elliott, general secretary. Headquarters: 600 Lexington Ave., New York 22, N.Y.

**Zionist Organization of America.**—Founded in 1897, this organization's purpose is to safeguard the integrity and independence of Israel as a free and democratic commonwealth by means consistent with U.S. laws, and to strengthen Jewish sentiment and consciousness as a people and promote cultural creativity. Its 1950 activities included charitable and cultural work consistent with these purposes. Membership in 1950 was 250,000 and publications included *The New Palestine*, *Dos Yiddishe Folk* and *Inside Israel*. Officers (1950): Benjamin G. Browdy, president; Sidney Marks, secretary. Headquarters: 41 East 42nd St., New York 17, N.Y.

**Zonta International.**—A service organization of executive women in business and the professions, founded in 1919, this organization encourages high ethical business and professional standards and the improvement of the legal, political, economic and professional status of women, plus international understanding through a world fellowship of executive women. Membership in 1950 included about 225 clubs with approximately 8,500 members in the U.S. and other countries. Publications: *Zontian* and pamphlets. Officers (1950-51): Elizabeth Gist Dozier, San Fernando, Calif., president; Ellen Fireoved, Chicago, Ill., executive secretary. Headquarters: 59 E. Van Buren St., Chicago 5, Ill.

**Sociology.** The trend most clearly apparent in 1950 was the continuing merger of sociology with a vaguely general social science as yet unnamed. The merger was the result of drift; there was certainly little semblance of planning. Thus there was much overlapping of effort, concealed by competing terminologies and esoteric techniques.

Among the fields in which work was going on during 1950 that was capable of being linked up with an eventual general theory of the social sciences, despite some overlapping, was social psychology. The work of Muzafer Sherif on social norms, of H. A. Murray and Norman Cameron on abnormal personality, of L. S. Cottrell and others on subjective aspects of social interaction,

**COMMUNITY LEADERS** of Morningside Heights, Inc., a project under way in 1950 to halt the "creeping obsolescence" of neighbourhood decay by efforts at total planning. The community comprised Morningside Heights, N.Y., and adjoining Manhattanville, known as "the Valley"

and of the followers of Kurt Lewin on group dynamics was all relevant. In particular, Cottrell's revival of attention to the phenomena loosely called empathy promised much, for it gave some assurance that the almost-forgotten work of Max Scheler on "the forms of sympathy"—compathy, transpathy, mimpathy, empathy, unipathy, and propathy—would soon be integrated with current theory and research. Further, the trends in group dynamics correlated not only with R. Freed Bales' *Interaction Process Analysis* but also with the quasi-sociological studies carried on by the school centring around J. L. Moreno and his journals, *Sociometry* and *Sociatry*, and with the renewed interest in the study of small groups. Among the ways in which this interest appeared was the translation by Kurt H. Wolff of *The Sociology of Georg Simmel* and the reissue of Howard Becker's *Systematic Sociology on the Basis of the Beziehungslehre and Gebildelehre of Leopold von Wiese*.

The field roughly described by the phrase "culture and personality" also gave some indication of eventual interconnection with general social science theory. Initially stimulated by grants from the Social Science Research council in the early 1930s, and intended to serve as an open court for all the social sciences, the study of "culture and personality" had been largely taken over by the anthropologists in the early 1940s. Discredited to some extent by the free-and-easy speculations of Margaret Mead, Geoffrey Gorer, Gregory Bateson and even Ruth Benedict, but retaining a good deal of esteem because of the more circumspect work of Ralph Linton and others, "culture and personality" showed signs in 1950 of profiting by contact with social psychology rather than with psychoanalysis only, and also of absorbing effectively the French sociological contributions of Émile Durkheim, Marcel Granet, Louis Gernet and Maurice Halbwachs. If this integrative trend were to continue, it would mean that sociology of knowledge, not only of French derivation but also stemming from the German varieties represented by Max Scheler and Karl Mannheim, would either incorporate "culture and personality" or be incorporated by it. The end product, moreover, would be readily assimilable into one important section of a general theory of the social sciences.

During World War II there had emerged a strong interest in what might be called a concrete rather than abstract integration of the social sciences, namely, area studies. Focused primarily on Axis countries and necessarily of *ad hoc* character, this interest nevertheless led to the conviction that the various social sciences, including those that were almost wholly descriptive, could be brought into some semblance of unity when an area or region provided the integrating boundary. Interest in abstract integration soon developed. Werner J. Cahnmann, a sociologist, was among the first to advance a general theory of area studies, and in 1950 the Social Science Research council published a monograph by Julian H. Steward, an anthropologist, entitled *Area Research*. Further, a number of grants were made for area research training fellowships and travel. The Russian institutes at Harvard and Columbia universities continued to function essentially as centres of area studies, and other institutes dealing with the far east, notably the one at Yale, were also established. The state of world affairs had again given a concrete emphasis to area studies, but in 1950 the abstract counterpart was not lacking, and might be expected to develop further.

Perhaps more important than any other 1950 development toward the integration of the social sciences, because it was not of limited perspective, was the November Princeton conference, sponsored by the American Council of Learned Societies, on "Uniformities in History." There had been previous conferences along related lines, but the one in 1950 was particularly designed to take advantage of the presence in the United States of the

author of *A Study of History*, A. J. Toynbee. In view of the fact that his work, vast in its sweep and implications, included far more than conventional history, philosophers, anthropologists, sociologists and students of language and literature were brought together with a number of specialists in various historical fields. The topic was "Feudalism," but might just as well have been called "Methods for the Comparative Study of Social Structures, with Special Reference to Feudalism." Toynbee participated actively in the discussions, and those present agreed that a definite step toward the integration of history (in certain of its aspects) with the other social sciences had been made. It remained to be seen what later conferences would bring forth.

During 1950 the American Sociological society further expanded, consolidated and increased the number and quality of services to its members. For the first time, the annual meeting was held west of the Mississippi and at a time other than the Christmas holidays—Denver, Colo., Sept. 7–9. In Oct. 1950, the Philosophy of Science association held its annual meeting in Chicago, Ill., where attention was focused on the philosophy of the social sciences.

In Europe, the outstanding sociological event of the year was the meeting of the International Sociological congress at Zürich, Switz., during the summer. Another organization, likewise calling itself international but having few participants, met somewhat earlier at Rome.

**Sodality of Our Lady:** see SOCIETIES AND ASSOCIATIONS.

**Softball.** Avenging their setback of the previous campaign, the Clearwater, Fla., Bombers dethroned the Toronto (Ont.) Tip Top Tailors as Amateur Softball association champions. The two teams came through to a showdown play-off in the world tournament at Austin, Tex., and the Bombers triumphed, 1–0, as Johnny Hunter twirled his 11th consecutive shutout.

Laurels in the women's championship, played at San Antonio, Tex., were won by the Orange, Calif., Lionettes. The strong coast team frustrated the bid of the Phoenix, Ariz., Ramblers for their third straight crown when the two rivals met in the deciding game of the tourney on the last day. With Bertha Ragan, their mound star, showing the way, the Lionettes tallied twice in the 15th inning to triumph, 3–1.

(T. V. H.)

**Soil Erosion and Soil Conservation.** By 1950 it had become apparent that many of the world's soil and water conservation programs were being developed as permanent national institutions. Not only were individual nations consolidating their facilities for conservation work, but groups of nations were taking steps to co-ordinate their programs for greater speed of accomplishment and mutual benefit. An example of the latter was the Inter-African Information Bureau on the Conservation and Utilization of the Soil, formed early in the year by Belgium, France, Portugal, Great Britain and the Union of South Africa.

At the close of the year, 22 countries besides the United States had organized soil conservation programs. Some conservation measures had been applied to farm land in 30 other countries. In general, nearly all these programs were patterned after that of the United States.

Some of the problems that had developed in connection with the spread of soil conservation were attacked with vigour during 1950. Important beginnings were made to solve the most serious problem of all—the training of soil conservation tech-

nicians in sufficient numbers to staff programs. A plan for in-service training on the island of Cyprus was launched by the Food and Agriculture organization of the United Nations and the government of Cyprus during meetings held in April. Twelve near east and south European countries participated in the co-operative training program: Cyrenaica, Iran, Jordan, Lebanon, Saudi Arabia, Syria, Turkey, Israel, France, Greece, Italy and Yugoslavia. Technicians from these countries were sent to Cyprus to spend one year or more working under supervision of conservation officials of Cyprus, either on a broad over-all basis or as specialists in one particular field of land and water conservation.

Other serious problems seen with greater clarity at the turning of the half century were those having to do with steep cultivated lands in areas of heavy rainfall, wind erosion on newly drained and cultivated flat areas, sloping land subject to landslips, tropical soils of low fertility and irrigated areas destroyed by misuse of water. Research was started in several parts of the world to find conservation methods suitable for these special land and climatic conditions. Pilot experiments were in progress in West Bengal, India, and in Ceylon, to study the volume, rate and types of erosion in relation to rainfall. Field experiments to adapt drainage-type terraces to rolling land with tight subsoil and excessive runoff were in progress in the Republic of the Philippines. In New Zealand the prevention of soil slips on eroded steep slopes was being investigated through various methods of revegetation. Wind erosion on light peat soils after drainage was being studied in the East Anglia fenlands of England. Exchange of seed and other planting materials of potential erosion-control values was carried on among the United States, Australia, New Zealand, African countries, India and Japan, and among South and Central American countries, especially those in the tropical zone. Sand dune control plants also were made available to France, and to Israel and other near east countries, from various parts of the western hemisphere.

**United States.**—By Nov. 1, 1950, farmers and ranchers in continental United States and in Alaska, Hawaii, Puerto Rico and the Virgin Islands had organized 2,319 soil conservation districts covering 1,270,000,000 ac. and 4,817,820 farms. The more than 11,000 farmer directors or supervisors of the districts constituted the largest group in the world of voluntary, unpaid agricultural leaders devoted to conservation of soil and water, the basic agricultural resources. During 1950 the main objective of the districts, and of the soil conservation service which provides technical assistance to the districts, was to speed up the work of applying soil conservation plans to farm land. A rate-of-progress study showed that nearly five times as much conservation work was done on the land in 1950 as was done in 1942, and that approximately 19% of the task of applying the basic conservation measures had been completed, nation-wide, as of June 30, 1950.

At the end of the fiscal year, detailed conservation surveys had been completed on 344,770,000 ac. of farm and ranch land. Complete conservation farm plans had been prepared for 873,181 farms including 240,000,000 ac. Nearly 218,000,000 ac. of the farm land planned were being operated according to the conservation plans. About 200,000 additional farmers and ranchers had made application to the soil conservation service for assistance in preparing plans for their land.

Considerable progress was made in the land capability survey work, a function of the soil conservation service. Data reported from the survey showed that more than 31% of the land of the United States falls in classes I, II and III—land which is suitable for continuous cultivation, with careful conservation treatment of classes II and III. Eight and one-half per cent consists of class IV, a borderline grade which should be under

good grass cover most of the time with only an occasional plowing for crop production. And about 55.5% consists of land classes V, VI and VII, suited only for growing grass and trees. A small percentage (5%) is in class VIII, which consists of marshes, beaches, rock outcrop and other land good only for wildlife or recreational purposes.

A progress report of flood control operations carried on by the soil conservation service in 11 watersheds showed that 554 subwatershed work plans, covering 7,174,703 ac. and 40,057 farms, had been completed by June 30, 1950. It was estimated that the program of improvement works in the 11 watersheds would require from 10 to 24 years, varying with the needs of the areas for upstream flood control measures.

Intensive studies were carried out in the southern Great Plains on the mechanics of wind erosion. A carefully standardized wind tunnel of laboratory type was used for measuring the susceptibility of soils to wind erosion when prepared by a variety of conservation practices. The studies confirmed the great importance of roughness in seedbed preparation in the plains, especially the protection given by clod structures against erosive winds. Projects also were devoted to the delineation of zones of high erosion risks for dry-land farming in the High Plains. Two areas of maximum wind erosion risk were indicated—the sandy row-crop land west and southwest of Lubbock, Tex., and the newly broken expanded small-grain area in southeastern Colorado as well as adjoining counties in Kansas. Stubble mulch farming, important wind erosion control practice, was practised on more than 35,000,000 ac. of cropland by the end of the year.

**Latin-American Countries.**—Developments in nearly all Latin-American countries included important research and demonstrations to determine and prove the conservation practices best suited to different soil and climatic conditions. There was a

TAPPING FOR WATER TABLES beneath Saharan dunes in 1950, as scientists of the Centre of Saharan Research at Beni Abbès, Alg., explored for ways and means of restoring desert fertility and making the land habitable

distinct trend toward introducing technical planning of individual farms as the essential feature of co-operative programs between landowners and the government. In Mexico, complete conservation plans were made for 1,000 ac. of irrigated farms in Durango and the plans given farmers for use in planting, cultivating and irrigating to prevent erosion, alkalization and waste of water. In unirrigated areas, bench terraces, rock dams, contouring and strip cropping, hillside tree planting and range management were widely used.

In Costa Rica a soil conservation project was organized in the Palmares valley where erosion is serious because of continuous cultivation for tobacco. Nearly 1,000 ac. were terraced. Green-manure cropping, contour strip cropping and rotations including pasture crops were introduced on many farms. In El Salvador, the soil conservation program, originally started for rehabilitation of coffee lands, was extended to all farm land, with skilfully managed educational programs in all localities.

Tree planting in the Argentine pampas was launched by governmental order as a part of the program to halt soil erosion. At the same time, intensive ecological studies were in progress to determine native and exotic plants suitable for stabilization of moving sand dunes in the province of Buenos Aires.

More than 100 trained soil conservationists were working in various regions of Colombia to assist farmers with erosion control. Watershed studies were made and reported to the government for use in setting up regional soil and water conservation projects. A survey of the land of Ecuador, to determine the critical eroded areas of both steep and level lands and the areas requiring reforestation, were made and the report submitted to the Food and Agriculture organization of the United Nations. The Ecuadorian government urged formation of an inter-American institute for soil conservation and reforestation, proposing Ecuador for location of the institute and the land of Ecuador for study and demonstrations to benefit all South American countries having similar problems.

**Europe.**—A meeting of European experts in land and water utilization and conservation was held at Amsterdam, Neth., in July. It was sponsored by the Food and Agriculture organization of the United Nations. Countries sending delegates were Austria, Belgium, Denmark, Finland, France, Ireland, Italy, the Netherlands, Norway, Sweden and the United Kingdom. Observers attended from Spain, western Germany and the United States. Some of the problems brought to light were:

1. Lack of co-ordination, within most European countries, of agencies concerned with different phases of land and water utilization. In Spain, a government decree ordered that all soil conservation activities be co-ordinated in a soil conservation service. France and Italy, too, had taken initial steps to draw together their conservation facilities. In the United Kingdom there was an effective co-ordination of activities concerned with the major aspects of land and water use.

2. Need for exchange among all European countries of knowledge resulting from scientific experiments which might be of use for soil conservation throughout the continent. The conference stressed the need for publication, through all Europe, of negative results as well as successful ones in order to minimize duplication of research.

3. Need for a mutual assistance agreement among European nations in setting up regulations for protection of agricultural lands against sand, clay, peat, stone and other types of industrial exploitation. Norway, the United Kingdom, Belgium and the Netherlands had such regulations, but in other countries they were lacking.

4. The overgrazing of pastures, both highland and lowland, in the Mediterranean countries had created a very difficult problem. Uncontrolled grazing on mountain lands had seriously dam-

aged forest land and endangered the productivity of valley land by flooding, spreading of erosion debris and clogging of streams and reservoirs. Research in pasture management and improvement was strongly recommended by the conference.

The conference recommended establishment of a permanent soil conservation working commission for Europe, with two subsections, a northern and a southern group, meeting at stated intervals and on call for consideration of critical area problems which might arise.

Serious soil erosion was reported in western Norway, with dust storms on cultivated land, and in the western and northern areas where peat and grass and heather turf are cut for fuel. The soil conservation committee of the department of agriculture proposed legislation for soil conservation in the Norwegian parliament.

**Africa.**—The Algerian soil conservation program, organized in 1941, was given fresh impetus during 1950 by the granting of Economic Cooperation administration funds for purchase of heavy machinery for use in applying erosion-control practices on 4,800,000 ac. of farm land urgently in need of protection. Nearly 50,000 ac. were restored in 1950, making about 100,000 ac. treated with modern conservation practices such as contour terracing, bench terraces on steep slopes, tree planting and control of gullying.

Important soil structure and fertility investigations were in progress throughout much of East and South Africa, for use in determining conservation measures suitable to cultivated and pasture lands in Uganda, Kenya, Tanganyika, Nyasaland, Rhodesia and the Union of South Africa. Two main groups of projects were studies of the functions of organic manures in supplying nutrients to the plants, and investigations of soil structure as related to crop rotations including grass, the carbon and nitrogen cycles in soil and mechanization in relation to soil moisture. Surveys showed that considerable erosion damage in East African countries had resulted from the "increased crops" production during World War II. All governments announced that the programs for soil conservation education would be intensified in native areas. The soil conservation service of South Africa was reorganized to provide for regionalization of both administration and activities on the land, with a view to farm planning in individual-farm units.

**Israel.**—The soil conservation service of Israel consisted of 50 technicians who were responsible for introducing soil conservation measures on settlement lands as the areas were laid out by the government. Conservation plans had been prepared for nearly 100 settlements by the end of 1950. Contour planting, terracing, pasture seeding, water spreading, tree planting and conservation crop rotations were basic practices in use. Grass nurseries were started, one at Gaza near the Egyptian border, for tests of grasses from the United States and for expansion of orchard grass, native to Israel. A water conservation experiment station was planned, and a range management division was established to function as a part of the soil conservation service.

**Solar System:** see ASTRONOMY.

**Solomon Islands:** see PACIFIC ISLANDS, BRITISH; TRUST TERRITORIES.

**Somaliland, British:** see BRITISH EAST AFRICA.

**Somaliland, French.** This former colony situated in the Gulf of Aden, the status of which was changed in 1946 to that of overseas territory, is bounded north

by Eritrea, northwest and southwest by Ethiopia and southeast by British Somaliland. Area: 8,376 sq.mi. Pop. (1949 est.) 47,000. Among the natives there were 21,000 Danakils, 15,700 Somalis and 5,600 Arabs. There were also about 2,034 Europeans, including 1,260 French. Capital of the Côte Française des Somalis: Jibuti (pop., 1948, 22,000). Governor: Numa Sadoul.

**History.**—By an act of Aug. 19, 1950, was created a representative assembly of 25 members divided into two sections deliberating together, the metropolitan section consisting of 12 members and the native section of 13 members elected by constituencies based on ethnic considerations (4 Issas, 4 Danakils, 2 Issaks, 2 Arabs and 1 Gadabourcy). On Nov. 5 election of the metropolitan section took place: only candidates of the Rassemblement du Peuple Français (Gen. Charles de Gaulle's party) were elected.

**Finance.**—Budget (1949 est.): 403,300,000 Jibuti francs. Monetary unit: Jibuti franc with an exchange rate of 100 Jibuti francs=168 metropolitan francs. The exchange rate in 1950 for the metropolitan franc was 350 to the U.S. dollar.

**Foreign Trade.**—(1949) Imports 1,940,200,000 Jibuti francs; exports 1,490,200,000 Jibuti francs. Main exports (metric tons): salt 112,015; Ethiopian coffee 5,341; Ethiopian cereals 4,409; Ethiopian hides 1,670.

**Transport and Communications.**—Railway (a section of the Jibuti-Addis Ababa line): 98 km. Roads (1948): 25 km. Motor vehicles licensed (1948): cars 169, commercial 210. Ships entered at Jibuti (1949) 1,550; cargo (metric tons): unloaded 277,900; loaded 133,000. (C. A. J.)

**Somaliland, Italian.** This former Italian colony in east Africa, under British military administration from 1941, was consigned to Italian trusteeship on April 1, 1950; bounded southeast by the Indian ocean, northwest by British Somaliland and Ethiopia and west by Kenya. Area: 194,000 sq.mi. Pop.: (1949 est.) 955,000, almost exclusively Somali, with 2,985 Italians. Capital: Mogadishu (pop., 1949 est., 74,000, including the majority of Italians in the territory). Administrator: Giovanni Fornari.

**History.**—On Nov. 21, 1949, by a resolution of the general assembly of the United Nations, Italian Somaliland was placed under the trusteeship system, with Italy as the administering authority, with the provision that it should become an independent sovereign state in ten years. Pending ratification of the trusteeship agreement the administration, which had been British since the territory was occupied by Allied forces in 1941, was taken over by Italy on April 1, 1950.

The transfer of powers took place without incident and a temporary administrative boundary between Somaliland and Ethiopia, the frontier of which remained undefined, was agreed upon by the parties concerned. As part of the trusteeship machinery an advisory council was established in Mogadishu, consisting of representatives of Colombia, Egypt and the Philippines, to advise the administering power.

The advisory council reported favourably to the United Nations in Nov. 1950 on the work of the Italian administration and noted an improvement in public security. During the fifth session of the general assembly of the U.N. the trusteeship agreement for the territory was approved despite an objection by the Ethiopian government that it was invalid because as an interested power they had not concurred in it. During the debates representatives of the Somali Youth league, which had bitterly opposed the return of Italy, complained of oppression and victimization and of intense Italian immigration, but the report of the advisory council suggested that the complaints were exaggerated. Ethiopian opposition to Italy softened considerably after the satisfactory solution approved for Eritrea (*q.v.*) and discussions between these two countries over the thorny problem of the disputed boundary, which formed the pretext for the Italian conquest of Ethiopia in 1936, began. (See also TRUST TERRITORIES.) (F.E. St.)

**Economy.**—Budget (1948-49, actual): revenue £1,114,747; expenditure £1,405,832. Foreign trade (1949): imports £1,378,500; exports £878,900. Roads (1947): 5,300 mi.

**Somoza, Anastasio** (1896— ), Nicaraguan government leader, was born on Feb. 1 in San Marcos, province of Carazo, Nic. He was educated at the Instituto Nacional de Oriente, Granada, Nic., and at the Pierce Commercial school in Philadelphia, Pa. He was collector of internal revenue of the department of León in 1925, and after his party came into power in 1928 rose rapidly in national affairs, becoming successively governor of León, minister of war, envoy extraordinary and minister plenipotentiary to Costa Rica, assistant secretary of foreign affairs and finally minister of foreign affairs. He was president of the republic, 1937-47. He held the post of war minister when he announced, Feb. 12, 1950, that he would run for president in that year to succeed Víctor Román y Reyes. He was elected to a six-year term on May 21, 1950.

**South Africa, British:** see BRITISH SOUTH AFRICAN PROTECTORATES.

**South Africa, The Union of.** The Union of South Africa is a self-governing dominion of the British Commonwealth of Nations. The four provinces of which it consists, the Cape of Good Hope, Natal, the Transvaal and the Orange Free State, extend from the southernmost point of the African continent to the Limpopo river in the north. The total area of the Union is 472,494 sq.mi. (incl. Walvis bay, 430 sq.mi.). Pop. (1946 census): 11,418,349; (1949 est.): 12,108,000 (Europeans 20.7%; native [Bantu] 68.7%; Asiatic 2.5%; mixed 8.1%). South-West Africa (area 317,725 sq.mi., pop. est. 1949: 374,000), a former German colony, has been administered by the Union of South Africa since 1920 under League of Nations mandate and governed as an integral part of the Union (see also TRUST TERRITORIES).

Official languages (European pop., 1946): Afrikaans (derived from Dutch) 55.9%, English 39.9%. The Africans are Bantu-speaking; of the coloured, more than 90% are in the Cape province and all speak Afrikaans or English; of the Asians (Indians), more than 80% live in Natal. Religion: (European pop., 1946) Christian 95.5% (Dutch Reformed Church 55%, Anglican 19%, Methodist 6%, Presbyterian 5%, Roman Catholic 5%), Jewish 4%; (non-European pop.) Christian 51%, no religion 44%, the remainder Hindu, Moslem and Buddhist. Chief towns (pop., 1946 census): Capetown (seat of legislature 470,911, incl. 220,398 Europeans); Pretoria (seat of government, 244,887, incl. 130,810 Europeans); Johannesburg (765,457, incl. 332,026 Europeans); Durban (372,269, incl. 130,143 Europeans); Port Elizabeth (147,907, incl. 65,271 Europeans). Governors general: (1950) Maj. Gideon Brand van Zyl, (from Jan. 1, 1951) Ernest George Jansen; prime minister and minister of external affairs, Daniel François Malan.

**History.**—The most important event in 1950 was the death of Gen. J. C. Smuts (see OBITUARIES) which occurred on Sept. 11. The whole country was deeply moved by the passing of the man who was by common consent regarded as the greatest figure South Africa had produced. Jacobus Gideon Nel Strauss was unanimously elected leader of the United party and of the parliamentary opposition in succession to General Smuts.

The first elections held on Aug. 30 in the mandated territory of South-West Africa under the act passed in 1949 resulted in a sweeping victory for Malan's Nationalist party, which won all the six new seats in the Union house of assembly as well as 15 of the 18 seats in the local legislature. The government's slender majority in parliament was strengthened accordingly,

SOUTH AFRICAN MINING RECRUIT being fingerprinted by an official of the National Recruiting corporation in 1950, by way of signing up for work in the nation's gold mines

there being a total of 86 members of the assembly supporting the government and 73 forming the opposition (including all parties).

Ernest George Jansen resigned the portfolio of native affairs following the announcement that he would take office on Jan. 1, 1951 as Governor general. A former speaker of the house of assembly, he would be the first Nationalist to hold the office of governor general.

**Legislation.**—The parliamentary session lasted from January till June. There were four highly controversial measures. The Group Areas act provided for the population to be divided into three major groups, white, native and coloured, and for the native and coloured groups to be subdivided on ethnic, linguistic or cultural lines. The government was empowered to proclaim areas for occupation by members of the three racial groups. A person who was not a member of a group was prohibited from owning or occupying property or trading in the group area unless he had been granted an official permit issued at the discretion of the minister of the interior. It was announced that the act would also be applied to the small Chinese section of the popu-

lation.

The Population Registration act provided for the compilation of a register of the whole population and for the issue of identity cards to persons whose names were included in the register. Every registered person was to be classified as a white person or a native or a coloured person and natives and coloured people were to be further classified according to the ethnic or other group to which they belonged.

A third measure was also designed to implement the government's avowed policy of *apartheid* or segregation of the races. It was the Immorality act, which declared sexual intercourse between white and coloured persons to be a serious crime, thereby extending the law of 1927 which had made such relations between Europeans and Africans an offense.

Considerable criticism not only by the parliamentary opposition but by the legal profession and other bodies was directed against the passage of the Suppression of Communism act. The act conferred on the minister of justice far-reaching powers. He might declare any organization unlawful and name any person a Communist where in his opinion the person or organization had promoted the spread of communism. Communism was defined in wide terms to include the doctrines of Lenin, Trotsky,

the Comintern and the Cominform and also the encouragement of feelings of hostility between the European and non-European races of the Union. A person named by the minister might be prohibited from taking any part in public life and from holding any office. If such a person were a member of parliament, the minister could direct him to resign. Severe penalties of imprisonment might be applied to persons who failed to comply with official orders or who hindered investigations made under the act. The act also declared the Communist party of South Africa to be an unlawful organization, but the party dissolved itself shortly before the act was passed. About 300 people were named under the new law. Although the act virtually excluded appeal to the courts, the government's appointment of a liquidator to wind up unlawful bodies and to compile a list of persons named was challenged at law.

**International Relations.**—The general assembly of the United Nations asked the International Court of Justice (*q.v.*) for an advisory opinion on the status of the mandated territory of South-West Africa and on the international obligations of the Union arising therefrom. By a vote of 8 to 6, the court held that the United Nations charter did not impose on South Africa a legal obligation to put the territory under trusteeship. By 12 votes to 2, however, the court held that South Africa continued to have certain obligations, including the transmission of petitions to the United Nations from the inhabitants of the territory. The court further held unanimously that South Africa acting alone could not modify the international status of the territory without the consent of the United Nations. The prime minister promptly declared that the implications of this decision were not acceptable to the Union government.

After preliminary talks, the round-table conference between India, Pakistan and South Africa, proposed by the general assembly of the United Nations, was not held. The government of India declined to participate on the ground that new legislation had aggravated the treatment of Indians in the Union. This subject, as well as the status of South-West Africa, was debated by the United Nations. (Ju. L.)

**Education.**—State schools (1947): primary 1,190 (European 1,110), pupils 115,368 (European 92,291), teachers 3,927; secondary and high schools 241, pupils 75,339 (European 65,232), teachers 3,122. Mission schools 3,036, pupils 386,054, teachers 9,421. Other schools 99, pupils 3,031; training institutions 32 (European 9), pupils 3,790 (European 874), teachers 218. Private schools (1947): kindergarten 92; primary 773; secondary 114; commercial and business 19; other 10; pupils at all private schools 73,787 (European 36,500). Technical colleges (1946) 11, students 43,110, teachers 2,063. Universities (1946) 4 and constituent colleges of the University of South Africa, Pretoria, 5, students 19,994, professors and lecturers 1,743.

**Finance and Banking.**—Budget: (1949–50 est.) revenue £(S.A.)146,000,000, expenditure £(S.A.)147,000,000; (1950–51 est.) revenue £(S.A.)149,000,000, expenditure £(S.A.)149,000,000. National debt (Aug. 1950) £(S.A.)747,000,000. Currency circulation (Aug. 1950) £(S.A.)68,400,000. Gold and foreign exchange (Sept. 1950) U.S. \$416,000,000. Bank deposits (Aug. 1950) £(S.A.)307,600,000. Monetary unit: South African pound at par with the pound sterling and with an exchange rate (Nov. 1950) of £(S.A.)0.357 to the U.S. dollar.

**Foreign Trade.**—Imports (1949): £(S.A.)314,000,000; exports (1949) excluding gold bullion: £(S.A.)152,600,000. Main sources of imports (1949): U.K. 40.9%; U.S. 27.7%; Canada 5.6%; Iran 2.6%. Main destinations of exports (1949): U.K. 28.3%; Southern Rhodesia 9.8%; France 9.8%; U.S. 8.3%.

**Transport and Communications.**—Licensed motor vehicles (Dec. 1949): cars 406,000; trucks 113,000. Railways (1949) 13,931 mi.; freight net ton-miles 11,021,000,000; freight carried 44,868,000 metric tons. Shipping (July 1949): number of merchant vessels over 100 gross tonnage 157; total tonnage 177,268. Air transport (1949): passenger-miles 104,000,000; cargo net ton-miles 3,378,000. Telephones (1947–48): subscribers 206,493. Radio receiving sets (1949) 497,428.

**Agriculture and Fisheries.**—Main crops (metric tons, 1949): maize 2,363,000; wheat 372,000; barley (1948) 31,000; oats 116,000; potatoes 285,000; rice, milled equivalent 15,000; sugar, raw value 508,000; peanuts 85,000; sunflower seed 31,000; grapes, total 430,000; raisins (1948) 9,500; citrus fruit (1948) 194,000; tobacco 20,900. Wine production (1948) 2,700,000 hl. Livestock: cattle (Aug. 1949) 12,242,000; sheep (Aug. 1948) 32,612,000; pigs (Aug. 1946) 1,118,000; horses (1946) 687,000. Meat production (1949) 435,000 metric tons, of which beef and veal made up 309,000 metric tons. Dairy production (metric tons, 1949): butter, factory production 21,100; cheese, factory production 7,800. Wool production, greasy basis (1949) 97,000 metric tons.

**Industry.**—Industrial establishments (1946–47): 11,886; persons employed 558,725 (Europeans 194,937). Fuel and power (1949): coal 25,008,000 metric tons; electricity 9,924,000,000 kw.hr. Raw materials (metric tons, 1949): iron ore, metal content, 1,248,000; pig iron 708,000; steel ingots and castings 636,000; copper 29,600. Gold 11,708,000 fine ounces; diamonds 1,265,000 metric carats; cement production 1,363,200 metric tons.

## South Carolina.

A south Atlantic state of the United States, eighth of the original 13 to ratify the constitution (1788), South Carolina is known as the "Palmetto state." Area 31,055 sq.mi., 461 sq.mi. being inland water. Population (1950 census): 2,117,027, an increase of 11.4% over 1940; distribution (1940): 57% white; 42.9% Negro; 0.1% other; 75.5% rural; 0.3% foreign-born. Capital: Columbia. Chief cities (with preliminary 1950 pop.): Columbia (85,945); Charleston (68,243); Greenville (57,932); Spartanburg (36,674); Rock Hill (24,472); Florence (22,378).

**History.**—In 1950 the legislature passed a comprehensive elections law which belatedly gave the voter a secret, party-column ballot and regulated registration, primaries, conventions and general elections. Literacy, or property, requirements for voting in general elections were extended to the primary to minimize the vote of the Negro whose right to party membership was definitely established by federal court decisions in 1948. With little friction a small number of Negroes attended precinct meetings, county and state conventions and voted in the primary. Constitutional amendments abolishing the poll tax as a voting requirement, eliminating separate registration for municipal elections and allowing larger school districts were approved by the people but had again to pass the legislature.

Accepting a proposal of the commission on government reorganization, the legislature consolidated eight fiscal and personnel agencies under a single budget and control board and established central purchasing. Other legislative acts created a water pollution control board and a state-wide civil defense agency under the adjutant general. Bills for premarital examinations and for referenda on biennial sessions and a veterans' bonus were killed.

In the primary election former U.S. Supreme Court Justice James F. Byrnes easily won the Democratic nomination for governor over three opponents. In the senatorial race Sen. Olin D. Johnston overcame Gov. J. Strom Thurmond, both endorsing racial segregation and opposing Pres. Harry S. Truman's civil rights and Fair Deal program. In the general election, with Democratic nominees unopposed, only 50,641 votes were cast. Chief state officers elected were: J. F. Byrnes, governor; G. B. Timmerman, lieutenant governor; C. F. Thornton, secretary of state; T. C. Callison, attorney general; J. B. Bates, treasurer; E. C. Rhodes, comptroller general; J. T. Anderson, superintendent of education.

The Atomic Energy commission announced that a 250,000 ac. tract on the Savannah river in Aiken and Barnwell counties was chosen for construction of an atomic materials production plant

JAMES F. BYRNES, Democrat, elected governor of South Carolina, Nov. 7, 1950

which would cost \$260,000,000, employ 5,000 persons and necessitate the relocation of 1,500 families.

**Education.**—For the year ending June 30, 1950, enrolment in white elementary schools was 109,465, an increase of 5,291; in Negro elementary schools, 186,891, an increase of 3,148; in white high schools, 81,840, an increase of 4,470; in Negro high schools, 34,989, an increase of 3,173; total white and Negro teachers, respectively, numbered 10,285 and 6,918. Expenditures for current expenses were \$30,657,251 for white and \$12,053,843 for Negro pupils; administration, veteran training, capital outlay, debt service, adult education, etc., consumed an additional \$21,348,881; total, \$64,059,975, an increase of \$5,010,717.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In the year ending June 30, 1950, federal allocation for needy persons totalled \$10,572,876, to which the state added \$5,004,952. As of June 30 assistance was being given to 42,118 aged, 1,522 needy blind, 24,093 children and 5,401 persons needing general assistance, making a total of 73,128 persons. The state employment trust fund totalled \$48,832,885 on June 30. Payments during the fiscal year then ending (duplicate names not eliminated) went to 62,900 persons and totalled \$12,008,297. Patients in the state hospital for mentally diseased, June 30, 1950, numbered 5,326; in the school for feeble-minded, 1,307; prisoners in the penitentiary, 1,487; in reformatory for white boys, 263; in Negro boys' reformatory, 182; in white girls' reformatory, 107.

**Communications.**—Paved highway mileage, June 30, 1950, was 12,083; total miles under state highway department, 21,036; under county systems, 27,376. State highway department revenue totalled \$42,175,014 included \$10,000,000 from bonds; \$5,239,272 from federal aid; \$21,688,689 from the gasoline tax of \$25.819,348. Railroads measured 3,563 mi. Eastern, Delta, National and Southeastern air lines cross the state.

**Banking and Finance.**—On June 30, 1950, there were 25 national banks plus 29 branches, 103 state banks plus 10 branches with capital account, resources and deposits, respectively, as follows: national, \$23,615,000, \$421,205,000, \$395,241,000; state banks and depositories \$20,493,772, \$253,476,674, \$232,382,422. Resources of the 32 federal building and loan associations totalled \$91,886,120; of the 40 state associations, \$35,545,473. For the year ending June 30, 1950, the state had an operating deficit of \$8,162,774 which consumed the 1949 surplus of \$3,922,660 and caused an increase in the state gasoline tax from 6 cents to 7 cents. The general appropriations bill for the new year totalling \$108,538,717 also increased the tax on cigarettes to 5 cents and on cans of beer to 6 cents. The state debt, June 30, 1950, was \$68,995,598 (\$67,062,000 being for roads). Federal income taxes totalled \$151,136,431 and other federal revenue \$23,780,656. Exports totalled \$59,600,000; imports, \$34,600,000; duties on imports, \$2,522,050.

**Agriculture.**—The chief field and truck crops for the year 1950 were valued at \$284,780,000 or 4% more than in 1949 despite a 6% decrease in crop volume. Harvested acreage was about 400,000 or 9% below 1949.

Table I.—Leading Agricultural Products of South Carolina

	1950	1949	Average 1939-48
Corn, bu. . . . .	33,258,000	31,590,000	25,394,000
Wheat, bu. . . . .	2,184,000	1,930,000	3,185,000
Oats, bu. . . . .	18,984,000	16,484,000	15,572,000
Barley, bu. . . . .	440,000	518,000	472,000
Rye, bu. . . . .	90,000	86,000	165,000
Hay, tons . . . . .	344,000	484,000	451,000
Irish potatoes, bu. . . . .	1,768,000	1,650,000	2,563,000
Sweet potatoes, bu. . . . .	5,671,000	4,800,000	5,318,000
Tobacco, lb. . . . .	150,480,000	147,075,000	120,400,000
Cotton, bales . . . . .	400,000	554,000	738,000
Cottonseed, tons . . . . .	162,000	233,000	297,000
Peanut, lb. . . . .	468,000	2,340,000	3,789,000
Pecans, lb. . . . .	3,000,000	3,200,000	2,465,000
Peanuts, lb. . . . .	15,750,000	14,300,000	18,312,000

**Manufacturing.**—The value of manufacturing for the year ending June 30, 1950, was \$1,708,383,629, against \$1,701,838,552 for the previous year. Employees numbered 172,962, against 173,926 the year before. Total manufacturing capital was \$775,304,036, against \$736,547,207 in the previous year.

Table II.—Products of Principal Industries of South Carolina

Industry	Year ending June 30, 1950	Year ending June 30, 1949
Textiles (including knitting)	\$1,206,433,982	\$1,175,337,135
Lumber products (barrels, boxes, baskets, veneering, paper and pulp, furniture, woodwork)	120,636,711	118,876,202
Electricity	45,090,928	42,594,385
Clothing	50,507,224	62,760,486
Fertilizers	31,107,743	35,921,923

**Mineral Products.**—Mineral products, chiefly stone and clays, especially granite and kaolin, totalled in value \$10,186,446 for the year ending June 30, 1950, against \$9,727,287 the year before. (C. E. Cn.)

**South Dakota.** A north-central state of the United States, admitted as the 40th state on Nov. 2, 1889, South Dakota is popularly known as the "Coyote state." Area: 77,047 sq.mi., of which 511 sq.mi. are water; population (1950 census): 652,740 (an increase of 1.5% since 1940), with about 240,000 listed as urban; the Indian population in 1945 was 26,432. Capital (with preliminary 1950 census figures): Pierre (5,690).

SIGURD ANDERSON, Republican, elected governor of South Dakota, Nov. 7, 1950

Principal cities: Sioux Falls (52,161), Rapid City (25,179), Aberdeen (20,976), Huron (12,713), Watertown (12,662) and Mitchell (12,062).

**History.**—A special session of the legislature was called by the governor on Feb. 6, 1950, to consider proposals for a public power district law and to provide funds for highway construction. Twenty-one measures were enacted during the 11-day session, including provisions for the creation of public power districts by majority vote and an appropriation of \$1,200,000 for matching federal highway funds.

The election on Nov. 7, 1950, revealed a strong Republican trend with the Republican candidate for the U.S. senate polling 63.9% of the votes cast. Congressman Francis Case, who had defeated incumbent Chan Gurney in the May primary, was elected to the United States senate. E. Y. Berry, Republican, was elected to succeed Case, and Congressman Harold O. Lovre, Republican, was re-elected.

State officials (all Republican) elected included: Sigurd Anderson, governor; Rex Terry, lieutenant governor; Ralph A. Dunham, attorney general; Geraldine Ostroot, secretary of state; Theodore Mehlhaf, treasurer; and Harold S. Freeman, superintendent of public instruction (elected on nonpartisan ballot).

**Education.**—The school census, ages 6-20, inclusive, was 159,232 in 1949-50, compared with 156,372 in 1948-49. The enrolment was 88,577 in elementary schools and 29,098 in high schools. Total expenditures were \$25,984,238.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the calendar year 1949 the state department of social security distributed \$5,483,256 among 12,006 persons in old-age assistance; \$1,444,489 to 2,014 families as aid to 4,956 dependent children; and \$88,303 for the needs of 211 blind persons. Eight penal and charitable institutions were in operation on a legislative appropriation of \$2,289,699 for the fiscal year 1949-50.

Unemployment benefit payments during 1949 amounted to \$680,739 at an average weekly rate of \$18.07 paid to 4,542 individuals. Readjustment allowances paid to unemployed veterans under the Servicemen's Readjustment act totalled \$863,000.

**Communications.**—The state in 1950 maintained a highway system of 6,050 mi., including 2,908 mi. of bituminous surface, 386 mi. of concrete pavement, 2,559 mi. of gravel surface and 195 mi. of earth grade, at a cost of \$4,417,066. There were 3,967 mi. of railroad in operation in 1950. Telephones in use Jan. 1, 1950, numbered 147,248, of which 40,867 were classified as rural.

**Banking and Finance.**—There were 35 national banks in operation on Dec. 31, 1949, with total assets of \$272,503,000 and total deposits of \$257,933,000. The 134 state banks and trust companies on June 30, 1950, had resources of \$243,267,802 and deposits of \$227,241,342. Eight building and loan associations on June 30, 1950, reported total resources of \$5,632,556.

Total receipts for the state treasury for the fiscal year ending June 30, 1950, were \$87,871,281; disbursements were \$79,367,904. The net bonded indebtedness was \$21,730,993. Federal internal revenue collections for the same year totalled \$56,631,289, of which amount \$47,846,262 was derived from the income tax.

**Agriculture.**—Cash farm income for 1950 was estimated to be somewhat smaller than that of 1949. Production of some crops, including corn, was greater but wheat production was the smallest since 1943.

**Mining.**—The total value of mineral substances produced in 1949 was \$24,085,352. The state ranked first in gold production, valued at \$16,221,500; third in bentonite, valued at \$1,533,228; fourth in feldspar,

Principal Agricultural Products of South Dakota

Crop	1950	1949	Average 1939-48
Corn, bu. . . . .	99,296,000	82,824,000	88,607,000
Wheat, bu. . . . .	33,978,000	34,276,000	39,747,000
Oats, bu. . . . .	87,742,000	67,988,000	83,696,000
Barley, bu. . . . .	18,942,000	14,756,000	33,808,000
Flaxseed, bu. . . . .	4,527,000	4,956,000	3,809,000
Potatoes, bu. . . . .	2,250,000	1,260,000	2,519,000
Hay, all, tons . . . . .	3,405,000	2,873,000	2,794,000

valued at \$511,526; and fourth in mica, valued at \$19,779. The state-owned cement plant produced 698,101 bbl. of cement, valued at \$1,787,060. (H. S. S.)

**Southern Rhodesia:** see RHODESIA, SOUTHERN.

**South Pacific Commission:** see PACIFIC ISLANDS, BRITISH.

**South-West Africa:** see SOUTH AFRICA, THE UNION OF; TRUST TERRITORIES.

**Sovereigns, Presidents and Rulers:** see PRESIDENTS, SOVEREIGNS AND RULERS.

**Soviet Union:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Soybeans.** The U.S. soybean crop of 1950 was an all-time record of 287,010,000 bu., far above the 230,897,000 bu. produced in 1949 and a vast increase as compared with the 1939-48 average crop of 164,491,000 bu. Harvested acreage in 1950 of 13,291,000 was also a record; 10,156,000 ac. were harvested in 1949. Yields in 1950 were 21.6 bu. per acre. Illinois produced about one-third of the crop, 94,752,000 bu.; Iowa was in second place with 42,262,000 bu. and Indiana followed with 35,002,000 bu.

Average prices received by farmers fluctuated widely during the year. A preliminary estimate on the 1950 crop was \$2.32 per bushel average or \$665,590,000 total, as compared with \$2.16 per bushel and \$499,743,000 total for the 1949 crop. The non-mandatory government support program set a national average support price of \$2.06 per bushel, or 80% of the Sept. 1 parity.

A special investigation by the Commodity Exchange authority of the erratic fluctuations in the prices of soybean futures revealed, among other things, rather heavy trading by Chinese interests. Exports of soybeans and soybean oil were sharply lower in the first nine months of 1950 compared with the same months of 1949.

World soybean production in 1950, estimated at 626,000,000 bu., was also a new record, as compared with 510,170,000 bu. in 1949, and a prewar average of 463,900,000 bu. The Chinese crop was estimated as high as 200,000,000 bu.; and that of Manchuria near 100,000,000 bu. (J. K. R.)

**Spain.** A country of southwestern Europe. Spain is bounded on the north by the Bay of Biscay and France, on the west by the Atlantic and Portugal and on the south and east by the Mediterranean. Area: 194,945 sq.mi., including Balearic (1,936 sq.mi.) and Canary (2,804 sq.mi.) Islands. Pop. (1940 census) 25,877,971; (1949 est.) 28,023,000, including Balearic (1940 census, 407,497) and Canary (680,294) Islands. Language: mainly Spanish (Castilian) but Catalan, Galician and Basque are also spoken. Religion: mainly Roman Catholic. Chief towns (pop., 1947 est. if not otherwise stated): Madrid (cap., 1949 est., 1,440,041); Barcelona (1949 est., 1,500,000); Valencia (562,967); Seville (382,013); Zaragoza or Saragossa (292,965); Málaga (277,582); Murcia (226,702); Bilbao (220,333). Leader (*caudillo*), chief of state and prime minister, Gen. Francisco Franco (*q.v.*).

**History.**—A statement by Dean Acheson, the U.S. secretary of state, announced on Jan. 19, 1950, the readiness of the United States to vote in the general assembly of the United Nations for a resolution which would leave members free to send an ambassador or minister to Spain if they chose. This would in no sense signify approval of the regime: it was designed to resolve an anomalous position. On May 1 Daniel F. Malan said that the Union of South Africa was considering the establishment of diplomatic relations with Spain; and Antonio de Oliveira Salazar urged again, on Aug. 10, the formation of a "front of intelligence" against communism and the revision of the western powers' attitude to Spain. When the general assembly met in September it became certain that the decision of

Dec. 1946 recommending the withdrawal of diplomatic representatives and excluding Spain from the specialized agencies of the United Nations would be rescinded. The motion to this end, presented by a group of Latin-American states, was carried on Nov. 4 by 38 votes to 10 with 12 abstentions (among these Great Britain, France and the Scandinavian countries). Mexico, Uruguay and Guatemala voted against it. Of the 1946 resolution there still remained the general condemnation of the Franco regime and the ban on full Spanish membership in the United Nations. Prior to the vote, there were in Madrid 9 ambassadors and 17 ministers plenipotentiary. In December, Stanton Griffis was named U.S. ambassador to Spain.

The U.N. Food and Agriculture organization admitted Spain to full membership on Nov. 10. The U.S. department of justice had ruled earlier (Oct. 19) that members of the Falange, Spain's only legal party, were debarred from entry into the U.S., as members of a totalitarian group, under the new Internal Security act.

An apparent Spanish reluctance to develop normal trading relations with the United States was referred to in January by Acheson, who noted that Spain had shown no interest in the offer of a new treaty of friendship, commerce and navigation nor in the request for a simplified foreign exchange system whereby Spanish goods might compete in the dollar market. Repeated offers of dollar loans from the Export-Import bank had evoked an extraordinarily tardy response, according to the U.S. *chargé d'affaires*, speaking in Barcelona in May, who added that existing legislation made it appear that United States capital was not attractive to Spain. On Aug. 1 the U.S. senate voted an amendment to the General Appropriation act in favour of granting a \$100,000,000 loan to Spain through the Export-Import bank; a proposal that the money should come instead from Economic Cooperation administration funds was defeated.

Pres. Harry S. Truman expressed opposition, not to the loan as such, but to the method invoked, and refused to regard the provision inserted in the act as a directive, "which would be unconstitutional," but simply as an additional authorization: "Money will be loaned to Spain whenever mutually advantageous arrangements can be made with respect to security, terms of repayment, the purposes for which the money is to be spent and other appropriate factors, and whenever such loans will serve the interest of the U.S. in the conduct of foreign relations." In mid-November President Truman sanctioned a \$62,500,000 credit to Spain, to be spent on industrial equipment and consumer goods.

Orders were placed in England for nearly £3,000,000 worth of electric locomotives for the Spanish national railways (April) and for hydroelectric machinery totalling over £1,300,000 (June).

New exchange rates for foreign tourists and for remittances from abroad to residents in Spain were announced on Aug. 1; the pound rate rose from 70 pesetas to 110.32 pesetas and the dollar rate from 25 pesetas to 39.40 pesetas. In October a new system of state-controlled cheap exchange came into force for essential imports of raw materials or semimanufactured goods. For nonessential goods foreign exchange would be obtainable only through the Madrid free market, at much higher rates. Fiduciary circulation was limited by decree, also in October, to 30,000,000,000 pesetas, this figure showing an increase of 4,500,000,000 pesetas in three years, and it was announced that the provisions of the current budget would remain in force until the end of the next financial year.

Trade agreements were signed with Greece in February, providing for \$2,000,000 worth of goods in each direction and the settlement of claims pending since the Spanish Civil War, and

with western Germany in April, this being a revision intended to double the existing volume of trade to a total of \$99,000,000. The deterioration of trade relations with Argentina, through Spain's inability to fulfil its undertaking to build ships, supply railway and other material and construct a free port at Cadiz, seriously aggravated the difficulties of the economic situation. It culminated in January in the withholding by Argentina of further wheat shipments pending the settlement by Spain of a debt of more than 84,000,000 pesetas (gold); 50,000 tons of wheat were hastily purchased from the U.S. and Canada, and a further 60,000 tons from Australia. In July Spain decided to join the World Wheat board and undertook to purchase 100,000 metric tons of wheat a year. The total wheat needed from abroad in 1950 was estimated at 500,000 tons, as against 350,000 tons imported in 1949.

Speaking in May of the need to increase food production, General Franco said that in many parts of Spain the climate made the breaking-up of large estates impracticable. Irrigation was the key to the problem, and Spanish prosperity depended on the government's success in developing hydraulic power, the production of fertilizers and technical methods of cultivation.

A strike of taxi-cab drivers in Madrid in January, following on others by bank clerks and students, betokened the growing unrest accompanying the general economic hardship. Strikes in Spain were illegal. Rail fares and freight charges were increased in April by 40% and 60% respectively, to allow wage increases of up to 50% for lower-paid railway employees, and taxi fares in Madrid rose again. In view of the extreme gravity of the hydroelectric situation, following persistent drought in the central and eastern areas, Madrid experienced in October the most drastic light and power cuts yet imposed. The industrial use of electric power was restricted to three hours on three days a week.

General Franco and his government again attended, on Feb. 28, a memorial mass at El Escorial to mark the anniversary of King Alfonso XIII's death in 1941, while monarchists attended a rival mass in Madrid organized by the Council of Grandees. Five royalist propagandists had been arrested a week earlier; after trial by court-martial in June, the duchess of Valencia and another were acquitted, but three received prison sentences. Eighteen prisoners, one an ex-civil governor of Madrid under the republic, Antonio Trigo, were charged before a Madrid military court in March with planning an alliance between the banned anarchosyndicalist C.N.T. (*Confederación Nacional del Trabajo*) and more moderate opposition elements; prison sentences were imposed. In September General Franco declared that there were no political prisoners in Spain; the total prison population of 33,357 was lower than under either the monarchy or the republic. (W. C. AN.)

**Education.**—Schools (1947): primary 54,055 (62,116 in 1950), pupils 2,649,315, teachers 55,077; secondary 110, teachers 3,001, students 31,668; commercial 32, teachers 579, pupils 57,694; technical 123, teachers 2,127, students 45,229; training colleges for elementary teachers 53, students 25,928; universities 12, teaching staff 3,079, students 42,597; institutes of higher education 34, teaching staff 570, students 19,242. Illiteracy (1947) 20.8%.

**Finance and Banking.**—Budget: (1949, actual) revenue 16,071,000,000 pesetas, expenditure 16,629,000,000 pesetas; (1950 est.) revenue 17,848,000,000 pesetas, expenditure 17,941,000,000 pesetas. Currency circulation (June 1950) 27,500,000,000 pesetas. Gold reserve (June 1950) U.S. \$61,000,000. Bank deposits (June 1950) 33,800,000,000 pesetas. Monetary unit: peseta with an official exchange rate (Nov. 1950) of 11.22 pesetas to the U.S. dollar.

**Foreign Trade.**—(Gold pesetas, 1949): Imports 1,390,000,000; exports 1,164,000,000. Main sources of imports (1949): Argentina 17%; United Kingdom 15%; the Netherlands 11%; U.S. 10%. Main destinations of exports (1949): United Kingdom 29%; France 11%; U.S. 6%; the Netherlands 4%.

**Transport and Communications.**—Roads (1949) 75,000 mi. Licensed motor vehicles (Dec. 1949): cars 70,000; commercial trucks 83,000. Railways (1949): 10,920 mi.; passenger miles 4,534,000,000; freight net ton-miles 3,438,000,000; freight carried 25,000,000 tons. Shipping (July 1949): merchant vessels over 100 gross tons 1,181; total tonnage 1,200,336. Air transport (1948): km. flown 4,358,670, passengers flown

163,106; cargo carried 471 metric tons; air mail carried 160 metric tons. Telephones (1948): subscribers 537,837. Radio receiving sets (1949) 375,635.

**Agriculture and Fisheries.**—Main crops (metric tons, 1949): wheat 2,580,000; barley 1,460,000; oats 500,000; maize 540,000; rye 460,000; rice, paddy 260,000; sugar, raw value 155,000; potatoes 3,500,000; tobacco (1948) 14,000; oranges and tangerines (1948) 814,000; lemons (1948) 65,000. Production: wine (1948) 15,000,000 hl.; olive oil (1949) 300,000 metric tons. Livestock: cattle (Dec. 1948) 4,000,000; sheep (Dec. 1949) 22,000,000; pigs (July 1946) 4,700,000; horses (1947) 600,000; asses (1947) 800,000; mules (1947) 1,080,000; goats (1947) 6,100,000; chickens (July 1950) 35,000,000. Meat production (1949) 110,000 metric tons. Wool production, greasy basis (1949) 35,000 metric tons. Fisheries: total catch (1948): weight 533,979 tons; value 1,777,000,000 pesetas.

**Industry.**—Fuel and power (1949): coal 10,644,000 metric tons; lignite 1,320,000 metric tons; manufactured gas 256,000,000 cu.m.; electricity 5,040,000,000 kw.hr. Raw materials (metric tons, 1949): iron ore, metal content 1,812,000; pig iron 610,000; steel ingots and castings 720,000; black and blister copper 11,800; lead 27,400; zinc 19,500; manganese ore 17,700; potash ore 913,500. Manufactured goods (metric tons, 1949): cement 1,860,000; cotton yarn 59,500; wool yarn 8,900; rayon filament yarn 6,720; rayon staple yarn 11,900.

**BIBLIOGRAPHY.**—J. Alvarez del Vayo, *The Last Optimist* (1950); G. Brenan, *The Spanish Labyrinth*, (Cambridge 1950); R. Menéndez Pidal, *The Spaniards in Their History* (London, 1950).

**FILMS OF 1950.**—*La Familia Sanchez* (Encyclopædia Britannica Films Inc.).

**Spanish-American Literature.** During the year 1950 exciting signs of vitality were apparent in all the literary genres. Perhaps the most widely acclaimed novel was Luis Durand's *Frontera*, which won the Atenea prize (Chile) as well as numerous local and national honours. Another outstanding novel was *La sangre hambrienta* by the young Cuban Enrique Labrador Ruiz; his work is darkened, however, by the baroque profusion of its style. Significant, too, was *Milpa, potrero y monte*, by the well-known novelist of the Indians and the Mexican Revolution, Gregorio López y Fuentes. A number of short-story collections appeared: in *Café de angelitos* the Argentine Bernardo Verbitsky exhibited the most varied milieus of Buenos Aires; in *Treinta hombres y sus sombras*, the veteran Arturo Usler-Pietri gave a splendid picture of rural life in his native Venezuela, comparable in theme and brilliant style to *Hombres de maíz* by the Guatemalan Miguel Angel Asturias, a powerful tale in which corn, the symbol of American civilizations, is the allegorical deity and central protagonist. Among newcomers of promise mention may be made of the Colombian Hernando Téllez for his striking tales in *Cenizas para el viento* and of the Chilean Julio Silva Lazo, whose collection *Hombres de Reloncaví*, introduced encomiastically by Mariano Latorre, showed unsurpassed freshness and spontaneity. With the publication of *Cuentos completos de Rubén Darío*, the great master of modernism, Rubén Darío (1867–1916), was discovered as a first-rate storyteller. His verve and rich poetical imagination were writ large over most of the 76 pieces here collected from inaccessible periodicals or published for the first time.

In the realm of poetry the most important event of the year was the publication of Pablo Neruda's masterpiece, his long-awaited *Canto general*. For years Neruda had been weaving a complex tapestry of his idolized America in which prehistoric threads were interwoven with indigenist and contemporary threads into a most exciting pattern of adoration, vituperation, exhortation and tender prayer. A colour illustration by Diego Rivera and another by David Alfaro Siqueiros enhanced and, to a certain extent, high-lighted some of Neruda's leitmotifs. An excerpt from this multifaceted poem appeared in English translation under the title "Summits of Macchu Picchu" in Whit Burnett's anthology *The World's Best*. A poet who was becoming well established throughout Latin America was Antonio de Undurraga, also of Chile. His *Red en el génesis* won him homage in Buenos Aires. His critical study of Carlos Pezoa Velis (1879–1908), the Chilean modernist poet, won him the Essay prize awarded yearly by the Chilean writers association. The Poetry prize of the same association went to Fernando Durán for his poems in *Velámen*, rich in

imagery and disturbing music.

*Aquí yace la espuma* was the strange title of the exquisite collection by Ecuador's foremost poet, Jorge Carrera Andrade. Published in Paris in a de luxe edition, this volume seems to translate in magical language the poet's longing for his beloved America: for her flowers, her fruits, her trees, her stones, her birds. A third edition of *Presagio* made available to an ever-widening public the exquisite works of the Mexican Rafael Cabrera (1884-1943), long out of print. David Martínez' compilation *Poesía argentina 1940-1949* presented an over-all picture of the diverse trends discernible in Argentine poetry: the work of 42 young poets was included. Two belated modernists came to the fore from Guatemala: the Roberto Girón of *El paraíso fingido* and the José Humberto Hernández Cobo of *El resucitado*. The Cuban poet Cintio Vitier came close to fulfilling his lyrical promise in *Substancia*, a poetry of an incredibly calm, pure flow, devoid of bombast and rhetoric. Spanish America lost one of its finest poets when the 46-year-old Xavier Villaurrutia died on Dec. 25, 1950, in his native Mexico City. His plays and novels were shot through with the same poetical genius which made his sonnets and short lyrics so memorable.

Chief among the numerous biographies celebrating the centenary of Gen. José de San Martín were Carlos Obarguren's *San Martín íntimo*, Bernardo González Arrili's *San Martín* and Luis Busaniche's *San Martín vivo*. A remarkable biography by the well-known Venezuelan critic Mariano Picón-Salas was *Pedro Claver, el santo de los esclavos*, who championed the cause of Negro slaves. Picón-Salas' achievement typified rather well a strongly discernible trend toward historical reconstruction; Angel Torres González, the noted journalist of Mexico City's *El Nacional*, in *La tumba de Cuauhtemoc* described vividly the recent discovery of the remains of Cuauhtemoc in the town of Ixcateopan, and then proceeded to weave around this find all the legendary and folkloric material which had come down from oral tradition about the Aztec emperor. In *Nayjama* the Bolivian critic Fernando Díez de Medina evoked with impassioned lyricism the setting of pre-Incan civilizations, those remote, telluric cultures which flourished on the Andean summits long before the days of Manco Capác. Argentina Díaz Lózano, one of Honduras' leading storytellers, dramatized in her historical novel *Mayapan* the relationship between the descendants of the Mayas and the Spaniards during the early 16th century.

The field of biography further produced an excellent work on the 19th-century Mexican romantic poet Manuel Acuña. Its author, Francisco Castillo Nájera, former Mexican ambassador to the United States, succeeded brilliantly in bringing the poet to life; as a poet himself and a physician he understood both Acuña's emotional tensions and the illnesses which led him to suicide at the age of 23.

The range of biographical-critical studies was amazingly broad: there was a rather perceptive Kafka by Mario Lancelotti,

of Buenos Aires; an Einstein by the Colombian Daniel Caicedo; a Dostoievski by the Cuban Pedro Soler Alonso; and the first serious analysis of the life and work of that gifted and totally overlooked Argentine playwright and novelist Roberto Arlt, who died in 1941 at the age of 42: *Roberto Arlt, el torturado*, by the Argentine Raúl Larra. Other significant contributions to literary criticism included *Estudios de literatura hispanoamericana* by the perceptive Cuban critic José Arrom, of Yale university, and various volumes of José Luis Martínez dealing with contemporary Mexican literature.

Among the numerous important studies of Latin-American origins first mention must be made of two major works: a panoramic survey of Ecuador by Leopoldo Benítez in his trenchant *Ecuador: Drama y paradoja*, and the exhaustive *Geografía de México*, in two volumes, by Jorge L. Tamayo. On a more philosophical plane were *Extremos de América* by the Mexican economist and sociologist Daniel Cosío Villegas; *Dos épocas en el pensamiento en Hispanoamérica* by the young Mexican philosopher Leopoldo Zea; and the provocative *Espiritualismo y positivismo en el Uruguay* by A. Ardao.

The National Literary prize of Mexico was awarded to the prolific veteran Mariano Azuela, author of dozens of social novels in realistic vein and well known in the United States for his *Underdogs*, a novel of the Mexican Revolution. The National prize of Chile was won by an author of quite different stamp, José Santos González Vera, who was scarcely known outside Chile, having written but one novelette, *Alhué* (1926), and a few short stories, *Vidas mínimas* (1924).

(A. FLO.)

**Spanish Colonial Empire.** Under this heading are grouped the Spanish possessions in Africa. Their total area is approximately 134,763 sq.mi. and the total population (1949 est.) 1,587,000. Certain essential information on the territories composing the empire is given in the table.

**History.**—Four hundred Moslem pilgrims sailed from Ceuta and Melilla to Mecca in July 1950: they carried with them, as gifts to the Arab league for distribution among refugees from Palestine, quantities of cloth, sandals, preserved fish and pharmaceutical products.

General Francisco Franco and the ministers of home affairs, air, industry and commerce, and public works, paid a four-day visit to Spanish West Africa in October. Sidi Ifni was the first port of call. General Franco stated that Ifni, with a population increasing at the rate of 1,000 a year, would shortly have an abundant water supply and a new fishing port. Medical and school services were being steadily expanded. "I promise you," said Franco to a large assembly of Spaniards and natives, "that the well-being a Spaniard may enjoy in Spain you will enjoy here." A new air service linking Tetuan with Gibraltar was inaugurated in November.

## Spanish Literature.

Notable among Spanish creative writers in 1950 were the poets Leopoldo Panero, Luis Rosales, Luis Felipe Vivanco, J. L. Cano (*Sonetos de la Bahía*) and Gabriel Celaya (*Deriva*) and the essayist Pedro Rocamora (*El Museo imaginario*). The most important contribution to topography was José Pla's *Mallorca, Menorca e Ibiza*. Two much-read political works, R. Calvo Serer's *España sin problema* and J. M. Doussinague's *España tenía razón, 1939-1945*, have self-explanatory titles. *España musulmana*, the fourth volume of the great *Historia de España* edited by Ramón Menéndez Pidal, was written by E. Lévi-Provençal and translated by E. García Gómez. Two other outstanding historical works were R. Menéndez Pidal's *El Imperio hispánico y los cinco reinos* and J. M. Doussinague's *El Testamento político de Fernando el Católico*.

Several important co-operative enterprises were initiated. The first volume appeared of an encyclopaedic *Historia general de las literaturas hispánicas*, edited by Guillermo Díaz-Plaja, and also the first volume of José Simón Díaz's *Bibliografía de la literatura hispánica*. The first of various prolegomena to the comprehensive historical dictionary of the Spanish language being prepared by the Royal Spanish academy is the *Introducción a la lexicografía moderna*, by its secretary, Julio Casares. The literature of the Tirso de Molina tercentenary (1948) was considerably, if somewhat belatedly, swelled by a collection of critical essays (*Estudios*) published by the Mercedarian review of that title. Six more volumes appeared of the Edición Nacional of the works of Marcelino Menéndez y Pelayo, bringing the total published up to 49.

Individual critical works of merit include Díaz Echarri's *Teorías métricas del Siglo de Oro*; M. Baquero's voluminous study, *El Cuento español en el Siglo XIX*; José Deleito y Piñuela's largely personal and anecdotic *Origen y apogeo del género chico*; and G. Torrente Ballester's *Literatura española contemporánea*. Gregorio Marañón published a critical biography of Santiago Ramón y Cajal; Concha Espina and Antonio Oliver wrote on Antonio Machado. J. M. Blecuá published the first volume of his critical edition of the *Rimas* of the brothers Leonardo de Argensola.

Two noteworthy newly elected academicians were the historian Melchor Fernández Almagro and the literary critic Rafael Lapesa. Carlos Bousoño published a substantial study of Vicente Aleixandre (*La Poesía de Vicente Aleixandre. Imagen. Estilo. Mundo poético*), who was elected to the academy in 1949.

(E. A. P.)

**Special Libraries Association:** see LIBRARIES.

**Spices.** Spices were more costly during 1950. All sources of supply announced advances. Serious political disturbances handicapped production and there was a rise in the cost of ocean freight.

By late August, sales of black pepper were made in India at the highest price of modern times, \$2.90 per pound. This was \$1.50 per pound above the top figure for 1949. There was a lively increase in pepper speculation in London, New York and India. Most of the world production in 1950 went to the western hemisphere since consumers there outbid other buyers for the available supply. Prior to World War II, Indonesia exported 125,000,000 lb. of pepper annually (132,000,000 lb. in 1939). From the same source, exports in 1950 probably did not exceed 9,000,000 lb. Shipments from India during the year were three to four times greater than the combined tonnage from all other regions and prices were controlled by a varying Indian export tax.

The Indian government intensified production and enlarged its revenue by levying a maximum tax on pepper exports.

True cinnamon, available solely from Ceylon, was in good supply at prices well above those of 1949. The largest market continued to be Latin America and southwestern United States. Cassia moved in large volume from China, Indonesia and Indochina. Crops were good, and the political situations in those lands fostered early sales for quick shipment. Heavy arrivals at shipping ports caused prices to drop to levels which stimulated accumulation.

Prices of cloves were high to cover expanding wage scales in Zanzibar, Madagascar and Pemba. Tonnage sufficed for world needs. It was thought that the extra-fragrant Penang and Amboyna cloves, always in small supply, might soon reappear in small quantities.

Production of nutmegs in Celebes, Banda, Siau and near-by islands decreased during the year. Offsetting the shortage of these Indonesian varieties was a larger crop in the British Leeward Islands. The volume of sales expanded despite higher prices, and supply and demand were in balance.

A 13,000,000-lb. crop of *Brassica alba* mustard seed was harvested in the U.S.; about 10,000,000 lb. were imported. Because of its rich flavour, golden colour and assertive strength, mustard from England is preferred despite higher cost and the U.S. takes an annual average of 1,500,000 lb. Little was known of the 1950 plantings of *Brassica juncea* in China which had been extensive in the past. A crop of Chinese *juncea* was grown in Montana. There were neither offerings nor reports from Rumania, Poland, eastern Germany or Hungary, where in former years the combined crops of mustard reached an impressive total. Both *Brassica juncea* and *alba* were sown in Canada, but because of an early frost, the yield was only about 60% of normal.

**Spirits:** see LIQUORS, ALCOHOLIC.

**Spitsbergen:** see NORWAY.

**Sports and Games:** see ANGLING; ARCHERY; AUTOMOBILE RACING; BADMINTON; BASEBALL; BASKETBALL; BILLIARDS; BOBSLEDDING; BOWLING; BOXING; CANASTA; CHESS; CONTRACT BRIDGE; CRICKET; CURLING; CYCLING; FENCING; FOOTBALL; GLIDING; GOLF; GYMNASTICS; HANDBALL; HORSE RACING; HOCKEY, FIELD; HOCKEY, ICE; ICE SKATING; LACROSSE; LAWN BOWLING; MOTOR-BOAT RACING; POLO; ROWING; SHOOTING; SKIING; SOCCER; SOFTBALL; SQUASH RACQUETS; SWIMMING; TABLE TENNIS; TENNIS; TRACK AND FIELD SPORTS; WRESTLING; YACHTING.

**Squash Racquets.** The national amateur championship went to the middle west for the first time when Edward Hahn of Detroit, Mich., defeated Richard Rothschild of New York city 15-4, 15-10 and 17-14 at the University club in New York. A record field of 135 started in quest of the crown that Hunter Lott, Jr., of Philadelphia, Pa., did not defend. The veterans' singles went to George Waring of Boston, Mass., for the third straight year.

In the doubles at St. Louis, Mo., Lott and G. Diehl Mateer, Jr., of Philadelphia won for the second successive season, defeating their fellow townsmen Charles Brinton and Stanley Pearson 17-16, 17-16, 14-17 and 15-7. Lott and Mateer also repeated their triumph of 1949 in the Lockett trophy tourney, halting E. C. Oelsner, Jr., and Don Strachan of New York city 11-15, 15-3, 15-7 and 15-10.

Edward Hahn added the Canadian title to his U.S. one and his brother Joe paired with Doug Sinclair of Montreal, Que., for doubles laurels. Edward Reid of Hartford, Conn., took United States professional honours and Ted Hands of Yale was inter-collegiate champion. The United States retained the Lapham trophy, but U.S. feminine stars lost the famous Wolfe-Noel cup,

bowing to the British, 5-0, at London. Janet Morgan proved the big star by downing Peggy Howe of New Haven, Conn., best of the invaders, 9-0, 9-0 and 9-6.

Betty Howe won the U.S. singles title, which Miss Morgan did not defend, while Mrs. William Rawls and Jane Austin of Philadelphia took doubles honours. Mrs. Ellwood J. Beatty, Jr., another Philadelphian, was the women's veterans' champion.

(T. V. H.)

**Stalin, Joseph Vissarionovich** (1879- ), soviet prime minister, was born on Dec. 21 at Gori, Georgia, in Transcaucasia. He studied for the priesthood and entered the Tiflis Orthodox seminary in 1893, but was later expelled.

He became active in the revolutionary underground in Georgia and, between 1902 and 1912, was arrested and deported five times, but each time escaped. In March 1913 he was deported to the Turukhansk district in northern Siberia, where he remained until Feb. 1917. Returning to St. Petersburg (now Leningrad) he became one of the members of the Politburo of the Communist party. After the Communist *coup d'état* of Nov. 7, 1917, he was appointed people's commissar for nationalities. In 1922 he became general secretary of the central committee of the party. Soon after Nicolai Lenin's death (Jan. 21, 1924), Stalin rose to pre-eminence in the party machine, and by 1937 his position as dictator of soviet Russia was unquestionable, although he did not hold state office until May 6, 1941, when he assumed the post of prime minister. On July 19, 1941, after the German attack, he appointed himself commander in chief and minister of the armed forces, and in March 1943 he assumed the rank of marshal of the Soviet Union.

During World War II Stalin met the leaders of Russia's wartime Allies at Tehran (Nov. 1943), Yalta (Feb. 1945) and Potsdam (Berlin) (July 1945). On March 3, 1947, he resigned as minister of the armed forces, retaining the post of prime minister. From Feb. 9, 1946, when he reviewed soviet war achievements, Stalin made no public speeches and kept himself in the background. On Dec. 21, 1949, his 70th birthday was celebrated throughout the U.S.S.R. and the soviet-dominated states, and 12 months later *Izvestia* was still continuing publication of congratulatory messages. On Feb. 13, 1950, he attended at the Hotel Metropole, Moscow, a banquet given by Mao Tse-tung and this was understood to be the first time Stalin had dined at a public place since 1923. On June 20, 1950, *Pravda* published an article by Stalin "About Marxism and Linguistics" which was followed by four answers to questions in the monthly *Bolshevik* (July and August). (See also UNION OF SOVIET SOCIALIST REPUBLICS.)

**Stamp Collecting:** see PHILATELY.

**Standards, National Bureau of.** Established by act of congress, March 3, 1901, this bureau is the principal agency of the federal government for fundamental research in physics, mathematics, chemistry and engineering. During 1950, it consisted of 24 divisions and offices: 15 scientific divisions (electricity, optics and metrology, heat and power, atomic and radiation physics, chemistry, mechanics, organic and fibrous materials, metallurgy, mineral products, building technology, mathematics, electronics, missile development, ordnance and radio propagation); 3 offices (basic instrumentation, scientific publications and weights and measures); and 6 administrative divisions (fiscal, personnel, supply, shops, plant and services).

The completion and successful operation of SEAC—the National Bureau of Standards Eastern Automatic Computer—represented one of the outstanding developments of the year. De-

PERMANENT STANDARD of neutron radiation intensity developed by the national bureau of standards in 1950; it was a beryllium sphere enclosing a capsule of radium which was estimated, in 1950, to be emitting 1,100,000 neutrons per second

veloped within a period of 20 months, under the sponsorship of the department of the air force, SEAC was the fastest, general-purpose, automatically sequenced electronic computer in operation. Given coded instructions and numerical data, it could rapidly solve important mathematical, computational and statistical problems which could not be undertaken by conventional methods for reasons of time or cost or both. Significant problems in mathematics and chemistry were solved during the year, and a pioneering application to large-scale problems of military management and administration was begun. A second machine, SWAC (National Bureau of Standards Western Automatic Computer), was finished toward the end of the year while several machines were contracted to industry for construction under bureau supervision.

In low-temperature physics, a new and wholly unexpected relationship was discovered between superconductivity—the loss of electrical resistance at very low temperatures—and the constitution of the atomic nucleus. A striking demonstration of the validity of the two-fluid theory of liquid helium II, a form of helium existing near absolute zero, was provided by the development of the Thermal Rayleigh Disk method for investigating the wavelike propagation of heat in this substance. As a result of the increasing need for reliable temperature measurements at both very high and very low temperatures, considerable research was done to develop suitable instruments and methods of calibration.

In mathematics, progress was made on the general problem of finding the eigen values, or characteristic values, of matrices and systems of differential equations. Considerable effort was also expended in seeking methods of solution for the partial differential equations of physics, which describe the phenomena of motion and change in the physical world. Twenty mathematical tables were completed or in progress during the year. The program in statistical engineering was concerned with the application of modern statistical inference to complex engineering experiments and sampling problems and with the analysis of data arising in physical experiments. Attention was given to the theory of small samples such as are used in experimentation in the physical sciences and in engineering testing.

Comprehensive programs of research were carried out to learn more about the earth's upper atmosphere and its effects on the propagation of radio waves. Fourteen radio propagation field

stations, extending over North and South America and the Pacific area, were operated by the bureau either directly or in close association with other agencies. Data thus obtained provided basic material for scientific research and for the application of propagation data to radio communication problems. Radio waves emitted by the sun and stars were studied because they are related to radio propagation and also because they provide a new means for exploration of the universe. A major program was begun during the year for the study of the propagation factors affecting the use of radio for aircraft navigational and traffic control, and an experimental field station was set up for this purpose at Cheyenne mountain, Colo. Continuous broadcasts of standard frequency and time were continued over the bureau's radio station WWV at Beltsville, Md., and over an experimental station, WWVH, at Maui, T.H.

The bureau was engaged in a broad program of fundamental research in atomic and radiation physics to meet the need for new techniques, instruments, measurement methods, scientific and engineering standards and health and protection measures. The omegatron, a new instrument which is basically a miniature cyclotron, was developed for the measurement of atomic masses. An accurate, sensitive technique was worked out for experimentally determining the electric-field distribution and space-charge density within magnetrons. A nonmagnetic radio-frequency mass spectrometer was developed in which a radio-frequency field replaces the usual magnetic field. The new type of mass spectrometer was found ideally suited for use in rockets to determine the composition of the upper atmosphere. The program for the calibration and distribution of standard samples of artificially produced radioactive isotopes continued to grow as the demand for such standards increased in medicine, science and industry. With the installation of a new 50,000,000-v. betatron, work in radiation physics was extended into the realm of extremely high energies. Considerable effort was expended on instrumentation and techniques related to detection of nuclear radiations.

These projects, illustrating the work in a few areas, suggest the nature and scope of the year's work. Similar work was conducted in other fields of the physical sciences while a considerable amount of activity occurred in biophysics and biochemistry. The following developments were typical: a new and simple instrument and method for sectioning organic tissue, important in cancer and other biological research; the effect of altitude on octane number measurement of fuels; the burning velocities and flame temperatures in jet engines; the determination of the absolute viscosity of water; measurement of the absolute viscosity of bulk rubber and rubber solutions; a method for impregnating second-grade sole leathers with rubber, which provides soles more durable and waterproof than the best leather; an instrument for detecting gasoline vapours or other combustible gases; a method for measuring the adhesion of electroplated coatings; the application of silicone rubbers at low temperatures; the growing of thallium bromide-iodide crystals for infra-red transmission; and improved ceramic dielectrics for capacitors and for jet and rocket propulsion.

More than 250,000 tests and calibrations were performed. Typical services of this kind included the sample testing of about 9,000,000 bbl. of cement; the testing and certification of more than 2,000 radium preparations, the life testing of more than 5,000 light bulbs (a sampling of more than 4,000,000 purchased by the government

during the year), the testing of 2,500 samples of microfilm for hypo content, and the sample testing of about 74,000 clinical thermometers.

The results of the bureau's work are available through three monthly periodicals (*Journal of Research*, *Technical News Bulletin*, and *Basic Radio Propagation Predictions*) and a series of nonperiodical publications. An indexed list of publications (*Publications of the National Bureau of Standards*, Circular 460) is available from the superintendent of documents, U.S. government printing office, Washington 25, D.C. **U.S. Stocks.**—The U.S. stock market **Stocks and Bonds.** in 1950 was considerably more active and eventful than in 1949. The volume of trading was about double that of the preceding year. A bull market continued for nearly all of the year with only two sharp but temporary dips in June and November, coinciding with serious adverse news from Korea. The market, however, was extraordinarily unresponsive to bad economic news. By Nov. 23, 1950, the industrial price average had risen to the highest level in 20 years (Sept. 18, 1930); rails were at the best peak in 19 years; and the general average had reached a new high since 1933.

For 90 stocks combined, representing the railroad, industrial and public utility groups, the Nov. 1950 average price level stood at 157.4, as compared with 134.0 for January, and with 131.6 and 121.9 for December and January of 1949. Between Dec. 1949 and Nov. 1950, railroad stocks, using Standard and Poor's figures, increased from 41.0 to 51.8, or 26.3%. Industrial stocks during the same period increased from 162.3 to 199.7, or by 23%. Public utility stocks decreased from 81.6 to 79.9, or by only 1.9%, and copper stocks increased from 114.9 to 152.8, or 33.0% (See Table I).

Corporate dividends, with the exception of certain limited groups like leather and leather products, railroad and railroad equipment, rubber and textile stocks, showed a combined increase of 21.1% in total distribution as compared with 1949. As was the case during 1949, nearly all groups of corporations managed to adjust themselves, through price increases and improved productive efficiency, to wage increases won by labour.

The following factors were mentioned frequently as affecting speculative sentiment during 1950: (1) continuing adverse developments in the international situation; (2) unimprovement in the inflation picture, with an ever-ascending price spiral and with further prospects of price increases because of recurring strikes,

\*Split up four shares to one.

†Split up two shares to one.

as well as greatly increased taxation prospects; (3) failure to balance the national budget by billions, and the prospect of greatly increased taxation both nationally and locally, as well as a prospective crushing armaments budget; (4) governmental restrictions on mortgage loans and consumer credits and the prospect of further governmental controls along many other lines; (5) strikes at an increasing rate; (6) an unfavourable balance of trade, with imports exceeding exports for the month of August, the first time such an event had happened since 1937.

The plethora of favourable dividends and stock split-ups, announcements of exceptional earnings reports, the expectation of a great expansion in armaments, a general belief in higher prices and the general feeling that no unfair excess-profits tax measure would be enacted in 1950 seemed to overcome the adverse news in speculative sentiment.

On Nov. 1, 1950, the market value of all listed shares on the New York Stock exchange stood at \$80,485,000,000, with an average flat price per share of \$47.01. On Nov. 1, 1949, this market value stood at \$72,631,000,000, with an average flat price per share of \$43.75. An increase in the value per share of approximately 7.4% was thus shown for the year.

**Number, Volume and Amount of Stocks.**—According to the New York Stock exchange's compilation, stocks listed on that exchange on Nov. 1, 1950, stood at 2,221,000,000 shares, with a total market value of \$80,486,000,000. This value compared with \$72,631,000,000 on Nov. 1, 1949, \$72,185,000,000 on Nov. 1, 1948, \$68,884,000,000 on Nov. 1, 1947, and \$66,115,000,000 on Nov. 1, 1946. Of the 1950 total (Nov. 1) United States stocks aggregated 2,153,000,000 shares, valued at \$78,829,000,000, and stocks of other countries 67,990,000 shares, valued at \$1,656,000,000. The total of shares was distributed over 1,450 separate United States issues and 21 issues of other countries, representing a total of 1,055 issuing corporations.

Total shares traded on the New York Stock exchange during 1950 amounted to 524,799,621 shares, as compared with 272,203,402 shares during 1949, 302,218,965 shares during 1948, 253,624,000 shares during 1947, 363,709,000 shares during 1946, 377,564,000 shares during 1945 and 1,125,000,000 shares during

TRADING IN STOCKS on the New York Stock exchange: yearly range of prices and number of shares sold, exclusive of odd-lot and stopped sales

1929, the largest yearly total on record. The New York curb market had sales during 1950 of 107,810,000 shares, as compared with 66,130,000 during 1949, 75,090,000 during 1948, 72,380,000 during 1947, 137,220,000 shares during 1946, 143,337,000 shares during 1945 and 71,062,000 shares during 1944.

**U.S. Bonds.**—The bond market was remarkably stable during 1950 at an exceedingly high price level. (See Table III.) The slight decline in bonds after June was contrary to the rising trend in the stock market.

**Number, Volume and Amount of Bonds.**—According to the New York Stock exchange's compilation, the total par value of bonds listed on that exchange at the beginning of Nov. 1950 stood at \$117,441,000,000, with a market value of \$118,417,000,000. This par value compared with \$129,870,000,000 and \$131,226,000,000 for the corresponding period in 1949 and 1948. Of the 1950 total, U.S. corporation bonds (at the beginning of November) amounted to \$17,517,000,000 par value, with a market value of \$17,175,000,000; company bonds of other countries with a par value of \$519,062,000 and a market value of \$433,846,000; U.S. government bonds (inclusive of corporations and subdivisions) with a par value of \$97,816,000,000 and a market value of \$99,627,000,000; and other governments (inclusive of subdivisions) with a par value of \$1,338,000,000 and a market value of \$928,363,000. The total listed bonds of United States corporations were distributed over 919 issues with 377 issuers; of United States government bonds with 65 issues and 3 issuers; and other governments with 181 issues and 49 issuers. The total bonds traded on the New York Stock exchange during 1950 amounted to \$1,878,700,000, as compared with \$817,949,070 during 1949, \$1,013,829,000 during 1948, \$1,076,000,000 during 1947, \$1,364,000,000 during 1946, \$2,262,000,000 during 1945 and \$2,695,000,000 during 1944.

SALES AND PRICES on the New York Stock exchange, 1950

constitution increasing the membership of the board of governors of the exchange from 25 to 33 was approved by the membership. On June 15 the board approved the appointment of an advisory committee on public relations consisting of five members. On July 13 announcement was made of the election, as a public governor, of Thomas S. Nichols, chairman of the board and president of Mathieson Chemical corporation. On Aug. 25 the exchange also announced the election of Henry M. Wristom, president of Brown university, Providence, R.I., as a third public governor of the exchange, which brought the board of governors to its full membership of 33. On Aug. 10 the board approved three amendments to the constitution which would permit members of the exchange, while on active duty in the armed forces of the United States or Allied nations, or engaged in public service incident to national defense, to have partners act as floor alternates to share commissions on floor business handled by another member, or to be exempted from payment of dues. These amendments were approved by the membership on Aug. 24.

**Trading Rules and Clearance of Transactions.**—On Aug. 10 the board of governors approved final extension to Dec. 31 of the experimental plan for clearing transactions by mail for out-of-town firms. On Nov. 13 Japanese dollar bonds were restored to dealings; they had been suspended since Dec. 11, 1941.

**Financial Statement.**—According to the condensed statement of income and expenses of the exchange for the nine months ended Sept. 30, the exchange reported operations at a profit of

\$769,348 compared with a net loss of \$325,995 for the same period of 1949. (S. S. H.)

**Great Britain.**—The devaluation of the pound in Sept. 1949 was followed by an unexpectedly speedy improvement in the balance of payments and in the gold and dollar reserves of the sterling area. This in turn prompted a rebirth of confidence in the pound and a flow of foreign funds to London, partly in the belief that the pound, at \$2.80, was now undervalued. Much of these funds sought investment in British government securities, which became a firm market and thus provided a solid foundation for the stock market price structure as a whole.

The prices of British government securities had receded in 1949. In 1950, however, prices were about 1% higher for the year, despite the setback caused by the Korean crisis. British government securities were always highly susceptible to changes of confidence in the pound and proved so again on this occasion. This firm trend assisted the government's own operations.

Perhaps the biggest surprise of the year in the gilt-edged section was the decision of the government to offer holders of £714,000,000 (\$1,999,200,000) of 2½% national war bonds, 1949–51, the opportunity to convert their holdings into 2½% funding loan, 1956–61, at par, with a cash adjustment; at the same time an additional £100,000,000 (\$280,000,000) of 2½% funding, 1956–61, was offered for cash subscription at 99½%. Holders of £505,000,000 (\$1,414,000,000) of 2½% national war bonds accepted the offer. In November notice of redemption was given for the remaining £209,000,000 (\$585,200,000), and at the same time £250,000,000 (\$700,000,000) of 3% funding stock, 1966–68, was offered at par both for public subscription and for conversion of the remaining £209,000,000.

The years 1947, 1948 and 1949 had seen British industrial shares falling at a gradually increasing pace. In 1950, however, this trend was reversed, and there was an improvement of 8% (*Financial Times* index) on the figure for 1949. The relatively small over-all rise in equity prices concealed much greater changes in individual sections of the market. For instance, shares in the shipbuilding industry, which experienced a great recovery in the tonnage of new shipping on order, rose about 60%. Those in the plastics industry, which had had a difficult time in 1949, gained about 30%, with a late spurt at the end of the year. Shares in the motor industry added about 20% in value. Armament shares were, of course, one of the firmest markets. In general, fears of inflation which were stimulated by the increased expenditure on arms, induced a reluctance to sell equities.

Trading experience was good, but the need to retain profits in order to finance stocks at rising prices naturally made for caution in dividend distributions. In the analysis by the *Financial Times* of the results of more than 2,700 industrial companies, net dividends paid on equity capital were shown to have risen from £112,000,000 (\$313,600,000) in 1949 to £116,000,000 (\$324,-

These indexes of prices on the London stock exchange are reproduced by courtesy of the *Financial Times*, London.

Constituents of the indexes are: government securities, 11 British government securities, including short-dated, medium-dated, long-dated and some redeemable only at the option of the government; industrial ordinary, 30 of the leading British industrial equities; gold mines, 30 South and West African and West Australian gold mining shares. The industrial ordinary share yield is based on dividends in the industrial ordinary share index. Daily bargains are those recorded in the stock exchange official list. Base dates when the indexes were 100 are: government securities, 1928; industrial ordinary, July 1, 1935; and gold mines, Oct. 15, 1926.

800,000) in 1950; but as there was proportionately a still larger increase in equity capital and reserves the actual percentage return to holders on capital employed was slightly less. The expansion in dividend payments was, in fact, materially less than the expansion in equity earnings, which at £354,000,000 (\$991,200,000) was to be contrasted with £317,000,000 (\$887,600,000) for 1949. These figures, however, probably obscure the fact that adherence to dividend limitation was less pronounced in the latter half of the year than in the first.

Just as 1950 was a boom year for commodities—many of them produced in the sterling area by British companies—so was it a good year for commodity shares. It would have been better still but that many producers were operating in countries near possible theatres of war, such as the far east. The rise in copper shares was more than 50%, and that in producers of lead and zinc was not far short of 40%. The shares of plantation rubber companies would no doubt have fared better than they did (a rise of 14%) but for the banditry in Malaya. Oil shares showed only a modest improvement for the same reason, namely the proximity of the middle eastern producers to the U.S.S.R. In the light of rising commodity prices (implying higher working costs) and a fixed gold price, the setback in gold mining shares (of about 17%) was intelligible.

**Strikes.** As shown in Table I, there were 3,606 strikes in the United States in 1949, an increase of almost 200 from the 1948 total of 3,419. These 3,606 strikes involved more than 3,000,000 workers as compared with slightly fewer than 2,000,000 for 1948, and resulted in 50,500,000 idle man-days during the year, nearly 50% more than in the previous year.

Table I.—United States: Number of Strikes Beginning in the Year, Workers Involved and Man-days Lost

Year	Number of strikes	Number workers involved	Man-days idle during year	Per cent of estimated work time
1935-39 (average) . . . . .	2,862	1,130,000	16,900,000	0.27
1946 . . . . .	4,985	4,600,000	116,000,000	1.43

1949 . . . . .	3,606	3,030,000	50,500,000	.59
1950 (8 mo.) . . . . .	2,955	1,660,000	28,900,000	.52

Source: United States Bureau of Labor Statistics, *Monthly Labor Review*. 1950 figures are preliminary.

The first eight months of 1950 as compared with the corresponding period of 1949 indicated a greater number of strikes for the whole of 1950. For this period of 1950 there were 2,955 strikes, whereas in 1949 there were 2,625 during this time. Fewer workers were involved in the 330 more strikes of 1950, but an increase of more than 10,000,000 idle man-days were incurred during the period.

Included in these statistics published by the U.S. bureau of labour statistics were all known work stoppages arising out of labour-management disputes that continued for at least one full day or shift and involved six or more workers. The data on man-days idle and workers involved covered all workers made idle in establishments directly involved in a stoppage and not those employees made idle through material or service shortages incurred by such stoppages.

Table II indicates the work stoppages arising from industrial

\*Fewer than 50. † Fewer than 500. ‡Some workers, largely in the coal mining industry, were involved in more than one stoppage and are counted more than once in the totals. For all industries combined, the net total number of workers involved was approximately 180,000 in the 1950 period and 300,000 in the 1949 period.

Source: Ministry of Labour Gazette (London).

industrial disputes, arose in coal mining, with 603 strikes through Aug. 1950 and 616 strikes for the corresponding months of 1949. However, fewer workers were involved and fewer working days were lost in 1950, less than half as many as in 1949 in each instance. Other industries with a relatively large number of strikes were building and contracting, transport, engineering, shipbuilding and ship repairing and vehicles. Although the number of strikes in each of these industries was less than 10% of the number of stoppages in mining for the periods under consideration for each year, the number of working days lost in transportation and allied industries came considerably closer to the large number lost in mining.

Wage disputes were the predominant cause of industrial stoppages in Great Britain for the first eight months of 1950, accounting for 41.6% of the stoppages (Table III). Only 5.7% of all

Table III.—Analysis of Principal Causes of Industrial Disputes in Great Britain: First Eight Months of 1950

Principal causes	Stoppages begun during 1950		Workers directly involved	
	Number	Per cent	Number	Per cent
Wage increase . . . . .	52	5.7	36,200	14.7
Other wage disputes . . . . .	328	35.9	35,000	14.2

Total . . . . .	913		246,100	

Source: Ministry of Labour Gazette (London).

stoppages, however, were for wage increases, the major share being based on other wage issues. Disputes over other working arrangements accounted for 36.4% of all stoppages, and comprised the other large category. Wage disputes involved approximately 75% more workers than did the stoppages based on other working arrangements.

Comparative figures for the first eight months of 1949 and 1950 showed fewer strikes in progress in all but two of the months, January and July, in 1950. Table IV indicates, however,

Table IV.—Relative Frequency and Size of Labour Disputes in Great Britain: First Eight Months of 1950 and Corresponding Months in 1949

Month	Strikes in progress		Number of working people involved		Number of working days lost	
	1950	1949	1950	1949	1950	1949
January . . . . .	131	121	22,900	55,300	65,000	114,000
February . . . . .	124	133	22,100	19,900	91,000	58,000
March . . . . .	178	180	30,500	19,800	127,000	70,000
April . . . . .	132	138	35,500	40,600	159,000	135,000
May . . . . .	132	161	22,300	76,700	51,000	355,000
June . . . . .	146	162	28,700	47,700	95,000	192,000
July . . . . .	91	74	44,200	24,000	250,000	266,000
August . . . . .	99	115	18,000	105,000	52,000	274,000

Source: Ministry of Labour Gazette (London).

that the number of working people involved and the number of working days lost did not necessarily increase (decrease) when the number of stoppages increased (decreased).

Table V.—Number\* and Time Loss in Canadian Labour Disputes

Month	1950†			1949		
	No. of strikes	No. of employees involved	Time loss in working days	No. of strikes	No. of employees involved	Time loss in working days
Jan. . . . .	9	2,456	39,488	10	1,811	9,710
Feb. . . . .	15	3,764	26,300	10	7,245	71,652
March . . . . .	21	5,659	25,118	11	6,601	136,317
April . . . . .	20	2,585	14,640	18	7,851	138,931

Aug. . . . .	19	129,787	1,053,000	20	4,574	36,276

\*These figures relate only to the actual number of strikes and lockouts in existence and the workers involved during the year, not being a summation in each case of the monthly figures. Strikes and lockouts were recorded together and are a cessation of work involving six or more employees and lasting at least one working day.

†1950 figures are preliminary.

Source: Labour Gazette (Ottawa).

In Canada a comparison of the first eight months of 1949 and 1950 shows the number of labour disputes remaining relatively constant (Table V). The number of employees involved and the time loss in working days, however, was less from February through July of 1950 than in the corresponding months of 1949. Only January and August showed an increase over the preceding year's figures and the August increase was primarily the result of the railway dispute which accounted for 125,700 workers being on strike. This dispute was responsible for the second highest time loss for a month in the recorded history of Canadian labour. (See also LABOUR UNIONS; NATIONAL LABOR RELATIONS BOARD; NATIONAL MEDIATION BOARD; UNITED STATES.) (P. TA.)

**Subsidies:** see AGRICULTURE.

**Sudan:** see ANGLO-EGYPTIAN SUDAN; FRENCH UNION; FRENCH WEST AFRICA.

**Sugar.** Production of sugar in 1949-50 in the principal areas supplying the U.S. was 11,140,000 tons, only slightly less than the record crop of 1947-48, and the 1950-51 crop was forecast as 12,139,000 tons, a new record and almost 50% larger than the average of 8,193,000 tons prior to World War II.

Total sugar production in the U.S. proper was estimated for 1950 at about 2,475,000 tons, compared with 2,084,000 tons in 1949. The preliminary estimate of the 1950 crop included 1,950,000 tons of refined beet sugar, a 25% increase over 1949, and 525,000 tons of cane sugar. The 1950 U.S. crop included a sugar-beet crop of 13,383,000 tons, considerably larger than the 10,197,000-ton crop of 1949 and much greater than the 1939-48 average. Acreage harvested rose to 936,000, compared with 687,000 in 1949 and 773,000 average of 1939-48. Early season weather was generally unfavourable, but yields were 14.3 tons per acre, compared with 14.8 tons in 1949 and the 12.8-ton average of 1939-48.

Table I.—U.S. Sugar-Beet Production (in thousands of short tons)

State	1950	1949	Average, 1939-48
California . . . . .	3,777	2,519	2,149
Colorado . . . . .	2,190	1,878	1,849
Idaho . . . . .	1,514	1,067	1,037
Michigan . . . . .	1,030	743	733
Nebraska . . . . .	814	559	740
Montana . . . . .	743	697	836
Utah . . . . .	532	466	538
Wyoming . . . . .	457	406	430
Ohio . . . . .	288	252	269
Other states . . . . .	2,038	1,610	1,357

The 1950 sugar-cane crop of 6,620,000 tons, mostly in Louisiana, to be used for sugar making, was well above the average for the decade (5,467,000 tons) and the 1949 crop of 6,121,000 tons. Yields in tons per acre were high at 21.0 compared with an average for the decade of 19.8. Acreage at 314,700 approximated that of 1949.

Sugar cane for syrup in several southern states was a smaller crop in 1950, principally because acreage was cut to 62,000 from 70,000 the previous year. Production was 10,830,000 gal., against 11,920,000 gal. in 1949.

Table II.—U.S. Sugar-Cane Production (in thousands of short tons)

State	1950	1949	Average, 1939-48
Louisiana . . . . .	5,382	4,994	4,584
Florida . . . . .	1,238	1,127	873

Other minor U.S. sources of sugar, such as honey and maple sugar products, were produced in 1950 in about 5% larger amounts than in 1949. Sorgho syrup at 6,383,000 gal. was slightly larger than the 6,012,000 gal. of 1949, the smallest crop on record. Maple products of the northeast amounted to 1,968,000 gal. of syrup and 262,000 lb. of sugar, against 1,614,000 gal. of syrup

**SUGAR CANE** under floodlights at an experimental plot in Hawaii in 1950. Keeping the plants "awake" by night light was found to increase the sugar yield because the plants no longer produced the seed-bearing tassels after which they normally stop producing sugar and only grow taller

and 292,000 lb. of sugar in 1949. The 1950 honey crop was estimated at 234,153,000 lb., 3% more than in 1949 and the largest since 1939. Honey was included under mandatory price supports in the Agriculture Act of 1949, primarily because of the value of the honey bee in the pollination of many agricultural crops, and the support price for extracted honey was set at 60% of parity or nine cents per pound.

Civilian consumption of refined sugar in 1950, including unusual reserves accumulated during the scare buying, was estimated as high as 100.0 lb. per person, compared with 95.6 lb. in 1949 and an average of 97.0 lb. during the years 1935-39.

The U.S. sugar supply quota for 1950 was initially set at 7,500,000 tons by the U.S. department of agriculture, but later was twice raised, the final total being 8,700,000 tons, of which only about 7,850,000 tons were used. Under the Sugar Act of 1948, the department of agriculture late in 1950 again held public hearings in order to determine the 1951 requirements of consumers in the continental U.S., and the marketing quota for 1951 was set at 8,000,000 tons; of that quota Cuba received

2,902,600 tons, domestic beet growers 1,800,000 tons, domestic cane producers 500,000 tons, Hawaii 1,052,000 tons, Puerto Rico 910,000 tons and the Philippines 782,000 tons.

Domestic sugar prices in early 1950 approximated 1949 levels, but after the start of the Korean war trends were moderately upward with sugar retailing for about ten cents per pound, in excess of eight cents per pound wholesale and Cuban raws near six cents—nearly 50% higher than in 1949.

The world cane and beet sugar crop of 1950-51 was estimated at 35,386,000 short tons (raw value of centrifugal sugar), 10% more than the record crop of 32,055,000 tons of the previous year and 22% more than before World War II. In addition, production of noncentrifugal sugar, mostly in Asia and South America, was estimated at 5,700,000 tons, compared with 6,200,000 tons in 1949-50 and 4,900,000 tons before World War II. Of the centrifugal total, beet sugar accounted for a record 13,499,000 tons, compared with 11,625,000 tons in 1949-50 and a pre-World War II average of 11,027,000 tons. Sugar (centrifugal) from cane was 21,887,000 tons, compared with 20,430,000 tons in 1949-50 and 17,310,000 tons before World War II. Increased production was rather general. The Cuban crop was estimated at 6,300,000 tons, compared with 6,126,000 tons in the previous year and 3,183,000 tons in 1935-39. Formosa showed a substantial decline. The Republic of the Philippines approached the pre-World War II level of production but was expected to fall short by 200,000 tons of being able to meet the possible full quota of exports to the U.S. Somewhat less than one-third of the total crop was expected to move in world trade. (See also **FOOD SUPPLY OF THE WORLD.**)

(J. K. R.)

**Suicide Statistics.** The suicide rate for the United States in 1950 was almost 2% greater than that for 1949, according to a sample of mortality records covering the first eight months of both years. Within this period, each month except May and June showed a higher rate for 1950. For the entire year 1949, it was estimated there were 17,125 deaths by suicide in the United States and that the rate was 11.5 per 100,000 population; the comparable final figures for 1948 were 16,354 deaths and a rate of 11.2 per 100,000. Canada recorded 1,030 deaths from suicide during 1949 and a rate of only 7.8 per 100,000 population. In the same year, England and Wales had 4,750 suicides, the rate being 10.8 per 100,000; the rate for New Zealand (excluding Maoris) was 9.7 per 100,000 in 1949.

About 1.7% of all deaths among white males in the U.S. in 1948 was by suicide; the rate was only 0.7% among white females. The proportions were even smaller among the nonwhites, 0.5% for males and 0.2% for females.

According to a survey of suicide mortality in the post-World War II period among white persons with industrial insurance in the Metropolitan Life Insurance company, about one-third of the suicides among older men were by hanging, another third by firearms and about one-eighth by inhaling poisonous gas. Among women, only one-quarter of the suicides were by hanging, a like proportion by gas and almost one-fifth by poisons.

**BIBLIOGRAPHY.**—Louis I. Dublin, Alfred J. Lotka and Mortimer Spiegelman, *Length of Life* (1949); United States Public Health Service, *Current Mortality Analysis* (issued monthly), *Vital Statistics—Special Reports* (issued irregularly); Metropolitan Life Insurance Company, *Statistical Bulletin* (issued monthly). (M. Sp.)

**Sulphur.** World production of sulphur increased from 5,380,000 short tons in 1947 to 5,940,000 in 1948, and dropped back to 5,820,000 tons in 1949. This was the first decline since 1943. The United States supplies about 90% of the total, and Italy, with about 3%, is the next largest producer.

**United States.**—The U.S. bureau of mines reported the following data on the industry:

Data on Sulphur Industry in the United States

(In thousands of short tons)

	1944	1945	1946	1947	1948	1949
Production . . . . .	3,604.4	4,203.6	4,322.8	4,974.1	5,453.5	5,314.4
Shipments . . . . .	3,941.4	4,293.3	4,623.6	5,020.7	5,576.4	5,364.0
Exports . . . . .	756.2	1,055.8	1,395.3	1,511.5	1,451.0	1,602.6
Available supply . . .	3,185.2	3,237.5	3,228.3	3,509.2	4,125.4	3,761.4
Consumption . . . . .	3,270	3,316	3,256	3,965	4,144.0	3,920.0
Stocks (producers') . .	4,600	4,484	4,221	3,771.5	3,612.0	3,471.2

Production in 1950 was stepped up to 4,359,446 tons in the first three quarters, and shipments rose to 4,600,790 tons, indicating a possible new record high for the year. (G. A. Ro.)

## Supreme Court of the United States.

The annual term of the court began Oct. 3, 1949, the first Monday in October as provided by statute, and ended June 5, 1950, the earliest adjournment date since 1941.

A special term, a rarity in the court's history, was held Sept. 20, 1950, to afford attorneys attending a meeting of the American Bar association the opportunity of appearing before the court to be admitted to practise; 531 lawyers were admitted at the one-day session as compared with 849 during the entire 1949 term.

The court disposed of 1,308 cases, 126 less than at the 1948 term and there were but 87 signed majority opinions rendered as compared with 114 in the previous term.

The small number of cases decided by one vote, 6, and the number of dissenting opinions, 54, were in striking contrast to the division within the court during preceding terms. At the previous term there were 35 five to four opinions and 90 dissenting opinions.

Resolutions of the bar of the supreme court in memory of Chief Justice Charles Evans Hughes, who died Aug. 27, 1948, were presented to the court May 8, 1950.

**Members of the Court.**—The United States supreme court was composed in 1950 of the following members (dates indicate year appointment was confirmed by the senate): chief justice, Frederick M. Vinson (1946); associate justices, Hugo L. Black (1937), Stanley F. Reed (1938), Felix Frankfurter (1939), William O. Douglas (1939), Robert H. Jackson (1941), Harold H. Burton (1945), Tom C. Clark (1949), and Sherman Minton (1949). (See also LAW.) (H. B. Wy.)

**Surgery.** The maintenance of caloric balance in patients recovering from operations and not able to eat continued to be stressed in 1950. Fluids and sugar (dextrose) had been administered routinely but it was difficult or impossible to maintain satisfactory caloric balance in this way. C. O. Rice, B. Orr and I. Enquist showed that if, in addition to glucose and amino acids (protein building blocks), alcohol is added to the solution given intravenously, an adequate number of calories can be administered. Unless the caloric intake is high, there is a demand upon the patient's own protein, which is undesirable. By the administration of alcohol, glucose and amino acids, however, there is little likelihood of breakdown of the body protein. The alcohol also produces a mild sedative effect, reducing the need for opiates. I. S. Ravdin and H. M. Bars showed that patients with poor liver function can be prepared adequately for operation by giving a high caloric diet preoperatively to protect them against liver failure as a result of injury to the organ by anaesthesia or inadequate oxygen supply. Previously it had been thought inadvisable to permit fat in the diet of these patients; now it became known that if the protein intake is adequate, fat

can be given and in this way the caloric intake can be maintained more readily.

Blood is administered in increasing quantities to patients before, during and following operation. Although blood administration is essential in a patient with anaemia, its pre-operative administration is not without danger, particularly when the heart function is diminished. W. D. Holden *et al.* demonstrated that the administration of large amounts of blood to persons with heart damage can be hazardous, particularly when given rapidly.

W. S. Tillett and associates showed that digestive ferments from streptococci can be obtained which will digest clotted blood and other exudate in patients in whom there are accumulations of pus. The use of the digestive ferments frequently eliminates the need for operative drainage.

In order to decrease the mortality rate in tetanus (lockjaw), O. Creech, J. P. Woodhall and A. Ochsner employed tracheotomy in severe cases. They believed that death in most instances is due to suffocation because of spasm of the muscles of the larynx, and that this can be prevented by maintaining an open airway through a tracheotomy tube. M. T. Jenkins and associates showed that when salt solution is administered too rapidly, particularly in sick individuals, changes in the lung can occur which can produce death. The capillaries of the lung become markedly dilated and the air is excluded from the air sacs.

Many disturbances of the heart were being attacked successfully by surgery in 1950. C. P. Bailey *et al.* treated obstruction of the valve at the outlet of the heart in a number of different ways. They concluded that a dilator introduced through the carotid artery (in the neck) directly into the aorta and through the aortic valve can effectively dilate a stenotic valve. A. Blalock and R. F. Kieffer, Jr., demonstrated that a constriction of the pulmonary valve, which is at the origin of the vessel going from the heart to the lung, can be accomplished by the introduction of a special dilator through the wall of the heart and through the valve. The operation is done usually in patients who are completely incapacitated otherwise; although hazardous, it offers great and at times virtually complete relief of symptoms. J. M. Beal and associates showed that patients suffering from rheumatic heart disease and with auricular fibrillation and subject to detachments of clots from the heart with the development of embolus in the peripheral arteries can be treated successfully by resection of the portion of the heart wall in which clots are located (auricular appendage). A. M. Vineberg and E. H. Niloff transplanted an artery of the chest wall (internal mammary) into the heart muscle to overcome deficient blood supply of the heart muscle resulting from coronary arterial disease. Gordon Murray overcame valvular disease of the heart resulting from rheumatic fever by first relieving the constriction or narrowing of the valve and substituting a new valve which consisted of a vein introduced into the heart cavity which functioned as a valve.

Certain cases of intractable asthma were successfully treated surgically by B. Blades and associates. The nerves supplying the lung are resected in these cases with fairly satisfactory results. Operation was used only in severe cases.

Although it had been commonly thought that ligation of the hepatic artery to the liver usually results in death, C. Tanturi *et al.* showed that if penicillin is given to animals following ligation of the arteries supplying the liver, death does not occur. A mortality rate of 69% resulted when penicillin was not used.

P. W. Gebauer successfully treated tubercular strictures of the trachea (windpipe) and bronchial tubes by surgical removal of the scarred portion and replacement with skin supported by a wire frame. In this way, functioning lung tissue was spared

and rendered functioning again. (See also ANAESTHESIOLOGY; MEDICINE.)

**FILMS OF 1950.**—*The Bone Bank* (Sturgis-Grant Productions, Inc.). (A. O.)

**Surinam** (DUTCH GUIANA). Lying between French Guiana to the east and British Guiana to the west, Surinam, a Netherlands colony, occupies 54,291 sq.mi. in north-eastern South America. Like its two neighbours, it consists of a sea-level plain about 100 mi. wide, where the bulk of the slightly more than 200,000 inhabitants live, and a table land, sparsely settled and rich in fine timber and mineral resources. The population (1950 est., 192,000) includes about 85,000 indigenous and mixtures of indigenous and European elements, about 20,000 Afro-Americans, 35,000 Javanese and more than 50,000 who were either born in India or descended from persons born there. Hardly 2,000 of the inhabitants were born in Europe. The capital is Paramaribo (pop., 1946 est., 71,000). No other town has 5,000 in population. The official language is Netherlandish, but other languages and dialects are widely used. Governor during 1950: J. Klaasesz.

**History.**—A new constitution was promulgated on Jan. 20, 1950. The responsibility for governing the colony formally passed from the colonial ministry in The Hague to a cabinet of nine members responsible to the legislature. The Dutch government continued to supervise the foreign relations of the colony, and to assure its defense against aggression.

The cabinet initially selected was, by the end of the year, after some readjustments slowly and carefully making its way toward a program for national development. Julius de Miranda, who served as Surinam's first prime minister, resigned on Dec. 28; his successor had not been chosen when the year closed. Like the legislature, the cabinet reflected the variety of racial origins of the population of Surinam, in somewhat the same way as in Trinidad, whose legislature and cabinet had many of the same Asiatic and African elements.

The exports of bauxite and of rice, the two leading products of Surinam, both showed an increase in 1950. The trade balance was in fair equilibrium. Credit conditions remained firm, despite some uneasiness as to the currency and fiscal policies possibly to be evolved in the process of self-government. Several substantial projects of economic development, involving the investment of foreign capital, were under consideration at the end of the year. (See also NETHERLANDS ANTILLES.) (C. ME.)

**Education.**—On Jan. 1, 1949, Surinam had 129 primary schools with 773 teachers and 31,463 pupils. About 15% of the 1950 budget was earmarked for education.

**Finance.**—The monetary unit is the Surinam guilder, valued at \$0.530264 U.S. currency, official rate, in 1950. The 1950 budget estimated government revenue at 19,845,200 guilders and expenditure at 20,544,793 guilders; the deficit of 1,699,593 guilders was to be covered by loans. Actual revenue in 1949 was 25,541,004 guilders. Notes in circulation on Dec. 31, 1949, totalled 11,796,900 guilders. The Surinam bank, the local bank of issue, had deposits of 8,394,095 guilders on Dec. 31, 1949.

**Trade and Communications.**—Exports in 1949 totalled 34,077,650 guilders; imports were 37,812,004 guilders. The chief exports were bauxite (74%), rice (9%), citrus fruit (3%), timber, gold, balata and coffee. Principal customers were the U.S. (75%) and the Netherlands (23%); the chief suppliers were the U.S. (52%), the Netherlands (26%), Trinidad (6%) and the United Kingdom (4%).

Internal transportation is largely by water. International air service was supplied by five air lines in 1950. In 1948 there were 1,505 telephones, 500 mi. of wire and 1,353 motor vehicles.

**Production.**—The major economic activity is the extraction of bauxite, most of which is exported to the U.S. Production figures in 1949 included bauxite, 2,382,715 short tons; gold, 3,793 troy oz.; balata, 61 short tons; sugar, 4,850 tons; rice, 33,050 tons; and coffee, 385 tons. (J. W. Mw.)

**Swains Island:** see SAMOA, AMERICAN.

**Swaziland:** see BRITISH SOUTH AFRICAN PROTECTORATES.

**Sweden.** A democratic monarchy of northern Europe. Area: 173,390 sq.mi.; pop. (Jan. 1, 1950): 6,986,181. Capital: Stockholm (pop. Dec. 31, 1949) 732,281. Other principal cities (pop. Dec. 31, 1949) were Göteborg 349,323; Malmö 189,391; Norrköping 84,228; Hälsingborg 71,263; Örebro 65,630; Uppsala 61,561. Religion: Lutheran Christian. Rulers in 1950: King Gustav V to Oct. 29; thereafter Gustav VI Adolf. Prime minister: Tage Erlander.

**History.**—The death of 92-year-old Gustav V on Oct. 29, 1950, marked the end of an era. For 43 years he had given continuity and dignity to the Swedish monarchy. He was succeeded by his oldest son, who took the name Gustav VI (g.v.). The new king's grandson, four-year-old Carl Gustav, became crown prince, for the king's son, Prince Gustav Adolf, father of the boy, had been killed in an aeroplane crash in 1947. At the impressive funeral of Gustav V on Nov. 9 a large royal family,

GUSTAV VI comforting his grandson, Crown Prince Carl Gustav, just before ceremonies at Stockholm in which Gustav formally succeeded to the Swedish throne on Oct. 30, 1950. The young prince was apparently bewildered by the attendant excitement

neighbouring rulers and an entire nation were in mourning.

The most important elections of the year were those of September for the choice of municipal and provincial councils, which in turn have the duty of choosing each year about one-eighth of the members of the first chamber of the *riksdag* (parliament). The Social Democrats increased their popular vote from 44.4% in 1946 to 49% in 1950. The Liberal party polled 21.6%, a slight drop from 1948, but an increase from 15.6% in 1946. The Conservatives dropped from 14.9% in 1946 to 11.8%, and the Agrarian Union won 12.4%. The Communists continued a steady decline from 11.2% in 1946 to less than 5%, and lost two-thirds of their representation. In the city of Stockholm results were especially noteworthy, slashing the Communist numbers from 17 to 5 in the city council, and thus removing them from all boards in the administration. The Social Democrats elected 44 of the 100 councilmen, but the Liberals and Conservatives together now achieved a majority.

Government officials condemned the Communists, and the labour unions continued their successful drive to oust Communist officials. The government publicly denounced the use of the name "Stockholm" in the so-called peace appeal started by a Communist conference there in the summer.

Serious controversies arose with the Soviet Union itself. In the spring a number of Swedish fishing vessels in the Baltic were captured or chased by soviet warships. Two of them were, according to Swedish estimates, about 20 mi. from the eastern shore of the Baltic. The Swedish government protested strongly; the U.S.S.R. replied that the boats were 10.5 and 11 mi. respectively from shore, and therefore within the 12-mi. limit of restricted soviet waters. Moscow claimed that it had set its limits at 12 mi. in 1927. When Sweden and Denmark insisted that history and international law prescribed a limit of either 3 or 4 mi., the Russians answered with the claim that a nation could set its own limits, and that its boundaries would be 12 mi. from its coasts in the Baltic. Potentially even more threatening was an article in a Russian legal journal claiming that the sound between Sweden and Denmark really closed off the entire Baltic, and made it an inland sea subject to control only by the states bordering thereon.

These events and claims gave added concern with regard to the legal position and guarantees of the Åland Islands (*see* FINLAND.)

Sweden continued to insist on its neutrality, or rather its "alliance-free policy," but world trends made Sweden's alignment with the west more and more obvious. Isolationism was strongly disclaimed, and Sweden took seriously its United Nations obligations. It sent an equipped field hospital to Korea, and during the year joined U.N.E.S.C.O. (the United Nations Educational, Scientific and Cultural organization). Sweden also definitely proposed a United Nations army and studied means whereby Swedes could join such a force. The government still disavowed any intent to join the North Atlantic treaty, but increased appropriations for Sweden's own defenses.

Economically Sweden continued to prosper. In the period 1945-49 Sweden built 32 housing units per 1,000 inhabitants, compared with 19 per 1,000 in the U.S. and 17 per 1,000 in Great Britain. Swedish shipyards in 1949 turned out 81 ships of 475,000 tons dead weight, and at the end of the year had orders for 1,687,000 tons. Sweden's own merchant fleet had climbed to 2,080,000 tons. Foreign trade achieved an almost even balance of exports and imports, and in December the government announced that Sweden would not participate in the Economic Cooperation administration program in 1951 (Sweden had never received gifts but only loans under the Marshall plan).

On Jan. 30 Sweden signed with Norway, Denmark and Great Britain an agreement which facilitated trade and financial ex-

change among the four countries.

A sweeping educational reform was promulgated in the spring, the full realization of which would take at least ten years. It extended the period of required schooling from eight years to nine, the eighth and ninth years being similar in pattern to the junior high school in the United States. The most significant aspect was the gradual abandonment of the varied types of elementary schools in favour of a uniform system for all children. After the first years of identical schooling pupils would branch into practical technical or classical studies. (F. D. S.)

**Education.**—Schools (1949): elementary 26,045 (1945), pupils 589,775, teachers 28,382; secondary 219, pupils 82,862, teachers 4,818 (1948); technical and teachers' training colleges, pupils 11,912, teachers 1,645 (1948); universities 6 and institutions of higher education 11, students 15,650, professors and lecturers 1,423.

**Finance and Banking.**—Budget: (1949-50 actual) revenue 5,074,000,000 kronor, expenditure 4,652,000,000 kronor; (1950-51 est.) revenue 4,998,000,000 kronor, expenditure 4,839,000,000 kronor. National debt (Jan. 1950): 12,055,000,000 kronor. Currency circulation (Sept. 1950): 3,197,000,000 kronor. Gold reserve (Sept. 1950): 448,000,000 kronor. Savings and bank deposits (Sept. 1950): 18,344,000,000 kronor. Monetary unit: krona (pl. kronor) with an exchange rate (Oct. 1950) of 5.18 kronor to the U.S. dollar.

**Foreign Trade.**—(1949) Imports 4,334,000,000 kronor, exports 4,250,000,000 kronor. In weight imports amounted in 1949 to 13,634,000 metric tons and exports to 17,976,000 metric tons.

**Transport and Communications.**—Roads (1950): 90,409 km. Licensed motor vehicles (Jan. 1950): cars and buses 201,468, trucks 79,503. Railways (1949): 16,657 km.; passenger traffic 6,336,000,000 passenger-km.; freight traffic 7,536,000,000 ton-km. Shipping (Jan. 1950): number of merchant vessels 2,199; total tonnage 2,080,000 gross tons. Air transport (1949): kilometres flown 8,849,000; passengers flown 145,845; cargo carried (metric tons) luggage 3,705, freight 2,725, mail 978. Telephone subscribers (1950): 1,591,473. Radio receiving set licences (1950): 2,095,474.

**Agriculture.**—Main crops (metric tons, 1950): wheat 676,000; barley 210,000; oats 806,000; rye 306,000; potatoes 1,745,000. Livestock (June 1950): cattle 2,655,000; sheep 282,000; pigs 1,265,000; horses 440,000; poultry 12,000,000. Fisheries, total catch (1949): weight 179,000 metric tons; value 103,000,000 kronor.

**Industry.**—Industrial establishments (1948): 17,490; persons employed 806,000. Fuel and power (1949): coal consumption 8,706,000 metric tons; electricity 16,104,000,000 kw.hr. Raw materials (metric tons, 1949): iron ore 13,752,000; pig iron 841,000; steel ingots and castings 1,368,000. Manufactured goods (metric tons, 1949): wood pulp 2,886,000; paper 1,072,000; cement 1,698,000.

**Sweet Potatoes:** *see* POTATOES.

**Swimming.** The upset defeat of Japan by the United States in an intercountry engagement at Tokyo, a bountiful harvest of world records and a history-making race across the English channel headlined swimming in 1950.

In the competition with Japan, United States swimmers won 9 of the 12 events, running up a score of 46 to 17.

Seventeen world standards, 14 by men and 3 by women, were approved and registered. The chief contributor was John B. Marshall, a young Australian, enrolled as a freshman at Yale university. He bettered eight free style marks, dropping the figures for 200 m. to 2 min. 4.6 sec., 220 yd. to 2 min. 5.5 sec., 400 m. to 4 min. 29.5 sec., 440 yd. to 4 min. 31.2 sec., 500 yd. to 5 min. 12 sec., 500 m. to 5 min. 54.3 sec., 880 yd. to 9 min. 37.5 sec. and 1,760 yd. (1 mi.) to 19 min. 49.4 sec. Hironoshin Furuhashi of Japan completed the free style crop by cutting the time for 800 m. to 9 min. 35.5 sec.

In relay swimming a U.S. team made up of W. Farnsworth, L. Munson, J. Blum and R. Reid clipped the record for 800 yd. to 7 min. 48.9 sec. and a Japanese four composed of Furuhashi, Y. Hamaguchi, S. Murayama and S. Hashizume cut that for 800 m. to 8 min. 40.6 sec. At the breast stroke, Leonid Meshkov, of the U.S.S.R., lowered the standard for 100 m. to 1 min. 6.8 sec., while Robert Brawner and Joseph Verdeur, U.S., reduced those for 200 yd. to 2 min. 13.1 sec. and 200 m. to 2 min. 28.3 sec.

BURSTING VERY LIGHTS at Cap Gris Nez, Fr., on Aug. 22, 1950, starting 24 swimming contestants in a race across the English channel. The victor was Hassan Abd-el Rehim of Egypt, who set a record of 10 hr. 53 min.

In the women's field, Gretjen Wielema of the Netherlands shaded the backstroke records for 100 yd. to 1 min. 4.6 sec. and 200 m. to 2 min. 35.3 sec., and Giselle Vallerey of France reduced the record time for 100 m. breast stroke to 1 min. 17.4 sec.

The channel contest was sponsored by a London newspaper and cash prizes were offered. It drew 24 contenders. Favoured by ideal conditions, seven men and two women achieved the gruelling trip from Cap Gris Nez to Dover. Previously, since the course was first covered officially in 1875, only 29 swimmers had made the crossing. Hassan Abd-el Rehim, an Egyptian army officer, was the winner in 10 hr. 53 min., and Roger le Morvan, a French electrician, second in 11 hr. 3 min., both breaking the course record of 11 hr. 5 min. Eileen Fenton of England, sixth, earned the first prize for women in 15 hr. 31 min.

The channel record for women also fell earlier in the summer, Florence Chadwick, U.S., dropping it from 14 hr. 34 min. to 13 hr. 20 min.

FILMS OF 1950.—*Champ or Chump* (Hollywood Film Enterprises). (L. DE B. H.)

**Switzerland.** A republican confederation of 22 cantons in west-central Europe. Switzerland is bounded west by France, north by Germany, east by Austria and Liechtenstein and south by Italy. Area: 15,940 sq.mi. Pop. (1950 census): 4,696,057. Language: German 72.6%; French 20.8%; Italian 5.2%; Romansch 1.1%. Religion: Protestant 57.6%, Roman Catholic 41.1%, Jewish 0.5%. Chief towns (pop., 1946 est.): Berne (cap., 136,700); Zürich (360,500); Basle (170,300); Geneva (137,600); Lausanne (99,300). President of the confederation for 1950: Max Petitpierre; vice-president of the federal council (government): Eduard von Steiger.

**History.**—During 1950 two major preoccupations absorbed the attention of the Swiss, that of regularizing their fiscal system on the one hand and that of building up their military strength to an unprecedented level on the other.

On Dec. 21, 1949, a provisional financial program based upon direct federal taxation had been voted to tide things over for another two years. Early in 1950, however, it was agreed to drop this plan after only one year. In the place of the direct federal taxes which, although introduced as emergency measures, had now been levied for years, it was proposed that 70,000,000 Fr. a year should in future be provided by the cantons to the *Bund* or confederation and that direct taxes should be levied by the confederation only upon corporations. On

March 21, 1950, the two houses of the legislature accepted the government motion in favour of putting this proposal to the people to be voted upon in a referendum on June 4.

During April and May the Social Democratic party, the trade unions and co-operatives and also Gottlieb Duttweiler's independent party (Landesring) campaigned against the cantonal quota plan. In the referendum 486,506 persons and 16 cantons voted against and 267,540 persons and 6 cantons in favour.

In July, therefore, the government proposed a return to the provisional program of Dec. 21, 1949, with certain modifications, to which the chambers added during their autumn sessions. Virtually all foods were to be freed of the sales tax and more low incomes were to escape the so-called *Wehrsteuer*, which was in fact a form of income tax; further, 400,000,000 Fr. were to be put aside for social relief in emergencies. The last point ensured Social Democratic support, and it was decided that this revised plan, to function to the end of 1954, should be offered for popular approval in a referendum on Dec. 3. In view of the increasingly serious international situation the government urged acceptance with unusual emphasis and 516,757 people voted in favour and 227,329 against.

Until the beginning of 1950 the Swiss high command had by no means applied the lessons of World War II to the organization of the Swiss armed forces; during the year, however, it succeeded in convincing the government and the public that it was time that this should be done. The much more specialized training of fewer recruits was decided upon, together with rearmament at a steep rate involving complete motorization and an unprecedented extension of the air force. In October 1,400,000,000 Fr. over five years was voted for these purposes.

Rearmament at home and abroad shaped Switzerland's economic history during the year. In the spring, in view of the ever more strained international situation, the government appealed to the public to lay in domestic supplies. At first the response was relatively slight as prices were still felt to be excessively high, but after the outbreak of war in Korea buying increased and prices rose further. The rise in prices became part of a fresh Swiss boom created by the rearmament of the whole western world. The first signs of unemployment which had appeared in 1949 were obliterated and foreign labour was recalled.

A striking increase in foreign trade was noticeable by August and continued in September and October; while the United States remained Switzerland's most important trade partner, there was a sharp increase of trade with western Germany.

The boom in the second half of 1950 thus had conflicting con-

sequences. On the one hand the increase in foreign trade increased the revenue from customs and thereby eased the federal budget situation. On the other for many people the cost of living became more oppressively high. Prices of milk, sugar and coffee immediately rose.

In foreign policy the Swiss government tried to insist upon the principle of neutrality as severely as ever, but was nevertheless drawn into solidarity with the west. In August it recognized western Germany. On Sept. 19, in Paris, Switzerland adhered to the European Payments union and this was ratified at an extraordinary session of the national assembly (the two chambers combined) on Oct. 26.

On Sept. 14 Joseph Escher, former president of the Catholic Conservative party, was elected unanimously to succeed Enrico Celio (who had resigned in order to become Swiss minister to Rome) as the seventh federal councillor or minister. This meant that the Italian-Swiss were not represented in the federal council for the first time since 1912, the council consisting of five German-speaking and two French-speaking members. On Dec. 14 Eduard von Steiger was elected president of the confederation for 1951 and Karl Kobelt vice-president of the federal council. (E. Wl.)

**Education.**—Schools (1947-48): elementary, pupils 430,720, teachers 13,932; secondary, pupils 75,510, teachers 3,131; universities (1948-49) 7, students 13,195, professors and lecturers 1,360; institutions of higher education 2, students 4,371, teachers 442.

**Finance and Banking.**—Budget: (1949) revenue 1,423,000,000 Fr., expenditure 1,424,000,000 Fr.; (1950 est.) revenue 1,622,000,000 Fr., expenditure 1,466,000,000 Fr. National debt (Dec. 1949 est.): 11,000,000,000 francs. Main sources of imports (1949): U.S. 20%; France 10%; and foreign exchange (Sept. 1950): U.S. \$1,619,000,000. Bank deposits (June 1950): 7,238,000,000 Fr. Monetary unit: franc with an exchange rate of 4.36 Fr. to the U.S. dollar.

**Foreign Trade.**—(1949) Imports 3,792,000,000 francs; exports 3,456,000,000 francs. Main sources of imports (1949): U.S. 20%; France 10%; Germany 9%. Main destinations of exports: U.S. 12%; Belgium-Luxembourg 9%; Germany 9%. Main imports: wheat 5.2%; machines 5.2%; coal 5.1%; fruit and vegetables 5.0%; edible animal products 4.9%. Main exports: machines 22.3%; watches 20.3%; textiles 12.3%; implements and apparatus 6.5%; chemical dyes 6.1%.

**Transport and Communications.**—Roads (1949): 10,250 mi. Licensed motor vehicles (Dec. 1949): cars 123,009; commercial 38,512. Railways (1949): 3,345 mi.; passenger-miles 3,475,000,000; freight net ton-miles 1,066,000,000; freight carried 15,732,000 tons. Shipping (1948): number of merchant vessels 12; total gross tonnage 40,818. Swissair traffic (1949): miles flown 5,350,928; passengers flown 153,812; freight carried 1,733.4 metric tons; air mail carried 603.4 metric tons. Telephones (1949): subscribers 537,614. Radio receiving sets (1949): 986,679.

**Agriculture.**—Main crops (metric tons, 1949): wheat 254,000; barley 65,000; oats 88,000; rye 30,000; sugar, raw value, 27,000; potatoes 793,000; tobacco (1948) 1,700. Livestock (April 1949): cattle 1,478,000; pigs 887,000; sheep 183,000; horses 138,000; goats (April 1948) 187,000; chickens 6,100,000. Meat production (metric tons, 1949): total 164,000, of which beef and veal were 82,000; pork 80,000. Dairy produce (metric tons, 1949): butter 14,500; cheese 49,400; milk 2,409,000.

**Industry.**—Industrial establishments (1949): 11,566; persons employed 496,573. Electricity (1949): 7,764,000,000 kw.hr. Index of industrial activity (1949; 1938=100): building 115; cotton 94; silk 121; embroidery 105; metals 142; watchmaking 131; chemicals 166; foodstuffs 128. Index of manufacturing employment (1949; 1937=100): 127.

**FILMS OF 1950.**—*Lausanne, Rendezvous of the World* (Films of the Nations, Inc.).

**Symington, William Stuart** (1901— ), U.S. mobilization co-ordinator, was born on June 26 at Amherst, Mass. He studied at Baltimore (Md.) City college, and after serving as a lieutenant in World War I attended Yale university at New Haven, Conn., until 1923. In 1935 he was made president of the Rustless Iron and Steel Co. of Baltimore, and in 1938 he became president of the Emerson Electric Manufacturing Co. in St. Louis, Mo., which during World War II was one of the nation's largest manufacturers of aeroplane armaments.

In 1945 Pres. Harry S. Truman appointed him chairman of the Surplus Property board. When this was later replaced by the Surplus Property administration, Symington was made the administrator. On Jan. 18, 1946, he was named assistant secretary

of war for air, and on Sept. 18, 1947, secretary of the air force. In April 1950 he resigned as air force secretary to become chairman of the National Security Resources board (NSRB), an agency set up under the military unification act of 1947 to co-ordinate military, industrial and civilian mobilization. In September President Truman designated Symington, in his capacity as chairman of the NSRB, to act as co-ordinator of economic mobilization, administering the control powers given the president by the Defense Production act of 1950. Symington repeatedly made public warnings concerning the gravity of international affairs; on Oct. 4, for example, he stated that the nation had "a good chance of losing" a future war unless it built up adequate civilian defense.

**Syria.** An independent Arab republic, formerly under French mandate, Syria is bounded by the eastern Mediterranean, Turkey, Iraq, Jordan, Israel and Lebanon. Area: 72,560 sq.mi. Pop.: (1938 census) 2,930,107, including the inhabitants of Hatay, ceded to Turkey in 1939; (1949 est.) 3,407,000. Language: Arabic is the mother tongue of about 86% of the population, but Kurdish, Armenian, Turkish and Circassian are also spoken. Religion (1943 est.): Moslem 85%; Christian 14%; other 1% (Jewish, Yezidi, etc.). Chief towns (pop., 1948 est.): Damascus (cap., 342,000); Aleppo (369,000); Homs (111,000); Hama (82,000); Latakia (42,000). President: Hashem el Atassi; prime ministers in 1950; Khalid el Azam and (from June 4) Nazim el Kodsí.

**History.**—In Jan. 1950 Egypt and Saudi Arabia offered support to the Khalid el Azam cabinet, provided that a republican regime in Syria would be maintained. On June 4 a new cabinet under Nazim el Kodsí took office and on Sept. 6 the constituent assembly published the new constitution to replace that first promulgated by the French mandatory, which had been swept away by the Husni ez-Zaim coup d'état in 1949. The new constitution strengthened the legislature by providing that the president must sign legislation within three days or refer it to a state council constitutionally established. Other provisions were that the president must be a Moslem, that Moslem law was the basis of legislation and that there would be freedom of worship for "all revealed religions." The new chamber of deputies approved the constitution by 105 votes to 6 and Hashem el Atassi Pasha, up till then temporary chief of the state, became president and Nazim el Kodsí reformed his cabinet.

Economically Syria suffered severely during 1950 from the rupture in March of the Lebanese-Syrian customs union; and to relieve the position created by the closing of the Lebanese frontier to Syrian exports, the government published plans for the improvement of port and road facilities at Latakia, as an alternative to the ports of Beirut and Tripoli, the cost to be met from a \$6,000,000 loan from Saudi Arabia. (See also LEBANON.)

In February the government rejected sponsorship by the U.N. Conciliation Commission for Palestine of two "pilot projects" for the drainage of the Ghab marshes and the harnessing of the Orontes river. Instead they announced a comprehensive plan of their own which included, as purely Syrian undertakings, the two "pilot projects" and also schemes for the supply of water for Aleppo from the Euphrates; a Damascus electric supply from the Yarmuk; and a Latakia electric supply from the Sind river. Later in the year a budget of L.S. 43,000,000 was published providing for all five works.

During the year the construction of the Syrian section of the Arabian American Oil company's pipe line from the Persian gulf to Sidon in Lebanon was completed. Agreement for this construction had been reached with the Zaim government; in April the new government accepted an advance payment of \$1,500,000 toward expenses. After the promulgation of the new constitution, however, it was announced that the Zaim concession would have to be ratified by the new chamber of deputies.

Syria was prominent in the deliberations of the Arab league and associated itself with the resolution qualifying Jordan's annexation of Arab Palestine and signed the Arab States Collective Security pact. In August a treaty of friendship with Pakistan was signed in Karachi. In July there was friction with Israel over a clash near the Sea of Galilee between the frontier troops on both sides. (O. M. T.)

**Education.**—(1949) Primary schools 977 (including 373 private schools); secondary schools 35 (including 13 private schools); foreign schools 41; universities 1: institutes of higher education 3.

**Finance and Banking.**—Budget estimates: (1949) balanced at L.S. 130,700,000; (1950 est.) balanced at L.S. 142,800,000. Currency circulation (Aug. 1950) L.S. 233,000,000. Monetary unit: Syrian pound with an exchange rate of L.S. 2.21 to the U.S. dollar.

**Foreign Trade.**—(Syro-Lebanese customs union, 1949): Imports L.S. 516,200,000; exports L.S. 111,100,000.

**Transport and Communications.**—Roads (1946) 3,966 mi. Licensed motor vehicles (Dec. 1949): cars 4,647; trucks 5,521. Railways (1949) 539 mi. Telephones (1948) 6,200. Radio receiving sets (1949) 30,000.

**Agriculture.**—Main crops (metric tons, 1948): wheat 540,000; barley 260,000; maize 30,000; oats 5,000; potatoes 15,000; rice 22,000; broad beans 28,000; hemp fibre 2,200; tobacco (including Lebanon) 5,300. Fruit production (metric tons, 1949): grapes 150,000; olive oil 18,000; oranges and tangerines 3,000; lemons 300. Livestock (Dec. 1947): sheep 3,176,000; goats 1,185,000; cattle 354,000; horses 141,000; donkeys 230,000; mules 47,000; chickens 937,000; turkeys 76,000. Wool production, on greasy basis, (including Lebanon, 1949): 6,000 metric tons.

**Industry.**—Production (1947): cotton yarn 1,500 metric tons; natural and artificial silk textiles 4,800,000 m.; box calf and kidskin leather 29,000 sq.m.; salt 18,800 metric tons; cement 41,400 metric tons; asphalt 14,500 metric tons.

**Syrup, Sorgo and Cane:** see SUGAR.

**Table Tennis.** The 1950 world championships were played at Budapest, Hungary, Jan. 29 to Feb. 6. The Swaythling cup for men's teams was won by Czechoslovakia (Bohumil Vana, Ivan Andreadis and V. Tereba). The Corbillion cup for women's teams was won by Rumania (Angelica Roseanu, S. (Koloszvary) Szasz and S. Slavescu). Other winners: men's singles, Richard Bergmann (England); women's singles, Angelica Roseanu (Rumania); men's doubles, Ferenc Sido, Ferenc Soos (Hungary); women's doubles, Dora Beregi (England), Helen Elliot (Scotland); mixed doubles, Ferenc Sido, Gizi Farkas (Hungary). The U.S. teams were unable to gain permission from their own country to enter Hungary. The 20th U.S. open championship, played at St. Louis, Mo., March 31–April 2, 1950, produced the following winners: men's singles, John Leach (England); women's singles, Reba K. Monness (New York city); men's doubles, John Leach and Jack Carrington (England); women's doubles, Magda Rurac and Mildred Shahian; mixed doubles, Sally G. Prouty (U.S.) and John Leach (England); junior singles, James Tancill (St. Louis); boys' singles, Alphonse Holtman (St. Louis); junior miss singles, Joane Gardner (Columbus, O.); senior singles, Tibor Hazi (Washington, D.C.); senior doubles, Jack Carrington (England) and Bernard Hock (U.S.). (P. W. R.)

**Taft, Robert Alphonso** (1889– ), U.S. senator, was born on Sept. 8 in Cincinnati, O., the son of William Howard Taft, 27th president of the U.S. He graduated from Yale university, New Haven, Conn., in 1910 and Harvard law school, Cambridge, Mass., in 1913. During World War I he served as assistant counsel of the U.S. Food administration and after that war helped organize relief services to

Europe. He served in the Ohio house of representatives (1921–26) and the Ohio senate (1931–32). He was elected to the U.S. senate in 1938 and re-elected in 1944 and 1950. He was a strong contender for the Republican nomination for the presidency in 1940, 1944 and 1948, and his re-election to the senate in 1950, by an overwhelming plurality, again made him a leading contender for the Republican nomination at the 1952 convention.

Taft in 1950 gained the nickname of "Mr. Republican" for his consistent sponsorship of policies opposed to Pres. Harry S. Truman's "Fair Deal" administration. Among Taft's policies were his labour stand, exemplified by the Taft-Hartley labour act; his insistence on caution in international military commitments; his opposition to the administration's compulsory health program; and his advocacy of a reduction in overseas relief and recovery funds. In winning re-election to the U.S. senate, Taft defeated the combined efforts of virtually all major labour organizations and after the election labour spokesmen frankly conceded that they had suffered a major setback, so much had they regarded the contest against him as a test of labour strength nationally.

**Tangerines:** see FRUIT.

**Tangier.** Tangier has been, since 1912, an international and demilitarized zone of Morocco on the southern shore of the Straits of Gibraltar. Area: 232 sq.mi. Pop.: (1940 Spanish census) 102,306 including 16,500 Europeans, 36,500 native Moslems and 7,000 native Jews; (mid-1949 est.) 150,000 including 30,000 Europeans. Languages: Arabic, French and Spanish. Religion: mainly Moslem. When the one-sided incorporation of Tangier into the Spanish zone of Morocco (Nov. 3, 1940) had been terminated on Oct. 11, 1945, international administration was re-established with a committee of control composed of the resident consuls general of France, Great Britain, the United States, the U.S.S.R., Belgium, the Netherlands, Portugal and Spain. The soviet representative refused to take his seat on the committee as long as Franco Spain was represented. Italy was readmitted to the committee on March 8, 1948. The committee of control appointed a legislative assembly of 26 members (4 French, 4 Spanish, 3 British, 3 U.S., 1 Belgian, 1 Dutch, 1 Portuguese, 3 Jewish and 6 Moslem). Tangier remained under the nominal sovereignty of the sultan of Morocco and his representative (the *mendoub* was Hadj Mohammed el Tazi. Administrator (from Aug. 1948), Jonkheer H. L. F. C. van Vredenburg).

**History.**—The steady expansion of Tangier since 1945, both as a place of political refuge and as a resort for capital, continued during 1950, and there were signs of a land boom. United States preponderance in trade and finance was marked. It was estimated that approximately £30,000,000 in gold was banked in Tangier, and there was much activity in the conversion of sterling accounts into dollars in London and elsewhere in the sterling area. Seventy-three gold ingots, landed surreptitiously from an aircraft near Périgueux, Fr., in October, and believed to be contraband, bore seals marked "Tangier." A trade deficit of £7,000,000 a year compelled renewed attention to the prevalence of smuggling, and in April new measures were announced by the committee of control to prevent abuse of the free port facilities. Ships carrying cargo were warned that all papers must be in order. The step was regarded as the first breach in the policy of *laissez-faire*. (W. C. AN.)

**Tanks:** see MUNITIONS OF WAR.

**Tariffs.** The program initiated by the General Agreement on Tariffs and Trade (G.A.T.T.) and the continuing efforts to broaden its scope and increase its effectiveness supplied during 1950, as it had in each of the three preceding years, the major events of importance in world tariff history.

As a result of the negotiations at Geneva (1947) and at Annecy (1949), 33 countries had become signatories to the general agreement. The agreement had become provisionally effective on the following dates for each of the 23 original contracting parties which negotiated at Geneva:

Australia . . . . .	Jan. 1, 1948
Belgium, the Netherlands and Luxembourg . . . . .	Jan. 1, 1948
Brazil . . . . .	July 31, 1948
Burma . . . . .	July 30, 1948
Canada . . . . .	Jan. 1, 1948
Ceylon . . . . .	July 30, 1948
Chile . . . . .	March 16, 1949
China . . . . .	May 22, 1948
Cuba . . . . .	Jan. 1, 1948
Czechoslovakia . . . . .	April 21, 1948
France . . . . .	Jan. 1, 1948
India . . . . .	July 9, 1948
Lebanon . . . . .	July 30, 1948
New Zealand . . . . .	July 31, 1948
Norway . . . . .	July 11, 1948
Pakistan . . . . .	July 31, 1948
South Africa . . . . .	June 14, 1948
Southern Rhodesia . . . . .	July 12, 1948
Syria . . . . .	July 31, 1948
United Kingdom . . . . .	Jan. 1, 1948
United States . . . . .	Jan. 1, 1948

The Annecy protocol became provisionally effective on the following dates for each of the ten acceding countries which negotiated at Annecy:

Denmark . . . . .	May 28, 1950
Dominican Republic . . . . .	May 19, 1950
Finland . . . . .	May 25, 1950
Greece . . . . .	March 9, 1950
Haiti . . . . .	Jan. 1, 1950
Italy . . . . .	May 30, 1950
Liberia . . . . .	May 20, 1950
Nicaragua . . . . .	May 28, 1950
Sweden . . . . .	April 30, 1950
Uruguay . . . . .	Not yet effective Jan. 1, 1951

Communist control of China ultimately changed that country's relationship to G.A.T.T. Early in 1950 the Communist government signified its intention of reinstating the tariff revisions of 1948, thereby indicating its intention not to observe the Geneva agreement. Shortly thereafter, the Chinese nationalist government clarified the obligations of the contracting parties by notifying them that it would withdraw from the general agreement, effective May 6, 1950. Consequently, in August the United States announced that (after consultation, when requested, with contracting parties claiming an economic interest therein) it would withdraw a substantial number of the tariff concessions initially negotiated with China at Geneva. By the close of the year, however, most of the other contracting parties had failed to take definite action concerning the extent to which they would withdraw concessions originally negotiated with China.

At Annecy the contracting parties had initiated measures looking toward a third set of tariff negotiations, to begin in the fall of 1950. In Feb. 1950, therefore, a fourth session of the contracting parties was held at Geneva to prepare for these negotiations. Torquay, Eng., was selected as the site of the general agreement's third set of tariff negotiations. The conference, which officially opened on Sept. 28, 1950, was attended by the contracting parties and seven countries desiring to accede to the general agreement: Austria, the Federal Republic of Germany, Guatemala, Korea, Peru, the Republic of the Philippines and Turkey. In effect, three types of negotiations were undertaken at Torquay: (1) Those between contracting parties and newly-acceding countries; (2) those between individual pairs of acceding countries; and (3) those between individual pairs of contracting parties. The latter type of negotiation, designed to broaden the scope of agreements previously reached, was, no doubt, the most significant, particularly in view of the fact that it involved a greater number of major trading nations.

As at Geneva and Annecy, simultaneous with a session of the contracting parties (the fifth) at which the Torquay tariff negotiations were conducted, the contracting parties engaged in various discussions relating to the provisions of the general agreement and other issues which had arisen after their last session.

**Revisions by Individual Nations.**—Although no clear line of demarcation exists between the adoption by a country of a new tariff and the comprehensive modification of a schedule already in existence, it is sometimes convenient to make such a distinction. During the year Argentina, China, Colombia, Germany, Italy, Japan, Korea, Iran, Peru and Portugal were reported to have adopted, or to have been in the process of adopting, "new" tariffs. Generally, however, the changes instituted did not involve the complete revision of existing nomenclatures and rate schedules.

*Argentina.*—Near the end of the year Argentina placed in effect a rather comprehensive revision of its customs tariff. Its earlier announced intention of adopting the nomenclature devised by the League of Nations apparently was not carried out. The most important change provided for in the new tariff was a transition to a system of true ad valorem duties to replace the former ostensible ad valorem duties.

*China.*—As stated previously, the Chinese Communist government indicated that it would not be bound by tariff commitments made by the Chinese nationalist government.

*Colombia.*—In July 1950 Colombia announced the results of a revision of its tariff originally undertaken in 1945. It had long been known that Colombia intended to adopt the League of Nations nomenclature as a basis for its tariff classification. When the new tariff was published, spokesmen for the government described it as "courageously protectionist." Compound rates of duty (*i.e.*, simultaneous use of both specific and ad valorem rates) were applied to most commodities.

*Germany.*—During the year the Federal Republic of Germany completed most of the technical work required for its projected new tariff. The proposed revision involved not only the adoption of a completely new nomenclature but also a new schedule of duties. With this revision, western Germany was added to the growing list of countries which had adopted, or contemplated adopting, the League of Nations nomenclature; in this instance Germany employed the Brussels revision of the League classification, as developed by the European customs union study group. The new schedule consisted primarily of ad valorem rates of duty, whereas those in the former German tariff had been predominantly of the specific type. Apparently, the level of the new duties was somewhat lower than that of duties currently imposed by most western European countries; the highest rate was reported to be 35% ad valorem. The projected tariff was submitted to the allied high commission, and later to the Bonn parliament, for review and approval.

*Italy.*—A new Italian tariff became effective in July. The nomenclature employed was that of the League of Nations as revised at Brussels. Rates of duty in the new tariff were predominantly of the ad valorem type. The effective burden of the new schedule of duties became much heavier than that of duties imposed by Italy during most of the years following World War II.

*Japan.*—As was the case with some other countries which adopted new tariff systems, tariff revision in Japan was still in the "projected" state at the close of 1950. For many months a technical committee had been at work preparing a new tariff for review by the legislative and administrative authorities. Early in the year a proposed schedule of duties was published. The nomenclature employed followed closely that of the old tariff. The new schedule, however, made almost exclusive use

of ad valorem rates of duty, whereas the old tariff consisted largely of specific duties.

**Korea.**—The new tariff of Korea, instituted at about the beginning of the year, consisted principally of a revised schedule of duties. Previously, virtually all imports had been subject to a flat rate of 10% ad valorem. The new rates, imposed largely for revenue, ranged from duty-free treatment for many essential raw materials to duties as high as 100% ad valorem for certain luxuries.

**Iran.**—Near the close of the year Iran initiated a revision of its tariff, which, it was expected, would be completed by the middle of 1951. Meanwhile, the government was authorized to make alterations in the tariff schedule for an experimental period of six months.

**Portugal.**—In September Portugal instituted the first general revision of its tariff made since 1929. Although numerous refinements in commodity classifications were adopted, the nomenclature employed followed, in general, that of the previous tariff. The new tariff also continued in effect the double-column tariff of the previous schedule of duties, the rates in the minimum column being applied to imports from countries extending to the products of Portugal the most favourable treatment in their own tariffs.

**Minor Changes.**—During the year there were fewer changes of minor, or piecemeal, character in the tariff schedules of individual countries than had occurred in any peacetime year for considerably more than a decade. This might be attributed, in part, to the element of stability provided by the tariff commitments exchanged under G.A.T.T. and, in part, to the fact that revisions of a more general character were somewhat more numerous in 1950 than in most previous years. The minor changes consisted chiefly of two types: (1) revisions of duties involving a more or less comprehensive list of import items, and (2) piecemeal changes either raising or lowering duties on one or a few individual items.

In Latin America both Chile and Ecuador, in effect, increased customs charges more or less commensurate with the depreciated foreign exchange value of their respective currencies. Similarly, in Europe, Austria adjusted its duties to compensate for currency depreciation. Early in the year all duties in Spain were increased some 20% above their previous level. In September Portugal increased its import duties substantially on a wide variety of manufactured goods. In Iraq duties were increased on an extensive list of commodities. (See also EUROPEAN RECOVERY PROGRAM; INTERNATIONAL TRADE.) (D. L.H.)

**Taxation.** With the outbreak of the Korean war on June 25, 1950, shortly after the passage by the U.S. house of representatives of a bill reducing excise taxes and increasing the rate of tax on corporate incomes, the entire fiscal picture took on an entirely new aspect. On July 13, the senate finance committee discontinued hearings on the bill at the request of the treasury. On July 25 Pres. Harry S. Truman recommended elimination of the excise tax reductions contained in the house bill, an increase of the rate of corporation income tax to 45% and increases in individual income tax rates. On Aug. 22 a bill incorporating in substance the president's recommendations was reported out by the senate finance committee and was passed by the senate with minor modifications on Sept. 1. The substantial variations between the senate and house drafts of the bill were ironed out by the conference committee on Sept. 21 and the new law became effective on Sept. 23, 1950.

The 1950 fiscal year of the U.S. government closed on June 30 with a budgetary deficit of \$3,122,000,000. The budget for the 1951 fiscal year, as proposed, anticipated a deficit of \$5,-

"WHIRLPOOL," a 1950 cartoon by Summers of the Buffalo Evening News

133,000,000. After taking into account the prospective increased revenue and the decrease of some forms of expenditures, the secretary of the treasury indicated in December a prospective budgetary deficit of about \$2,000,000,000, but a substantial cash surplus.

It was estimated by the senate finance committee that the increase in revenues from the Revenue act of 1950 during the fiscal year ending June 30, 1951, would be nearly \$3,000,000,000, and for the succeeding year, the first full year of the new law's operations, about \$4,500,000,000.

**U.S. Revenue Act of 1950.**—From a fiscal point of view the most significant features of this legislation were the increases in income tax rates applicable to corporations and individuals, estimated to increase tax receipts by \$1,500,000,000 and \$2,700,000,000, respectively, for a full year's operation.

For the calendar year 1950, corporations were required to pay, under the new law, a normal tax of 23% on all income and a surtax of 19% on income over \$25,000. For the calendar year 1951 and for fiscal years beginning on or after July 1, 1950 these rates were set at 25% for the normal tax and 20% for the surtax. Provision was made for prorating the increased rates in the case of fiscal years beginning before July 1, 1950 and ending after June 30, 1950. Aside from periods when excess profits taxes had been in force, these rates represented all-time highs, comparing with an aggregate rate of 40% for the period 1942-45, 19% for 1939, 11% for 1929 and 1% when the corporation income tax was first instituted in 1913. For the purpose of putting corporations more nearly on a pay-as-you-go basis, the new law increased the proportion of the total tax payment to be made in the first two quarters. Instead of paying the tax on the preceding year's income in four equal instalments on the 15th of March, June, September and December, the new law called for payments of 25% in each of the first two quarters of 1951. In each succeeding year the new law called for a five percentage point increase in the March and

June payments until the fifth year at which time each of these payments would represent 50% of the tax due.

For individuals the increase took a more complicated form. For the year 1949, the basic tax rates followed a schedule enacted in the Revenue act of 1945, but were subject to certain percentage reductions. The 1950 bill eliminated one-quarter of such reductions for the calendar year 1950 and all of such reductions for the calendar year 1951. The new law did not revoke the increased personal exemptions and dependency credits granted in 1948 nor did it eliminate the privilege then accorded to married couples to divide their joint income equally between them on the community property principle. With these exceptions, the Revenue act of 1950 returned personal income tax rates to their all-time peaks reached during World War II.

Tapping a new vein, the 1950 law included in the tax base the income of charitable and other previously exempt organizations from any business regularly carried on by them which was unrelated to the main charitable or other purpose forming their basis for exemption. A substantial segment of the congress took the position that co-operatives, building and loan associations and various so-called mutual organizations, fully as much as charities, were using their exemption to compete unfairly with fully taxable business. Although no legislation on this point was incorporated in the Revenue act of 1950, the chairman of the senate finance committee stated that steps would be taken in the next tax bill to tax these organizations.

**U.S. Excess Profits Tax Act of 1950.**—This legislation, finally passed by congress Jan. 1, 1951, imposed both an excess profits tax and increased the rate of the corporation surtax. For taxable years beginning after June 30, 1950, the rate of surtax was increased from 20%, established by the Revenue act of 1950, to 22%. No change was made in the 25% rate of normal tax established by that act.

The excess profits tax followed in general the pattern of the tax in force during World War II. Before determining the amount of income subject to excess profits tax the taxpayer was permitted to reduce his income by a credit, such credit being, at the taxpayer's election, 85% of the average of the highest three out of four years in the 1946-49 period, or a percentage of invested capital, 12% where invested capital was not more than \$5,000,000, 10% where invested capital was from \$5,000,000 to \$10,000,000, and 8% where invested capital exceeded \$10,000,000. A flat \$25,000 credit was granted where the credit as otherwise computed would have been below that sum. Relief provisions were included in the case of abnormalities during the 1946-49 base period, new and growing corporations and corporations which effected a substantial increase in their capacity for production or operation during the base period. Certain minimum credits, not allowed under the World War II excess profits tax, were allowed railroads, telephone and telegraph services, airlines and public utilities, on the theory that such concerns were subject to governmental rate regulation and hence should be accorded more lenient excess profits tax treatment than nonregulated businesses.

The effective date of the excess profits tax under the act was June 30, 1950, and the basic rate was set at 30%, effective for taxable years beginning on or after July 1, 1950. For the calendar year 1950, the rate was 15% since only half of the year was subject to the tax. Provision was made for proration of the tax in the case of fiscal years beginning before July 1, 1950, and ending after June 30, 1950.

The aggregate normal tax, surtax and excess profits tax was limited by the new law to 62% of income.

**U.S. Social Security Taxes.**—The Social Security act amendments of 1950 represented the first thorough revision of this legislation since its original enactment in 1937. The rate of

old age benefit tax which, except for the new act, would have advanced to 2% on Jan. 1, 1951, was fixed at 1½% each on the employer and the employee for the years 1951 through 1953. Beginning with 1951, the tax was to be figured on the first \$3,600 of wages rather than on the first \$3,000 prior to the amendment. For the first time regularly employed domestic servants and agricultural labourers were covered by the law. Employees of charities were given the option of electing coverage and state governments were permitted to secure coverage for their employees. Self-employed persons, subject to certain exceptions such as members of the professions, were made subject to tax at the rate of 2½% on their self-employment income. The new amendments also provided for substantial additional employee benefits. It was estimated that 10,000,000 additional workers would be covered by the new act and that the average benefit payments would be increased about 77½%.

**U.S. Tax Treaties.**—Activity in the field of international tax treaties continued in 1950. At the beginning of the year income tax conventions with Denmark, France, the Netherlands and Sweden and income and estate tax treaties with Canada, France and the United Kingdom were in effect. At the same time, signed income tax conventions with Belgium, New Zealand, Norway and the Union of South Africa and signed estate tax conventions with Norway and the Union of South Africa awaited ratification. Additional income and estate tax conventions with Ireland and Greece were signed and submitted for ratification but no additional conventions were ratified with the exception of a supplementary convention with Canada.

**U.S. State and Local Taxation.**—The trend of U.S. state tax collections, which had been steadily upward since 1933, was continued through the fiscal year 1950 with total collections for the year reaching a record high of \$9,000,000,000. The 7.4% increase over the prior year's collections resulted primarily from increased rates on existing taxes rather than the imposition of new levies. The largest amounts of increase were provided by sales taxes on motor vehicle fuel and by motor vehicle and operators' licence taxes. The tax burden per capita also rose, along with the increased collections, the state average being \$60.72 compared with \$57.43 for the prior year and \$30.75 for 1937.

General sales and gross receipts taxes continued as the largest source of state tax revenue, producing \$1,679,000,000 or 18.7% of total state tax collections in 1950, despite the fact that such taxes were in effect in only 28 states. This category was up \$70,000,000, or 4.3% in 1950 from the 1949 level. General sales taxes were the largest source of revenue in almost half the states and were the leading source of revenue in all except four of the states in which they were levied. The reason for this popularity, as pointed out in the 1949 report of the Connecticut state tax survey committee, was the practical difficulty of reaching the lowest income groups through an income tax and the need for stability of revenue in the case of state and local governments which, unlike the federal government, could not engage in prolonged deficit financing. The granting of authority to cities, hitherto hard pressed to meet their budgetary requirements from other sources, to levy such taxes was a feature of the 1950 scene; New York, Louisiana and Mississippi liberalized their enabling acts in this particular.

The next ranking source was the sales tax on motor vehicle fuels, which provided \$1,548,000,000. These taxes were levied in all states but were the leading producer of funds in only 16.

Taken together, the general and selective sales and gross receipts taxes yielded \$4,687,000,000, more than one-half (52.3%) of the total collected from all tax sources. The third major tax group was net income tax on individuals and corporations,

which produced \$1,321,000,000. This tax was the leading source of revenue in only six states.

**Canada.**—The minister of finance presented certain budget resolutions dealing with the Income Tax act to the Canadian parliament on March 28, 1950. No changes were proposed in personal income tax rates or exemptions. The minister took occasion to assure parliament that it was not the policy of the government to tax capital gains. While expressing his wish that greater certainty could be introduced in the determination of just what constituted capital gains, he stated that he did not believe that this could be done by legislation.

Legislation implementing these resolutions received royal assent on June 30, 1950. The numerous amendments which were adopted were technical in nature. Of general interest, however, particularly in view of contemporaneous developments in the United States, were more stringent requirements for exemption from income tax in the case of charitable organizations, non-profit corporations and charitable trusts.

On Sept. 7, 1950 the minister of finance presented a new budget. Resolutions called for an additional 5% corporation income tax and an increase in various excise taxes. These amendments received royal assent on Sept. 15. Reintroduction of an excess profits tax was rejected primarily on the ground that at high rates such a tax became an invitation to extravagance and waste in corporate management. (*See also BUDGET, NATIONAL; DEBT, NATIONAL; LAW.*) (J. DE.)

**Tea.** Apparent civilian per capita consumption of tea (all imported) in the United States in 1950 was two-thirds of a pound, 10% more than in 1949, but only 97% of the pre-World War II level. Imports, mostly from India and Ceylon, amounted to 104,537,000 lb. in 1949-50, 17% more than the 89,175,000 lb. of the previous year; the value also increased, from \$43,487,000 to \$50,534,000. Imports for the calendar year 1950 were indicated at a level of about 120,000,000 lb., as compared with 94,900,000 lb. in calendar year 1949; and the largest since 1918.

World tea production in 1950 was preliminarily estimated as larger than the 1949 crop of approximately 1,000,000,000 lb. Preliminary figures indicated that the 1950 crop was larger in north India and Pakistan and slightly lower in south India and Ceylon. Japan produced more.

Tea prices were strong, ranging from 40 to 70 cents per pound. Ceylon in July raised its export tax on tea by 15 cents per pound, with resulting uncertainty as to whether this applied to a large contract with Great Britain which had been only partially shipped. (J. K. R.)

**Technicolor:** *see* MOTION PICTURES.

**Telegraphy.** During the year 1950 telegraph facilities of the United States serving military camps and naval bases were expanded and a large number of direct circuits for operation around the clock were added for the armed forces. The nation's telegraph system had twice its World War II capacity and had vastly increased its efficiency of operations.

**New High-Speed Telegraph System.**—A nationwide system of high-speed message centres was completed in 1950. A big centre placed in operation at Portland, Ore., in November, to serve as the funnel for telegrams to and from four northwestern states, was the 15th and last area centre, completing the network. Through the new system, which was installed as a part of Western Union's \$100,000,000 program of mechanization and other plant improvements, telegrams are typed only at their points of origin and flash through the centres to their destinations without manual retransmission at any point. The program of

mechanization, increasing the efficiency of operation, contributed greatly to a marked improvement in Western Union's financial position.

To interconnect the 15 high-speed message centres and provide direct circuits between them and other cities, about 2,000,000 channel miles of carrier circuits were installed. Carrier systems permit the transmission of as many as 288 telegrams simultaneously over a single pair of wires, or more than 2,000 simultaneously over a microwave radio beam system.

**Radio Beam System.**—The Western Union Telegraph company had in operation, between New York city, Philadelphia, Washington, D.C., and Pittsburgh, the world's first radio beam transmission system, with towers about 30 mi. apart. This system operated without interruption through the most severe storms.

**Facsimile Telegraphy.**—The Desk-Fax, the miniature facsimile telegraph machine which brings telegraph and cable service directly to the user's desk, was in customer use in ten cities. Washington, D.C., and Pittsburgh, the world's first radio beam at the touch of a button, and could eliminate the time formerly required for the pickup and delivery of their telegrams by messengers. Three thousand additional Desk-Fax machines were being manufactured, the first 1,000 of which were to be installed in Washington, D.C., to provide direct connections with the national high-speed telegraph network.

Other types of facsimile equipment were being placed in use in hotels, office buildings, hospitals, universities and other locations. One of them receives and automatically seals the message, ready for delivery.

**Telecar.**—A fleet of Telecars was being placed in city-wide operation in Baltimore, Md., to speed the pickup and delivery of telegrams in residential areas. The Telecar is an automobile equipped with facsimile recording apparatus, similar to the Desk-Fax, which receives telegrams automatically while the car is cruising in its assigned suburban area. While the telegram is being received, the Telecar starts on its way to the address to deliver it. The Telecar also picks up telegrams in its area and transmits them to the main telegraph office.

**The Bank Wire.**—A new nation-wide private telegraph system known as the "Bank Wire" was placed in operation in November and December. It interconnected 188 banks in 54 cities with fast and efficient record communication. The Bank Wire had a potential capacity of more than 3,000,000 telegrams monthly. Each bank in the network had a printing telegraph machine over which messages were transmitted at typing speed to one of the high-speed message centres in the Bank Wire network, which were located at New York, Chicago, San Francisco, Dallas and Atlanta. At these five centres trained operators flashed the bank messages instantaneously and automatically to the banks of destination by the mere push of a button. More than 27,000 mi. of telegraph circuits were utilized in this system.

**Submarine Cable Amplifier.**—The world's first long submarine cable amplifier was inserted in a Western Union transatlantic cable between Penzance, Eng., and Bay Roberts, Nfld., in Oct. 1950, and increased the speed of the cable from 300 to 1,000 letters per minute. The amplifier was inserted in the cable north-east of Bay Roberts where the depth of the ocean is 1,700 ft. The success of the first amplifier led to a decision to install similar equipment on five other transatlantic cables to more than double the capacity of the five cables.

**National Communications Policy.**—The president of the United States, by executive order in Feb. 1950, created a Communications Policy board to make a broad survey and to establish policy in the communications field. The board was expected to make its recommendations to the president early in 1951.

(W. P. MA.)

**Telephone.** On Jan. 1, 1950, the world total of telephones was estimated at approximately 70,300,000. The United States had about 58% of the world's total. Second was the United Kingdom with 5,177,370; and Canada was third with 2,700,000 (see table).

The telephone industry in the United States continued its record-breaking expansion and improvement activities during 1950. Communications requirements of the national defense program received increasing attention from the nation's telephone companies during the last half of the year.

An important defense undertaking was the start of the installation of telephone facilities for an air defense radar network rimming the country. Thousands of miles of private line networks were provided to the military. Local and toll telephone facilities were furnished to military bases and training camps throughout the country, and to civilian defense organizations.

There was a gain of 2,200,000 telephones during the year in the U.S., including approximately 300,000 in rural areas, to bring the total number in service to 42,900,000. Of these 35,300,000 were operated by the Bell system. The remainder were served by the several thousand non-Bell telephone companies, and additional thousands of farmer-owned lines. About 60% of all U.S. families had telephone service. In Evanston, Ill., 99% of the families had telephone service, leading the nation and the world in this respect.

The U.S. per capita telephone development was 27 per 100 persons, while Sweden was second with 23 and Canada third with 20. The world as a whole had 3 telephones per 100 population.

New York city continued to lead the world's cities in the number of telephones, with 2,956,832. This was more than in any country in the world except the United Kingdom. London was second with 1,526,548 telephones, and Chicago third with 1,495,900. Washington, D.C., had more telephones per capita than any other large city (more than 50,000 people), with 59 per 100 persons. San Francisco was second with 55 telephones per 100 people, and Stockholm, Sweden, was third with 47.

The industry set new records in the number of calls handled in the U.S. in 1950. An average of 170,000,000 local and long distance calls per day were completed—an increase of 10,000,000 per day over 1949. About 6,400,000 conversations in 1950 were toll and long distance, a 9% increase over 1949.

**U.S. Plant and Equipment.**—At the end of 1950 the total investment in plant and equipment for the U.S. industry reached \$11,200,000,000. For the Bell system, the total was \$10,100,000,000. The industry's construction and service improvement program in 1950 cost slightly more than \$1,000,000,000.

Shipments by the Western Electric company—manufacturing and supply unit of the Bell system—included 52,000,000,000 conductor feet of exchange cable and enough local central office switching equipment to serve about 2,000,000 new telephones.

The industry continued its program of converting nondial telephones to automatic operation during 1950. The total number of Bell system dial telephones increased to 26,500,000, or 76% of the total in service. Nearly 4,500 new long distance circuits were added to the Bell system network, increasing the total in service to 90,000.

Demand for telephones increased during the second half of the year, reflecting the effect of increased communications requirements growing out of the defense program. The Bell system put in service about 6,000,000 telephones, achieving a net increase of more than 1,900,000. Despite this accomplishment, however, Bell companies still had nearly 800,000 orders on file for new service, and 1,700,000 requests from party-line customers for better grades of service.

**Stockholders.**—The number of stockholders of the American Telephone and Telegraph company—parent company of the Bell

system—reached a new high of more than 980,000. Other large non-Bell companies and their number of stockholders were: General Telephone corporation, 17,500; Telephone Bond and Share Co., 5,500; Rochester Telephone Co., 4,650.

\*Including Newfoundland. †June 30, 1949. ‡Including all Asiatic territory of the U.S.S.R. §March 31, 1950. ||Partly estimated. ¶March 31, 1949. †Less than 0.1.

A. T. & T. stockholders laid the groundwork for additional financing in the Bell system at a special meeting in Nov. 1950. They voted to increase the number of shares of authorized stock from 35,000,000 to 45,000,000 shares. They also authorized the board of directors to issue at its discretion up to \$435,000,000 in convertible debentures, and to offer for sale to Bell system employees a maximum of 3,000,000 shares of stock.

**Rural Expansion.**—Of the 300,000 new rural telephones installed by the U.S. industry during 1950, about 250,000 were in territory served by the Bell Telephone companies. This brought

the total gain in new rural Bell telephones since V-J day to 1,500,000. It was estimated that the total cost of rural telephone expansion in 1950 was \$130,000,000. The Rural Electrification administration, during its first full year in the rural telephone field, granted 61 loan allocations amounting to \$19,000,000. Of these loans, 20 went to co-operative organizations and 41 to telephone companies.

**Television.**—The Bell system continued to expand its network television facilities. Twenty-two new television stations in 17 cities were added to the existing networks, bringing the total number of cities with network television facilities to 42. Approximately 9,000 channel miles of coaxial cable and radio relay circuits were installed during 1950. Both the cable and relay links were capable of transmitting television and radio programs as well as telephone messages. This brought the total channel mileage devoted to television network transmission to 18,000. The longest radio relay system to date was built during 1950 from New York to Omaha, Neb., via Chicago. Consisting of 54 relay stations, the system utilized directional antennas to beam very-high-frequency radio waves from one station to the next. A radio relay route from Omaha to the west coast was scheduled for completion late in 1951.

**Operator Toll Dialing.**—During 1950, equipment was installed to permit operators to dial long distance calls straight through to 400 distant cities and towns without the assistance of other operators. With those cities connected in the previous few years, approximately 1,000 localities could be reached by the toll dialing method. Nearly 35% of the nation's toll traffic was being handled by operator toll dialing at the year's end. In addition, equipment in several areas enabled 3,500,000 customers to dial their own calls directly to nearby cities or communities beyond their local calling area.

**Overseas Calls and Mobile Service.**—Telephone calls with other countries and ships on the high seas via Bell system radio-telephone stations increased about 15% in 1950, to a total of 720,000 messages. At year's end, service via Bell system radio-telephone stations reached telephones in 85 countries or areas.

Mobile telephone service by the end of 1950 was available in 141 areas covering about 500 communities. The Bell Telephone companies were providing general mobile service to 9,000 vehicles of all types. These units were placing calls at the rate of about 300,000 per month. In addition to general mobile telephone service, the Bell companies had under contract approximately 4,500 mobile telephones on a private-system basis. These were complete systems for the exclusive use of specific customers, the telephone companies only installing and maintaining the equipment.

**New Developments.**—Among outstanding developments in telephony in 1950 was the installation of two new submarine telephone cables between Key West, Fla., and Havana, Cuba, containing the first underwater electronic amplifiers. The amplifiers boost electrical voice currents weakened by the resistance of long spans of wire.

The parts of these amplifiers, including the electron tubes, were especially designed and manufactured by the Bell Telephone laboratories for stability and long life. They were expected to withstand pressures encountered in depths down to three miles and lie undisturbed on the ocean bottom for many years. Power for the amplifiers is supplied over the cables from shore.

Also in 1950, a new type of carrier equipment called "N-1" was put into commercial service by the Bell system. Carrier apparatus permitted telephone circuits to carry several conversations simultaneously. Designed especially for use over short distances, N-1 permitted four wires in a single cable to transmit 12 conversations at the same time.

(L. A. WI.)

SOUND WAVES photographed by a scanning technique similar to that used in television, as developed at the Bell Telephone laboratories in 1950. The technique was expected to be useful in studying the sound-wave field of telephone receivers and other communications equipment

**Telescopes:** see ASTRONOMY.

**Television.** The action of the Federal Communications commission (*q.v.*) in late 1948 "freezing" the authorization of new television stations while investigating questions of geographical spacing remained in effect throughout 1950. The general television hearing begun in Sept. 1949 had not been completed at the end of 1950. The effort of the commission for the first nine months of the year had been concentrated on the phase of the hearing dealing with colour television systems. Late in the year, following a first report and second report on the colour question, the commission embarked on the allocations phases, including reallocation of the 12 VHF (very-high-frequency) television channels, allocation of UHF (ultra-high-frequency) television bands and the assignment of specific channels to communities on a nation-wide basis. Another allocations issue was introduced by the request of the American Telephone and Telegraph company for the frequencies 470-500 mc. for broad-band multichannel mobile radio-telephony. The year ended with educators making a strong appeal for the assignment of a group of television channels for educational broadcasting.

**Colour Television.**—During the colour phase of the hearing three specific systems were demonstrated: a field-sequential system (CBS) in which the picture is scanned from top to bottom in each of three primary colours in sequence; a line-sequential system (Color Television, Inc.) in which a change in colour occurs at the end of each scanning line; and a dot-sequential system (RCA) in which the colour is changed for each picture element or dot. After the hearing was concluded an additional system, frequency interlace (G.E.), was proposed but not demonstrated.

The commission's first report on colour television established criteria for an approved system and concluded that the field-sequential system proposed by CBS was satisfactory for commercial telecasting in spite of the fact that this system was not "compatible"; *i.e.*, CBS colour signals could not be received in either black-and-white or colour on existing receivers without the use of an adapter. The commission noted that the sale of television receivers was continuing at a high rate and the compatibility issue would become increasingly important the longer a decision was delayed. The first report stated that unless manufacturers would agree to modify future receivers in accordance with proposed "bracket standards," which would permit the reception of field-sequential colour signals as well as

monochrome signals the commission would be compelled to standardize on the field-sequential system in order to prevent obsolescence of the monochrome receivers which were being purchased by the public. Nearly all manufacturers responding to the commission's report expressed the view that the modification of their receivers to accommodate "bracket standards" could not be accomplished in the time specified and would increase the cost of sets unduly. Doubt was expressed, in the light of the incompatibility of the field-sequential system, whether colour programs would be broadcast in sufficient quantity to make the public's additional investment worthwhile.

In its second report the commission reviewed the responses of the manufacturers and in accordance with its first report concluded that it would adopt the CBS field-sequential system as standard for commercial colour telecasting effective Nov. 20, 1950. The commission's first report was adopted unanimously but the second report was approved on a five to two basis.

Court proceedings were instituted by RCA and other radio manufacturers attacking the commission's action. A restraining order was obtained in Chicago preventing the inauguration of commercial colour telecasting. At the end of the year it seemed evident the issue would be submitted to the supreme court for final disposition.

In the meantime CBS gave public demonstrations in New York city and Philadelphia of its field-sequential colour system using disk type receivers. Early in December RCA in Washington demonstrated improvements in its compatible dot-sequential system to radio manufacturers, broadcasters and the press. A direct-view tricolour kinescope or picture tube was used in the RCA demonstrations. The screen in this tube was composed of a total of approximately 600,000 dots of red, green and blue phosphors. These dots were arranged in groups of three and so positioned that the electrons from each of three electron guns always hit the dots of their own colour. The phosphor dot groups were so small and so close together that when illuminated by the electron streams, they presented a continuous, smooth, full-colour picture.

**Receivers.**—Based on actual production figures for the first ten months of 1950, total production of television receivers for the year was estimated at 7,200,000, more than twice the number produced in 1949. Picture tube production increased correspondingly with an estimated total of 7,840,000.

In television receivers the pronounced trend toward larger pictures which began in 1949 continued in 1950, the majority of the receivers produced using 16-in. or larger picture tubes. A tube 30 in. in diameter was announced by the Allen B. Du Mont laboratories. The trend toward lower prices likewise continued in the early part of the year; but in midsummer increases in material and labour costs caused a reversal in this trend, which was accentuated on Nov. 1 by the application of an excise tax which increased the retail prices of receivers by an average of approximately 6%. Restrictions on the use of cobalt and other essential materials made it apparent at the end of the year that the number of television receivers produced in 1951 would be smaller than in 1950.

**Stations and Programs.**—At the end of 1950, 107 stations were operating on a regular schedule in 58 metropolitan areas, an increase of 9 stations for the year.

Revenues showed rapid growth in 1950 with time sales estimated at approximately \$84,000,000 as compared with \$28,000,000 in 1949. Of total time sales in 1950, \$36,000,000 was network, \$18,000,000 national and regional nonnetwork and \$30,000,000 local.

On Oct. 5, 1950, the FCC issued proposed rule-making which would provide that no television station in a one-station community could carry the programs of any one television network for more than two hours in either the afternoon or evening time

segments; no station in a two-station community could carry the programs of any one network for more than three hours within one segment; and no station in a three-station community could carry the programs of any one network for more than four hours within one segment. The segments referred to are the hours 1:00 P.M. to 6:00 P.M. and 6:00 P.M. to 11:00 P.M. Most stations which submitted comments were opposed to the proposal on the basis that it interfered with a licensee's responsibility to select programs and deprived stations of a bargaining position with the networks.

Television network facilities at the end of 1950 extended in the eastern United States from Boston in the north to Jacksonville, Fla., Atlanta, Ga., and Birmingham, Ala., in the south, and to Chicago, Ill., Milwaukee, Wis., Minneapolis, Minn., Omaha, Neb., Kansas City, Mo., and Memphis, Tenn., in a westerly direction; and in the western United States between Los Angeles and San Francisco, Calif., linking in all 51 cities. The coaxial cables had an effective band-width limitation of 2.7 mc., compared with the 4-mc. video band-width required for full utilization of the 6-mc. television channel. The American Telephone and Telegraph company indicated that the cable system would be modified to provide the additional band width. Microwave relay systems providing the desired 4-mc. video band width were in operation between Boston, New York city, Philadelphia and Washington; and New York, Detroit, Chicago, Milwaukee and Omaha.

One of the technical developments which aroused considerable interest was the design and construction on the Empire State building of a multiple antenna system to enable all of the five New York city television stations to broadcast from a single structure.

Sports events, variety shows and dramatic productions continued to maintain their popularity as television programs. In 1950, a survey covering all television station areas showed the most popular network programs on the basis of the number of homes reached to be as follows: "Texaco Star Theatre," "Philco Television Playhouse," "Your Show of Shows," "Comedy Hour," "Toast of the Town," "Fireside Theatre," "Stop the Music," "Godfrey's Talent Scouts," "Kraft Television Theatre," and "Four Star Revue." In international politics the televising of the proceedings of the United Nations aroused much interest. A novel feature of the 1950 political campaign was the question and answer technique used by Gov. Thomas E. Dewey in television broadcasts. In these broadcasts, Dewey answered questions asked by individuals at different pickup points around New York city.

Interest in theatre television increased substantially during the year. Twelve commercial theatre television equipments of the direct projection type were produced by RCA and installed in theatres in Providence, Albany, Binghamton, Brooklyn, Bronx, Queens Village, Chicago and Los Angeles. An installation of intermediate film equipment was made by United Paramount Theaters, Inc. in one of their Detroit theatres. Several theatres on the east coast used television news programs on a daily basis to replace a film newsreel. (See also ADVERTISING; MOTION PICTURES; RADIO.)

(G. L. Bs.)

**Europe.**—The prospect of a shared television service for Europe receded as a result of decisions taken in 1950. A study group was set up in 1948 by the Comité Consultatif des Radio-communications, a European body, to investigate the various characteristics of television transmissions with a view to international standardization; between July 1949 and May 1950, the group, under a Swedish chairman, toured in the U.S., France, the Netherlands and Britain. It was unable to reach agreement. Irreconcilable differences of opinion on the standard (number of lines) that should be adopted existed.

Great Britain, the only European country with a complete television service, believed that its 405-line standard would

Above: FIRST TELECAST of Eleanor Roosevelt's weekly forum on Feb. 11, 1950. Participating in a discussion of "What To Do With The Hydrogen Bomb" were, left to right: Sen. Brien McMahon, Hans A. Bethe, Mrs. Roosevelt, David E. Lilienthal and J. Robert Oppenheimer

Above: ANSWERING QUESTIONNAIRES during a television survey conducted at the Burdick Junior High School, Stamford, Conn., in 1950. Results showed that the children spent an average of 27 hr. per week watching TV, three-quarters of an hour less than the weekly time spent in school

Below: BEATRICE LILLIE AND BOB HOPE in the *Star-Spangled Revue* during Hope's debut on television in April 1950

Below: BRITISH TELEVISION STAGE during a dress rehearsal for *Corinth House*, a play by Pamela H. Johnson televised in Feb. 1950

amply suffice for many years to come. France would not give up its standard of 819 lines. Seven other European countries, including Italy, declared for 625 lines, although no country had operated a 625-line service except under laboratory conditions. It remained extremely unlikely that any of the seven countries, except possibly the Netherlands, would be in a financial position to operate a public service for years to come.

Progress in Great Britain was considerable. Plans were issued for a television city in southwest London which would be the first of its kind in the world. The construction of the third and fourth high-power transmitters, in Yorkshire and Scotland, proceeded smoothly and both were scheduled to open in 1951. A recording system enabling programs to be photographed off the end of the cathode ray tube for subsequent transmission was successfully brought into use. Elaborate outside broadcasts including one from Calais, on the French coast, and one from an aircraft in flight were the feature of the year's programs which in December included a daily children's hour and a newsreel which was changed three times a week.

France, in spite of a shortage of funds, in April opened a transmitter at Lille, the first outside Paris. Programs still emanated from Paris and were ingenious rather than artistic. A great part of the transmission time was taken up with old French films. Public interest was small and fewer than 20,000 sets were in operation.

Outside Europe and the U.S. the tale was still mostly one of hope deferred and experiments to come. Canada appointed a senior staff under Fergus Mutrie and Aurèle Seguin to supervise the erection of production centres in Toronto and Montreal. Orders were placed for transmitter equipment in the U.S. and for studio equipment in England. Mexico began transmissions which were principally of bull-fights on Sunday afternoons. The U.S.S.R. announced "further extensions" of a service the details of which were not known outside the U.S.S.R. The standard receiver in Moscow and other large cities had a four and one-half-inch screen. A model with a seven-inch screen was shortly to be made available. This compared with the model in Great Britain which had an eight-inch screen.

**Tennessee.** A south central state, 16th to enter the union, area 41,961 sq.mi., water area about 700 sq.mi. Population (1940): 2,915,841; rural 1,888,635, urban 1,027,206, rural farm 1,271,944; native white 2,395,586, Negro 508,736, foreign born 11,320, other races 199.

The total state population in 1950 was 3,291,718. The population of principal cities in 1950 (preliminary census figures): Nashville (capital) 173,359; Memphis 394,012; Chattanooga 130,333; and Knoxville 124,183.

**History.**—The state commissioners, appointed by Gov. Gordon Browning in 1949 and remaining in office throughout 1950, were: agriculture, Edward Jones; conservation, C. P. Swan; education, James A. Barksdale; finance and taxation, Clarence Evans; highways and public works, Charles F. Wayland; institutions, Houston Brown; public welfare, J. O. McMahan; insurance and banking, M. O. Allen; labour, J. L. Case; public health, R. H. Hutcheson; safety, Sam Neal; employment security, E. K. Wiley. Railroad and public utility commissioners elected by the people were: Hammond Fowler, John Hammer and J. B. Avery. The constitutional officers were: James H. Cummings, secretary of state; W. N. Estes, state treasurer; Cedric Hunt, state comptroller.

Governor Browning was re-elected in Nov. 1950 for another term of two years. Former Republican National Chairman Carroll Reece was again elected to congress from the first district. A proposal was made to elevate Memphis State college to university rank affiliated with the University of Tennessee. A proposed constitutional amendment to prevent diversion of the gasoline tax failed of passage. Governor Browning sent the national guard to patrol a strike of textile workers near Morristown.

The Tennessee Valley authority planned construction of a large steam plant to generate electricity in the Swan Pond area of Roane county.

**Education.**—Enrolment in elementary schools in 1949 was 525,623, an increase of 1.3% over 1948. High school enrolment was 113,307, an increase of 3.5%. Total net enrolment in 4,794 schools was 638,930. There were 4,450 county and 344 city schools, 3,832 white and 962 Negro. The total number of teachers was 22,521.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In Sept. 1950 the total amount of assistance was \$3,424,275 to 95,464 cases; 67,139 old-age recipients received \$2,083,259; 68,782 dependent children \$1,239,445; and 2,659 blind received \$101,571. The increase in payments over Sept. 1949 was 14.8%.

There were in 1949–50 seven correctional institutions in the state with expenditures of \$1,792,000. A school was maintained for the blind and deaf, three state hospitals for the insane, a home for the feeble-minded and an industrial school.

**Communications.**—Of the 65,153 mi. of public road in 1949, 7,667 mi. were state highways; expenditure for construction of highways was \$54,193,000. There were 3,491 mi. of railroad. As of June 1950 there were 62 civilian airports, of which 29 were commercial, 23 municipal, 1 CAA intermediate and 9 private. There were 433,765 class A and B telephones in Tennessee, 69,416 business and 364,349 residential. Water-borne commerce on the Tennessee river in 1949 amounted to 2,766,845 short tons, Cumberland river 1,351,956 (1948); Mississippi river 17,896,229 (1948), and 2,063,613 (1948) at the port of Memphis.

**Banking and Finance.**—In June 1950 there were 72 national banks and 224 state banks; assets \$1,444,200,000 for national and \$588,942,000 for state banks; deposits \$1,347,751,000 for national banks and \$540,380,000 for state banks. Savings and loan associations numbered 37 with assets of \$132,565,000. Federal associations constituted 36 of these with assets of \$131,895,000.

State revenue collected for the fiscal year 1949–50 was \$162,000,000. Federal and local aid amounted to \$40,506,000; proceeds from bonds sold \$11,150,000. Debt outstanding was \$96,690,000, an increase of \$4,757,000 during the year. Collections increased by \$7,000,000 over 1949, expenditures by \$19,948,000. Of total expenditures of \$223,103,000, \$64,521,000 was for education, highways \$61,275,000, welfare \$33,118,000 and distribution to cities and local governments \$70,389,000 (\$44,494,000 for education).

**Agriculture.**—The gross value of agricultural production in 1949 was \$547,631,000; cash farm income \$437,121,000. Cash income from crops was \$216,894,000, from livestock \$215,067,000 and from government payments \$5,160,000. The value of home consumption was \$110,510,000. The forest area was 12,641,000 ac.

**Manufacturing.**—According to the 1947 census of manufacturing, 3,346 manufacturing plants employed 221,454 persons, wages and salaries being \$473,211,000. Value added by manufacture was \$957,539,000, led by chemical industries \$162,578,000, food \$132,489,000 and textiles \$121,294,000.

Table I.—Leading Agricultural Products of Tennessee

Crop	1950	1949	Average, 1939-48
Corn, bu. . . . .	72,794,000	68,900,000	64,072,000
All hay, tons . . . . .	2,126,000	2,436,000	2,173,000
Cotton, bales . . . . .	400,000	633,000	541,000
Soybeans, bu. . . . .	3,150,000	2,500,000	642,000
Wheat, bu. . . . .	3,375,000	4,350,000	4,729,000

Tobacco, lb. . . . .	133,320,000	136,277,000	123,872,000
Potatoes, bu. . . . .	2,200,000	2,250,000	3,190,000
Sweet potatoes, bu. . . . .	1,900,000	2,205,000	3,280,000

Table II.—Principal Mineral Products of Tennessee

Mineral	Value 1948	Value 1947
Coal . . . . .	\$37,232,433	\$29,840,946
Stone . . . . .	12,932,537	10,617,502
Cement . . . . .	13,667,060	11,017,225
Zinc . . . . .	7,853,384	7,553,304
Sand and gravel . . . . .	4,147,728	3,805,669
Lime . . . . .	1,442,906	1,533,737
Clay (except for cement) . . . . .	2,501,657	2,120,196
Barite . . . . .	275,242	285,853
Phosphate rock . . . . .	8,231,251	7,778,619
Other minerals . . . . .	5,314,802	5,387,949
Total value . . . . .	\$93,599,000	\$79,941,000

**Mineral Production.**—The total value of mineral production in Tennessee for the year 1948 was \$93,599,000, according to the U.S. bureau of mines. (C. E. A.)

**Tennessee Valley Authority.** Emphasis during 1950 by TVA was on the expansion of electric generating capacity to meet both normal growth of load and the requirements of national defense, including large expansions at the Atomic Energy commission plant at Oak Ridge, Tenn. With 218,000 kw. placed in operation during the year, the total installed capacity was 3,090,000 kw. Construction under way and planned was designed to increase the installed capacity of the system to 4,900,000 kw. by 1953.

Construction of Widows Creek steam plant, to have a capacity of 500,000 kw. in four units, was started on Guntersville reservoir in north Alabama. Work was speeded up on construction of the Johnsonville steam plant in west Tennessee, on Kentucky reservoir, and the planned capacity was doubled to include six generating units totalling 675,000 kw. Construction of two new dams, Boone (near the spot where Daniel Boone "cilled a Bar" in 1760) and Fort Patrick Henry was started on the south fork of the Holston river in east Tennessee. Boone dam was to be of concrete, 150 ft. high, providing 100,000 ac.ft. of flood control storage and 75,000 kw. of installed capacity. Fort Patrick Henry dam, 100 ft. high, was to have a capacity of 36,000 kw. Both would benefit from storage in Watauga and South Holston reservoirs. Filling of the latter reservoir started with closure of the dam on the south fork Holston late in 1950.

The 17th and 18th generating units were placed in operation at Wilson dam, filling all the stalls at that structure. Because of upstream regulation of stream-flow by TVA-constructed dams, it became possible to more than double the installed capacity of the Wilson dam and increase its output six times. Two new units at Wheeler dam, 15 mi. above Wilson, completed installations at that project, bringing the total to 259,000 kw.

The integrated system produced 17,500,000,000 kw.hr. in the fiscal year 1950 and TVA power revenues were about \$58,000,000. Net operating revenue of \$27,000,000 equalled a return of 5.75% on the net average power investment. Ninety-five municipal and 50 co-operative systems distributed about 6,500,000,000 kw.hr. to ultimate consumers, with revenues of \$81,500,000 and combined net income of \$14,400,000. They added 110,000 new consumers during the year. Rural electrification advanced to 80% of farms in the area, compared with 3% in 1933. Average residential use of electricity reached 3,100 kw.hr. per customer, compared with the national average of less than 1,800.

TVA flood control operations reduced two crests on the lower Ohio and Mississippi rivers, one by two feet and a second by more than a foot, thus averting the need to use the Bird's Point-New Madrid floodway which would have caused millions of dollars in damage in a 200-sq.mi. area.

Freight traffic on the Tennessee river amounted to 508,000,000 ton-miles, 15 times as much as in 1933, and savings to shippers were estimated at \$6,000,000 in the calendar year 1949.

At the beginning of 1950, investment in recreational facilities—parks, boat docks, boats, etc.—by states, counties and private interests amounted to \$21,000,000 on TVA lake shores, compared with \$16,000,000 in 1948. Success of TVA malaria control operations was indicated in the fact that 4,300 blood films taken in former malaria problem areas along the stream showed no evidence of malaria parasites.

TVA chemical plants, capable of producing either fertilizer materials or munitions as needed, in the fiscal year 1950 produced 136,000 tons of ammonium nitrate, 16,400 tons of calcium metaphosphate, 125,400 tons of concentrated superphosphate and 17,400 tons of fused tricalcium phosphate. The products were used in farm test-demonstrations or sold. TVA discontinued the

production of dicalcium phosphate, undertaken during World War II to help meet a need for mineral supplements for stock feed.

The TVA board of directors consisted of Gordon R. Clapp, chairman, James P. Pope and Harry A. Curtis. (See also DAMS; ELECTRICAL INDUSTRIES; PUBLIC UTILITIES.) (K. R. K.)

**Tennis.** The successful conclusion of Australia's four-year quest of the Davis cup was the outstanding development in lawn tennis in 1950. The year which marked the 50th anniversary of the International Lawn Tennis championship saw 26 nations challenge the U.S. for the famous trophy. Sweden, European zone winner, gave Australia, winner in the American zone, a close fight in the interzone final at the Westchester Country club, Rye, N.Y., when Lennart Berglin scored two victories over the Australian champion Frank Sedgman and the veteran John Bromwich. Australia won, 3-2, to qualify for the challenge round which was played at the stadium of the West Side Tennis club, Forest Hills, N.Y., late in August. When Sedgman beat Thomas P. Brown, Jr., of California and 21-year-old Kenneth McGregor gave Frederick R. (Ted) Schroeder, Jr., another Californian, his first Davis cup defeat, the stage was set for Australia's conquest. The victory was sealed the second day as the Australian doubles team of Sedgman and Bromwich defeated Schroeder and Gardnar Mulloy of Florida in a hard-fought five-set match. The final day Sedgman trounced Schroeder in straight sets, but Brown saved the U.S. from being whitewashed by winning a thrilling uphill battle from McGregor by the score of 9-11, 8-10, 11-9, 6-1, 6-4.

Three of the world's four major championships were won by U.S. players. Sedgman defeated McGregor for the Australian title. J. Edward (Budge) Patty, Californian, won the French championship by beating Jaroslav Drobny (Egypt) in a five-set final and downed Sedgman at Wimbledon to capture the British crown. A sprained ankle kept Patty out of Davis cup competition and the U.S. championships. Arthur Larsen, a left-

GERTRUDE MORAN (right) and Mrs. Pat Todd, partners in the second round of the women's doubles at Wimbledon, Eng., July 1, 1950, during the All-England lawn tennis tournament. The U.S. team won the match 6-3, 6-8, 6-3

hander, also from California, captured the U.S. crown by defeating Herbert Flam, student at the University of California at Los Angeles, 6-3, 4-6, 5-7, 6-4, 6-3. The championship was played as usual at Forest Hills early in September. Larsen also beat Flam again a few weeks later to win the U.S. Hard Court championship played at the Berkeley (Calif.) Tennis club. Flam, nevertheless, had an impressive record in U.S. tournaments, having won the National Intercollegiate singles and doubles (with Eugene Garrett), the U.S. Clay Court singles, crushing Schroeder 6-1, 6-2, 6-2, and (with Larsen) taking the doubles from Schroeder and Tony Trabert of Cincinnati, O. Flam also won two important sectional events, the western and the eastern (grass). Trabert, 19, won the French doubles with William F. Talbot of New York and with Patty conquered Sedgman and McGregor in the quarter-final of the British championships which featured the longest set (31-29) ever played at Wimbledon.

Two important doubles titles went to Australia when the veterans Bromwich and Adrian Quist, many times Australian doubles champions, won at Wimbledon, and Sedgman and Bromwich captured the U.S. championship at the Longwood Cricket club, Brookline, Mass., by defeating Talbot and Mulloy, who had won the title four times.

The women's division again found U.S. players in complete command. The U.S. Wightman cup team of Mrs. Margaret Osborne du Pont, Louise Brough, Doris Hart and Mrs. Patricia Canning Todd overwhelmed their British opponents in seven matches at Wimbledon. On the British team were Mrs. Betty Hilton, Mrs. Jean Walker-Smith, Joan Curry, Jean Quertier and Kay Tuckey. The four major championship titles were distributed among Miss Brough, who won the Australian and Wimbledon crowns, Miss Hart, who won the French title and was runner-up in the Australian, British and U.S. championships, and Mrs. du Pont, who captured her third successive U.S. title. Mrs. du Pont and Miss Brough continued their great record as a doubles team by taking their ninth successive U.S. championship. They also scored their fourth Wimbledon doubles victory.

**FILMS OF 1950.**—*Tennis by Contrast* (Hollywood Film Enterprises, Inc.). (E. S. Br.)

**Texas.** Known as the "Lone Star state" from the single star in the flag of the Texas republic, 1836-45, Texas is a west south central state of the United States. Land area, 263,644 sq.mi.; inland water, 3,695 sq.mi.; total 267,339. Pop. (1950 census), 7,711,194, a gain of 20.2% over the population of 6,414,824 in 1940. Urban population (preliminary), 4,403,791, or 57.1%. Negroes constitute about one-seventh of the population, residing largely in the eastern third. Latin-American population (Mexican and Mexican descent) constitute another one-seventh, residing principally along the southwestern border. Capital: Austin, with 131,964 population in 1950. Other cities ranked by population in 1950 (preliminary census figures): Houston 594,321; Dallas 432,927; San Antonio 406,811; Fort Worth 277,047; El Paso 130,003; Corpus Christi 108,053; Beaumont 93,715; Waco 84,300; Amarillo 73,737; Lubbock 71,390; Wichita Falls 67,709.

**History.**—Events of significance during 1950 were: the U.S. supreme court decision awarding tidelands to the federal government in opposition to Texas' claim based on provisions of the annexation agreement of 1845; the supreme court decision admitting Negroes to the University of Texas, Austin, and other tax-supported higher educational institutions under some conditions. The state elections (actually determined in the Democratic primaries in Texas) returned all incumbents to office except John C. White who replaced J. E. McDonald as commissioner of agriculture and Robert W. Calvert who replaced R. H. Harvey as a supreme court justice. There was no session of the

legislature during 1950.

The principal state officials for the biennium, 1951-52, were: governor, Allan Shivers; lieutenant governor, Ben Ramsey; attorney general, Price Daniel; comptroller of public accounts, Robert S. Calvert; treasurer, Jesse James; state commissioner of education, J. W. Edgar; commissioner of agriculture, John C. White; commissioner of general land office, Bascom Giles. Members of the three-member state railroad commission, also having jurisdiction over oil production and oil and gas pipe lines, were William J. Murray (term ending Jan. 1, 1957), Olin Culberson (Jan. 1, 1953) and Ernest O. Thompson (Jan. 1, 1955).

**Education.**—The first full school year, 1949-50, under the Gilmer-Aikin (school system reform) act, increased average classroom teachers' salaries to \$3,040, supervisors' to \$3,335 and administrators' to \$4,947. During the school year 1950-51, active independent school districts numbered 947, active common school districts 1,565. The decline in number of districts was attended by a compensating increase in the number of teachers and pupils per district and the expansion of bus transportation. The state's apportionment to public schools, 1950-51, was \$80,847,416, or \$52 per student, supplemented by an equalization fund. Local districts contributed a little less than the state. Other data: teachers 49,676; students (age 6-17) 1,589,183; average attendance 1,151,971; high school graduates (1949-50) 50,482. Total expenditures for common school and higher education amounted to \$209,151,257, to which was added approximately \$75,000,000 in local support.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The number on the old-age assistance rolls, Aug. 31, 1950, was 226,208; average monthly payment \$7,612,390; average monthly payment per recipient \$33.65. The number of dependent children aided was 19,306; average monthly payment \$843,866; average monthly payment per recipient \$43.71. The number of needy blind aided was 6,538; average monthly payment \$248,882; average monthly payment per recipient \$38.07.

**Communications.**—The total public road mileage in Texas, Aug. 31, 1950, was 197,717 mi., according to the state highway department, of which 41,998 mi. were in the state system. Paved roads, of all classes, totalled 34,786 mi. in the state and 8,682 mi. in the local system, with an additional 41,000 mi. of gravelled and low-grade bituminous roads principally in the local system. Highway expenditures for the year ended Aug. 31, 1950, were \$202,410,112. Total vehicle registration was 2,306,144 passenger and 271,280 commercial. Railroad mileage (Dec. 31, 1949) was 15,570 mi. of mainline and 6,034 mi. of auxiliary track, according to the railroad commission of Texas; total investment \$862,925,553; number employees 58,436; net freight revenue \$334,068,631; passenger revenue \$22,706,930. The total movement through Texas ports in 1949 was 122,630,943 short tons, including inbound and outbound, foreign and domestic. In the calendar year 1949, there were 2,115 common carrier motor buses in operation, with \$49,726,880 of operating revenue and \$47,321,743 of operating expenses. Commercial motor trucks, numbering 37,291, had operating revenue of \$363,481,284 and operating expenses of \$347,354,219, including all common carriers, specialized and contract carriers. There were 11 air lines serving the state. There were in 1949, 624 airports of all classes and 25,210 licensed pilots. In 1950 there were 1,069 telephone exchanges with approximately 1,579,000 telephones. Radio stations in 1950: AM 170; FM 30; TV 6.

**Banking and Finance.**—The total state revenues, year ended Aug. 31, 1950, were \$556,849,144, according to the comptroller of public accounts. Expenditures were \$527,499,975. The principal expenditures were: education \$209,151,257; public welfare \$132,031,102; highways \$110,986,293; eleemosynary and correctional \$23,560,146. The state's bonded debt was \$4,100,000, consisting entirely of old obligations. The total debt of local civil districts (1948) was \$647,251,632. National banks, June 30, 1950, numbered 440 with \$5,454,118,000 of deposits and \$5,797,407,000 of resources. State banks numbered 446 with \$1,203,244,000 of deposits and \$1,283,139,000 of resources.

**Agriculture.**—Harvested acreage in 1950 was 25,000,000, about 5,000,000 less than in 1949 because of bad weather conditions. The total crop value was \$1,234,416,000, compared with \$1,573,645,000 in 1949.

Number and value of livestock on farms, Jan. 1, 1950 (U.S. department of agriculture): all cattle 8,658,000, valued at \$900,432,000; milk cows only 1,296,000, valued at \$180,144,000; hogs 1,701,000, valued at \$35,381,000; all sheep 6,821,000, valued at \$104,878,000; goats 2,246,000, valued at \$12,802,000; horses 352,000, valued at \$12,320,000; mules 139,000, valued at \$6,672,000; chickens 27,384,000, valued at \$30,396,000; turkeys 755,000, valued at \$3,624,000. Total value \$1,106,506,000.

**Manufacturing.**—The volume of industrial production in 1950 was approximately 10% above the level of 1947, latest census, which showed

Table I.—Leading Agricultural Products of Texas

Crop	1950	1949	Average 1939-48
Cotton lint, bales . . . . .	2,900,000	6,040,000	2,729,000
Cottonseed, tons . . . . .	1,197,000	2,438,000	1,124,000
Wheat, bu. . . . .	22,712,000	100,398,000	56,350,000
Sorghum for grain, bu. . . . .	148,818,000	92,676,000	62,954,000
Corn, bu. . . . .	65,730,000	58,208,000	64,272,000
Rice, 100-lb. bags . . . . .	11,544,000	10,740,000	7,873,000
Sorghum for forage, tons . . . . .	2,271,000	2,145,000	3,804,000
Peanuts, lb. . . . .	330,750,000	333,450,000	283,952,000
Hay, tons . . . . .	1,281,000	1,348,000	1,426,000
Oats, bu. . . . .	27,027,000	34,020,000	31,195,000
Tomatoes, bu. . . . .	4,543,000	5,245,000	...
Sweet potatoes, bu. . . . .	5,130,000	5,775,000	5,119,000
Grapefruit, boxes . . . . .	12,000,000	6,400,000	18,187,000
Onions, 50-lb. sacks . . . . .	4,483,000	3,644,000	...
Oranges, boxes . . . . .	3,500,000	1,760,000	3,676,000

\$1,727,464,000 of value added to manufactured products and 242,014 wage earners with \$558,420,000 wages. Petroleum refining, food products, chemicals and general machinery were the leading manufacturing lines.

**Minerals.**—The total value of mineral production in 1950 was estimated at \$2,700,000,000, based on production and price trends of petroleum, natural gas and allied products, which contributed 91% of the total value.

Table II.—Principal Mineral Products of Texas

Mineral	Production		Value, 1948
	1948	1947	
Oil, bbl. . . . .	903,318,000	819,427,000	\$2,326,209,000
Natural gasoline, thousand gal. . . .	1,861,164	1,646,227	170,306,000
Natural gas, million cu. ft. . . . .	2,289,923	1,932,857	103,505,000
Liquefied petroleum gases, gal. . . .	1,123,225,000	973,703,000	50,433,000
Sulphur, long tons . . . . .	3,973,201	3,965,825	71,500,000
*Carbon black, lb. . . . .	903,384,000	895,773,003	58,021,000
Cement, portland, bbl. . . . .	13,786,846	12,349,219	30,352,972
Sand and gravel, commercial tons . .	13,560,001	11,641,867	12,383,756

\*Listed as both mineral and manufactured product by U.S. government.

Petroleum production, 1950, was estimated (preliminary) at 825,000,-000 bbl., as compared with 743,900,000 in 1949 and a peak of 903,-318,000 in 1948. (S. McG.)

**Textile Industry.** Under the pressure of military demand, use of textile fibres increased steadily during 1950 with every prospect of continued expansion during the years immediately ahead.

Cotton consumption in the U.S. was approximately 25% higher in 1950 than in the previous year. Wool consumption in 1950 was up by about 30%. Silk deliveries for domestic consumption were slightly more than double those of the comparable period in 1949. Shipments of synthetic fibres were also 30% higher than in 1949.

The U.S. textile industry reinvested a record amount of capital in its mills during 1950. Of the estimated total of \$565,000,-000, about one-third was spent by synthetic-fibre-using mills and a slightly smaller amount by cotton mills. A sharp increase also characterized the total amount reinvested in dyeing and finishing. Woollen and worsted mills spent the least of all the industry branches on expansion or improvement. On the other hand, those mills utilizing primarily synthetic fibres committed the most money to expansion and improvement in 1950.

United States shorn wool production during the calendar year 1950 was estimated to total 218,000,000 lb., greasy basis, representing a small increase over the 217,000,000 lb. clipped in 1949, and being in fact the first increase recorded since 1941.

World production of raw wool during the 1950-51 season was estimated by the United States department of agriculture at 4,000,000,000 lb., representing an increase of 3½% over the output during the previous season, and being the highest level since the five seasons 1939-40 to 1943-44 inclusive.

In synthetics, imports of rayon staple expanded sharply in 1950 as compared with 1949. Textile weavers and knitters in many countries, hard pressed for sufficient supplies of textile fibres, protested the continued export of rayon staple, particularly to the United States. They maintained, for example, that the consumption of rayon staple in their own fabricating mills would save the expenditure of dollars for raw cotton and also would permit the production of lower-priced fabrics through blending rayon with the natural fibres. (D. G. Wo.)

**Great Britain.**—The British textile industry suffered in 1950 from shortages in the basic raw materials including cotton, wool, silk, rayon, flax, jute and the range of the more recent man-made fibres. Prices, high production costs and insufficient skilled labour were also disturbing; and inequalities in the levels of consumption in the different parts of the world were more pronounced than at any time since World War II. Shortage of sterling in certain countries, coupled with shortages of U.S. dollars and of Swiss and Belgian francs, affected production in some of the supplying countries and at the same time prevented a substantial volume of demand from becoming internationally effective.

World demand for wool was phenomenal: total consumption

was approximately 25% higher than production. Output by the wool industry, however, increased progressively, and the deliveries of worsted yarn in September totalled 19,610,000 lb. compared with 16,890,000 lb. in the same period in 1949. Woven wool fabrics amounted to 39,030,000 sq.yd. (compared with 35,380,000), woven blankets to 2,580,000 (compared with 1,670,000). The United Kingdom produced 26,730,000 lb. of merino and crossbred tops in Sept. 1950 (compared with 23,-290,000 in Sept. 1949).

Board of trade statistics for the cotton industry showed that production of single cotton yarns in Sept. 1950 was 16,210,000 lb. (compared with 15,810,000 in Sept. 1949). Waste yarns, alarmingly short at 1,880,000 lb. in Sept. 1949, increased to 1,970,000 lb. in 1950. Production of doubled yarns also increased (5,180,000 lb. compared with 4,820,000). Similar increases were noted in cotton cloth at 40,200,000 linear yards (compared with 38,300,000) and rayon and mixture cloths at 13,500,000 (compared with 12,900,000). In finished manufactures, exports claimed priority, but rising prices operated in favour of overseas competitors, particularly where quality was a secondary consideration. The total export value of filament rayon yarns, rayon staple and fabrics, ribbons, lace, etc., made from rayon was £3,900,000 in September, compared with £3,060,-000 in the previous year.

An outstanding introduction was a continuous machine for dyeing fabrics with the aid of molten metal. A new double-deck heavy-package uptwister featured flexible type spindles fitted with extra heavy roller-bearing inserts. There was an increasing use of new metal alloys and of plastics in warp beams, bobbins, etc. Other developments included electrical loom pilot-switches, tungsten carbide and ceramic thread-guides, yarn-tension meters, variable-speed drives, fluorescent lighting, liquid-flow indicators, machines for measuring lengths of fibres, yarns and fabrics and an instrument for measuring and recording irregularities in textile laps and slivers.

**Europe.**—European countries were badly affected by inadequate supplies of raw materials, but production and exports of yarns and piece-goods steadily expanded. Restrictions on the natural fibres were met to some extent by an increase in man-made fibres. Germany developed some new drop-box looms and a shuttleless loom claiming greatly increased speeds. A French circular loom attracted considerable attention, as did a Belgian automatic loom in which nickel-molybdenum acicular cast iron for the picking shafts and components was said to have virtually eliminated breakages in service. Swiss technical engineers further investigated their high-speed precision-built specialties. Details were also announced of Czech developments, including an automatic weft winder, a high-speed beam warper with magazine creel, two types of automatic looms, a heavy cotton loom and a pirn-changing attachment for looms, in addition to dob-bies and jacquards.

**British Commonwealth.**—The Pakistan government planned to set up more cotton mills and encouraged the erection of jute mills. A company was formed to erect three of the latter at Marayanganj, with 1,000 looms each. In Australia woollen cloth output increased by approximately 125% over pre-World War II figures, and textile industries were employing 35% more operatives than in 1939. Cotton, wool and rayon manufacturing steadily expanded, and some interesting new solvents, soaps and other detergents used in scouring wool, etc., were announced. (See also COTTON; LINEN AND FLAX; RAYON AND OTHER SYNTHETIC FIBRES; WOOL.) (A. DR.)

**Thailand** (SIAM). A kingdom of southeastern Asia, Thailand is bounded west and northwest by Burma, north-east and east by French Indochina and south by Malaya. Area

(excluding the territories taken from Indochina in 1941-46): 198,272 sq.mi. Pop. (1937 census) 14,464,105; (1947 census) 17,317,742; (1949 est.) 17,987,000. The 1937 census revealed only 524,062 Chinese (3.6%), but it included as Siamese the Chinese born in Thailand, whose number already in 1929 was 113,050. Language: Thai (Siamese) 75%; Chinese 20%; Indian and Malayan 5%. Religion (1947 est.): Buddhist 95%, Moslem 4%. Chief towns (1947 census): Bangkok (cap., 884,197); Khonkaen (590,664); Chiang Mai (534,628); Chiang Rai (481,621). Ruler, King Phumiphon Adundet (Rama IX) (*q.v.*); prime minister, Marshal Luang Pibul Songgram.

**History.**—The administration led by Marshal Pibul remained in office during 1950, with only slight changes. The political scene was relatively calm and the country suffered none of the violent disturbances such as occurred in Feb. 1949. There was some excitement on Jan. 27 when it was known that Lt. Gen. Kach Songgram, one of the leaders of the extreme militarist section of the army, had been arrested with 14 other officers. It was generally believed that the arrests were designed to prevent a military *coup d'état*. General Kach was deported to Hong Kong.

King Phumiphon arrived in Bangkok from Switzerland on March 24. On April 28 he was married to the daughter of the Siamese ambassador in London, and on May 5 his coronation took place. He left Thailand again for Switzerland on June 5. The trial of three men accused of complicity in the death of King Ananda Mahidol on June 9, 1947, continued throughout the year and still did not reach its conclusion. It could not be said that the evidence given shed any real light on this mysterious tragedy.

In the field of foreign relations, on Feb. 28 the Thai government extended recognition to the Bao Dai regime in Việt-Nam, though this step, which appeared to commit Thailand to the anti-Communist camp in the "cold war," was not taken without a cabinet crisis and was followed by the resignation of Nai Pote Sarasin from the office of foreign minister, not because of any sympathy on his part for the Communist cause in Indochina but, it appeared, because of his dislike of French policy; he was succeeded by Nai Worokarn Bancha. Later, in July, the government gave approval to the action of the United Nations in regard to Korea and undertook to send a military force of 4,000 men to assist in the defense of South Korea against the Communist attack.

Thailand continued to co-operate with the Malayan authorities in taking precautions for the peace of the southern border, and also sought co-operation with the United States. In April the government agreed to give aid in military equipment to the extent of \$10,000,000; on Sept. 19 an economic and technical co-operation agreement with the United States was signed, and this was followed by the arrival of experts to advise in matters of railways, harbours, minerals, public health, etc.; in the same month, a U.S. military mission visited the country. The government obtained assistance also from the International Bank for Reconstruction and Development, which on Oct. 30 announced the issue to Thailand of loans totalling \$25,400,000 for the rehabilitation of railways, port development, irrigation and drainage and inland water communications. (B. R. P.)

**Education.**—Schools (1948): government 440, pupils 63,581; local public and municipal 18,670, pupils 2,081,414, teachers 62,028; private 1,501, pupils 167,629; universities 5, students 10,494.

**Finance and Banking.**—Budget: (1949-50 est.) revenue 1,254,800,000 baht, expenditure 1,577,700,000 baht; (1950-51 est.) revenue 1,596,700,000 baht, expenditure 2,052,100,000 baht. Currency circulation (Dec. 1949) 2,365,000,000 baht. Bank deposits (Dec. 1949) 1,000,000,000 baht. Monetary unit: baht or tical with an exchange rate (Nov. 1950) 12.55 bahts to the U.S. dollar.

KING PHUMIPHON ADUNDET (RAMA IX), of Thailand in a royal procession through Bangkok after assuming the throne on May 5, 1950

**Foreign Trade.**—(1949) imports 2,297,000,000 baht; exports 2,809,000,000 baht. Main sources of imports: Hong Kong 12.8%; Japan 10.3%; Malaya and Singapore 8.7%; United Kingdom 7.8%. Main destinations of exports: Malaya and Singapore 31.0%; India 10.3%; Hong Kong 9.5%; Indonesia 7.3%.

**Transport and Communications.**—Roads (1948) 3,578 mi. Licensed motor vehicles (Dec. 1949): cars 6,600; trucks 4,800. Railways (1949): 2,033 mi.; passenger-miles (1948) 812,000,000; freight net ton-miles (1948) 187,000,000; freight net ton-miles (1948) 187,000,000. Air transport (1949): miles flown 1,212,000; passenger-miles 11,767,000; cargo ton-miles 174,000; mail ton-miles 32,000. Telephones (Bangkok, 1948) 5,586. Radio receiving sets (1949) 36,000.

**Agriculture and Fisheries.**—Main crops (metric tons, 1949): rice 5,630,000; maize 10,000; cotton 6,000; tobacco 10,000. Livestock: cattle (1949) 5,000,000; pigs (1947) 2,000,000; horses (1948) 230,000; buffaloes (1948) 5,500,000. Fisheries: total catch (1949) 195,800 metric tons.

**Industry.**—Raw materials (metric tons, 1949): rubber (net exports) 95,730; tin in concentrates 7,941. Cement production (1949) 127,000 metric tons.

**Theatre.** The U.S. theatre during 1950 was once again a fabulous invalid, racked with a variety of ailments and recovering spasmodically and miraculously to the amazement of the sceptical. Its maladies were many, while the diagnosticians—both among the producers and the critics—offered countless cure-alls.

Production costs rose alarmingly, reaching new heights; and many a moderately successful play found it virtually impossible to survive the strong competition for housing space. The promised plan to alleviate the chronic theatre shortage by constructing several new playhouses in New York city was abandoned when the federal government—after the outbreak of war in Korea—imposed wartime building restrictions. Another optimistic drive to reduce or eliminate entirely the luxury tax on theatre tickets met a similar fate with the coming of the new war. Motion picture, radio and television interests made further inroads into the property of the legitimate theatre by leasing additional playhouses in Manhattan.

There were few new plays of estimable stature by native dramatists, and during the autumn the U.S. theatre came to lean heavily on imports from England. Even the musical comedy stage (long a characteristic stand-by of the American theatre)—though prolific—yielded nothing to compare with such inspired efforts of previous years as *Oklahoma!*, *Carousel*, *Brigadoon* or *South Pacific*.

The Drama Critics' circle—in lieu of anything better—selected *The Member of the Wedding* by Carson McCullers as the best play of the year. This was Miss McCuller's dramatization of her own novel of a lonely childhood in the southlands. As dramatic writing it was ineffectual, but there were helpful performances by Julie Harris as the unhappy adolescent, by Ethel Waters as her Negro nurse and by Brandon De Wilde as her little brother. *Come Back, Little Sheba*—written by William Inge, a former dramatic critic from St. Louis, and produced by the Theatre guild—appeared to be a play of considerable promise. In his telling of a rather banal tale (the decline of a drunkard unable to accept his intolerable home-life), Inge displayed his talent for both dialogue and characterization, and his play was admirably acted by Sidney Blackmer and Shirley Booth.

T. S. Eliot's *The Cocktail Party* achieved a greater success in New York than it did in London. A strange mixture of advanced poetry, psychiatry and obscure religious philosophy, it was dramatically little more than a sophisticated rewriting of *The Passing of the Third Floor Back*. Brilliantly acted by Alec Guinness as the mysterious psychoanalyst who knows all of life's secrets and by an all-British company, it found responsive audiences and ran through the entire year.

Two established U.S. playwrights—Clifford Odets and Samson Raphaelson—returned from Hollywood with new plays. The Odets play—one of his best—*The Country Girl*, a realistic picture of backstage life and the career of a drunken actor, was

SCENE from Gian-Carlo Menotti's *The Consul* which opened in New York city in March 1950, and received the Donaldson and New York Drama Critics' Circle awards as the best musical play of the season and the 1950 Pulitzer prize for music

further distinguished by the performances of Paul Kelly as the fading Thespian and Uta Hagen as his long-suffering wife. *Hilda Crane* by Samson Raphaelson concerned a career woman whose turbulent life ends in suicide. Jessica Tandy, the original Blanche Du Bois of *A Streetcar Named Desire*, played the similar leading role with moving power.

On the lighter side were Wolcott Gibbs' comedy of daily life at a Fire Island summer resort, *Season in the Sun*, a diverting piece of foolery; Louis Verneuil's *Affairs of State* which dealt with love affairs in Washington, D.C.; Rex Harrison and Lilli Palmer in John van Druten's *Bell, Book and Candle*, a comedy of a publisher's encounter with a witch; and *The Happy Time* by Samuel Taylor, a homespun comedy-farce of French-Canadian family life in the 1920s.

In *The Wisteria Trees*, Joshua Logan attempted to rearrange Chekov's *The Cherry Orchard* for Helen Hayes by transplanting the Russian countryside household to Louisiana, but met with only moderate success despite the excellent acting of Miss Hayes. Maurice Valency's adaptation of Jean Giraudoux's *Intermezzo* (retitled *The Enchanted*) was a quick failure, while William Archibald's *The Innocents* (based on Henry James' "The Turn of the Screw") lingered for several months.

After September the English invasion commenced. Dame Edith Evans' performance in James Bridie's *Daphne Laureola* won critical praise but not public support. Flora Robson in a psychological drama, *Black Chiffon*, apparently pleased the majority. Aldous Huxley's own dramatization of *The Gioconda Smile* survived only six weeks, and *The Day After Tomorrow*, a typical Frederick Lonsdale drawing-room comedy, was withdrawn almost immediately.

John Gielgud and Pamela Brown brought Christopher Fry's fine poetic comedy of witchcraft in 15th-century England—*The Lady's Not for Burning*—to Broadway and introduced an important new British playwright to U.S. audiences. Some weeks later Fry's adaptation of Jean Anouilh's *Ring Round the Moon*, a charade with music, again proved Fry's wit and skill as a dramatist.

Statistics of the Theatre in New York City

	1950	1949
Productions . . . . .	99	84
Musical comedies . . . . .	28	29
Plays . . . . .	71	55
Premières . . . . .	47	46
Successful productions . . . . .	20	14
Performers employed . . . . .	1,873	1,821
Tickets sold . . . . .	9,200,000	8,500,000
Approximate cost of production . . . . .	\$4,100,000	\$3,800,000
Number of shows booked for other cities . . . . .	68	72

Among the revivals that prospered were Sir James Barrie's *Peter Pan* with Jean Arthur as the boy who never grew up and with Boris Karloff as Captain Hook; Maurice Evans and Dennis King in George Bernard Shaw's *The Devil's Disciple*; Estelle Winwood in another Shaw play, *Mrs. Warren's Profession*; Katharine Hepburn in *As You Like It*; and Cyril Ritchard in Sir John Vanbrugh's rowdy Restoration comedy, *The Relapse*. *Death of a Salesman*, *Mister Roberts*, *Gentlemen Prefer Blondes*, *South Pacific* and *Kiss Me, Kate*—all the fruit of other seasons—continued their engagements through 1950.

Gian-Carlo Menotti's *The Consul*, though actually a grand opera, was offered as a "dramatic musical" on Broadway. A desperate tragedy of lives destroyed by fascism, it towered above the usual theatre fare both dramatically and musically and was superbly sung by Patricia Neways and Marie Powers. There were many musical comedies, the majority deficient in both music and comedy. Among the more popular were Ethel Merman in Irving Berlin's *Call Me Madame*, a burlesque of an American lady ambassador's adventures in foreign court circles; *Tickets, Please* with the Hartmans; *Pardon Our French* with Ole Olson and Chic Johnson; *Michael Todd's Peep Show* and *Guys and Dolls*, based on some Damon Runyon stories.

The Arena theatre—substituting a central platform for a proscenium—gave a series of revivals including *The Show-Off*, *Julius Caesar*, *The Medium* and *Arms and the Man*, while the American National Theatre and Academy commenced its long-planned program with Judith Anderson in *Tower Beyond Tragedy* by Robinson Jeffers.

(T. Q. C.)

**Canada.**—Dominion drama festival awards were won at the festival held in Calgary in May: Lord Bessborough trophy (highest honour) to the Toronto Belmont group theatre for Clifford Odets' *Awake and Sing*; Sir Barry Jackson trophy (best Canadian play) to the Ottawa drama league for *Rumpelstiltskin* as dramatized by Marion Taylor; Henry Osborne trophy (best male role) to William Walker, Nella Jeffries trophy (best fe-

male role) to Jeanne Morphy, both in Noel Coward's *Present Laughter*.

Summer theatre developments included the following: Nova Scotia players toured 50 maritime centres; the open-air playhouse of Montreal specialized in Shakespeare; in Ontario international players of Kingston, Midland players of Allanbury, the summer theatre of Peterborough, and the straw hat and barnstormers of Muskoka Lakes, were active; the provincial players of Alberta toured 28 centres; Vancouver's theatre under the stars presented its 11th season; the Canadian repertory theatre in Ottawa pioneered by giving Canadian and North American premières of American and British plays. (C. Cy.)

**Great Britain.**—A red-letter day in Britain's theatrical calendar of 1950 was Nov. 14 when the Old Vic company came home to its theatre in Waterloo road, London, after an exile of 11 years.

At Stratford-on-Avon there was also an event of significance, the appearance of John Gielgud at the head of the company. In the days before World War II when Gielgud stood alone at the head of Britain's classical actors the idea that he should remove his talents to the depths of Warwickshire would have seemed unthinkable both in Stratford and in London. The fact that he, Peggy Ashcroft, Godfrey Tearle and Diana Wynward, together with other players of like standing, were regular members of the company in 1950 was the exact measure of the change which had come both to public taste and the confidence of the Shakespeare Memorial theatre in itself.

In the West End the year lacked something of the distinction of its predecessor. In general, managements seem to find it difficult to obtain workmanlike plays, and as a result there was a number of dead failures. This was the more disappointing because the year opened in a manner to suggest that something very different was in store. Between Jan. 18 and Jan. 26 three plays by Christopher Fry were produced and acclaimed. These were *Venus Observed*, *The Boy with a Cart*, and *Ring Round the Moon*. Fry had had a fair success in 1949 with his first full-length play, *The Lady's Not for Burning*, and his emergence as a popular as well as a distinguished author spoke as well for the public's taste as for his talent. On May 3 the arrival of T. S. Eliot's *The Cocktail Party*, and its immediate success, added to the impression that 1950 was to be a year of sustained brilliance. Essentially, however, *The Cocktail Party* belonged to 1949 and nothing of similar quality arrived to keep up the standard.

The established dramatists on the whole wrote much below their best. Exceptions to this rule were Emlyn Williams with *Accolade* and Benn Levy with *Return to Tyassi*; while Frederick Lonsdale, breaking a silence of some years with *The Way Things Go*, adapted his style to the changed times with much ingenuity. Three plays which had been successful in New York were taken to London. *Mister Roberts* by Thomas Heggen and Joshua Logan drew great crowds. Sidney Kingsley's *Detective Story* was less fortunate and soon failed, and *Carousel* inherited something of the popularity of the triumphant *Oklahoma*!

For the Edinburgh festival of 1950 the Scottish dramatists James Bridie and Eric Linklater were invited to supply a play each. Bridie responded with *The Queen's Comedy* based on an incident in Homer's *Iliad* but expressed in terms of modern warfare with the gods of Olympus at their ancient games of interference and undue influence. Linklater's contribution was *The Atom Doctor*, a well worked out story of a charlatan and his dupes in an Edinburgh setting.

**Tibet.** A country of central Asia, lying north and northeast of the Himalayas, Tibet is mainly a high tableland. Nominally a Chinese dependency, it had been in practice independent, and was the only country in the world entirely under ecclesiastical control. Area: *c.* 469,294 sq.mi. Population (1948 est.): *c.* 3,000,000, one-fifth of the male population being monks. Capital: Lhasa. Language: Tibetan. Religion: Buddhist. Ruler, Ling-Erh-La-Mu-Fan-Kha (formerly Lhamo Dhondup), the 14th dalai lama, born June 6, 1935, and enthroned Feb. 13, 1940.

**History.**—From the beginning of 1950 the Tibetan authorities became aware of the frequency with which the Chinese Communist government was asserting its suzerainty over Tibet and of its intention to "liberate Tibet by force."

In Aug. 1950 Jawaharlal Nehru (*q.v.*), prime minister of India, stated that the Indian ambassador in Peking had informally pointed out to the Chinese government the desirability of settling the Tibetan question peacefully. In October the ministry of external affairs at Delhi, India, stated that the Tibetan government had asked India's help in settling the dispute arising from the Chinese invasion. Meanwhile the Indian government had forcefully pointed out to the Chinese government its deep regret that the Chinese should have decided to seek a solution of the Tibetan question by force. Peking replied that no foreign interference would be tolerated as Tibet was a domestic Chinese problem.

Conflicting information regarding the progress of the Chinese troops continued to come in, but it appeared that they had not gone much beyond Chamdo in eastern Tibet.

On Nov. 17 the Tibetans took the important step of investing with full powers the 15-year-old dalai lama. This investment came as a surprise, for usually the dalai lama does not come of age until he reaches 18 years. The decision was obviously intended to brace the Tibetan people for resistance to the Chinese, as the news that the dalai lama had assumed full powers would be heartening to so devout a nation. The Chinese government was believed to be endeavouring to put in the 13-year-old panchen lama as a substitute for the dalai lama at the head of Tibet.

This would not be acceptable to the Tibetans as a whole. The panchen lama was admittedly the reincarnation of the highest spiritual authority in Tibet, and he had a minor temporal responsibility for the province in which his monastery was situated at Shigatse. But the dalai lama not only had spiritual functions of great importance and second only to those of the panchen lama, but he had been possessed of the temporal power ever since the 17th century. It should be admitted that there was frequently a certain amount of friction between the two grand lamas and their followers, but broadly the pre-eminence of the dalai lama in secular matters was unquestionable, and as the present dalai lama was fully invested and was two years older than the panchen lama he was expected to be in a good position to refute Chinese pretensions.

Tibet appealed to the United Nations. India, in a further note to the Chinese government on Oct. 31, made it clear that India had no political or territorial ambitions in Tibet and sought no privileged position for itself or nationals in that country. After discussing the legitimate Tibetan claims to autonomy within the framework of Chinese suzerainty the Indian note pointed out that there was no allegation of provocation on the part of the Tibetans, hence there was no justification for the military operations against them.

**Tin.** World tin production was stepped up by 6% in 1949, increases in Malaya and Thailand more than offsetting a 9% loss in Bolivia, and smaller losses in China and Indonesia. The 1949 total was the largest since 1941. Outputs of the major producers are shown in Table I, as reported by the U.S. bureau of mines.

**Tito** (JOSIP BROZOVICH OR BROZ) (1892— ), Yugoslav prime minister, was born on May 25 at Kumrovec, Croatia. He served in the Austro-Hungarian army in World War I and in 1915 was captured by the Russians. A prisoner of war until 1917, he joined the Red army and fought with it against anti-Communist Russian armies. In 1920 he was sent by the Comintern to Yugoslavia to organize the Communist party there. From 1928 to 1934 he served a term of imprisonment for conspiracy, and in 1937 he became secretary-general of the Yugoslav Communist party. After the Germans overran Yugoslavia in 1941, Tito organized a leftist guerrilla group which effectively harried the axis occupation forces. In the first months of 1945 all Yugoslavia was liberated and on March 7, 1945, Tito, who in the meantime had appointed himself marshal, became prime minister and commander in chief. On June 28, 1948, the Cominform published a statement denouncing Tito for his "hateful policy in relation to the U.S.S.R." But from a correspondence between Belgrade and Moscow published later it was possible to learn that the real core of Tito's heresy was his brand of Yugoslav patriotism. "Even though we love the U.S.S.R. we cannot love our own country less," wrote Tito to Stalin on April 13, 1948. As the propaganda campaign of all Communist-controlled countries against Tito continued during 1949 to increase in violence, the Yugoslav leader was forced to make many public replies. On May 31, 1950, he proclaimed that Yugoslavia was the only neutral country in the contemporary world. On Oct. 29, at Zagreb, he paid tribute to the U.S. government, which was helping Yugoslavia in its food crisis without imposing any political obligations. (See also YUGOSLAVIA.)

**Tobacco.** The U.S. tobacco crop of 1950 was estimated at 2,035,915,000 lb., compared with 1,972,359,000 lb. in 1949, a 10-year average of 1,777,945,000 lb. and an all-time record crop in 1946 of 2,332,000,000 lb. Record yields per acre of 1,277 lb. were slightly higher than the previous record 1,274 lb. of 1948. The acreage harvested in 1950 of 1,594,000 was lower than the 1,631,000 ac. of 1949 and the 1,650,000 ac. average of the decade.

Class I flue-cured types of tobacco, produced mainly in coastal plain areas south of Maryland and the chief tobacco used in cigarettes and for the export trade, were estimated at 1,255,790,000 lb. in 1950, 13% larger than the 1,114,508,000 lb. in 1949, compared with a ten-year average of 1,020,200,000 lb. The harvested acreage of 954,500 was larger than the 935,400 ac. in 1949, but less than the 1939-48 average. Yields per acre were the highest on record, 1,316 lb., compared with 1,191 lb. in 1949 and an average of 1,048 lb. for 1939-48. North Carolina was the leading state. Exports of these types were 447,000,000 lb. in 1949-50, or about 15% greater than the previous year; anticipated exports in 1950-51 were at a favourable though slightly lower level. Domestic use in 1949-50 was at a record level and was expected to hold near that level in 1950-51. Carry-over of the flue-cured type on July 1, 1950, was 1,484,000,000 lb., 3½% less than a year before, with carry-over on July 1, 1951, forecast at 1,510,000,000 lb. The 1950 crop at early sales brought an average price of about 55 cents per pound, a new record high.

Class II fire-cured types, produced mostly in Kentucky and Tennessee, in 1950 yielded only 57,690,000 lb., a record low compared with 72,073,000 lb. in 1949 and 80,430,000 lb. average for the previous decade. Acreage, under quota, was sharply reduced to the lowest on record, 53,100 ac., compared with 60,400 ac. in 1949 and 81,450 average for 1939-48. Yields declined to 1,086 lb. per acre, compared with 1,193 lb. in 1949; the ten-year average was 997 lb. Carry-over of 165,000,000 lb. was the largest since 1944, and the supplies of this type, a considerable part of which are used in making snuff and chewing tobacco, were fully ample to meet domestic use and prospective exports. Exports in the year prior to Oct. 1 were 29,000,000 lb., one-third less than in 1948-49 and less than one-half the pre-World War II average.

The burley-type tobacco crop of 1950 amounted to only 499,266,000 lb., compared with 560,129,000 lb. in 1949 and 471,393,000 lb., average for 1939-48. Yields were less than the record 1,396 lb. of 1948, but at 1,232 lb. (1,235 in 1949) were larger than the 1,104 lb. average for 1939-48. The harvested acreage of 405,300 was down sharply compared with either the 453,400 ac. of 1949 or the decade average of 422,720 ac. Carry-over stocks on Oct. 1 were estimated at 1,000,000,000 lb., a new record, exceeding the 1949 record of 974,000,000 lb. Exports declined slightly. Early auctions indicated a price several cents per pound higher than the average of 45 cents per pound received for the 1949 crop.

The southern Maryland tobacco (type 32) crop of 1950 totalled 40,000,000 lb., compared with 41,250,000 lb. in 1949, and 32,121,000 lb. average of 1939-48. The per acre yield in 1950 was 800 lb., below the 825 lb. of 1949 but about 762 lb. average of 1939-48. Carry-over stocks of 58,000,000 lb. were somewhat

higher than in 1949; exports lagged. The 1950 sales of the 1949 crop gave an average price of 48.5 cents per pound, compared with a wartime peak of 57 cents; government price supports were set at 48.6 cents per pound on the 1950 crop, 16% higher than on the 1949 crop.

The 1950 crop of dark air-cured type tobacco was 30,569,000 lb., well below the 35,941,000 lb. of 1949 and the 39,347,000 lb. for the preceding decade (average). The per acre yield of 1,054 lb. was comparable with 1,120 lb. in 1949 and an average for the decade of 1,032 lb. Carry-over stock of 80,000,000 lb. was a record. The support price on the 1950 crop was 30.5 cents per pound.

Cigar types of tobacco in 1950 were produced in an amount of 152,450,000 lb., compared with 148,258,000 lb. in 1949 and an average for the decade 1939-48 of 134,292,000 lb.

The total U.S. cigarette output in 1950 was about 395,000,000,000, a new record; 384,980,000,000 were manufactured in 1949. Cigar consumption of about 5,600,000,000 in 1950 was approximately the same in the previous year; those below eight cents in price were increasingly emphasized. Cigarette exports in 1950 dropped sharply to 14,000,000,000, as compared with 19,547,000,000 in 1949 and the record level of 25,179,000,000 attained in 1948.

The world's tobacco harvest during the year July 1950 through June 1951 was forecast at 7,220,000,000 lb., 2% more than the revised estimate of 1949-50 production of 7,100,000,000 lb. and compared with the prewar average (1935-39) output of 6,597,000,000 lb.

**Tobago:** see TRINIDAD AND TOBAGO.

**Tobin, Maurice Joseph** (1901- ), U.S. secretary of labour, was born in Roxbury, Mass., on May 22. He worked for the New England Telephone and Telegraph company for a number of years, served in the Massachusetts legislature, 1927-28, was mayor of Boston, 1937-44, and governor of Massachusetts, 1944-46. In 1948 Pres. Harry S. Truman appointed him secretary of labour. In 1949 and early 1950 Tobin led in campaigns to repeal the Taft-Hartley labour law, to raise unemployment benefits and institute larger retirement benefits for labour. When a clothing union official, alarmed at unemployment, advocated in May 1950, a 35-hr. week, Tobin called the idea impractical "at present." Later Tobin was called upon to supervise the supply of labour for U.S. remobilization, and on Sept. 29 he set up an office of defense manpower to develop "plans, policies and programs" for assuring adequate labour supplies to war plants.

**Tornadoes:** see DISASTERS.

**Toronto.** By Jan. 1950 the population of the capital of Ontario had declined 7,000 from the Jan. 1949 figure, largely because of the movement to the surrounding suburbs; the total population of the area was 1,021,007. The provincial government pressed hard for unification of the 12 suburbs and Toronto proper into one municipal unit, and set up a committee to examine the idea with a possibility of unification by Jan. 1, 1951. Toronto proper endorsed the scheme, but some of the surrounding municipalities continued to oppose it.

Municipal elections were held in Jan. and Dec. 1950. Under the former law, elections were on Jan. 1, at which two plebi-

U. S. Tobacco Production by Leading States

scites were held: commercial sports were legalized on Sundays (excepting Easter Sunday, and Christmas when on Sunday), and the traditional Jan. 1 voting day was changed to the first Monday of December. At the December election, a record of 47.49% of the voters turned out.

The city council voted in 1950 to rescind the licence of any business which discriminated against a customer because of colour or creed. Concrete pouring on the subway began in March, two months ahead of schedule. The provincial department of planning and development recommended spending \$180,000,000 on civic improvements, of which the Toronto city planning board selected \$28,000,000 of capital expenditures for 1951, including major street widenings and extensions.

(C. Cy.)

**Tourist Travel.** By 1950, close to 70,000,000 Americans were contributing annually to the gross national vacation expenditure, estimated at between \$7,000,000,000 and \$12,000,000,000. The travel upsurge of the post-World War II years had been accounted for in large measure by the spread of the 40 hr. work week with annual vacation leave and a steadily rising standard of living. In addition, private passenger cars, of which there were approximately 40,000,000 in the United States in 1950, had become an important factor in long-distance travel. Between 80% and 90% of all vacation travel is by means of the automobile.

Regions under jurisdiction of the national park service comprised the major U.S. travel objectives in 1950. For the 12 mo. ending Sept. 30, these areas were visited by a total of 32,782,238 persons, an all-time record, exceeding the previous high, set in 1949, by 11%. Four parks were visited by more than 1,000,000 persons each: Great Smoky Mountains National park in North Carolina-Tennessee (1,598,886), Shenandoah National park in Virginia (1,147,542), Rocky Mountain National park in Colorado (1,118,630) and Platt National park in Oklahoma (1,059,220). Shenandoah and Rocky Mountain National parks topped 1,000,000 for the first time.

Other travel objectives, administered by the national park service, which topped the 1,000,000-visitor mark were: Lincoln memorial, Washington, D.C., (1,917,157), Lake Mead National Recreational area in Arizona-Nevada (1,612,045) and Blue Ridge parkway in Virginia-North Carolina (1,596,221). Significantly, historic shrines such as the Lincoln memorial and Civil War battlefields appeared to draw as many visitors as the spectacular scenic regions. A total of 96.3% of all visitors to the national parks travelled in private automobiles.

Other important vacation areas were the state parks and national forests, which were expected to surpass their all-time records in visitor volumes set in 1949 of 107,000,000 and 26,000,000 respectively.

The three leading tourist states in 1950 continued to be Florida, which was visited by about 5,000,000 persons who spent a total of \$900,000,000; California, with about 4,800,000 visitors spending an estimated \$880,000,000; and Michigan, with 7,000,000 persons who spent more than \$560,000,000.

Among other states that considered vacation travel one of their three major industries were Arizona, Colorado, Kentucky, Minnesota, Montana, New Hampshire, New Mexico, North Carolina, South Dakota, Virginia, Vermont, Washington, Wisconsin and Wyoming. Advertising budgets of state agencies alone totalled in the neighbourhood of \$5,000,000, with one-third of them spending at least \$100,000 each.

About 50% of all vacation trips were taken during the summer months, 25% in autumn, 13% in spring and 12% in winter. The average motoring vacationist travelled 928 mi. per trip; in aggregate, motorists spent \$970,000,000 for gasoline, oil and

automobile accessories in the course of recreational travels.

Percentages of vacation trips by means other than automobile were estimated to be: rail pullman, 5%; rail coach, 13%; bus, 11%; air, 3.5%; ship and boat (except overseas), 3%; ship overseas, .2% (the total exceeds 100% since many trips used more than one method).

Canada in 1950, as in preceding years, was the major foreign objective of U.S. travellers, with tourist volume increasing over the record year of 1949. That year travellers from other countries spent a total of \$286,000,000 in Canada. Of this amount, \$268,000,000 originated in the United States and the greater part of the remainder of \$18,000,000 came from the United Kingdom. Of the total number of 3,815,855 U.S. tourist travellers, slightly more than 2,500,000 arrived by automobile; 551,309 by rail; 334,680 by bus; 300,243 by boat; and 128,836 by plane.

States from which the greatest volume of Canada-bound travel originated were New York, Michigan, Washington, Ohio and Maine. By far the most popular province was Ontario.

Travelling farther north, motorists in quest of adventure drove over the Alaska highway to visit Alaska in record numbers. During the summer tourist season a total of 4,813 automobiles carrying 12,439 persons made the 2,350-mi. trip from the U.S. border to Fairbanks.

Approximately 220,000 Americans visited Mexico, two-thirds by automobile. The major gateway was Laredo, Tex., through which 120,000 tourists in 40,000 automobiles crossed the border. The most important tourist development in Mexico was the opening of the new Central highway, the longest link of the Pan-American Highway system in a single country, extending 2,176 mi. from Ciudad Juárez (across the Rio Grande from El Paso, Tex.) to the village of El Ocotil, at the Guatemalan frontier. Below Mexico, however, the Pan-American highway was still far short of completion, and tourist travel was impractical, if not impossible.

South America, still to reach its full potential of tourist travel from the United States, made forward strides in 1950, principally through the action of six countries—Argentina, Bolivia, Chile, Ecuador, Uruguay and Venezuela—in waiving the visa requirement for U.S. citizens. Winter cruises comprised a large volume of the South American trade and the greatest number of ships in any single post-World War II year were due to travel to southern waters during the 1950-51 winter season.

Hawaii, served by three air lines and a steamship line, entertained 50,000 visitors, an increase of almost 5,000 over 1949. The tourist industry was outranked as a revenue earner only by sugar and pineapples.

In western Europe, perhaps more than any other section of the world, tourist travel was regarded as a major industry and source of dollars. The Economic Cooperation Administration and department of commerce acted jointly to encourage nations participating in the Marshall plan to adopt an aggressive program of travel promotion aimed at the American travel market.

With Holy Year in Rome as the major attraction, western Europe succeeded in drawing approximately 400,000 visitors from the United States. While the majority made their journeys during the summer months, the season was extended from mid-April until mid-October, largely through the means of reduced hotel rates, an extensive program of planned events and the air lines' inducement of fare reductions up to 25%. Approximately two-thirds of all transatlantic traffic was aboard steamships, the rest on air liners. The expenditure by Americans in the western European countries was estimated at \$220,000,000.

The majority of Americans in Europe visited both France and Italy; other countries in order of popularity were England, Switzerland, Holland, Belgium, Sweden, Denmark and Norway.

Approximately 50,000 Americans toured Europe by automobile. A total of 3,000 cars was shipped abroad from the U.S.; many others were rented for use on arrival. In Europe, as in the U.S., an average of three passengers travelled in each car. (See also AMERICAN CITIZENS ABROAD; NATIONAL PARKS AND MONUMENTS.)

(R. U. E. S.)

**Town and Regional Planning.** The 20th Congress of the International Federation for Housing and Town Planning was held Aug. 27–Sept. 2, 1950 in Amsterdam, the Netherlands, its headquarters.

The Netherlands Royal commission issued a report containing proposed housing and planning bills. The German Association for Housing and Town Planning, with headquarters at Frankfurt-am-Main, met in Berlin-Charlottenburg on May 6 and 7. In Yugoslavia a number of large towns and industrial centres were under construction; at Sarajevo wide avenues were laid out to replace narrow, winding streets. In Belgium the principal effort was to replace destroyed buildings and provide habitations for the people. In Rome, It., huge blocks of houses, 7 to 18 stories tall, were setting a pattern of high density occupation. In the outskirts, blocks of three-story flats were built to house refugees while they were being trained as building operatives. Warsaw, Pol., was building some of the residential units of its monumental plan. The city of Oslo, Nor., established a City Planning department and issued a general plan.

In Great Britain, the plan prepared for the city of London was being incorporated into a development plan for the county of London. It was planned under the New Towns act to provide for about 250,000 inhabitants of London in new towns. Eight locations had been named and reports issued for most of them.

In Canada the Conference of the Community Planning association met in Ottawa, where a master plan for the capital city had been prepared. Reports were given on planning in Canadian cities. In March, the American Institute of Planners and the Canadian Institute of Professional Town Planners met at Niagara Falls, Ont.

In the United States, the American Planning and Civic association met in Washington, D.C., in May 1950, and the American Society of Planning Officials met in Los Angeles in August. During the year most of the larger cities were engaged in revising plans to meet new conditions. The 1950 census provided accurate population counts. Philadelphia amended its zoning ordinance to eliminate mixed uses of land and provide better facilities in industrial districts. The greatest stimulant to planning in the smaller cities came from the regulations requiring comprehensive plans as a preliminary to federal loans and grants from the Housing and Home Finance agency for urban redevelopment programs. U.S. cities continued to be preoccupied with traffic congestion. In November the Chamber of Commerce of the U.S. called a Businessmen's Conference on Urban Problems in which traffic, offstreet parking and urban redevelopment were discussed. In addition to many neighbourhood shopping centres two regional centres had been established, Northgate near Seattle, Wash., and Crenshaw in Los Angeles, Calif. A report from the country club district of Kansas City, Mo., described nine shopping centres designed to serve more than 100,000 residents. (See also HOUSING.)

**Track and Field Sports.** One of the outstanding track and field men of the year 1950 was the 200-lb. Jim Fuchs, who represented Yale university and the New York Athletic club. Fuchs again went unbeaten in the shot-put to run his victory string through 72 consecutive meets.

The Eli giant, who made a sweep of the five national Amateur Athletic union, National Collegiate Athletic association and Intercollegiate A.A.A. titles, continued to improve on the world record, his best toss of 58 ft. 10½ in. being made in Sweden in August after he had hurled the sphere 58 ft. 5½ in. at Los Angeles, Calif., in April. In addition to his 16-lb. shot marks, Fuchs set U.S. records of 67 ft. 1 in. with the 12-lb. shot and 80 ft. 2¼ in. with the 8-lb. ball.

Dick Attlesley of the University of Southern California and the Los Angeles Athletic club had an undefeated year in the high hurdles. Early in 1950 he bettered Harrison Dillard's world mark when he was clocked in 13.5 sec. for the 120-yd. event and later he surpassed Spec Towns's 110-m. record in annexing the national A.A.U. outdoor crown in 13.6 sec.

Bob Mathias, Olympic decathlon champion, scored 8,042 points to keep his national title and in so doing eclipsed Glenn Morris' world standard of 7,900 points set in 1936 at the Olympic games in Berlin.

Don Gehrmann of Wisconsin captured the "longest race in history" and went undefeated in the mile run. At the meeting of A.A.U. officials in December, Gehrmann finally was declared winner of the Wanamaker mile of the previous Jan. 28. Gehrmann and Fred Wilt had run a blanket finish in that famous event in Madison Square Garden. Gehrmann's 4 min. 9.3 sec. in that indoor classic was his best mile of 1950. Wilt turned in the fastest 5,000-m. time ever for an American when he did 14 min. 26.8 sec. overseas after capturing the A.A.U. championship.

Mal Whitfield of the U.S. air force proved the top half-miler for the third straight year and equalled the world mark of 1 min. 49.2 sec. held by Syd Wooderson of Great Britain. Adolph Weinacker and Henry Laskau of New York city dominated the A.A.U. walking events, Weinacker taking national honours at 15, 20, 25, 30, 35 and 40 m. Laskau walked an indoor mile in the best time ever recorded in winning A.A.U. laurels in 6 min. 19.2 sec. Sam Felton erased what was believed to be the oldest championship record in amateur books when he threw the hammer 187 ft. 7¼ in.

Arthur Bragg and Bob Tyler of Morgan State college, Baltimore, Md., won the 100- and 200-m. dashes, respectively, in the A.A.U. outdoor games. Andy Stanfield of Seton Hall college, South Orange, N.J., the 60-yd. champion indoors and dominant speedster of 1949, hurt a leg in the outdoor campaign, but not until he had annexed the Intercollegiate A.A.A. 100-yd. crown to add to the 60-yd. title captured indoors. Bob Boyd of Loyola University of Los Angeles was the N.C.A.A. 100-yd. winner with Charles Parker of Texas taking the 220.

The Olympic club of Los Angeles was the A.A.U. team winner outdoors while the New York Athletic club triumphed indoors. Southern California carried off N.C.A.A. laurels, Yale took the Intercollegiate A.A.A. outdoor title and Michigan State the indoor honours. Other major team champions follow: Yale, Heptagonal league indoors and out; Manhattan college, Metropolitan

JIM FUCHS of Yale university setting an unofficial world shot-put record of 58 ft. 5½ in. during a collegiate track meet in Los Angeles, Calif., on April 29, 1950

intercollegiate indoors and out and Metropolitan A.A.U. indoors; New York Athletic club, Metropolitan A.A.U. outdoors; Indiana, Western conference outdoors; Ohio State, Western conference indoors. Tuskegee institute took five individual titles and the 400-m. relay crown as it kept its national A.A.U. women's outdoor laurels. Stella Walsh, veteran from Cleveland, O., was pentathlon queen. Nancy Phillips of the German-American Athletic club of New York city again was outstanding in indoor competition, capturing titles in the standing broad jump and 50-yd. hurdles in the A.A.U. games. The Police Athletic league of New York took team honours.

(T. V. H.)

#### Outstanding U.S. Track and Field Performances (Outdoor), 1950

##### 100 Yd.

9.4 sec.—Stanfield, Seton Hall  
9.5—Boyd, Loyola; Fell, Oregon; Peters, Indiana; Anderson, California; Henthorne, Oregon; Bienz, Tulane; Caffey, La Grange (Ill.) High School; Thresher, Mercersburg; Carter, Payne; Bragg, Morgan State; La Beach, unattached; Parker, Texas

##### 220 Yd.

20.4 sec.—Stanfield, Seton Hall  
20.5—La Beach, unattached; Carter, Payne  
20.6—Bienz, Tulane

##### 440 Yd.

46.9 sec.—Parker, Occidental; Cox, Rice  
47.0—McKenley, Grant Street Boys club; Whitfield, U.S.A.F.

##### 880 Yd.

1 min. 50.7 sec.—Gehrmann, Wisconsin  
1:51.1—Barnes, Occidental  
1:51.2—Brown, Morgan State

##### One Mile

4 min. 7.7 sec.—Newcomb, Southern California  
4:10.2—Gehrmann, Wisconsin  
4:10.3—Wade, Yale

##### Two Mile

9 min. 1.5 sec.—Wilt, New York Athletic club  
9:01.9—McEwen, Michigan  
9:02.0—McMillan, Los Angeles Athletic club

##### 120-Yd. High Hurdles

13.5 sec.—Attlesley, Southern California  
13.9—Fleming, Notre Dame  
14.1—Smith, Michigan

##### 220-Yd. Low Hurdles

22.9 sec.—Albans, North Carolina  
23.0—Hall, Texas A. and M.; Fleming, Notre Dame; Hoover, Michigan

##### Pole Vault

14 ft. 11½ in.—Richards, Illinois Athletic club  
14:5—Carroll, Oklahoma

##### High Jump

6 ft. 8½ in.—Walters, Texas  
6:8¼—Severns, Kansas State; Razzetto, San Diego State

##### Broad Jump

25 ft. 9 in.—Holland, Northwestern  
25:7¼—Biffle, Denver  
25:2½—Bryan, Stanford

##### Shot-Put

58 ft. 5½ in.—Fuchs, Yale  
57:4½—Chandler, Stanford

##### Discus

177 ft. 11½ in.—Gordien, Olympic club  
176:2—Frank, Yale

##### Javelin

233 ft. 4½ in.—Held, Stanford  
229:11¼—Roseme, California

##### Hammer Throw

187 ft. 7¾ in.—Felton, New York Athletic club  
179:2—Dillon, New York Athletic club

##### One-Mile Relay

3 min. 10.1 sec.—Occidental  
3:12.7—Oklahoma A. and M.  
3:13.6—Morgan State

**Trieste, The Free Territory of.** A small state at the northern end of the Adriatic sea, between Italy and Yugoslavia, demilitarized and neutral, Trieste's integrity and independence were assured from Sept. 15, 1947, by the Security council of the United Nations. Total area: 293 sq.mi. Total pop. (mid-1949 est.): 381,000. Military governors under provisional regime: zone A, British-U.S. (area, 96 sq.mi.; pop., 299,000), Maj. Gen. Terence S. Airey (British); zone B, Yugoslav (area, 197 sq.mi.; pop. 60,000), Col. Mirko Lenac.

**History.**—On March 4, 1950, the Yugoslav government followed the step it had taken in the previous July with regard to the currency by the abolition of the customs barrier between Yugoslavia and the Yugoslav-occupied zone B of the free territory of Trieste. The election of 202 local government representatives in zone B was announced to take place on April 16. Already on Feb. 25 the Yugoslav foreign minister, Edvard Kardelj, had made a strong speech at Maribor, implying that his government would never abandon its claims to the whole Trieste territory; and the Italians feared that after the elections the political would follow the economic annexation of zone B.

When the results of the election were announced it was stated that 86.77% of the eligible voters had voted: of these 88.36% had voted for the government-supported Titoist Popular front party.

On April 20 the U.S.S.R. addressed a note to the three western powers complaining that they had prevented the implementation of the Italian peace treaty with regard to Trieste. They replied on June 16, again putting forward their proposal of March 1948 for the return of Trieste to Italy. On July 8 the U.S.S.R. repeated its complaints, calling for the appointment of a governor of the free territory, the withdrawal of the Anglo-American forces and the "liquidation" of their "illegal naval base" at Trieste. (See ITALY).

(E. WI.)

**Economy and Finance.**—Budget (1948-49): revenue 12,800,000,000 lire, ordinary expenditure 13,800,000,000 lire, extraordinary expenditure 16,300,000,000 lire. During the first two years of the ERP (April 1948-March 1950) Trieste received aid totalling \$23,900,000.

**Trinidad and Tobago.** This British colony consists of two islands off the South American continent north of the Orinoco river delta. Area: 1,980 sq.mi. Population: (1946 census) 557,970 (27,208 on Tobago); (mid-1949 est.) 604,000 (30,000 on Tobago), including 214,200 East Indians. Chief towns (pop. 1948 est.): Port of Spain (capital 100,251); San Fernando (31,161). Governor, Major General Sir Hubert Rance.

**History.**—A new constitution became effective on Oct. 20, 1950. A general election was held on Sept. 18 on an adult franchise. The governor might appoint members of the executive council to be ministers, and all in the new council were assigned ministerial posts. Elected members in the executive council were responsible to the legislative council, by whom they might be re-

**History.**—For the whole trusteeship system the year 1950 was one of consolidation and constructive progress. A steadier evolution of the Trusteeship council and smoother working became possible by reason of the absence of the U.S.S.R. Since taking its seat the U.S.S.R. had tended to use its influence on the council for propaganda attacks on the so-called imperialist powers and their alleged exploitation of nonself-governing peoples. By 1950 full trusteeship machinery was available and in use, so that the whole area entrusted to the United Nations could be kept under continuous observation. Moreover, by the end of the year the Trusteeship council had completed visiting missions to all trust territories and was in possession of a series of reports written by men fully alive to the actual conditions of peoples and territories, together with the comments of the administering authorities on them.

Reports thus were available from missions (1949) to the two Togolands and the two Cameroons, and from visiting missions (1950) on Australia's administration of Nauru and New Guinea, on Western Samoa under New Zealand's administration and, for the first time, on a strategic trust territory, on the Pacific islands under U.S. administration, (the Trusteeship council reporting here to the Security council, instead of to the general assembly).

The main business of the Trusteeship council at its sixth session, which ended at Geneva on April 4, and the seventh session, which opened at Lake Success on June 1, was a thorough examination of the annual reports of the administering authorities. In its examination of these reports the council singled out a wide field of administrative action for approval. For example, it praised progress made in constitutional reforms, in raising the standard of living and in the expansion of medical services in Tanganyika; the leper settlement work in British Togoland; the improved health administration and increase of native representation in French Togoland; and the advances made in all fields in the Pacific islands in spite of their scattered geography and the short period of actual administration. At the same time further efforts were urged in many directions.

On the whole the council's recommendations showed a constructive and helpful spirit and more awareness than on earlier occasions of the actual conditions which administering authorities had to face. These recommendations emphasized the urgent need for expanding medical services, more education (the subject of a special study by the council), better training of teachers, more schools, more technical education for natives and measures for better nutrition, where United Nations technical organizations could give great assistance. Among economic and financial recommendations were the exploitation of former enemy land in Tanganyika to remedy the grave shortage of native lands; migration measures in Ruanda-Urundi to meet the threats of soil erosion and famine; the possibilities, in British Cameroons linked with Nigeria in an administrative union (these unions were being specially studied by the council), of using more of the profits from the Cameroon Development corporation for native welfare and, for a similar purpose, more of the profits from the production of gold in New Guinea. A social recommendation of interest dealt with the abolition of corporal punishment.

The council had the task of dealing with a record number of petitions, many of them presented to the visiting missions. To improve machinery for handling petitions the council appointed an *ad hoc* committee at each session to do the groundwork in their examination. More than 100 were dealt with at the sixth session; still more at the seventh. Two of the most notable came from the Ewe tribe, which is divided among French and British Togoland and the Gold Coast colony, and from the Bakweri tribe (for land restitution) in British Cameroons. The council gave a hearing to Sylvanus Olympio, president of the all-Ewe

conference, at the sixth session and took careful note of the progress made by a joint committee of the French and British administrations to provide a fair solution. After long discussion at the sixth and seventh sessions it was resolved to wait until the actual wishes of the Ewe tribe itself were clarified: a division of opinion appeared to exist as to whether an independent state or an autonomous state in a larger federation was to be desired. In dealing with the Bakweri petition the council emphasized the need of demonstrating clearly to the natives exactly how the plantation lands originally alienated by the Germans were now being worked for the benefit of the inhabitants as a whole.

During 1950 Italian Somaliland came into the trusteeship system making the 11th trust territory. On April 1 Italy took over the administration for a period of ten years. To assist Italy an advisory council of three was set up, the terms of reference being settled in the trusteeship agreement forwarded to the fifth general assembly.

Most questions of international control were closely related to the trusteeship system. Thus the problem of an international regime for Jerusalem, in default of any genuine willingness to co-operate on the part of the Israel and the Jordan governments, was referred to the Trusteeship council, which proceeded to draft a statute and forwarded it, together with its own report, to the fifth assembly.

A further step was taken on July 11, when the International Court of Justice at The Hague handed in an advisory opinion containing the answers to three questions in the matter of the Union of South Africa's retention of its mandate for South-West Africa on which no effective agreement could be reached either in the Trusteeship council or at the general assembly. These answers were: South-West Africa continued to be a territory under mandate (unanimous); the Union of South Africa was not competent to modify this international status without the consent of the United Nations (unanimous); and the provisions of chapter xii, articles 75 and 77, of the charter were permissive, the consent of the parties concerned being required, but the normal course indicated by the charter would end in a trusteeship agreement (majority). FILMS OF 1950.—*Pacific*, *The* (Encyclopædia Britannica Films Inc.). (M. FE.; X.)

**Trust Territory of the Pacific Islands:** see MARSHALL, CAROLINE AND MARIANA ISLANDS.

**Tuberculosis.** The division of tuberculosis of the United States public health service made more than 2,000,000 photofluorograms in 1950, of which 1,800,000 were done in community-wide surveys in Boston, Mass.; Denver, Colo.; Los Angeles, Calif.; Salt Lake City, Utah; and San Diego, Calif. It was estimated that 25,000,000 people in the United States had X-ray inspections of their chests.

During the first quarter of 1950, in a case-finding program among veterans, 200,000 X-ray film inspections were made of the chests of employees and patients. The incidence of new cases found among veterans hospitalized for other causes was 0.7%. Of those examined in outpatient departments the incidence was 0.6%, and among the personnel it was 0.1%. Among 79,393 midshipmen and navy recruits of the U.S., 9.7% reacted to tuberculin.

C. Cameron of Edinburgh, Scot., stated that in England about 80% of the population had been infected with tubercle bacilli by the age of 20 years. The number of known cases in Scotland was 40,000 whereas only 4,000 were isolated in hospitals. Northern Ireland tuberculosis authorities reported that 50% of the population had been infected with tubercle bacilli, and that more

MASS TUBERCULOSIS-TESTING on the campus of Victoria Girls college in Patiala, India, supervised by a World Health organization team in 1950. Those showing unfavourable reactions were inoculated with BCG, an anti-tuberculin serum which India had begun producing itself

than 10,000 persons were known to have clinical tuberculosis. There were 800 on the sanatorium waiting list. In England and Wales, 400 persons died per week. For lack of nursing personnel, 4,000 hospital and sanatorium beds were closed.

**Mortality.**—Reported mortality rates varied throughout the world. In the Union of South Africa the annual rate was 750 per 100,000 population among Europeans, 800 among Asiatics, 4,500 among the coloured and 8,000 among urban natives. In Japan the rate decreased from 280 in 1945 to 181 in 1948; Iceland, from 200 in 1930 to 34 in 1949; Denmark, from about 200 in 1900 to 19 in 1949. In the United States the rate continued to decrease, from slightly less than 200 in 1900 to 26.1 in 1949; it was estimated at well below 25 in 1950. There were ten states with rates of 16 or below, the lowest about 9.

The effect of World War II on tuberculosis in Europe was reported to have varied in different places. In Denmark and Switzerland the mortality was little or not at all increased. In Norway and Sweden the rates decreased. In England, Wales, Belgium and Ireland there was a preliminary rise and then a slight fall. In Scotland there was a rise during World War II which continued. In Poland, Germany, Italy and the Netherlands there was a steady rise throughout the war, but a sharp drop occurred later. In France there was increased mortality at first, but by 1945 it was the same as in 1938 and continued thereafter to decrease.

**Treatment.**—Hospitalization to control contagion and administer well-established procedures remained the best method of managing persons with clinical tuberculosis. In England the long waiting list for institutional treatment was the most pressing problem. Because of the shortage of beds the minister of health recommended that regional hospital boards arrange for admission of tuberculous patients to suitable general and isolation hospitals not required as essential epidemic reserves.

In the United States one state began to close sanatoriums for lack of patients, while in others there were waiting lists of patients for sanatorium beds. R. E. Teague said that 500 were

waiting for sanatorium admission in Philadelphia, Pa. R. F. Mitchell and J. R. Knudson, Trudeau, N.Y., reported a group of 289 patients with uncomplicated, active, minimal pulmonary tuberculosis treated by modified bed rest, which consisted of 21 hours in bed or on a lounge each day for about two months and abstaining from work for at least a year after the disease appeared well controlled. Seven to 18 years following such treatment, 79% of their patients were well and working.

A number of drugs, including aureomycin, chloromycetin, terramycin, mycomycin, diomycin, neomycin and tibione were studied, but none gained much prominence because of toxicity, ineffectiveness or insufficient trial. Streptomycin continued to be the most effective drug; in combination with PAS (para-aminosalicylic acid) it was regarded by many as the most useful medication. When these drugs were used together, the resistance which tubercle bacilli develop to streptomycin was definitely delayed and therefore medication could be given over a longer time. These drugs only suppress the disease, but in some situations this is adequate for the body's defense mechanism to control completely the lesions in such parts as the larynx, trachea and bronchi. They were also helpful in acute, rapidly progressive and widely disseminated tuberculosis such as miliary disease and meningitis. In chronic tuberculosis of the lungs, the suppressive effect of these drugs was usually found to be only temporary and therefore had to be supplemented by other treatment of more lasting benefit. These drugs were helpful only as a part of a long-term plan for control of the disease when properly timed in relation to other methods of treatment such as surgical procedures. J. H. Lehmann, Göteborg, Swed., and others used para-aminosalicylic acid alone.

D. M. Spain and N. Molomot, New York city, found that animals which received cortisone had more extensive, more widely distributed and less well-localized tuberculous lesions than those which received saline solution, streptomycin or cortisone combined with streptomycin. Until further data were available, there was no place for cortisone in the treatment of tuberculosis in human beings.

In June 1950 a U.S. public health law extended the period of presumptive service connection for tuberculous veterans in the United States from one to three or four years. To accommodate this added load, 4 hospitals were added, making a total of 18 for tuberculous veterans. Services were also opened in general hospitals. There were 14,276 beds available for tuberculous veterans in 1950, and 2,072 in non-Veterans' administration hospitals at federal expense. The medical staff of the Veterans' administration tuberculosis service had been quadrupled since the end of World War II, and treatment administered to veterans was of the highest quality. L. V. Schneider, Veterans' administration, Washington, D.C., stated that 50,000 World War II veterans were receiving disability compensation and pensions for tuberculosis.

**Immunization.**—Large numbers of children in various parts of the world received BCG (Bacillus-Calmette Guérin) administered by teams sponsored by the Danish Red Cross and directed by Johannes Holm. The American Trudeau society continued to recommend BCG for nonreactors to tuberculin who might be exposed to tuberculosis, such as professional students and laboratory personnel. On July 12 the Research foundation of the University of Illinois was licensed by the public health service for manufacture, exportation, importation and sale of BCG.

The U.S. bureau of Indian affairs announced that it would complete the administration of BCG to approximately 32,390 children enrolled in Indian schools. The Minnesota department of health reported that among 12,528 Indians in that state the tuberculosis mortality rate was 529.2 in 1937, when 64 died, but was only 71.8 (9 deaths) in 1949. This was accomplished

without BCG and was superior to results among Indians in areas where BCG was used.

Agnes R. MacGregor, Scotland, re-emphasized that the tuberculin reaction is purely for hypersensitivity which operates to produce reinfection and an acute destructive type of lesion and this may cause extension of the disease.

T. Gedde-Dahl, Oslo, Nor., mentioned the difficulties of statistical investigations in the effectiveness of mass administration of BCG. He said the decrease of erythema nodosum and pleurisy during 1946, 1947 and 1948 might be the result of the mass vaccination with BCG in 1947 and 1948. However, he thought, it was most likely caused by other factors reducing the risk of tuberculous infection in those years. L. B. Dickey, San Francisco, said that all favourable results reported from BCG vaccination could be surpassed by the use of accepted methods of tuberculosis control without BCG. He did not believe its harmlessness had been proved. Culminating events occurred when R. Dubos, New York city, found that BCG caused progressive and killing disease of the lungs of mice on deficient diets, and A. J. Vorwald *et al.*, Saranac Lake, N.Y., produced progressive and fatal tuberculosis by administering BCG to silicotic guinea pigs. These occurrences dampened the enthusiasm for the administration of BCG to people.

The American College of Chest Physicians regarded BCG as an experiment and passed a resolution against its use except in limited but well-controlled studies. Experiments on BCG were continued by the division of tuberculosis, U.S. public health service, involving approximately 268,000 persons in Georgia, Puerto Rico and the Virgin Islands.

R. W. Sarber *et al.* killed a virulent human strain of tubercle bacilli and BCG by ultra-violet light. These had essentially the same effect on guinea pigs as live BCG.

**Organizations.**—The International Union against Tuberculosis was held in Copenhagen, Den., Sept. 5-8, 1950. Manoel de Abreu was elected president of the 1952 session, scheduled to be held in Rio de Janeiro, Braz. The first International Congress on Diseases of the Chest, sponsored by the American College of Chest Physicians, held in Rome, It., Sept. 17-22, was attended by approximately 500 physicians from 40 nations.

A large volume of medical research was in progress through support from the National Tuberculosis association. Various projects included basic laboratory studies and clinical investigations. The sale of Christmas seals in 1949 by the National Tuberculosis association amounted to \$20,226,794.15.

The American Trudeau society and the American College of Chest Physicians offered several special courses for physicians in various parts of the country. (See also X-RAY AND RADIOLOGY.)

**Tungsten:** see MINERAL AND METAL PRODUCTION AND PRICES.

**Tunisia.** A French protectorate in North Africa, Tunisia is situated between Algeria (west) and Tripolitania (east). Area: 48,332 sq.mi. Pop.: (1946 census) 3,230,952; (1949 est.) 3,387,000. Arabs and Berbers constitute 87.6% of the population; they are Moslem and speak Arabic. Chief towns (1946 census): Tunis (cap., 364,593); Sfax (54,637); Bizerta (39,327); Sousse (36,566). Ruler: Bey Sidi Mohammed el-Amin; prime ministers in 1950: Mohammed Kaak and (from Aug. 17) Mohammed Shenik; French residents general in 1950: Jean Mons and (from May 31) Marcellin Marie Louis Périllier.

**History.**—Politically, 1950 was the most important year since

the inception of the protectorate. A new resident general was entrusted with the task of negotiating measures by which direct administration, contrary to the spirit of the protectorate of 1881, would be brought to an end. On Aug. 17 the bey gave his approval to a Tunisian ministry led by Mohammed Shenik in which the Tunisians participated in equal strength with the French. An official communiqué announced that the cabinet was to negotiate on behalf of the bey "the constitutional modifications which must bring Tunisia by successive stages to internal autonomy." On Oct. 7 the resident announced "a pause in politics," and on Nov. 18 troops fired on striking agricultural workers at Enfidaville, killing 7 and wounding 50. The Tunisians interpreted these two attitudes as a return to the politics of force. When the gravity of the situation was made known in Paris, a commission, under the chairmanship of the minister of foreign affairs, issued on Dec. 5 a plan for the reorganization of the government and public office. But the nationalists regarded the proposed reforms as a subterfuge since they indirectly restored the prerogatives of the secretary-general of the residency, who in fact controlled the premier, and the bey refused to agree to the proposed reforms.

**Finance.**—Budget (1949-50 est.): ordinary, revenue 16,342,900,000 fr., expenditure 16,339,600,000 fr.; extraordinary (investments) balanced at 12,923,300,000 fr. Monetary unit: Tunisian franc=metropolitan franc. In 1950 the exchange rate was 350 M. fr.=U.S. \$1.

**Foreign Trade.**—(1949) Imports 40,298,900,000 fr.; exports 27,237,100,000 fr.

**Transport and Communications.**—Railways (1949): 2,174 km. Roads (1949): 8,704 km. Motor vehicles licensed (March 1949): cars 11,062 commercial 6,485. Ships entered (1949) 2,765; cargo carried (metric tons): unloaded 829,500; loaded 3,483,700. Air transport (1949): aircraft landed 6,486; passengers flown 69,783; freight carried 2,436 metric tons; mail 176.

**Agriculture.**—Main crops (metric tons, 1949): wheat 540,000, barley 400,000, olive oil 95,000, dates 37,000, citrus fruit 37,300, wine 885,000 hl. Livestock (1948): cattle 341,000; sheep 1,588,000; goats 1,083,000; pigs 42,000; horses 72,000; asses 109,000; mules 47,000; camels 177,000.

**Industry.**—Essentially an agricultural country, Tunisia in 1949 recorded production amounting to 50,000,000,000 fr. compared with 20,000,000,000 fr. in 1947 and 34,000,000,000 fr. in 1948. The balance of trade continued seriously adverse.

**Mineral Production.**—(Metric tons, 1949): phosphate rock 1,441,900; iron ore 678,600; lignite 57,800; lead ore 39,100. (C. A. J.)

**Tunnels.** Tunnelling throughout the world in 1950 was confined largely to prosecution and completion of

INTERIOR of the Brooklyn-Battery tunnel, opened on May 25, 1950, and connecting lower Manhattan with Brooklyn in New York city

projects delayed by World War II. Few wholly new projects were started.

**United States.**—After numerous delays occasioned by World War II and repeated strikes, the twin-tube Brooklyn-Battery tunnel in New York city was opened to traffic in the summer of 1950. These tubes, 9,117 ft. long, were the longest vehicular tunnels in the United States.

On the Delaware river water-supply system for New York city, the 6-mi. Neversink tunnel neared the finish of excavation and was almost ready for concrete lining. Work on the 25-mi. Downsview tunnel on the same project was stepped up by completion of a construction shaft to open up two more headings in addition to those already under way from the two portals. Several small tunnels were completed on the Colorado-Big Thompson irrigation project in Colorado, and the 1.7-mi. Rattlesnake Tunnel was started on this same project. Driving started on the 6½-mi. Tecolote water tunnel in California. Boston, Mass., completed its 5½-mi. city water tunnel. Baltimore, Md., continued work on its 10-mi. Liberty road-Patapsco tunnel. Driving was resumed on the 6-mi. Duchesne tunnel in Utah.

Chicago had nearly completed its west side 7½-mi. interceptor sewer tunnel. At Portland, Ore., a difficult 3-mi. sewer tunnel was finished, as were also two short interceptors on the East bay in the San Francisco, Calif., region. At Philadelphia, Pa., a 2-mi. sewer tunnel was completed, and driving started on three more interceptors aggregating 7 mi. in length.

In California the big Feather river tunnels, 4 mi. and 6½ mi. long, were completed. Los Angeles continued driving its three tunnels, 9½ mi. total length, for power plants on the Owens valley project. Driving 12 power tunnels at Fort Randall dam and 8 more at Garrison dam, both on the Missouri river, was spectacular because of the size of bore, 26 ft. to 31 ft. diameter, and material encountered. At Fort Randall power saws cut the tunnels out of chalk; at Garrison a blocky shale made tunneling hazardous.

**Latin America.**—In Puerto Rico, progress continued on the four Caonillas reservoir tunnels, the Yauco-Locho tunnel and the Prieto-Locho tunnel, all for hydroelectric development. Work was under way on two highway tunnels in Chile, the ¾-mi. Zapata and the 1-mi. Chacabuco tunnel. Four hydroelectric tunnels were under construction in Brazil: Santa Cecilia, 2 mi.; Vigaria, ½ mi.; Sá Carvalho, 2 mi.; and San Antonio river, 1 mi. In Peru, Empresas Electricas Asociadas e Hidrandina was still at work on its 8-mi. hydroelectric tunnel, 6 mi. of which was 10 ft. in diameter, and 2 mi. of which was 18 ft. in diameter, for water storage for peak electric loads. Eight small irrigation water-supply tunnels, from 0.8 mi. to 3.7 mi. each, were under way.

**Europe.**—Work continued on 13 hydroelectric tunnels on eight projects in Italy, and was started on several others on a series of planned projects that would require 248 mi. of tunnel. Driving continued on the Acquedotto Romano del Peschiera water-supply tunnels, the largest of which was 49 mi. Several railroad tunnels were also under construction.

In Scotland the largest tunnel in Britain, the Clunie 1.7-mi. hydroelectric tunnel, 22 ft. in diameter, was completed. Ten other hydroelectric tunnels were nearly finished in Scotland. Work continued on the 10-mi. Bowland forest water-supply tunnel for Manchester, and was started on two other bores for the same project, Haslingden and Walmersley, totalling 11½ mi.

Eleven hydroelectric tunnels were finished in Switzerland or nearly completed during 1950, and work started on the Maggai valley project that required 45 mi. of tunnels. The four-lane Croix-Rousse highway tunnel, 1¼ mi. long, at Lyon, Fr. was opened to traffic. Nine hydroelectric tunnels up to 46½ ft. in diameter and up to 21 mi. long were under way in Sweden. Six

hydroelectric tunnels were under construction in Norway.

**Other Countries.**—Five railroad tunnels neared completion in Australia. The Kiewa hydroelectric tunnel, 1.6 mi. long, was half finished. Treuallyn, a 2-mi. power tunnel, was started. Work started on the 5½-mi. Rimutaka narrow-gauge railroad tunnel in New Zealand, and three hydroelectric tunnels were under way in India. Progress continued on the 8-mi. Hex river single-track railway tunnel in Cape Western, U. of S.A. (H. W. R.N.)

**Turbojets and Turboprops:** see JET PROPULSION.

**Turkey.** A republic in the southeastern Balkans and Asia Minor, Turkey is bounded on the west by the Aegean sea, on the northwest by Greece and Bulgaria, on the north by the Black sea, on the northeast by the U.S.S.R., on the east by Iran and on the south by Iraq, Syria and the Mediterranean. Area: 296,185 sq.mi. (including 9,256 sq.mi. in Europe). Pop.: (1950 census, preliminary returns) 20,902,628. Language (1935 census): Turkish 86.8%, Kurdish 9.3%. Religion: Moslem 97.7%. Chief towns (1950 census): Ankara (cap. 286,592); Istanbul (1,000,092); Izmir (23,508); Adana (118,000); Bursa (100,007). Presidents of the republic in 1950: Ismet İnönü and (from May 22) Celâl Bayar (*q.v.*); prime ministers in 1950: Şemsettin Günaltay and (from May 22) Adnan Menderes.

**History.**—The year 1950 was an eventful one for Turkey. The general election on May 14 resulted in a landslide in favour of the young Democratic party. The Democrats won 408 seats in a house of 487. The National party had one seat, there were a few independents and the remainder represented what was left of the old Republican People's party. Celâl (pronounced Jelal) Bayar was elected president of the republic; the new prime minister was Adnan Menderes, a landowner educated at the American college in Izmir; the foreign minister was now Fuat Köprülü, a historian of European repute, who was expelled from the Republican party five years before for writing an article attacking single-party government. The other ministers were specialists. Thus the old benevolent oligarchy gave place to a real democratic government.

The program of the new government might be summed up as long-range fiscal reform, with efforts to balance the budget and reduce the cost of living, the denationalization of the great state industries and a more generous attitude towards the working classes and non-Moslem citizens. The size of the government majority was so great that absolute cohesion was not to be expected and there were changes in the composition of the cabinet before the close of the year. There were 18 parties in Turkey, but few were serious. The new Socialist party was authorized to function on July 20. It claimed to be a guide to socialism in Turkey, with the keynote of equality and stability in international relations and the struggle for world peace. This party was encouraged by serious writers as the best insurance against an extremist left. Its organ *Gerçek* (Truth) was attacked by Moscow radio. It repudiated any foreign influence. There was also a Democratic Labour party, not Marxist, to support small artisans and peasants. All these parties were united against communism.

There was also a small group who called themselves the Friends of Peace, led by a woman, who protested against the dispatch of troops to Korea. It was discovered that they took directives from Moscow, and they were prosecuted. A large group of deputies signed a petition to make Communist leaders liable to the death penalty.

Turkey's stability in its foreign relations remained unaffected by the change of government, which had the effect of increasing its prestige abroad. Turkey was elected to the U.N. Security council and took an active part in the debates of the Council

of Europe. It was the first state to announce its decision to dispatch a brigade to support the army of the United Nations in Korea. Disembarked at Pusan in the second half of October, the Turks gave an excellent account of themselves in the fighting.

Turkey's disappointment at not being accepted in the North Atlantic treaty was largely compensated by the invitation to be associated with the planning work of the North Atlantic treaty organization with regard to the defense of the Mediterranean.

With Greece its relations remained very friendly, as with the Arab states, which looked to Turkey with respect. In a speech at the opening of the grand national assembly in October, President Bayar stated that relations with the U.S.S.R. were correct. With Bulgaria there were serious difficulties. The attempt by that country to expel 250,000 Turks, survivors of the former status of Bulgaria as an Ottoman province, led to serious tension. Many thousand expellees were admitted, embarrassing the Turkish government with problems of settlement. The attempt by Bulgaria to compel Turkey to accept non-Turkish subjects without visas was prevented by the closing of the frontier.

The biggest step in denationalization was the sale to a group of Turkish capitalists of the great cotton mills at Adana, being one of the components of the vast string of state enterprises administered by the Sümer bank. The price was £T450,000.

The International Bank for Reconstruction accorded Turkey a credit of \$12,500,000 for the improvement of the ports of Istanbul, Izmit, Samsun, Zonguldak and Iskenderun. In November the director of the U.S. Economic Cooperation administration announced that he had been authorized to spend £T126,000,000 from the counterpart fund for the promotion of agriculture and industry. Foreign exchange to the value of \$40,000,000 was allocated under the European Recovery program for the first year's expenditure upon the new 80,000-kw. power station on the river Sakarya.

But the immediate problem was to overcome heavy deficits in the budget, which was rendered difficult by the legacy of previous governments. With this was interlocked the endeavour to bring down the high cost of living. Some steps in this direction were made at once, such as a cut of 20% in the price of sugar and of 10% in certain state-produced textiles. It was stated that the government aimed at the reduction of the state expenditure by £T200,000,000 of which by the end of the year some £T40,000,000 was saved. A thorough reform of the whole fiscal system was contemplated.

Turkey expected to draw substantial benefit from its inclusion in the European Payments union. Serious shortage in sterling and dollar exchange prevented it from importing anything but necessities. The government endeavoured to simplify the formalities that had hampered foreign trade in the past. Controls were relaxed over a long range of commodities and a process of liberation and decentralization was begun.

A marked feature was the revival of trade with west Germany, which was Turkey's best customer and the main source of imports before World War II. In the first half of 1950 Germany replaced Great Britain as Turkey's first customer, buying £T52,500,000 worth of goods; it moved to second place as exporter to Turkey with £T47,100,000.

During the year the government distributed nearly 90,000 ac. of land on state farms to landless peasants and helped to start them at work.

(MA. B.)

**Education.**—Schools (1948-49): primary 15,310, teachers 30,546, pupils 1,474,671; secondary 321, teachers 4,112, pupils 65,960; lycées 88, teachers 1,858, pupils 22,721; institutions of higher education 33 (including the universities of Istanbul and Ankara), teaching staff 1,336, students 26,400.

**Finance and Banking.**—Budget: (1949) revenue £T1,251,800,000, expenditure £T1,371,800,000; (1950 est.) revenue £T1,313,300,000, expenditure £T1,487,200,000. Currency circulation (Aug. 1950) £T946,000,000.

Gold and foreign exchange (Sept. 1950) U.S. \$180,000,000. Bank deposits (Feb. 1950) £T842,000,000. Monetary unit: Turkish pound or lira with an exchange rate of £T2.825 to the U.S. dollar.

**Foreign Trade.**—(1949): Imports £T812,600,000; exports £T693,600,000. Main sources of imports (1949): United States 20%; United Kingdom 17%; France 6%; Italy 5%. Main destinations of exports: Germany 16%; United States 14%; United Kingdom 12%; Czechoslovakia 8%.

**Transport and Communications.**—Roads (1949) 13,530 mi., including 7,900 mi. all-weather roads. Licensed motor vehicles (Dec. 1949): cars 7,951; commercial 13,872. Railways (1949): 4,672 mi.; passenger-miles 1,350,000,000; freight net ton-miles 1,469,000,000. Shipping (July 1949): number of merchant vessels over 100 gross tons 191; total tonnage 312,031. Air transport (Turkish State airways, 1947): flights 6,712; miles flown 1,188,109; passengers flown 78,844. Telephones (1949): subscribers 52,423. Radio receiving sets (1949) 250,000.

**Agriculture.**—Main crops (metric tons, 1949): wheat 2,557,000; barley 1,220,000; oats 220,000; maize 609,000; rye 274,000; potatoes 471,000; sugar, raw value 140,000; tobacco (1948) 74,000; cotton, ginned 97,000; grapes, total 1,681,000; olives (1948) 214,000; linseed 52,000. Livestock (Dec. 1949): cattle 10,279,000; sheep 25,840,000; horses 1,164,000; camels 109,000; mules 104,000; asses 1,711,000; buffaloes 937,000; mohair goats (Dec. 1947) 4,162,000; turkeys (Dec. 1948) 1,145,000; chickens 18,434,000.

**Industry.**—Fuel and power (1949): coal 4,188,000 metric tons; lignite 1,272,000 metric tons; electricity 682,000,000 kw.hr.; crude oil 13,000 metric tons. Raw materials (metric tons, 1949): iron ore, metal content, 210,000; pig iron 113,000; steel ingots and castings 99,600; copper smelter 11,300; chrome 177,000; manganese ore (1947) 5,000. Manufactured goods (metric tons, 1949): cement 374,000; cotton yarn 29,800; wool yarn 7,900.

**Union of Soviet Socialist Republics.** The federation of soviet socialist republics is a Eurasian state covering parts of eastern Europe and northern and central Asia. Area (Sept. 17, 1939): 8,173,557 sq.mi. Pop. (1939 census): 170,467,186. In 1939 the union consisted of 11 republics of which the Russian Soviet Federated Socialistic republic was by far the largest (78% of the whole territory and 64% of the population). Of the remaining 36% of the population almost one-half lived in the Ukrainian Soviet Socialist republic (2% of the territory) and the other half in the nine other republics of the union. The U.S.S.R. is inhabited by almost 100 different nationalities speaking different languages. In Jan. 1939 Russians constituted 58.4% of the population, Ukrainians 16.6% and Byelorussians 3.1%. None of the other nationalities, all non-Slav and most of them non-Europeans, reached 3% of the total. The most important were Uzbeks 2.9%, Tatars 2.5%, Kazakhs 1.8%, Jews 1.8%, Azerbaijanis 1.3%, Georgians 1.3% and Armenians 1.3%.

In 1939 the U.S.S.R. consisted of the following republics:

	Capital	Area in sq. mi.	Population (1939 census)
Russian S.F.S.R.	Moscow	6,372,860	109,278,614
Ukrainian S.S.R.	Kiev	171,777	30,960,221
Byelorussian S.S.R.	Minsk	49,022	5,567,976
Georgian S.S.R.	Tiflis (Tbilisi)	27,020	3,542,289
Azerbaijan S.S.R.	Baku	33,196	3,209,727
Armenian S.S.R.	Erivan	11,580	1,281,599
Uzbek S.S.R.	Tashkent	145,908	6,282,446
Kazakh S.S.R.	Alma-Ata	1,059,184	6,145,937
Kirghiz S.S.R.	Frunze	76,042	1,459,301
Tadzhik S.S.R.	Stalinabad	55,584	1,485,091
Turkmen S.S.R.	Ashkhabad	171,384	1,253,985

Between 1939 and 1945 the U.S.S.R. considerably expanded its territory. In Europe the following areas were added:

	Area in sq. mi.	Population (1939 est.)
Estonia . . . . .	18,357	1,134,000
Latvia . . . . .	25,395	1,994,500
Lithuania (including the Vilnius area) . . . . .	25,173	3,032,000
From Finland . . . . .	17,596	100,000*
From Poland (excluding the Vilnius area) . . . . .	64,824	10,315,000
From Rumania (Bessarabia and N. Bukovina) . . . . .	19,338	3,650,000
From Czechoslovakia (Subcarpathian Ruthenia) . . . . .	4,856	725,400
From Germany (N.E. part of East Prussia) . . . . .	5,096	830,000
Total . . . . .	180,635	21,780,900

\*About 400,000 Karelians left in 1944 to resettle in Finland.

From Japan the U.S.S.R. acquired Karafuto or southern Sakhalin (13,935 sq.mi.; pop. 331,900) and the Chishima or Kuril Islands (3,994 sq.mi.; pop. c. 90,000). In addition the formerly independent republic of Tannu Tuva (64,000 sq.mi.; pop. c. 65,000) was added to the union.

After World War II the U.S.S.R. formed a federation of 16 republics. The five new ones were: the Karelo-Finnish S.S.R. (cap. Petrozavodsk); the Moldavian S.S.R. (cap. Chişinău or Kishinev) and Estonia (*q.v.*), Latvia (*q.v.*) and Lithuania (*q.v.*) transformed into soviet republics. Total *de facto* area: 8,436,121 sq.mi.

Addition of the figures quoted above would give a total population of 192,735,000. The official estimate for 1940 was 193,000,000 (E. Davydov in *Bolshaya Sovetskaya Entsiklopedia: S.S.S.R.*, suppl. vol., Moscow, 1948). The only postwar estimate, published in *Pravda* of Jan. 23, 1946, by Gheorghy F. Alexandrov, then propaganda chief of the All-Union Communist party, gave the same figure.

Chief towns (1939 census): Moscow (*q.v.*) (4,137,018); Leningrad (3,191,304); Kiev (846,293); Kharkov (833,432); Baku (809,347); Gorki, formerly Nizhni Novgorod (644,116); Odessa (604,223); Tashkent (585,005); Tiflis (519,175); Rostov-on-Don (510,253); Dnepropetrovsk (500,662). Chairman of the presidium of the supreme soviet of the U.S.S.R., Nikolai M. Shvernik; chairman of the council of ministers, Premier Joseph V. Stalin (*q.v.*).

**History.**—The year 1950 saw no important change in the political outlook of the Soviet Union or in its relations with the outside world. Some commercial contacts were maintained and even extended; but the enforced isolation of the soviet peoples from external currents of thought continued.

The diplomatic activity of the Soviet Union was divided into two parts, chronologically, by the outbreak of war in Korea in June and by the subsequent and consequent decision of the soviet government to abandon its boycott of the United Nations that had begun in January as the result of a refusal of the latter to admit the Chinese Communist representative in place of the delegate of the Kuomintang regime now confined in its effective strength to Formosa.

Despite the hopes expressed as a result of a somewhat conciliatory attitude of the soviet delegation on its arrival in New York city, the attitude taken up toward the various problems confronting the United Nations at the September meeting of the general assembly suggested little change in fundamental soviet policies. Once again, it was suggested that great power co-operation was the proper motive force for all U.N. action; and the soviet delegation took the lead in presenting its familiar proposals on atomic and general disarmament and in suggesting a revival of the dormant military staff committee. The soviet government also opposed the U.S. plan for overcoming the obstacles placed by the veto through the transference of greater initiative to the assembly. The use of the veto to block the renomination as secretary-general of Trygve Lie (*q.v.*), on the ground that he had improperly used his position in the handling of the Korean question, and the threat to ignore his renomina-

tion by the assembly were indicative of the limitations still put to the idea of international co-operation. (See UNITED NATIONS.)

Andrei Y. Vishinsky's speeches at Lake Success carried on the main line of previous soviet propaganda to the effect that the Soviet Union was a bastion of peace against U.S. war-mongering. While this was the main weapon used to hamper the opposition to soviet expansionism, the Soviet Union in its relations with the countries of eastern Europe was continuing the process of consolidating the "satellite countries" into a single bloc. Its precise relations with Communist China were, however, much less clear.

**Assimilation of People's Democracies.**—The techniques of reinforcing soviet control through economic and political means showed little change from the previous year. In Poland, Marshal K. K. Rokossovsky's entry in May into the Polish Politburo was significant of the extent of the political control now exercised. And in the autumn, there were reports that the Czechoslovak army, like the Polish army, was being thoroughly reorganized on the soviet army model. The propaganda war against Marshal Tito's regime in Yugoslavia showed no signs of abating. (See also ALBANIA; BULGARIA; CZECHOSLOVAKIA; HUNGARY; POLAND; RUMANIA; YUGOSLAVIA.)

**Soviet Policy in Germany.**—The soviet hesitation over German policy continued. Should eastern Germany be treated like the other satellites to which it was in this period linked by an increasing number of agreements concluded under soviet auspices? Or would this mean the certainty of a rearmed western Germany appearing in the forefront of the antisoviet defenses in Europe? As during 1949, both policies seemed to have been pursued simultaneously. At the same time, soviet intransigence over the proposed peace treaty for Austria was regarded as proof of the insincerity of soviet professions of their desire to create a peaceful and united Germany. (See AUSTRIA.)

A new trade agreement with the eastern zone was signed on April 12 and a supplementary one on July 21. In an exchange of letters in May it was agreed that the total of soviet and Polish reparations outstanding should be reduced by 50%. On the other hand, it was admitted that although some important industrial enterprises had been returned to the Germans, others still remained in soviet hands, giving the soviet government a

TAGANSKAYA STATION in the circle link of subway transportation newly opened to Moscow commuters in 1950

direct hold upon the eastern German economy. At the same time as the western powers were denounced for setting up an antisoviet arsenal of aggression in western Germany, the reports of a heavily armed police force in eastern Germany became more circumstantial and formed the basis for a protest by the three other occupying powers to the soviet government on May 23. No progress was made as the result of a proposal sent to the Soviet Control commission three days later for a procedure for setting up a united German government. Nor was the Berlin situation essentially altered. (See BERLIN.) The soviet statement on May 4 that all German prisoners had been repatriated from the Soviet Union was not generally accepted. (See PRISONERS OF WAR.) In the first half of the year Communist activity in western Germany had been directly subversive but some change of emphasis came in October, when after the symbolic consolidation of the Eastern German Communist regime in single-list elections, V. M. Molotov met in Prague the foreign ministers of the satellite states including eastern Germany. A communique from this conference on Oct. 21-22 proposed four points as the basis of a final settlement of the German problem. These proposals were: a four-power declaration reasserting the Potsdam policy; the removal of all limitations on peaceful German industry together with the maintenance of controls against the restoration of Germany's war potential; the conclusion of a peace treaty and the withdrawal of all foreign troops within a year of its signature and, finally, the calling of an all-German assembly with equal numbers of representatives from eastern and western Germany to prepare for the setting up of an all-German government. These proposals substantially reproduced those made after the Warsaw meeting on the same lines in June 1948. On Nov. 3, these proposals were called to the attention of the three western powers in notes handed to their ambassadors in Moscow, and it was suggested that the Council of Foreign Ministers should be convened at once "to examine the question of the fulfilment of the Potsdam agreement on the demilitarization of Germany." (See also GERMANY.)

*Soviet Policy in the Far East.*—Since the soviet government could do little but protest ineffectually against the continued control of Japan by Gen. Douglas MacArthur, and against the measures taken by him and by the Japanese government against Communist activities, most interest in the far east centred on relations between the Soviet Union and China to which a new complexity was given by the outbreak of the Korean war.

After negotiations in Moscow lasting for several weeks, a series of agreements between the U.S.S.R. and the Chinese People's Republic was signed in Moscow on Feb. 14. These were ratified on April 11. They included, first, a 30-year treaty of friendship, alliance and mutual assistance on the lines of those with the Soviet Union's western neighbours. The second agreement altered in favour of the new regime the provisions about Manchuria contained in the 1945 treaty concluded with Chiang Kai-shek. The Chinese Changchun railway was to be handed over to the full ownership and control of China, immediately upon the conclusion of a peace treaty with Japan and in any event not later than the end of 1952. Some modifications in its joint administration were to come into force at once. The same period was fixed for the return of Port Arthur; though the U.S.S.R. as well as China was to be allowed to use it in the event of war with Japan. It was recognized that the administration of Dalny (Dairen) belonged to China; and this subject too was to be reconsidered after the conclusion of the Japanese peace treaty. It was also announced that the Soviet Union would hand over to the Chinese government property "acquired by soviet organizations from Japanese owners in Manchuria." A credit of \$300,000,000 over a period of five years at 1% interest was granted to China. On March 27, a further agreement

KING PIECES from a soviet-made chess set brought to Europe by a returning traveller in 1950. Ideological warfare on the chessboard was represented by (left) a capitalist king shown as a skeleton clothed in ermine and obsolete armour, and (right) a heroic Communist-worker king

setting up two Sino-soviet companies for the exploitation of Sinkiang's mineral wealth was signed; and a trade agreement with China followed on April 19.

When the fighting broke out in Korea at the end of June, the soviet government at once took up the attitude that it was the result of a premeditated attack by South Korea upon North Korea. The measures taken by the Security council during the period of the Soviet Union's boycott were regarded as contrary to the charter and the subsequent fighting was described in the soviet press as being the product of the illegal intervention of the United States into a foreign civil war. An attempt at mediation through an approach by Jawaharlal Nehru to Joseph V. Stalin was frustrated by the premature publication of the correspondence on the soviet side, apparently with the object of showing that the only reason for the fighting continuing was the refusal of the Security council to seat the Chinese Communist representative or to hear a North Korean spokesman. The latter objectives were those clearly sought by Jacob Malik (q.v.) when he took the chair in the council at its August meetings, thus ending the boycott. But it seemed clear that there was no desire on the part of the Soviet Union to engage itself directly in the conflict. And when Chinese troops intervened early in November it was not possible to say to what extent, if at all, such intervention formed part of the general soviet plan. (See CHINA; JAPAN; KOREA; KOREAN WAR.)

*Internal Affairs: Economics.*—As usual internal "self-criticism" rather than the official statistical material with the dif-

ANDREI VISHINSKY, soviet foreign minister, signing a 30-year mutual defense treaty adopted in Moscow by the Soviet Union and Communist China, Feb. 14, 1950. Standing directly behind him are Joseph Stalin (left) and Mao Tse-tung

difficulties of interpretation it presented, afforded the main method by which the internal economic progress of the Soviet Union could be measured. The most important field in which shortcomings were pointed to was that of agriculture and as the year went on it became evident that an attempt at a major change in agricultural policy was being made, although as usual it was hard to know what lay behind some of the reports of its progress. The first symptoms came in February when Andrei A. Andreyev, the member of the Politburo with special responsibilities in the field of agriculture, acknowledged criticisms to the effect that he had allowed too much latitude to peasant individualism in the method of organizing work on collective farms. At the same time, there were reports suggesting that an attempt was being made to bring about the voluntary surrender to the collective farms of the plots which the peasants had been allowed to retain for their own use under the legislation of the 1930s. In a long article in *Pravda* on April 25, Nikita S. Krushchev, also a member of the Politburo, gave the signal for a campaign of a different kind—the aim now being to amalgamate the collective farms into larger units on the ground that *kolkhozes* of 30 families or less were too small to make full use of modern mechanized farming methods. Judging by later comments on the progress of this campaign, it ran into some opposition on the part of the peasantry who must have regarded it as yet another attempt to break their cherished link with the land.

In October it was learned that one of the tasks of the winter months would be to settle in larger agglomerations the peasants who had previously lived in the smaller villages. Although it may seem reasonable to regard this process as partly at least determined by the persistent inadequacy of the food supply for the country's rapidly growing population, a deeper social and political motive clearly underlay it. This was made plain in a *Pravda* leader on Sept. 18.

The soviet state has armed our agriculture with powerful equipment—tractors, combines and other machines which have lightened greatly the labour of the collective farmers and made it more efficient. Agricultural

labour is gradually being transformed into a type of industrial labour. One of the most important tasks of Communist construction—abolishing the difference between town and countryside—is being successfully solved.

It was thus admitted that the "permanent" agricultural settlement of the 1930s was being set aside and that the soviet rulers felt it possible and desirable to proceed to the proletarianization of the peasantry.

*Internal Affairs: Politics.*—Elections for the supreme soviet were held on March 12. There was as usual only one list of candidates; 99.96% of the electorate went to the polls. The supreme soviet held a session in Moscow from June 12–19. Its chief business was the budget which had an estimated revenue of 432,000,000,000 roubles and an estimated expenditure of 427,900,000,000 roubles. A state loan of 20,000,000,000 roubles had been oversubscribed in May. The supreme soviet also sanctioned amendments to the constitution to allow for the changes made in the number and composition of ministries: according to the new law, promulgated on June 17, there were 30 "all-union" or common ministries and 21 "union-republican" or separate ministries.

Changes in the holders of important posts during the year included the following: on Jan. 21 Mikhail G. Pervukhin became the 14th vice-chairman of the council of ministers and was replaced as minister of the chemical industry by Sergei Tikhomirov; on Jan. 2 K. M. Sokolov, minister of town development, was succeeded by Georgi M. Popov; on Jan. 11 A. A. Goregilyad, minister of shipbuilding industry, was replaced by Vyacheslav A. Malyshev, one of 14 vice-chairmen of the council of ministers; the next day Yury E. Maksarev was appointed minister of the transport machinery industry, releasing Ivan I. Nosenko; on Feb. 25, the ministry of armed forces was divided into two and Adm. Ivan S. Yumashev was appointed minister of the navy; on April 18, S. A. Akopov, minister of the automobile and tractor industry, was replaced by Grigory S. Khlamov; on May 29 S. Z. Ginzburg, minister of the building materials industry, was replaced by Pavel A. Yudin, and on the same day David Ya. Reiser was appointed minister of construction of heavy industry enterprises. In July it was learned that Col. Gen. Pavel F. Zhigarev had replaced Marshal Konstantin A. Vershinin as commander in chief of the air force. On Oct. 28 it was announced that Lev Z. Mekhlis resigned the ministry of state control because of ill-health and was replaced by Vsevolod N. Merekulov, formerly minister of state security.

On Jan. 12 the death penalty for treason, espionage and sabotage, abolished in May 1947, was restored.

*Cultural.*—The event of the year in the cultural field was generally held to be the publication by Stalin on June 20 of an article in which he took part in a controversy which had been going on about the linguistic theories of a well-known soviet philologist N. Y. Marr (1864–1934). This writer's theories had enjoyed a virtual monopoly as the only true Marxist theory of language since the 1920s. Stalin now attacked Marr's basic view that language is part of the "superstructure" of a particular economic order. Stalin argued that, on the contrary, language is not included in the superstructure and hence that the Russian language was basically the same as it had been before the revolution. He also approved of the study of "families" of languages, such as the Slav tongues, which Marr had deprecated.

Two further contributions to the controversy were published in August in *Bolshevik*. In the same issue another letter of Stalin dealt with a more general theoretical problem, namely that of the means by which the conclusions of Marx and Engels should be applied to current issues. It was wrong, said Stalin, to quote the works of an author without reference to the period at which they were written, and it is not the case that a formula arrived at through the study of one period of history is true for all periods. Stalin's examples were the view that Socialism in

one country alone was not possible and that after the victory of Socialism the state should "wither away."

Russian Marxists (he said) have arrived at the conclusion that Engels' formula had in view the victory of Socialism in all countries or in most countries, that it is inapplicable where Socialism wins in one country taken separately, while, in all other countries, Capitalism predominates.

By the same argument applied to linguistics, Stalin argued that a common world language incorporating the best elements of existing ones would be created but only when communism eventually triumphed. Meanwhile:

Marxism does not recognize immutable conclusions and formulae, binding for all epochs and periods. Marxism is the enemy of all dogmatism.

Whether this sally betokened serious official misgivings as to the sterility of soviet culture as a result of its enforced conformism and whether there were in fact symptoms of some reaction against the position taken up by Andrei Zhdanov during the cultural "purge" of 1948, it was too early to say. One interesting example of a new latitude in discussion was however the open discussion on the advantages and disadvantages of co-education and on other aspects of educational theory which took up some space in the soviet press in the summer. (See also COMMUNISM; RUSSIAN LITERATURE.) (M. Bf.)

**Education.**—Schools (1950): primary and secondary 220,000; institutions of higher education 850; universities 31. Pupils: primary, secondary and lower technical 37,000,000; universities and institutions of higher education 1,247,000. Teachers: primary and secondary schools 1,600,000.

**Finance.**—Budget (1950 est.): revenue 433,000,000,000 roubles; expenditure 427,900,000,000 roubles. On March 1, 1950, the rouble was put on what was described as a gold basis. The external value, already much too high and completely fictitious, was raised from 5.30 roubles to the U.S. dollar to 4 roubles to the U.S. dollar.

**Foreign Trade.**—In the soviet union foreign trade, a state monopoly, is used as a political weapon, and statistics of foreign trade are a state secret. Since World War II the U.S.S.R. had exploited the resources of its satellite countries, buying from them much more cheaply than the world market prices and selling to them at much higher rates. U.S.-soviet trade declined sharply after 1947, and in 1949 the U.S.S.R. took only \$8,000,000 of U.S. exports and supplied \$50,000,000 of U.S. imports. The industrialized western nations were not willing to help soviet armament by supplying strategic raw materials and latest models of industrial machinery.

**Communications.**—In 1950 the total length of the railways was estimated at 112,530 km., compared with 105,300 km. in 1940. Estimated 1950 freight traffic was 581,000,000,000 ton kilometres.

The five-year plan stipulated that by 1950 the total length of navigable inland waterways should be increased to 115,000 km. with an annual freight traffic of 49,000,000 ton-kilometres. No information was available as to actual achievements.

There were few all-weather highways suitable for motor traffic. No private motoring existed, although the production of motor vehicles was supposed to amount to 65,000 cars, 6,400 buses and 428,000 trucks.

Shipping of 1,824,000 dead-weight tons by mid-1950 occupied tenth place among the world fleets and represented 2.2% of world tonnage. Out of a total of 437 ships, the Soviet Union had only 60 of more than 7,000 tons, including 40 received from the U.S. under lend-lease and 10 taken from the Germans as reparations.

The civilian air fleet was operating an air transport system of 175,000 km. inside the Soviet Union, and also had a monopoly on air services between Moscow and the satellite capitals in Europe.

**Agriculture.**—The agricultural production targets for 1950 were not reached. Crop production (in metric tons, 1950): bread grains and coarse grains 124,700,000; sugar beets 24,300,000; potatoes 115,300,000 (planned); cotton 3,800,000. Livestock (1950, including those on collective farms, state farms and privately owned): cattle 57,200,000; pigs 24,100,000; sheep and goats 99,000,000; horses 13,700,000.

**Industry.**—Production (1950): coal 264,000,000 metric tons; crude oil 37,600,000 metric tons; electricity 86,700,000,000 kw.hr.; pig iron 19,200,000 metric tons; steel 27,600,000 metric tons. In the fourth quarter the average monthly gross industrial output exceeded that of 1940 by 53% in value and 70% in volume.

**Unitarian Church.** The outstanding event of the year 1950 was the celebration in Boston, Mass., in May of the 125th anniversary of the founding by Unitarian Churches of the American Unitarian association. The theme was "Religion for a new age of reason." Four panel discussions dealt with: (1) religion and the growth of the free mind; (2) religion and freedom in society; (3) religion and individual responsibility; (4) religion and stability in society. The assembly passed

resolutions bearing directly on social and international issues, especially in the spheres of civil liberties and the way toward a peaceful world. Samuel A. Eliot (who died six months later) received the annual award for distinguished service to the cause of liberal religion. Unitarian churches voted overwhelmingly for the establishment of a Unitarian-Universalist commission on federal union of the two denominations. The Universalists had paralleled this action and the commission was at work drawing up a plan. A 56-page issue of *The Christian Register* was devoted to Unitarian developments during the decade 1940–50, indicating that at mid-century the denomination was taking stock of itself. A large company of Unitarian ministers issued a statement which indicated a trend in the church, declaring, "We believe in universal religion which is greater than any of its organized expressions. . . . We believe in the development of this universal religion in order to break down today's tensions and so forward the sense of world community. . . . We pledge our efforts to this great Unitarian cause." H. Kishimoto, professor of the science of religion at Tokyo Imperial university, visited Unitarian headquarters to plead, "The Unitarian faith is more urgently needed in Asia than any other religious doctrine. Asiatics need a religion which gives them a spiritual basis for the political and social democracy America is preaching in Asia." The Unitarian Service committee sent a medical mission to Japan during the summer. The department of adult education and social relations reported a marked growth of group activities in the churches in this field. The Unitarian Women's alliance was active in leadership training, in the belief that leadership is "a set of functions and skills attainable, with effort, by all people rather than by the few strong only." (See also CHURCH MEMBERSHIP.) (J. H. L.)

**United Church of Canada.** The United Church of Canada, which in 1925 united the Presbyterian Church in Canada, the Methodist Church (Canada) and the Congregational Churches in Canada, reported for 1949 a membership of 806,179 with 1,916,908 persons under pastoral oversight, a Sunday school enrolment of 517,222 and 6,270 preaching places. The church owned property worth \$125,994,207 and raised a total of \$22,591,581 for all purposes. The missionary and maintenance givings of the church in 1949 totalled \$2,706,114.

Among the important events in the life of the United Church during 1950 were the contribution of \$103,000 to a special student aid fund; the raising of all ministers' retiring pensions by 25%; the sending of approximately \$98,000 for relief to churches in Europe and in Asia; the transfer of the church's missionary property in China to the Church of China; a definite pledge to seek organic union with the Church of England in Canada, when and if that church pledges itself in like manner; and a church-wide observance of the 25th anniversary of union.

In Sept. 1950 the Rev. C. M. Nicholson of Halifax was elected moderator of the church for a two-year term; the Rev. Robert S. Christie was appointed assistant secretary of its Board of Evangelism and Social Service and Ralph C. Young secretary of its Committee of United Church Men. (G. A. St.)

**United Kingdom:** see GREAT BRITAIN & NORTHERN IRELAND, UNITED KINGDOM OF.

**United Nations.** The further deterioration of relations between the soviet bloc and the western nations adversely affected the United Nations during 1950. For the greater part of the year the U.S.S.R. refused to take an active part in the work of the various organs of the U.N. on the alleged ground that China was being illegally represented by the

nationalist government. For the first time during its five years of existence the U.N. undertook the use of military force in support of its principles. For the U.N., 1950 was a time of testing in a world of mounting tension.

**Membership.**—The membership of the U.N. was increased to 60 by the admission of Indonesia. By the end of 1950, membership was as follows: Afghanistan, Argentina, Australia, Belgium, Bolivia, Brazil, Burma, the Byelorussian Soviet Socialist Republic, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, the Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Indonesia, Iran, Iraq, Israel, Lebanon, Liberia, Luxembourg, Mexico, the Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panamá, Paraguay, Peru, the Republic of the Philippines, Poland, Saudi Arabia, Sweden, Syria, Thailand, Turkey, the Ukrainian Soviet Socialist Republic, the Union of South Africa, the Union of Soviet Socialist Republics, the United Kingdom, the United States of America, Uruguay, Venezuela, Yemen and Yugoslavia.

The general assembly during its fourth session had asked the International Court of Justice (*q.v.*) to give an advisory opinion on the question of the competence of the general assembly to admit new states without a favourable recommendation by the Security council. On March 3 the court delivered an opinion in which it ruled by a vote of 12 to 2 that the general assembly could admit a state to membership only on the favourable recommendation of the Security council.

The question of the representation of a member in the organs of the U.N. was raised during 1950 by the effective occupation of continental China by the Communists, leaving the nationalist government only in control of Formosa. Soviet representatives on U.N. organs refused to attend meetings at which Chinese nationalist representatives were present on the ground that the nationalist government had ceased to represent China. The soviet representative returned to the Security council on Aug. 1 for the consideration of the Korean question. The general assembly considered the matter of Chinese representation in U.N. organs and appointed a committee to study the matter. No final action was taken, presumably because of the intervention of Chinese Communist forces in Korea.

**Meetings and Organization.**—The general assembly met for its fifth regular session at Flushing Meadow, N.Y., on Sept. 19. Nasrollah Entezam of Iran was elected president. The assembly had before it an agenda of 70 items, to which other items were subsequently added. The critical situation in east Asia, resulting from North Korean aggression in June and the subsequent military intervention of the Chinese Communists, creating the danger of a general war, made it impossible for the general assembly to complete its work. On Dec. 15 the president announced that he would subsequently make a definite proposal for the final closure of the fifth session of the general assembly. At that time, the First committee had not as yet completed its agenda. Because of the increasing scope of its work, the general assembly increased the number of its subsidiary organs. The Interim committee was continued for another year.

As in 1949, the Security council met less frequently than during its first three years, until the time of North Korean aggression. This was in large measure the result of the continuing great-power deadlock which made substantive decisions difficult and consequently encouraged the use, where possible, of the general assembly. The absence of the soviet representative from meetings during the first seven months further limited the work of the council, though it was by virtue of this absence that the council was able to function in the early stages of aggression in Korea. During 1950 the Security council was composed of China (represented by the nationalist government), France, the

Soviet Union, the United Kingdom and the United States (permanent members) and Cuba, Ecuador, Egypt, India, Norway and Yugoslavia. During its fifth session the general assembly elected Brazil, the Netherlands and Turkey to succeed Cuba, Egypt and Norway. The election of Turkey marked the first break in the continuous representation of the Arab league.

The Economic and Social council held two sessions during 1950, its 10th at Lake Success, N.Y., Feb. 7 to March 6, and its 11th in Geneva, Switz., July 9 to Aug. 16. Hernan Santa Cruz of Chile was president during both sessions. During 1950 the council was composed as follows: with terms ending Dec. 31, 1950—Australia, Brazil, Denmark, Poland, the U.S.S.R. and the United Kingdom; with terms ending Dec. 31, 1951—Belgium, Chile, China, France, India and Peru; and with terms ending Dec. 31, 1952—Canada, Czechoslovakia, Mexico, Iran, Pakistan and the United States. During its fifth session, the general assembly elected the following to membership for three-year terms ending Dec. 31, 1953: the Philippines, Poland, Sweden, the U.S.S.R., the United Kingdom and Uruguay.

The Trusteeship council held two sessions during 1950, the sixth in Geneva, Jan. 19 to April 4, and the seventh at Lake Success, June 1 to July 21. Roger Garreau (France) was president for the sixth session and Max Henriquez Urena (Dominican Republic) for the seventh. The membership of the council during 1949 was as follows: members administering trust territories—Australia, Belgium, France, New Zealand, the United Kingdom and the United States; members by virtue of permanent seats in the Security council—China and the Soviet Union; and members elected by the general assembly—Argentina, Dominican Republic, Iraq and the Philippines. In its fifth session the general assembly re-elected the Dominican Republic, whose term expired Dec. 31, for a three-year term, and elected Thailand for a three-year term, beginning Jan. 1, 1951, to take the place of the Philippines.

Some notable developments occurred in the organization and functioning of the secretariat. Early in 1950, Sec.-Gen. Trygve Lie asserted a strong political initiative in formulating a 20-year program of peace, which subsequently was the subject of negotiations with the governments of members, including the great powers. The outbreak of violence in Korea created conditions unfavourable to the success of this initiative. On March 1, 1950, the secretary-general announced the establishment of the United Nations field service as authorized by a resolution adopted by the general assembly in its fourth session. The administrative tribunal adopted its rules of procedure on June 7 and handed down its first decision on June 30. Since Lie's original term of office was due to expire on Feb. 2, 1951, it became necessary for the Security council and the general assembly to consider the appointment of a successor. Failing agreement of the permanent members of the Security council, the general assembly on Nov. 1 adopted a resolution extending Lie's term of office for three years. Shamaldharee Lall (India) was appointed assistant secretary-general in charge of conference and general services on Jan. 13, 1950, to succeed Adrian Pelt, who had been elected U.N. commissioner in Libya.

The secretary-general's budget estimates for 1951 provided for a total expenditure of \$45,450,800, compared with an approved budget of \$41,641,773 for 1950 (exclusive of \$8,000,000 for Palestine). The Advisory Committee on Administrative and Budgetary Questions recommended a reduction of \$1,623,800. The general assembly approved appropriations for 1951 totalling \$47,798,600 and voted to maintain the working capital fund at \$20,000,000. Estimated miscellaneous income of more than \$6,000,000 left a total of \$41,277,600 to be raised by contributions of members. The scale of assessments was revised, the most significant features being slight increases in the contributions of

"MUSICAL CHAIRS AT LAKE SUCCESS," a cartoon by Green which appeared in the *Providence Journal* in 1950

India and the U.S.S.R. and a slight decrease (0.87%) in the contribution of the United States.

Construction of the new secretariat building in Manhattan was completed, and personnel was moved from Lake Success to Manhattan during late 1950 and early 1951. The contract for the construction of the general assembly auditorium was signed on June 30. The general assembly in its fifth session requested the secretary-general to submit to it tentative plans and proposals for financing the construction of a delegation building at headquarters. The plan drawn up in 1947 had provided for a building housing delegation offices, specialized agencies and nongovernmental organizations.

**Political Problems.**—During 1950, the U.N. still had before it such questions as Indonesia, Palestine, Kashmir and the Balkans (Greece). In June, however, Korea and related problems in the far east came to dominate the picture and occupy a large part of the attention of the U.N. (see page 694).

**Indonesia.**—U.N. intervention through the Security council had been successful in bringing to an end hostilities between Dutch and Indonesian forces and in achieving a political settlement. The formal transfer of sovereignty from the Netherlands to the republic of the United States of Indonesia (*q.v.*) had occurred on Dec. 27, 1949. On Sept. 28, 1950, following favourable action by the Security council and the general assembly, Indonesia became a member of the U.N. There still remained important unresolved issues between the Dutch and Indonesian governments after the conclusion of the round-table conference agreements of Nov. 1949 and the subsequent transfer of sovereignty. One of these was the future status of Netherlands New Guinea (*q.v.*). This question remained unresolved notwithstanding lengthy negotiations between the parties at The Hague. By the end of the year these negotiations had been broken off.

**Palestine.**—The question of Palestine was a matter of continuing concern to the U.N. in 1950. The aspects of the question which were chiefly under consideration were the enforcement of the armistice agreements concluded in 1949, the relief and rehabilitation of Arab refugees, the achievement of an over-all political settlement and the future status of Jerusalem (*q.v.*). In February the chief of staff of the Truce Supervision organization, Brig. Gen. W. E. Riley, reported to the Security council that the work of the four commissions had thus far been remarkably successful. However, there continued to be numerous complaints of violation of these agreements. On Oct. 16 the Security council began consideration of certain of these charges which

had been brought before it, namely, the Egyptian complaint that Israel (*q.v.*) had expelled thousands of Arabs into its territory, Israel's complaint of blockade practices by Egypt at the Suez canal and Jordan's charge of aggression by Israel in occupying Jordan territory on Aug. 28 near the confluence of the Yarmuk and Jordan rivers. After extensive discussion, the Security council adopted a resolution on Nov. 17 which called upon the Mixed Armistice commission to give urgent attention to Egypt's complaint, called upon the parties to give effect to commission decisions on the repatriation of qualified Arabs and called upon governments not to take any action regarding transfer of persons without prior consultation with the Mixed Armistice commissions. The Security council reminded the governments that the armistice agreements envisaged permanent peace for Palestine and a political settlement.

The refugee question proved an insoluble problem and was a major factor blocking a political settlement. The United Nations Relief for Palestine Refugees, established under general assembly resolution of Nov. 1948, continued to deal with the matter until May 1, 1950, when the U.N. Relief and Works Agency for Palestine Refugees in the Near East took over. This agency was set up on the basis of recommendations of the Economic Survey mission, created by the U.N. Conciliation Commission for Palestine, that a public works program be organized to provide useful employment for recipients of relief. The agency was set up with Maj. Gen. Howard Kennedy as director, with an advisory commission. From the beginning it was handicapped in achieving its object by lack of funds and a paucity of work projects. By the end of 1950 the refugee problem seemed no nearer solution than at the beginning of the year.

No progress was made during 1950 in the achievement of a political settlement, largely because of the unwillingness of the Arab states to negotiate until adequate provision had been made for the Palestine refugees. The question of the future status of Jerusalem had been considered by the general assembly in its fourth session, and a resolution adopted providing for the setting-up of the city as a *corpus separatum* with the United Nations Trusteeship council as administering authority. The council was asked to draft a statute which it undertook to do during its sixth and seventh sessions. The council was unable, however, to get the co-operation of Israel and Jordan and, consequently, referred the matter back to the general assembly. The matter was considered by the general assembly in its fifth session, but the necessary two-thirds vote could not be mustered for any proposal under consideration. A Belgian proposal to study means of effecting international control of the holy places was defeated by a vote of 30 to 18, with 9 abstentions.

**Kashmir.**—The Kashmir (*q.v.*) dispute between India and Pakistan (*qq.v.*) remained in a state of deadlock at the end of 1950. The efforts of Gen. Andrew McNaughton of Canada, made on the basis of the Security council resolution of Dec. 17, 1949, to find a basis for dealing with the problem failed. His proposal for the progressive demilitarization of Jammu and Kashmir was not acceptable. The question came again before the Security council on Feb. 7, 1950. On March 14 the Security council adopted a resolution calling upon the parties to prepare and execute within five months a program of demilitarization. On April 12 Sir Owen Dixon of Australia was appointed United Nations representative to assist in the negotiations. The United Nations representative proposed that India and Pakistan hold those areas which were indisputably pro-Indian and pro-Pakistan in sentiment, and that a plebiscite under U.N. auspices should be held in the doubtful areas, corresponding roughly to the vale of Kashmir. The prime ministers of India and Pakistan agreed that no possibility existed of agreement along these lines. The United Nations representative made his report of failure to the Security

council on Sept. 15.

*Greece.*—The situation along Greece's northern frontier showed some improvement during 1950. The United Nations Special Committee on the Balkans reported to the general assembly at its fifth session that there had been no visible improvement in relations between Greece and Albania and Bulgaria, but that relations between Greece and Yugoslavia had become correct. It reported that the threat to the political independence and territorial integrity of Greece had been substantially lessened as the result of the elimination of large-scale guerrilla activity. The problem of repatriation of Greek nationals, especially children, remained serious. The general assembly adopted resolutions during its fifth session continuing the special committee for another year, requesting the repatriation of Greek nationals who expressed a desire to that effect and, particularly, urging the repatriation of Greek children.

*Korea.*—Developments in Korea offered the major challenge to the U.N. in the discharge of its responsibilities to maintain international peace and security. The general assembly at its fourth session had voted to continue the United Nations Commission for Korea for another year, authorizing it particularly to report on border violations in view of the tension between the People's Democratic Republic of Korea (North Korea) and the Republic of Korea (South Korea). Late in the evening of June 24 the secretary-general was informed of attacks launched by North Korean forces against South Korea. On the afternoon of June 25 (Sunday) an emergency meeting of the Security council was held with the soviet representative absent. A resolution based on a draft introduced by the United States representative was adopted, determining the action to constitute a breach of the peace, calling for the immediate cessation of hostilities and the withdrawal of North Korean armed forces to the 38th parallel, requesting the United Nations commission in Korea to observe and report and calling upon members to give every assistance in the execution of the resolution. Since reports from the United Nations commission gave clear evidence that the North Korean military attack was deliberate and unprovoked, and that the North Korean authorities were not willing voluntarily to withdraw their forces or accept the good offices of the commission, the Security council proceeded on June 27 to the adoption of a resolution, again based on a United States proposal, recommending that members furnish such assistance to the Republic of Korea as might be necessary to repel the armed attack and restore international peace and security. Earlier the same day Pres. Harry S. Truman had announced that U.S. forces would proceed to the assistance of the Republic of Korea. On July 7 the Security council recommended that members make forces and assistance available to a unified command, requested the United States to designate the commander, authorized the use of the United Nations flag and requested the U.S. to provide the Security council with reports on the course of action. On Aug. 1 the soviet representative returned to the Security council and assumed the presidency. During the month of August the council was involved in procedural tangles and was unable to take substantive decisions, but since resolutions had been adopted providing the basis for necessary U.N. military operations, the effectiveness of enforcement action did not suffer. The soviet representative, Jacob Malik, maintained that the early decisions of the Security council were invalid because taken in the absence of the soviet representative and with the "legal" government of China (the Communist) not represented.

By the time the general assembly convened for its fifth session in September, the military situation in Korea had changed to such an extent that, in spite of early reversals, it seemed likely that the U.N. forces might succeed in driving the Communists out of all Korea, if given the authority to do so. The

amphibious landing at Inchon on Sept. 15 appeared to have been decisive. After extended discussion a resolution was adopted on Oct. 7, recommending that all appropriate steps be taken to ensure conditions of stability throughout Korea, that constituent acts be taken under U.N. auspices for the establishment of a unified, independent and democratic government in Korea, that U.N. forces should not remain in Korea for a longer time than required to achieve these objectives and that all necessary measures be taken to achieve the economic rehabilitation of the country. A Commission for the Unification and Rehabilitation of Korea was set up, to take over the duties of the United Nations Commission for Korea and to assist in the achievement of these purposes. The Economic and Social council was requested, in consultation with the specialized agencies, to develop plans for relief and rehabilitation.

U.N. forces under Gen. Douglas MacArthur crossed the 38th parallel and undertook to achieve the military unification of Korea. The intervention of the Chinese Communists, however, professedly as "volunteers" but in reality on a large scale and in an organized manner, prevented this objective from being achieved and in fact confronted the U.N. with the threat of an extension of hostilities which might develop into a world war. The presence of organized Chinese forces was first reported by General MacArthur on Nov. 4. (*See CHINA; KOREAN WAR.*)

The intervention of Communist China came as no surprise to many. The U.N. organs had refused to seat representatives of the Communist government earlier in the year, continuing to accept representatives of the nationalist government when that government was reduced to control of the island of Formosa. President Truman had announced on June 27 that U.S. forces would prevent the Chinese Communists from attacking Formosa. On Aug. 25 the soviet representative on the Security council requested that the United States "armed invasion" of Formosa be considered by the Security council. On Aug. 29 the council voted to add this to its agenda. On Aug. 31 the soviet representative asked that the council investigate alleged bombing of Chinese territory by U.S. air forces. This proposal was rejected. The Chinese Communist foreign minister, Chou En-lai, publicly warned of the consequences of sending U.N. military forces into North Korea.

The intervention of the Chinese Communists presented new issues upon which there was not the same agreement among member delegations as there had been on action to meet the original North Korean aggression. At the time the complaint of U.S. "invasion" of Formosa was placed on the Security council agenda, a soviet motion that a representative of the Chinese Communist government should be invited to take part in the discussions was defeated by a vote of 4 to 4, with 3 abstentions. Subsequently, however, the council reversed its position, and the Communist government accepted an invitation to be represented. When General MacArthur's report on Chinese intervention was before the council, a resolution was adopted inviting the Communist government to be represented when this question was being discussed. A delegation headed by Gen. Wu Hsiu-chuan arrived in New York on Nov. 24. On Nov. 27 the council considered the complaint of U.S. armed aggression against Formosa and the complaint of aggression against the Republic of Korea. The representative of the Chinese Communist government was invited to participate in the discussions and made a lengthy statement, charging United States imperialism. On Nov. 30, a soviet veto defeated a six-power resolution, calling upon all states and authorities to refrain from assisting or encouraging the North Korean forces and to cause the immediate withdrawals of nationals or units in Korea, and affirming it to be the policy of the U.N. to hold the Chinese frontier with Korea inviolate. Four days later, on Dec. 4, the general

JACOB MALIK, soviet delegate to the United Nations (right foreground) presiding over the security council of which he was chairman throughout Aug. 1950. Seated, left, is Secretary-General Trygve Lie

assembly was asked to place the question of Chinese intervention on its agenda, which the assembly voted to do on Dec. 6. On Dec. 14 the assembly adopted a resolution sponsored by 13 Asian and Arab states requesting the president to constitute a group of three persons, including himself, to determine the basis on which a satisfactory cease-fire in Korea could be arranged. General Wu insisted that before there could be a cease-fire the United Nations must guarantee to meet Communist China's demands for the immediate evacuation of U.N. troops from Korea, withdrawal of the United States fleet from Formosan waters and the acceptance of the Communist government as representing China in the U.N. On Dec. 19 the Chinese Communist delegation left New York. The reply of the Chinese Communist government to proposals of the cease-fire group followed the lines of Wu's statement. As the year ended, the cease-fire group had not succeeded in its objective. Members of the United Nations were in disagreement as to the next step.

As a direct consequence of the Korean experience, U.S. Secretary of State Dean Acheson proposed to the general assembly a plan for strengthening the U.N. in the maintenance of international security. Based on the premise that in a future comparable situation circumstances might not be such as to permit the Security council to act promptly and effectively, the proposal involved strengthening the general assembly as an organ of enforcement action in case the Security council failed to discharge its responsibilities. On Nov. 3 the general assembly adopted a resolution (Uniting for Peace), based on a United States draft, which provided that if the Security council, because of the lack of unanimity of its permanent members, failed to exercise its primary responsibility for the maintenance of peace, the general assembly might consider the matter immediately with a view to making recommendations, that these measures might include the use of armed force when necessary, that if not in session the general assembly might meet in emergency special session

within 24 hours at the request either of the Security council or of a majority of the U.N. members, that a Peace Observation commission be established to observe and report in areas of international tension, that members include within their armed forces elements trained, organized and equipped for service as U.N. units and that a Collective Measures committee be set up to consider and recommend measures to be taken. The general assembly also adopted resolutions recommending that the Security council devise measures for the earliest application of charter provisions for placing armed forces at the disposal of the Security council and that the permanent members of the Security council meet and discuss problems likely to threaten peace with a view to resolving fundamental differences. On the basis of a Yugoslav proposal, the general assembly adopted a resolution on Nov. 14 stating that a member becoming involved in armed conflict should, within 24 hours, proclaim its readiness, if its opponent does likewise, to discontinue military operations and withdraw its forces.

Other steps taken by the U.N. for the maintenance of international peace and security included the following: the general assembly established a special committee to consider ways and means of co-ordinating the work of the Atomic Energy commission and the Commission for Conventional Armaments. With respect to the treatment of Indians in South Africa (*q.v.*), first brought before the United Nations in 1946, the general assembly adopted a resolution, characterizing a policy of "racial segregation" as discriminatory, recommending that the governments of India, Pakistan and the Union of South Africa hold a round-table conference on the matter and providing for the appointment of a three-member commission to assist if negotiations were not successfully concluded within a reasonable time. The general assembly adopted a resolution condemning Bulgaria, Hungary and Rumania for their refusals to carry out their treaty obligations in respect to human rights. By another resolution, the general assembly reversed action taken in 1946 and left members and specialized agencies free to determine

their relations with Spain. In the discharge of its duty under the Italian peace treaty to determine the future of the former Italian colonies, it completed partial decisions that had been made in 1949.

**Economic and Social Co-operation.**—The activities of the principal and subsidiary organs of the U.N. during 1950 covered a wide range of matters. The most important were economic development, technical assistance, full employment and economic stability, human rights, freedom of information, and refugees and stateless persons.

The question of the economic development of underdeveloped areas was considered by the Economic and Social council at its two sessions. The financing of economic development received special consideration from the Subcommittee on Economic Development. In its discussions the Economic and Social council recognized the close relation between economic development and full employment. It also emphasized the need of utilizing private capital as well as public funds, and the importance of carefully planned programs. It stressed the importance of a maximum effort on the part of the peoples of the underdeveloped areas, as well as of financial and technical assistance from outside. The general assembly, accepting the general conclusions of the council, called attention to the need of studying the extent to which agrarian conditions interfered with economic development, and the special problems connected with the development of arid areas. The assembly also requested a study of the effect of international economic and commercial policies on the development plans of underdeveloped areas.

Considerable progress was made during 1950 in organizing and carrying out the expanded technical assistance program adopted by the general assembly in its fourth session. The Technical Assistance board had its first meeting at Lake Success, Feb. 23–24, and made preparations for the Technical Assistance conference. The conference met at Lake Success June 12–14. Forty-five member states, nine nonmember states, ten specialized agencies and the Organization of American States were represented. Resolutions were adopted dealing with contributions of governments to the expanded program of technical assistance and concerning the allocation of funds among the participating organizations. Pledges of contributions from governments of approximately \$20,000,000 for the period ending Dec. 31, 1951, were received. Up to the end of 1950, 245 requests for technical assistance had been received from about 50 governments. More than 40 agreements with governments had been signed.

The international protection of human rights was a matter of continuing concern during 1950. Attention was largely focused on the drafting of an International Covenant on Human Rights, though related subjects came in for consideration. The Commission on Human Rights opened its sixth session on March 27 with the draft International Covenant on Human Rights and its implementation the leading item on its agenda. The commission undertook an article by article revision of the covenant in the course of which serious disagreements arose over the inclusion of provisions relating to economic and social rights, procedure for the handling of complaints and other matters. When the Economic and Social council considered the commission's report in its 11th session, it decided to submit certain controversial issues to the general assembly for its decision. The general assembly expressed dissatisfaction with the covenant as it stood, requested the commission to prepare recommendations for securing the maximum extension of the provisions of the covenant to constituent members of federal states, directed that economic, social and cultural rights be included and expressed itself in favour of the international consideration of private petitions.

GEN. DOUGLAS MacARTHUR being presented with the U.N. flag in Tokyo, Jap., in July 1950, after he was named commander of the U.N. military forces in South Korea, as authorized by the U.N. Security council

The question of freedom of information was considered by the Subcommittee on Freedom of Information and of the Press and the Economic and Social council. The subcommittee, meeting at Montevideo, Urug., May 15 to 26, was concerned primarily with the drafting of an international code of ethics. It also adopted a number of resolutions relating to freedom of information and the press, which were subsequently adopted in substance by the Economic and Social council. The general assembly, declaring freedom of information and the purposes of the U.N. indivisible, laid down a new program of work for achieving the desired end. It established a 15-member committee to meet not later than March 1, 1951, to examine the draft approved by the 1948 Conference on Freedom of Information and other texts, and to prepare draft conventions and submit its recommendations to the Economic and Social council. The general assembly also adopted a resolution condemning the practice of radio jamming.

The matter of refugees and stateless persons was considered by an *ad hoc* committee of the Economic and Social council which met at Lake Success on Jan. 16. The committee prepared a draft convention on the status of refugees, together with a protocol rendering applicable to truly stateless persons, whether or not refugees, the appropriate provisions. This draft was transmitted to the Economic and Social council. As subsequently revised by the *ad hoc* committee it was submitted to the general assembly. The general assembly decided to convene a conference to complete and sign a convention relating to the status of

refugees and a protocol relating to the status of stateless persons. It approved final arrangements for the establishment of the U.N. High Commissioner's Office for Refugees.

Other actions taken by the organs of the U.N. in the field of international economic and social co-operation included the following: The matter of forced labour and measures which might be taken to abolish it were discussed by the Economic and Social Council. An inquiry into the extent of slavery and analogous practices and methods for eliminating them was continued. The Commission on Narcotic Drugs and its *ad hoc* committee continued to work on methods of limiting more effectively the production and distribution of opium to legitimate medical and scientific requirements. Recognizing the need of continuing aid to children, particularly in underdeveloped areas and those subjected to war-devastation and other calamities, the assembly continued the United Nations International Children's Emergency fund (U.N.I.C.E.F.) for another three years.

An important, if not the most important, part of the work during 1950 in the area of international economic and social co-operation was performed by the specialized agencies, international organizations set up on the basis of their own constitutions for specialized purposes and brought into relation with the U.N. by agreements concluded by the appropriate organs of the U.N. and the particular specialized organizations in question. During 1950 the following specialized agencies were in actual operation:

*International Labour Organization (I.L.O.)*.—Headquarters in Geneva, Switz., David A. Morse, director-general; 62 members. See separate article.

*Food and Agriculture Organization (F.A.O.)*.—Headquarters in Rome, Norris E. Dodd, director-general; 68 members. See FOOD SUPPLY OF THE WORLD.

*International Monetary Fund*.—Headquarters in Washington, D.C.; Camille Gutt, managing director; 49 members. See separate article.

*International Bank for Reconstruction and Development*.—Headquarters in Washington, D.C.; Eugene R. Black, president; 49 members. See separate article.

*International Civil Aviation Organization (I.C.A.O.)*.—Headquarters in Montreal, Que.; Edward Warner, president of the council; 58 members.

The constitutions of two additional specialized agencies had been drafted and signed by the end of 1950 but had not entered into force by receiving the necessary number of ratifications. The convention establishing the Inter-Governmental Maritime Consultative organization had been ratified unconditionally by three states. Ratification by 21 states, including the principal maritime powers, was required. The constitution of the International Trade organization had not yet been ratified by any state.

**Aid to Nonself-Governing Peoples.**—The work of the U.N. in this field during 1950 came under three principal heads: (1) action taken under chapter xi of the charter to improve conditions in nonself-governing territories generally; (2) action taken in connection with the administration of the trusteeship system; and (3) action taken under other provisions of the charter or in the discharge of responsibilities conferred by separate international agreements.

The Special Committee on Information Transmitted under Article 73 (e) of the Charter, created by the general assembly to consider and report on information submitted to the secretary-general, met Aug. 18 to Sept. 12. In considering the information submitted to it by the secretary-general, the committee gave

special attention to the problems of education in nonself-governing territories, with special emphasis on the development of training in the economic and social fields. The committee reached the conclusion, embodied in its report to the general assembly, that the eradication of illiteracy was a problem of the utmost urgency. The general assembly endorsed this conclusion. It also invited member governments on behalf of nonself-governing territories to submit requests for technical assistance under the U.N. expanded program. It requested these governments also to report on the extent to which the Declaration of Human Rights was implemented in their respective territories.

During 1950 the trusteeship system was further extended, developed and refined in its actual operation. In its sixth and seventh sessions the Trusteeship Council drafted a trusteeship agreement for the former Italian colony of Somaliland. The general assembly approved this agreement, placing the territory under the administration of Italy as a trust territory. The Trusteeship Council also considered reports from the administering authorities, covering Tanganyika, Western Samoa, Ruanda-Urundi, the Cameroons (English and French), Togoland (English and French), New Guinea, Nauru and the Pacific Islands. The Council received and considered reports of visiting missions to the Cameroons and Togoland, completed arrangements for a visiting mission to the trust territories in the Pacific and decided to send a visiting mission to east Africa in 1951. It also received and examined more than 350 petitions, including petitions relating to the Unification of "Eweland." (The Ewe people, more than 800,000 in number, are west Africans, have a common language, traditions and customs, but are divided by political boundaries of three territories—the two trust territories of British Togoland and French Togoland and the British colony of the Gold Coast.) On the basis of a report of its Committee on Administrative Unions, the Council decided to establish a standing committee to examine regularly the operation of administrative unions. Taking note of recommendations adopted by the general assembly in its fourth session, the Council adopted a resolution recommending that administering authorities abolish corporal punishment and whipping in all trust territories and urging all administering authorities to take necessary measures to ensure the absence in trust territories of discriminatory laws and practices contrary to the charter or trust agreements. The general assembly, in its fifth session, on the basis of the Trusteeship Council's report and recommendations, adopted resolutions requesting the Council to study laws, policies and practices in trust territories relating to the utilization and alienation of land, and to make recommendations to the administering authorities with respect to land policies and practices which would contribute to the economic and social development of the population.

By the terms of the Italian peace treaty, the general assembly had been asked to determine the disposition of the Italian colonies in Africa. Decisions had been taken by the general assembly in 1949 which largely determined the final disposition of these territories though the final decision on Eritrea awaited the report of a special commission. Without a dissenting vote the general assembly adopted a program for the establishment of an independent Libya (*q.v.*). The program provided for the convening of a Libyan national assembly not later than the beginning of 1951, the establishment of a provisional government by April 1, 1951, and the progressive transfer of authority by Britain and France, the process to be completed by Jan. 1, 1952. The program for the transfer of authority was to be drawn up by the U.N. commissioner in Libya, aided by the Council for Libya. The assembly recommended that the Economic and Social Council, in conjunction with the specialized agencies and the secretary-general, extend to Libya such financial and technical aid as might be needed to establish the country on a sound eco-

nomic and social basis. The assembly also recommended that Libya, once it had achieved independence, be admitted to the U.N.

On the future disposition of Eritrea (*q.v.*), the members of the U.N. Commission on Eritrea, established by the general assembly in 1949, were in disagreement. Nor was the Interim committee to which the commission reported able to come to a decision. The general assembly decided on Dec. 2 that Eritrea should be federated with Ethiopia as an autonomous unit. The plan provided for a transitional stage, ending not later than Sept. 15, 1952, during which an Eritrean government was to be organized and a constitution put into effect, the United Kingdom to continue to conduct Eritrea's affairs in the interim period. As has already been explained, the decision to place Somaliland under trusteeship was implemented during 1950 by the drafting of a trusteeship agreement by the Trusteeship council and its approval by the general assembly.

The question of the status of South-West Africa was also before the U.N. during 1950 as the result of the refusal of the Union of South Africa to submit a trusteeship agreement and to make reports on the administration of the territory to the U.N. The International Court of Justice in an advisory opinion, while admitting that the Union was under no legal obligation to place the territory under trusteeship, nevertheless upheld the U.N. position that the mandate continued in force and that the Union government must hold itself accountable to the U.N. for the administration of the territory. The general assembly reaffirmed its earlier position and set up a five-member committee to confer with the Union government on matters relating to the advisory opinion. (See also INTERNATIONAL LAW; TRUST TERRITORIES.)

**United States.** As the year 1950 opened the mood of the country was one of stocktaking, as was natural at mid-century. Estimates of population increase, and of distribution of new population, had been much discussed in the closing months of 1949. Lengthy preparation for the census of 1950 had been made in Washington, D.C., and throughout the country. On April 1 approximately 140,000 enumerators began the gigantic task of interviewing the individual citizen and reporting upon his replies to more questions than had ever before been asked by the census bureau. Early in November the final figures for the 1950 population of the states became available. They showed that the population of the United States on April 1, 1950, was 150,697,361, a gain of slightly more than 19,000,000 persons in the decade. The final figures representing the populations of counties and cities were expected to become available state by state during the first seven or eight months of 1951. Meanwhile, the preliminary reports, and in some cases rumours based upon them, were of intense interest to business and labour and particularly to chambers of commerce. In late August one statement issued by the census bureau, reporting on the growth in the 12 largest cities, stressed the fact that the rate of growth in the suburban areas of those cities was higher than in the cities themselves. In December the report showed 427 cities with a population in excess of 25,000. (See BIRTH STATISTICS; CENSUS DATA, U.S.; CHURCH MEMBERSHIP; DEATH STATISTICS; IMMIGRATION AND EMIGRATION; also articles on the separate states.)

**Domestic Politics of the Nation.**—In an election year,

although only for members of the house and one-third of the senate, the leadership of the president was of primary interest. In his message to the congress on Jan. 4, he called again for the enactment of his "fair deal" program. This included a wider extension of social security benefits, protective legislation in matters involving civil rights, repeal of the Taft-Hartley act and acceptance of higher taxes. Within a week he submitted the largest peacetime budget in the history of the United States, and later in the month he was more specific in additional appeals in terms of national defense. The April 7 special message particularized on the wide extension of social security benefits including medical care and educational opportunity. The congress passed bills embodying some of these proposals, but not until late August was the social security legislation signed. Meanwhile, in May, the president had presented to the congress a plan for aids to small business. On the whole, the response of the congress to the appeals of the president was slow, and it was apparent that the president's own party in the congress was far from unified in support of any one of his major proposals. By the first of June it was an accepted fact that politics in the election year would play havoc with any rapid enactment of constructive legislation. The one exception to be noted later was the acceptance of governmental reorganization based upon reports of the Hoover commission.

Moreover, the attention of the country was taken up not with expectation of congressional action upon the president's proposals, but with the continued upward trend of prices, the effect of this trend on the value of the dollar, increased public buying of stocks, the growing unity in the demands of union labour for advances in wages and improvement of working conditions and the patent and distressing disharmony in the branches of the armed services. Yet there was a general optimism on the business outlook.

An indication of the continued division in the Democratic party was seen in the widespread comment upon the announcement by James F. Byrnes on Jan. 14 that he would seek election as governor of South Carolina. On Feb. 6 the Republican party members of the house and senate issued a statement of Republican party principles and objectives. This was sponsored also by the Republican National committee. In state primaries, it was significant that Sen. Claude D. Pepper of Florida, an outstanding figure in the New Deal, was defeated. On the Republican side in the important state of Pennsylvania, Gov. James H. Duff overcame the candidates of the old guard machine and emerged as a national figure. More and more eyes turned to the senatorial contest in Ohio, where Robert A. Taft was up for re-election, and to the gubernatorial election in New York, where Gov. Thomas E. Dewey was expected not to be a candidate for re-election and the Democrats were consequently optimistic. On May 17, the National committee of the Democratic party reaffirmed the party platform of 1948. Both party organizations had avoided an issue that had caused widespread discussion—early in February, by an overwhelming vote (64-27), the senate had approved a proposed constitutional amendment to share presidential electoral votes among the candidates in proportion to their popular vote.

The congressional delay on the bills for the admission of Hawaii and Alaska as states dragged through the year. Despite general approval, both in the country and in congress, and an increasing feeling in some quarters that this was a crucial political and military issue, no final action was taken.

As was expected, the crux of politics in an election year was found in the attitudes, policies and actions of organized labour. An epidemic of critical strikes began early in the year with a strike against the Chrysler company. The long-standing strike of the United Mine Workers led to a citation for contempt of

court despite John L. Lewis's direction to the miners on Feb. 12 to return to work, but under protest. The strike was brought to settlement on March 12. In mid-May the Brotherhood of Locomotive Trainmen and Engineers went on strike against four major railroad companies. The initial strike was quickly settled, but a recurrence and a threatened widening of the strike caused President Truman to take over the railroads on Aug. 25 and three days later the government began to operate the roads. This did not solve the problem, inasmuch as "wild cat" strikes occurred from time to time and in early December reached such proportions on four major railroads that there was serious interference with the crucial shipment of military supplies. President Truman's denunciation of this action of individual union members and his appeal to them to refrain from "absenteeism" led to a resumption of work, but the basic problem remained unsolved. (See also LABOUR UNIONS; RAILROADS; STRIKES.)

By May 25, the deadline provided in the law, 16 of the 21 plans for the reorganization of the federal government submitted to the congress by the president had gone into effect. These were the outgrowth of the Hoover commission reports and credit was given, as well, to numerous citizens' committees which had been organized to push this matter to a conclusion.

**Foreign Policy.**—Meanwhile, for the first six months of the year the foreign policy of the administration followed the lines laid down in the previous year. The greatest problem, realized to the full only part of the time, was how to maintain the position of the United States in the world *vis à vis* the Soviet Union. Two indeterminate factors were always present: (a) the shifting soviet foreign program; and (b) the uncertain partisan situation in the U.S. It is to be recalled that the mission of Madame Chiang Kai-shek, which had lasted more than a year, came to an end on Jan. 10. Her appeals on behalf of the nationalist government of China had been rejected by the president. On Jan. 5 President Truman stated that the United States would not defend Formosa, and inasmuch as Herbert Hoover and Robert Taft, as well as others, stated that they favoured holding Formosa, it became a matter of partisan discussion that underlay every move in matters involving the far east. Eight days after the president's statement the Communist government of China seized the United States consular offices in Peking, and Secretary of State Dean Acheson asked all U.S. consular officers to withdraw from China.

On the last day of January the president announced that he had asked the U.S. Atomic Energy commission to produce the hydrogen bomb. This served to intensify the debate in congress and in the country on foreign policy, and in particular on the technical bases of military supremacy and an over-all program for peace and security. The joint congressional committee on atomic energy approved the decision of the president, and scientists on the whole were in accord. It was apparent that a considerable body of the people approved but with misgivings. (See also ATOMIC ENERGY.)

In March the first shipment of arms, in accordance with the agreement previously reached, was sent to western European nations. Comment upon this, as a primary policy of the administration, ceased for a time when on March 17 Secretary of State Acheson, in an address at Berkeley, Calif., outlined a seven-point program of possible agreement with the Soviet Union as a basis for peaceful coexistence and the end of the cold war. Lack of favourable response by the U.S.S.R. explained the charge of the president, a month later, that it was apparent that the Soviet Union was fomenting revolution throughout the world and definitely preparing for war. He asked of the congress the appropriation of \$260,000,000 for the immediate development of the hydrogen bomb. The country was more and more inclined to follow his lead in taking increased measures for defense, but

NAVAL RECRUITS at an enlistment office in New York city in July 1950

disclaimed again and again any wish to enter an armament race.

But foreign policy was discussed more and more in terms of defense. It was pointed out that approximately three-fourths of the national budget for the fiscal year 1951 would be for past wars and the preparation for war. This led to vigorous debate on the cuts proposed by Secretary of Defense Louis Johnson. The president, as well as Secretary Johnson, claimed that the proposed cuts would not affect adversely the fighting units. But in March, testifying before a congressional committee, Gen. Dwight D. Eisenhower recommended increases of \$500,000,000 in the proposed budget. At this time he also pointed out the great necessity of protecting the approaches to Alaska. The debate in congress and in the country emphasized growing restiveness at what was termed western European lack of participation in preparation for defense. This was admitted despite the overwhelming evidence of economic recovery in these European countries made possible by funds furnished under the Marshall plan. Critics in the U.S. pointed out the mood of resignation expressed by European liberals, the lack of interest in west Germany in democratic education, the backward attitude of a large section of the British Labour party and growing French disunity. They feared that European jealousies would wreck any real defense against the U.S.S.R. The soviet response to the president's announcement as to the hydrogen bomb had been to term it "blackmail" in an effort to force soviet acquiescence to "American imperialism."

The accord reached by the 12 North Atlantic nations on May 18 lessened the strain, but it had been preceded on May 1 by an unprecedented display of military force when 25,000,000 Communists in the U.S.S.R. and elsewhere exhibited their potential military power. (See also EUROPEAN RECOVERY PROGRAM; NORTH ATLANTIC COMMUNITY.)

**Communism in the United States.**—As in the previous year, the people were much concerned with the evidences of communism or sympathy with communism within the United States. J. Edgar Hoover in April testified that there were 55,000 party members in the United States, but 500,000 fellow travellers. Late in January, Alger Hiss was convicted of perjury in the case growing out of charges made by a former Communist, Whittaker Chambers. This led to renewed activity on the part of those who felt that the charges in this case had been only the beginning of a widespread conspiracy. In March, Judith Coplon, former department of justice employee, was convicted of attempted espionage. And in April, after a trial lasting four months, Harry Bridges, long-time leader in the Longshoremen's union, was convicted of perjury in denying that in 1935 he had been a member of the Communist party.

Meanwhile, in February, Sen. Joseph McCarthy of Wisconsin began in the senate a series of attacks, which were later repeated elsewhere, upon "Communists in the state department." Late in the month a senate committee was appointed to investigate these charges and early in March began its hearings. These excited widespread attention. The president denounced McCarthy's charges; the individuals whom McCarthy named as Communists were vigorously defended and McCarthy himself was denounced even by Vice-President Alben W. Barkley. Seth W. Richardson, chairman of the loyalty review board, testified that 10,000 investigations of government employees in a three-year period had uncovered no case of espionage. On July 18 the senate committee, through its chairman, Sen. Millard E. Tydings of Maryland, reported that the charges of McCarthy had not been proved. McCarthy repeated and enlarged upon his charges. (See also COMMUNISM.)

**Mid-Year Crisis.**—In the first half of the year there was a feeling among the people of the U.S. of guarded but general optimism. Yet the tremendous costs of government and the apparently unending expansion of government activities caused widespread apprehension and fear of national bankruptcy. There was vigorous debate by some of the leading economists of the country on various programs of economic planning. Had the nation faced the second half of the year and the beginning of the fiscal year 1951 free to deal with long-familiar domestic problems involving labour, business and the farmer, it seemed certain that the people were in a mood to attempt to return to earlier programs.

But in the second half of the year a growing pessimism led to a general acceptance of war not only in Asia but possibly in Europe, and a resignation to conditions of life forced upon the American people by the state of the world outside the borders of the United States. Two developments occupied the national attention for the balance of the year—the growing tensions in Europe and the outbreak of armed conflict in the far east.

**International Developments.**—As the year had opened, the chances of an outbreak of general war seemed remote. Yet the first six weeks of the year were marked by six events, each one of which foreshadowed the most important developments of the next 12 months. On Jan. 6 Great Britain recognized the Chinese Communist government. On Jan. 13 the Soviet Union began its boycott of the meetings of the United Nations Security council. In late January India was proclaimed a republic. The United States, in the last week of January, formally signed defense agreements promising military aid to the North Atlantic nations. In early February Administrator Paul Hoffman asked for \$3,000,000,000 to continue the Marshall plan. On Feb. 15 it was announced that Communist China had signed a 30-year alliance with soviet Russia. In view of the widening breach in the United Nations, the secretary general, Trygve Lie, urged a conference of foreign ministers to formulate a 20-year peace plan; later in mid-

May he conferred with Joseph Stalin. (See also UNITED NATIONS.)

On July 8 Deputy Minister Jacob Malik returned to represent the U.S.S.R. in the Security council of the United Nations, becoming by previous agreement the presiding officer for the ensuing three months. Prior to his return, all attention had been shifted to the case of Korea, where on June 25 soviet-sponsored North Korean Communist forces had invaded the U.S.-sponsored South Korean republic. Prior to this, Herbert Hoover in a national broadcast had urged the reorganization of the United Nations with the exclusion of the soviet bloc. This suggestion, promptly opposed by both Americans and Europeans in and out of office, led to vigorous debate. Moreover, the repeated shifts in public opinion were reflected in the denunciation of the soviet-sponsored Stockholm peace appeal.

Throughout the late summer and early autumn, all discussions of international developments were held in the uncertain atmosphere produced by developments in Korea. The seeming success of united effort covered an actual situation of increasing apprehension. In mid-December Governor Dewey, President Truman and Herbert Hoover, in the order named, addressed the nation by radio, each in his own way and with a somewhat different program, calling upon the nation to meet at once the critical emergency created by disunion among non-Communist nations. Each denounced the U.S.S.R. On Dec. 29, in a radio broadcast, John Foster Dulles attempted to reconcile the opposing views as to means of preserving peace by emphasizing the weaknesses of the Soviet Union and the potential strength of the United States to win any war that it could not avoid.

**The United States and Korea.**—In early February, the question of economic aid to South Korea was answered by the congress with a vote of provisional aid. On Feb. 25 a United Nations commission on tour in Korea had been fired upon by North Koreans at the 38th parallel. This was followed by intensified guerrilla warfare in South Korea, but at the end of two months the South Korean government formally reported the elimination of the North Korean guerrilla forces. As early as Jan. 9 it had been reported that the withdrawal of U.S. military forces from South Korea was complete, but later it was announced that 95% of the officers of the South Korean army had been trained by U.S. army officers. Early in April Secretary of State Acheson gave warning to Pres. Syngman Rhee that scheduled elections in South Korea must be held and that economic rehabilitation must show progress or U.S. aid would be cut. It was reported at that time that Communists were barred from the elections, which were held, and a very large vote cast. The government of Rhee was weakened but remained in power. (See KOREA.)

The attention of students of contemporary international relations now shifted to Formosa. In April, speaking before the Academy of Political and Social Science in Philadelphia, Owen Lattimore had suggested that the United States forsake Formosa, recognize the Communist government of China, and "accept facts as they are." On June 18 Secretary of Defense Johnson and Gen. Omar Bradley, on a two-week tour in the far east, conferred with Gen. Douglas MacArthur in Tokyo "as to Formosa and Korea." It was reported from Tokyo that John Foster Dulles, adviser to the state department, who had been in Korea, would report to them. They returned to Washington on June 24.

The situation was dramatically altered and the pattern of the remaining months of the year set when on June 25 North Korean troops invaded South Korea. The Security council of the United Nations met in special session, condemned the action and voted to take armed measures to expel the North Koreans. Two days later President Truman issued orders for the army and the navy to join forces in South Korea in repelling the North Koreans. The following day Gen. MacArthur, representing the United

States, arrived in South Korea. In the meantime, the U.S.S.R. declared the action of the United Nations illegal because of the absence of the soviet representative from the meetings of the Security council. Great Britain at once joined the United States in undertaking military action in Korea. In the midst of this discussion President Truman declared that troops of the United States, now ordered to Korea, were engaged in "police action, not in war." Fifty-three of the United Nations representatives supported this view. On the last day of the month the first U.S. troops landed in South Korea, and on July 9 General MacArthur was named supreme commander of the United Nations forces operating in Korea. These were presently to include not only British and Canadian troops, but also Australian and New Zealand units. By the end of November, 13 nations had infantry units serving in Korea and 14 had air and naval contingents.

On June 28, following the statement of President Truman as to U.S. action in Korea, the minister of foreign affairs of the Central People's (Communist) government of China said: "The American President Truman, after directing the South Korean puppet government of Syngman Rhee to provoke the Korean civil war, declared that the United States government had decided to use military forces to prevent the emancipation of our own Formosa. President Truman's statement of June 27 and the operations of the American navy constitute military aggression against Chinese territory and also tear the charter of the United Nations completely to shreds. This kind of violent aggressive activity on the part of the United States government does not exceed the expectations of the Chinese people. It serves only to increase the Chinese people's vigilance, because the Chinese people have long been ceaselessly exposing the secret plot of American imperialism to invade China, to occupy all of Asia . . . in fact, this American directed attack . . . is only the first step in a prearranged series of actions whose purpose it is to create a pretext for the American invasion of Formosa, Korea, French Indochina and the Philippines, and it is also a further step in Amer-

ican imperialist intervention in Asian affairs." This was the argument used by the representative of the Chinese Communist government before the United Nations Security council in December.

In July President Truman requested additional funds for naval and army expenditure; the marines were at once to call in their reserves; and it was announced that certain national guard units would be alerted for a call to service. The national Selective Service board at once set about calling 100,000 draftees. New plans were announced for an expenditure of \$4,000,000,000 for the development of air power. (See also SELECTIVE SERVICE.)

On Sept. 12 George Marshall succeeded Louis Johnson as secretary of defense, and in late September a successful landing at Inchon, Korea, planned and led by General MacArthur, led to the liberation of the capital of South Korea. Continued success of the United Nations forces in their campaigns in North Korea led to widespread expression of belief on three points: (1) the war could be and ought to be localized; (2) Communists in China would not wish armed conflict with the United States; and (3) the U.S.S.R. would withdraw or had withdrawn whatever support it had given to the North Koreans, because of a wish to avoid World War III. On Oct. 14 President Truman and General MacArthur met in conference at Wake Island, and on his return President Truman delivered an optimistic address to the nation. But this point of view was short-lived. All expectations were proved to be wrong. The defeat and rout of the North Korean forces in mid-October was suddenly reversed by great bodies of Chinese Communist troops crossing the Manchurian border into Korea and forcing the United Nations forces into a costly retreat. (See also KOREAN WAR.)

On Dec. 1, upon invitation of the United Nations, Gen. Wu Hsiu-chuan presented the case of Communist China in Korea to the United Nations and to the world. All this showed clearly that the initial position of the Chinese Communist government toward the west and toward the United States in particular remained hostile. The debate in the United States now turned to a discussion of the possibility of the United Nations forces holding in Korea, the nature of any aggressive action against Communist China, and most of all, the final shifting of the centre of preparation for armed conflict to western Europe.

The appointment of Gen. Dwight D. Eisenhower to command the forces of the North Atlantic treaty nations in Europe only emphasized what had been evident as early as September—the overwhelming financial and military involvement of the United States in Europe. Whereas within the previous year \$300,000,000 had been assigned to expenditure for the far east, \$3,500,000,000 had been marked for activities in Europe.

How completely the United States had lost its place in China was seen on Dec. 30, when it was announced by the Chinese Communist government that all U.S.-subsidized religious, medical, educational and relief organizations would be taken over by the Chinese and operated by the government.

**Elections of 1950.**—Unquestionably "communism" was an issue in the congressional and senatorial elections in Illinois, California, Maryland, New York and elsewhere. How far it determined the outcome was not clear. Three gubernatorial contests attracted national attention. After indicating in early May that he would not be a candidate for re-election, Governor Dewey altered his plans and announced that he would run. He won a substantial victory over his Democratic opponent. In Pennsylvania Governor Duff, who in May had overturned the Grundy machine, was elected to the senate and his gubernatorial candidate, John S. Fine, was successful. In California Gov. Earl Warren, who had been nominated for a third term as governor, outdistanced his Democratic rival, James Roosevelt, winning by an overwhelming majority of 1,127,898 votes. Senatorial con-

tests were vigorous in 12 of the states holding such elections. The Democratic leader in the senate, Scott W. Lucas, was defeated in Illinois. Congresswoman Helen Gahagan Douglas, nominated by the Democrats and endorsed by the national administration, was defeated in California by Representative Richard M. Nixon, who had been prominent in the investigations that led to the Alger Hiss trial. The contest of greatest national interest had resulted, in Ohio, in the triumphant re-election of Robert A. Taft, generally considered the foremost representative of the Republican party in his opposition to the Truman administration. His opponent had been supported by all organized labour groups.

The congressional campaigns were fought at random inasmuch as both parties in the congress were divided on both domestic and international issues. The Democratic majority was materially reduced, the Republicans winning 200 seats and the Democrats retaining their control with 234 seats. The final vote showed that 40,351,862 votes cast in the elections for the house of representatives were almost equally divided between nominees of the Republican and of the Democratic parties except for 815,403

votes cast for other parties, which represented only 2.02% of the total. The total vote was unprecedented for an off-year election, yet represented, it was estimated, only 60% of the eligible voters.

(See also DEMOCRATIC PARTY; ELECTIONS, U.S.; REPUBLICAN PARTY.)

**National Emergency.**—The last two months of the year were packed with dramatic events. On Nov. 1 two Puerto Rican revolutionaries made an unsuccessful attempt at Blair House in Washington to assassinate President Truman. Early in November the general assembly of the United Nations accepted the proposals of Secretary of State Acheson, on behalf of the United States, that vital matters of world peace be discussed and acted upon in the assembly, where all the member nations were represented, and not in the Security council, where activity was subject to veto. Thus events had forced revision. Prior to this the Security council had asked that Communist China send a representative to explain China's action in Korea, and on Nov. 11 the Communist government of China announced acceptance, and their answer was given in the council on Dec. 1. It demanded that the United States get out of Korea. An attack upon the United States as the supposed villain in the world tragedy, this "answer" continued for many days. A committee of the United

<b>Puerto Rican constitution</b> (Provided for organization of a constitutional government by people of Puerto Rico) . . .	Passed by voice vote	Passed by voice vote	Signed July 3
<b>Mutual Defense Assistance Act of 1949 amendment</b> (Authorized appropriation of \$1,222,500,000 in U.S. military aid to foreign nations in period July 1, 1950-June 30, 1951) . . . . .	362-1 Yeas: D. 211, R. 151 Nays: A.L. 1	66-0 Yeas: D. 34, R. 32	Signed July 26
<b>Suspension of armed forces strength restrictions</b> (Suspended restrictions on authorized strength of armed forces until July 31, 1954) . . . .	Passed by voice vote	Passed by voice vote	Signed Aug. 3
<b>Social Security act amendments of 1950</b> (Extended federal social security coverage to an estimated 10,000,000 persons and provided for greatly increased benefits) . . . . .	374-1 Yeas: D. 234, R. 139, A.L. 1 Nays: D. 0, R. 1	Passed by voice vote	Signed Aug. 28
<b>Defense Production Act of 1950</b> (Gave President power over rationing, credit, allocations, production loans and priorities, and standby wage and price control powers) . . . . .	Passed by voice vote	Passed by voice vote	Signed Sept. 8
<b>Dependents Assistance act of 1950</b> (Provided for family allowances to dependents of armed forces enlisted personnel) . . . .	Passed by voice vote	Passed by voice vote	Signed Sept. 8
<b>Internal Security act of 1950</b> (Directed registration and reporting of activities by Communist and Communist front groups; barred Communists from federal and defense jobs; authorized the Attorney General to apprehend and hold persons likely to commit acts of sabotage or espionage; tightened alien-exclusion and deportation laws) . . . . .	312-20 Yeas: D. 186, R. 126 Nays: D. 18, R. 1, A.L. 1	51-7 Yeas: D. 24, R. 27 Nays: D. 6, R. 1	Vetoed Sept. 22 Veto overridden House 286-48 Yeas: D. 161, R. 125 Nays: D. 45, R. 2 A.L. 1 Senate 57-10 Yeas: D. 26, R. 31 Nays: D. 10, R. 0 Enactment date Sept. 23
<b>Revenue act of 1950</b> (Provided for an additional \$4,700,000,000 in revenue by raising corporate and personal income tax rates and some excise tax rates) . . . . .	328-7 Yeas: D. 199, R. 129 Nays: D. 4, R. 2, A.L. 1	Passed by voice vote	Signed Sept. 23
<b>Rent Control extension</b> (Rent control extension to Mar. 31, 1951) . . . . .	Passed by voice vote	Passed by voice vote	Signed Dec. 20
<b>Clayton act amendment</b> (Amended section 7 of Clayton act to prohibit purchases of assets of competitors which would tend to lessen competition or to create a monopoly) . . . . .	Passed by voice vote	55-22 Yeas: D. 40, R. 15 Nays: D. 0, R. 22	Signed Dec. 29
<b>Excess profits tax</b> (Subjected corporate earnings above the 1946-49 average to 77% tax, retroactive to July 1, 1950, and increased regular corporate tax rate from 45% to 47%) . . . . .	Passed by voice vote	Passed by voice vote	Signed Jan. 3, 1951
<b>Federal Civil Defense act of 1950</b> (Authorized appropriation of \$3,100,000,000 for a 3-year federal civil defense program) .	Passed by voice vote	Passed by voice vote	Signed Jan. 12, 1951

Nations appealed to Communist China to "cease fire" in Korea. In the midst of this, Prime Minister Clement Attlee of Great Britain journeyed to Washington for a conference with President Truman. It was not clear how satisfactory an agreement was reached except for statements that the United States and Great Britain would continue to stand together. Meanwhile, the war in Korea continued and the forces of the United Nations continued to retreat.

On Dec. 16 President Truman declared a national emergency and, addressing the nation in explanation of the need, outlined the steps the administration proposed to take in placing the nation on a war footing. As the year closed it was generally accepted by the people of the United States that all-out war with Communist China was to be avoided by any means short of appeasement in matters affecting the far east. As for the U.S. position in Korea, there was still uncertainty at the end of the year, both as to U.S. military policy in the field and as to the position of the U.S. in the United Nations. The complete shift in national interest was seen in late December in the wide attention given the decision of the North Atlantic treaty powers to create an "effective security force" for the North Atlantic community, signalized by the departure for Europe of General Eisenhower, who had been named supreme commander.

There was a growing conviction, as the year ended, that com-

munist must be contained, if not actually defeated, in Europe and in Asia if the United States were to survive. (E. E. R.)

**Foreign Credits of the U.S. Government.**—Amounts owed by other countries to the U.S. government rose by only 1% in the year ended Sept. 30, 1950. Whereas disbursements on loans and utilizations of other credits aggregated \$424,000,000 in that period, repayments of principal were \$292,000,000 so that the

POLICE AND SPECTATORS outside of Pres. Harry S. Truman's residence in Washington, D.C., on Nov. 1, 1950, after an attempt on the president's life by two Puerto Rican nationalists

net increase in outstanding indebtedness was only \$132,000,000. Credit utilizations were thus less than 40% of those in the preceding 12 months when they aggregated \$1,143,000,000.

Not only did gross foreign aid (credits and grants combined) decline sharply between these two years, from \$6,543,000,000 to \$4,474,000,000, but the proportion of the total consisting of credits fell from one-fifth to one-tenth. The contraction largely reflected the diminution in aid under the European Recovery program (Marshall plan). With the substantial increase in production and trade of the participating countries, their need for dollar assistance declined even more rapidly than contemplated under the original plan for its four-year life. It also came to be recognized that, in many instances, a virtual limit had been reached as to the amount which could be loaned with a reasonable expectation of repayment. Finally, the transition from strictly economic aid to military aid abroad, stimulated by the invasion of South Korea in June 1950, necessitated a greater emphasis on grant aid rather than loans and other credits.

Of the \$424,000,000 credits utilized in the year ended Sept. 30, 1950, almost half or \$197,000,000 was disbursed by the Export-Import Bank of Washington under its own authority. A substantial part of the balance or \$166,000,000 represented aid extended on a loan basis under the European Recovery program by the Economic Cooperation administration, collections on which are handled by the Export-Import bank.

Collections of principal rose within the year to reach \$292,000,000 as compared with \$251,000,000 in the preceding 12 months. These were expected to continue to rise since debt agreements on credits outstanding at mid-1950 called for payments of almost \$290,000,000 in the calendar year 1951 and more than \$330,000,000 in 1952. Interest collections also increased to \$107,000,000 in the year ended Sept. 30, 1950, from \$97,000,000 in the previous year. They were scheduled to rise further to between \$190,000,000 and \$200,000,000 in both 1951 and 1952. The

projected increase reflected in large measure amounts on the special British loan and related credits which were scheduled to fall due beginning Dec. 31, 1951, after five years of grace.

Since the creation of the original Export-Import bank in 1934, net commitments under all U.S. government lending programs amounted to \$12,700,000,000. All except \$900,000,000 had been utilized by Sept. 30, 1950. Of the \$11,800,000,000 utilized, \$1,800,000,000 had been repaid (exclusive of \$500,000,000 in interest and commissions) leaving almost \$10,000,000,000 outstanding on Sept. 30, 1950 as shown in Table II. Of the total unutilized commitments and authorizations on Sept. 30, 1950, three-fourths were those of the Export-Import bank, and a substantial part of the remainder were those under the European Recovery program. There was little likelihood of any further utilization of amounts available to the department of the army or the Reconstruction Finance corporation. (R. C. PE.)

PHOTOGRAPH SMUGGLED OUT of eastern Germany showing workers commuting to one of a series of soviet-operated uranium mines. According to a British report of Aug. 1950, the east German uranium mines were being operated 24 hours a day by conscripted German labour

**Uranium.** The development of the atomic bomb brought about an unprecedented demand for uranium and stimulated the search for uranium ore in every country in which it was known to occur, and in others where the geological conditions were favourable. This search resulted in the discovery of many new deposits and the expansion of the former producing areas, but, so far as was known, the newly discovered deposits were small and comparatively low in grade; because of their number, however, the output, both present and prospective, had been greatly increased. However, for security reasons, no country had released much information on its deposits or production.

While in the better deposits uranium is associated with vanadium and radium, it has also been found in small amounts in other combinations. For example, small amounts of uranium were found in the gold ores of South Africa and in the phosphate rock of Florida, and means were being sought for its recovery.

In the United States the former vanadium-producing area in the Colorado plateau was extended and its production increased to such a point that in 1950 there were six ore treatment plants. This area had furnished nearly all the output up to that time, but numerous deposits had been reported in other western states. Improvements were made in concentration and recovery processes, increasing the yield and reducing costs. Equipment was expanded at both the Hanford, Wash., and the Oak Ridge, Tenn., plants.

The number of shipments of radioactive isotopes increased from 1,652 in 1947 to 2,644 in 1948 and 4,370 in 1949, and of other isotopes from 315 to 434 and 958. (See also ATOMIC ENERGY.) (G. A. Ro.)

**Urology.** Examination of the urinary sediment for cells indicating malignancy in the genitourinary tract had not proved to be as useful as in other clinical fields during 1950. Although the presence of definitely malignant cells in the centrifuged urine had been regarded as positive evidence of cancer in the urinary tract, the incidence of successful cytologic diagnosis had not been high according to many urologists. Most cells that have had their origin in a renal cancer when found in the urine appear washed out and may resemble the normal epithelial cell so closely that microscopic differentiation has been found difficult. This is particularly true of small malignant cells.

Larger cells arising from a tumour in the renal cortex have been recognized more readily but they have been found in only a small percentage of cases. Malignant cells obtained from tumours of the renal pelvis and ureter have been found more frequently than those from tumours of the renal cortex. Since the absence of malignant cells does not exclude the possibility of tumours, negative results have even less diagnostic value than positive results. Although malignant cells have been found in the urine more frequently with tumours in the bladder, the practical value of their discovery is but little since cystoscopy readily permits diagnosis.

Cancer of the prostate gland usually may be recognized on rectal digital examination by the presence of a firm irregular nodule in the gland. When the nodule is small and of a doubtful nature, tissue biopsy made through perineal exposure is usually employed. Examination of prostatic secretion obtained by massage has confirmed the presence of cancer in some cases; however, cytologic diagnosis was usually possible only in cases with advanced carcinoma of the prostate gland.

The comparative value of castration and administration of estrogen in the treatment of prostatic cancer was still a controversial subject in 1950. A competent appraisal of their relative value was offered in an article which studied the survival statistics of 1,818 cases of prostatic carcinoma. (Reed M. Nesbit and William C. Baum, "Prostatic Carcinoma," *J.A.M.A.*, 143: 1317-20 [Aug. 12, 1950].) The following deductions were made: (1) it was demonstrated conclusively that patients with prostatic cancer who responded to castration or estrogen therapy lived longer and more comfortably than did patients not treated by this method; (2) five-year control of prostatic cancer was most effectively obtained by the combined employment of orchiectomy and diethylstilbestrol in patients who were free from metastases; (3) when metastases were present, orchiectomy was significantly more effective than diethylstilbestrol; the combination of diethylstilbestrol and orchiectomy did not appear to offer any advantage over orchiectomy alone in this group of patients; (4) the maximum benefit was achieved by the institution of treatment as soon as the diagnosis was established. (See also VENEREAL DISEASES.) (W. F. Br.)

**Uruguay.** A republic in southeastern South America, Uruguay is bounded on the north by Brazil, on the south by the Río de la Plata, on the east by the Atlantic ocean and on the west by Argentina. It is the smallest country in South

America with an area of 72,172 sq.mi. It has a population of 2,353,000 (official est. Dec. 1949), mostly of European extraction. Montevideo, the capital, has 850,000 inhabitants (1947 est.). Other leading cities are Paysandú (50,000); Salto (48,000); Mercedes (33,000); and Minas (32,000). Religion: Christian, mostly Roman Catholic. President: Luis Batlle Berres. President-elect: Andrés Martínez Trueba.

**History.**—Early in 1950 the treaty of friendship, commerce and economic development signed with the United States on Nov. 23, 1949, was submitted to the Uruguayan congress for ratification. The treaty dealt with the Point Four development program and recognized the right of U.S. enterprises to hire technical personnel regardless of their nationality and to receive a fair return on their investments. Fissionable material was exempted from its provisions.

The Communists synchronized all their moves to hamper ratification of the treaty. They denounced the visit to Uruguay of U.S. Assistant Secretary of State Edward G. Miller, and claimed that the treaty would make Uruguay a United States colony. The Latin American Labour confederation, led by Vicente Lombardo Toledano, held a conference in Montevideo which coincided with a major strike in the wool industry. At the conference Roberto Morena, a Brazilian Communist active in Uruguayan labour circles, Eugenio Gómez, Communist secretary-general, and Enrique Rodríguez, a Communist deputy, were active in parroting the party line. A speaking tour throughout the country launched by United States Ambassador Christian M. Ravndal, with the approval of the Uruguayan government, explaining the democratic way of life, also brought about further Communist charges of United States intervention in local affairs.

In the presidential election held in November, the dominant Colorado party had three candidates: Andrés Martínez Trueba, president of the Bank of the Republic; César Mayo Gutiérrez, vice-president of the republic; and Eduardo Blanco Acevedo, former cabinet member. The Blanco party opposition nominated its perennial candidate Luis Alberto Herrera, although some believed that a younger man should make the race. Martínez Trueba, the candidate backed by President Batlle, was elected and was to be inaugurated early in 1951.

Relations with the United States and British meat-packing companies operating in Uruguay were strained on account of the partiality of the government in favour of the Frigorífico Nacional. The meat packers stopped buying beef because they alleged that the government owed them \$447,000, which represented the difference between the export price to Great Britain and production costs. (J. McAd.)

**Education.**—In 1948 there were 1,644 public schools with 194,072 pupils. Rural schools were attended by 52,815 students. The 180 private schools had 32,448 students. University education was available at the University of Montevideo.

**Finance.**—The monetary unit is the peso, valued at \$0.5263 U.S. currency, controlled rate; \$0.4082, commercial free rate; and \$0.4219, uncontrolled rate, on Dec. 1, 1950. Actual government expenditure in the year 1949 amounted to 288,808,000 pesos; revenue was 286,662,000 pesos. The funded public debt (Dec. 31, 1949) amounted to 818,500,000 pesos. Notes in circulation on Sept. 30, 1950, totalled 244,600,000 pesos. Bank deposits averaged 413,000,000 pesos in Sept. 1950; gold holdings of the Bank of the Republic totalled \$217,000,000 on Sept. 30, 1950.

**Trade and Communications.**—Exports in 1949 totalled \$191,660,000; imports were \$184,644,000 (excluding imports of gold for banking purposes). Chief exports were wool (35%), meat (21%), industrialized farm products (15%) and hides and skins (15%). Chief imports were raw materials (26%), machinery (15%), vehicles and fuels and lubricants. The leading customers were the U.S. (26%), the United Kingdom (22%), Germany (11%), Brazil (7%) and Belgium (4%); the leading suppliers were the United Kingdom (23%), the U.S. (21%), Brazil (11%) and Belgium (7%).

Railways (1948) totalled 1,874 mi. The highway system (1948) comprised 26,000 mi. of which 3,051 mi. were paved national roads. On Dec. 31, 1949, there were 56,500 automobiles and 20,000 trucks. According to *Lloyd's Register of Shipping*, the merchant marine had 47 steamers and motor ships (100 tons and more) aggregating 84,598 gross

tons on June 30, 1949. Air service was supplied by eight international air lines and two local lines in 1950. Telephones numbered 77,686 on Jan. 1, 1949.

**Agriculture.**—Production estimates for major crops in the crop year 1949-50 (in short tons) included wheat 303,000; linseed 77,000; oats 44,000; malt barley 13,200; ordinary barley 6,600.

Official estimates (1949) showed 8,700,000 cattle and 23,000,000 sheep. Wool exports in the year 1949-50 (Oct. 1-Sept. 30) were 175,491 bales (about 81,000 short tons) (1948-49: 118,237 bales), of which 117,726 bales went to the U.S., 12,624 bales to Belgium, 10,402 bales to France and 7,816 bales to Germany. In 1948 22,833 short tons of cattle hides and 10,322 tons of sheepskins were exported. Meat exports in 1949 (largely to the United Kingdom) totalled 103,600 short tons, including 72,624 tons of frozen beef, 22,934 tons of canned beef and 6,897 tons of frozen mutton.

**Manufactures.**—The estimated values added by manufacture (exclusive of the cost of raw materials) of the leading industrial products in 1947 were: food products 62,000,000 pesos; textiles 35,000,000 pesos; beverages 35,000,000 pesos; metal products 27,000,000 pesos; stone, sand, cement and clay products 16,000,000 pesos; and clothing 15,000,000 pesos. There were four *frigoríficos* for treating meat, eight *saladeros* and seven meat-canning plants in 1950. There were about 115 textile mills in 1948, with an estimated total capital of 105,000,000 pesos and employing about 15,000 workers. The cost-of-living index for Montevideo stood at 181 in July 1950 (1937=100).

**Mineral Production.**—Activity was limited to the extraction of semiprecious stones and construction materials. (J. W. Mw.)

**U.S.S.R.:** see UNION OF SOVIET SOCIALIST REPUBLICS.

**Utah.** A Rocky mountain state, admitted to the union in 1896, Utah is popularly known as the "Beehive state." Area: 84,916 sq.mi. (82,346 sq.mi. land; 2,570 sq.mi. water); pop. (U.S. census 1950): 688,862, an increase of 25.2% since 1940. Capital: Salt Lake City (1950 census, preliminary figures) 181,718. Other principal cities with preliminary 1950 population figures were Ogden, 56,910; Provo, 28,899; Logan, 16,802.

**History.**—The chief officers of Utah in 1950 were J. Bracken Lee, governor; Heber Bennion, Jr., secretary of state; Reese M. Reese, auditor; Ferrell H. Adams, treasurer; Clinton D. Vernon, attorney general; E. Allen Bateman, superintendent of public instruction.

The political highlight of the year 1950 was the congressional election which attracted more than 263,000 voters to the polls, 65,000 more than had ever before turned out for an off-year election. Chief interest centred around the U.S. senate race which was won by Wallace F. Bennett (Rep.), who in his first race for political office defeated incumbent Elbert D. Thomas (Dem.) by more than 20,000 votes.

In the other contests Walter K. Granger (Dem.) retained his congressional seat in a close race with Preston L. Jones (Rep.). The second congressional district re-elected Reva Beck Bosone (Dem.) to a second term. J. Allan Crockett (Rep.) was elected to the state supreme court.

The Republican party made large gains in the state house of representatives, the 1950 election returning 30 Democrats and 30 Republicans. The Democratic party was, at the close of the year, still contesting a close race in Utah county. The state senate remained in the hands of the Democrats with 13 Democrats and 8 Republicans.

Gov. J. Bracken Lee, in his 1951 budget message to the legislature, followed his economy policy by recommending a cut of \$38,000,000 from state departmental requests. He also asked for a consolidation of the four agencies dealing with highway safety under the state highway patrol.

**Education.**—There were 96,685 elementary students in Utah during the school year 1949-50 in 361 schools. There were 59,687 secondary school students in 71 junior high schools and 75 high schools. The total number of teachers for the school year in both elementary and secondary grades averaged 4,849. The total operating cost of Utah schools for 1949-50 reached \$26,134,043.50 with total payments of \$36,172,163.82 and a building fund of \$4,582,251.30. Federal funds for education amounted to \$1,054,010.17 and state funds amounted to \$15,167,707.11.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Total expenditures for public assistance during the fiscal year July 1949-June 1950 amounted to \$11,725,325.49 (for 29,156 persons), an 8% drop from the previous year. The funds were distributed as follows: old-age assistance \$5,438,860.24 (10,820 persons); aid to dependent children,

\$3,758,457.11 (13,480 persons); aid to the blind \$121,894.82 (237 persons); aid to the disabled \$1,031,798.57 (2,197 persons); aid to employables \$428,471.88 (1,692 persons); foster care \$264,512.27 (545 persons); indigents in institutions \$46,308.75 (185 persons); sight conservation \$2,813.39; welfare services \$113,372.24; and administration \$519,830.22.

Utah had one state prison which housed an average of 488.5 inmates during the fiscal year 1949-50 at a total cost of \$384,280.47 and an average cost per capita per day of \$2.14. The Utah state industrial school had a total enrolment of 159 during 1949-50 and expended the sum of \$193,421.63 during that fiscal year.

**Communications.**—On June 30, 1950, there were 2,128 mi. of primary state roads, 2,276 mi. of secondary state roads, 956 mi. of other state roads. Total expenditures for the fiscal year ending June 30, 1950, amounted to \$11,423,075.69 of which \$3,312,756.62 was spent for maintenance, \$705,801.87 for state construction costs and \$5,652,754.38 for federal construction costs. Motor vehicle registration had reached 246,483 vehicles by Dec. 1, 1950, with 193,854 of the number being passenger cars. Operating railroads had a combined mileage of 2,116.37 as of July 1949. As of Dec. 1, 1950, there were 189,220 telephones in use in the state under the leading telephone company and 5,242 telephones in use under the operation of local exchanges.

**Banking and Finance.**—The 44 state banks had total assets of \$291,114,469.22 as of June 30, 1950. On that date the 11 national banks had total assets of \$292,311,941.90. There were 13 state-chartered savings and loan associations with total assets of \$52,979,374.19; 6 federal-chartered savings and loan associations with total assets of \$30,201,658.95; 29 industrial loan associations with total assets of \$10,413,132.70; and 57 state-chartered credit unions with total assets of \$4,009,110.11. Total assets of all the above institutions amounted to \$690,998,299.54.

State receipts for the fiscal year ending June 30, 1950, were \$79,926,317.38; disbursements for the same period amounted to \$79,032,015.79. The total state debt on June 30, 1950, was \$770,000 which would be completely amortized by March 1, 1955, as a result of a bond retirement fund created by the 1943 state legislature.

**Agriculture.**—The total farm income for Utah in 1949 amounted to \$161,574,000 with livestock and livestock products accounting for \$103,114,000, and total crops for \$47,455,000. The 1949 estimated production of meat from cattle and calves amounted to 128,000,000 lb., from hogs 30,360,000 lb. and from sheep and lambs 43,018,000 lb. On Jan. 1, 1950 there were 3,427,000 head of chickens in the state, an 11% increase over the previous year. They were valued at \$4,181,000 while the income from eggs produced in Utah in 1949 amounted to \$15,946,000. The state produced 32,150,484 lb. of turkeys from July 1, 1949, to March 1, 1950. At the end of 1950 there were in the state 57,000 horses valued at \$2,964,000; 88,000 hogs valued at \$1,954,000; 560,000 cattle (all types) valued at \$71,680,000; and 116,000 milk cows valued at \$22,040,000.

Table I.—Principal Agricultural Products of Utah

Crop	1950	1949	Average, 1939-48
Wheat, bu. . . . .	8,008,000	9,440,000	6,450,000
Barley, bu. . . . .	5,520,000	6,063,000	5,184,000
Oats, bu. . . . .	2,186,000	2,115,000	1,881,000
Potatoes, bu. . . . .	3,335,000	3,388,000	2,672,000
Sugar beets, tons . . . . .	532,000	466,000	538,000
Hay (all), tons . . . . .	1,062,000	1,219,000	1,145,000
Apples, bu. . . . .	282,000	365,000	473,000
Peaches, bu. . . . .	130,000	778,000	754,000
Tomatoes (processing), tons . . . . .	63,000	83,000	. . .

**Manufacturing.**—The total income for Utah in 1949 amounted to \$825,000,000, an increase of \$9,000,000 over the previous year. The state was affected by a decrease in agricultural income but industrialization had progressed to such an extent that the decline in agriculture was not sufficient to bring down the total income from all sources.

Table II.—Principal Industries of Utah

Industry	Av. workers per month	Total wages 1949
Mining . . . . .	12,778	\$ 44,514,717
Contract construction . . . . .	10,724	33,513,110
Manufacturing . . . . .	27,678	83,992,902
Transportation, communication, and utilities . . . . .	10,159	29,113,832
Wholesale and retail trade . . . . .	42,745	104,750,202
Finance, insurance and real estate . . . . .	5,693	15,145,240
Service . . . . .	14,057	26,687,285
Miscellaneous . . . . .	104	189,983
Total (all industries) . . . . .	123,938	\$337,907,271

**Mineral Production.**—The total value of minerals produced in Utah in 1950 amounted to \$157,949,922. Despite a large decline (29%) in the output of zinc-lead ore in 1950, the total ore mined in Utah increased

Table III.—Principal Mineral Production in Utah

Mineral	Production 1950	Value 1950	Value 1949
Gold, oz. . . . .	460,000	\$16,100,000	\$10,992,030
Silver, oz. . . . .	7,023,500	\$6,356,622	\$6,086,356
Copper, tons . . . . .	278,850	\$116,001,600	\$77,714,530
Lead, tons . . . . .	43,050	\$10,762,500	\$16,770,752
Zinc, tons . . . . .	31,400	\$8,729,200	\$10,086,160

from 21,993,467 tons in 1949 to about 31,850,000 tons in 1950, because of an increase of 10,162,000 tons (49%) in the output of copper ore. The number of mines producing in the state declined from 95 in 1949 to 85 in 1950.

**Vandenberg, Hoyt Sanford** (1899— ), U.S. air force chief of staff, was born on Jan. 24 in Milwaukee, Wis. He was graduated from the U.S. Military academy at West Point, N.Y., in 1923 and from the Air Service Flying school and its Advanced Flying school in 1924. After several years of flight training and teaching, he entered the Air Corps Tactical school in 1934, and the Command and General Staff school in 1935. He taught at the Air Corps Tactical school from 1936 to 1938, when he entered the Army War college.

Early in 1942 he was operations and training officer of the air staff in Washington, D.C. Later that year he helped organize the U.S. air forces in North Africa, becoming chief of staff of the 12th air force, and later of the northwest African strategic air force.

In Aug. 1943 he became deputy chief of staff at air force headquarters and headed an air mission to the U.S.S.R. In April 1944 he was designated deputy commander in chief of the Allied expeditionary air force and commander of its U.S. air component, assuming command of the 9th air force in August. His postwar positions included assistant chief of air staff (1945); director of intelligence on the war department general staff (January-June 1946); director of central intelligence (June 1946-April 1947); deputy commander and chief of air staff of the army air forces (June 1947); air force vice-chief of staff with the rank of general (Oct. 1, 1947); and chief of staff of the U.S. air force (April 30, 1948).

After the outbreak of the Korean war in 1950 he went to the far eastern theatre in July to confer on air strategy and tactics. In September he pointed out that air forces are part of a team with the other services, and alone could not win a modern war.

**Vargas, Getulio Dornellas** (1892— ), Brazilian president, was born on April 19 in São Borja, Rio Grande do Sul. He was educated at the Porto Alegre faculty of law and the Rio Parde military school. He became advocate of Rio Grande do Sul, and later deputy from that state to the congress in 1909. After an interval when he resumed his practice of law, he was again elected deputy in 1919. He became minister of finance in 1926; served as president of his native state, 1927-30, and led the revolutionary movement in 1930 that resulted in his being named president of Brazil on Nov. 3 of that year. He served as president of the republic until 1945, and was recognized as one of the strongest allies the United States had among Latin-American nations during World War II. He sent the Brazilian expeditionary force to fight with the Allied forces during the reinvansion of Europe. The Brazilian army forced his resignation in 1945 on grounds that it feared he would not hold promised elections and he backed Eurico Gaspar Dutra, who won the Dec. 1945 presidential election. Vargas re-entered politics for the 1950 campaign, and won the election to the presidency Oct. 3, 1950.

**Varnishes:** see PAINTS AND VARNISHES.

**Vatican City State.** This sovereign independent state was established by the Lateran treaty between the Holy See and the Italian government on Feb. 11, 1929. The treaty is recognized in international law, and the reigning pope is the sovereign. The area of Vatican City is 108.7 ac., excluding the papal estate of Castel Gandolfo and certain

basilicas in Rome which are extraterritorial. Executive powers are exercised by the governor, responsible to the pope. The population is about 1,000.

In Jan. 1950 there were 33 apostolic nuncios and internuncios, 3 regents of nunciature and a number of chargés d'affaires in the Vatican diplomatic corps. The nunciatures of Lithuania, Latvia, Estonia and Hungary were listed as vacant. There were 18 apostolic delegates. In Greece and Bulgaria, apostolic delegations were headed by chargés d'affaires. Arabia, Syria, and Albania were listed as vacant. The diplomatic corps accredited to the Holy See consisted of 19 ambassadors and 15 ministers. Diplomatic missions of China, Finland, Yugoslavia and Lebanon were headed by chargés d'affaires. Guatemala, Honduras, Panamá, Rumania and Hungary were listed as vacant.

Myron C. Taylor resigned in January as personal representative of Pres. Harry S. Truman at the Vatican.

The Sacred Congregation of the Holy Office issued a document explaining the Monitum of June 5, 1948, which forbade Catholics to take part in public discussions of religious doctrine without permission of the Holy See.

The Congregation of the Council, which regulates activities of the clergy, issued a decree excommunicating priests and religious who engage in business activity for themselves or others. The council also issued a decree excommunicating all those who attempt to overthrow ecclesiastical authority or accept church offices or benefices without proper ecclesiastical designation.

Diplomatic relations were established between the Vatican and Indonesia. The apostolic delegation in Jakarta was elevated to the rank of papal internunciature and Archbishop George de Joghhe d'Ardoye was named internuncio.

The Sacred Congregation of Rites approved canonization of seven new saints: Marie Emile de Rodat, founder of the Sisters of the Sacred Family; Antonio Maria Claret, Spanish textile worker who became Archbishop of Cuba; Bartolomea Capitanio and Vincenza Gerosa, who collaborated in founding the Sisters of Charity of Loreto; Jeanne de Valois, wife of King Louis XII; Maria Goretti, 11-year-old martyr of purity; Maria Ana de Paredes, who gave her life for plague-stricken Ecuador.

In his Christmas message Pope Pius XII announced that the tomb of St. Peter had been discovered under the main altar of St. Peter's basilica.

The Sacred Congregation for the Propagation of the Faith published a decree establishing a number of new sees on the African continent. According to the decree three ecclesiastical provinces would be set up. The first, in eastern Nigeria, would comprise the archdiocese of Onitsha with suffragan sees of Owerri, Calabar and Buea, the latter in Cameroon. The second would embrace the Gold Coast with the archdiocese of Cape Coast and suffragan sees of Accra, Kumasi, Tamale and Keta, the latter in Togo. The third, in western Nigeria, would be made up of the archdiocese of Lagos and the suffragan see of Ondo and Benin city. Erected in Sierra Leone were the dioceses of Freetown and Bo which would be immediately subject to the Holy See. (See also PIUS XII; ROMAN CATHOLIC CHURCH.)

**Veal:** see MEAT.

## Vegetable Oils and Animal Fats.

Domestic production of fats and oils in the U.S., including the oil equivalent of exported seeds, in the year beginning Oct. 1950 was forecast at 11,980,000,000 lb., almost the same as in the previous year. A huge soybean crop did not quite offset a large reduction in cottonseed. Lard, tallow and greases increased moderately; butter output declined. Domestic consumption of edible fats and oils was

indicated at a per capita total of 45.2 lb.

### U.S. Production of Principal Fats and Oils\*

	(In millions of pounds)			
	1950†	1949	1943	Average, 1937-41
Butter . . . . .	1,600	1,735	1,843	2,220
Lard . . . . .	2,800	2,657	3,267	2,091
Edible tallow . . . . .	170	168	213	225
Edible vegetable oils . . . . .	4,200	4,313	2,761	2,253

Other oils . . . . .	20	23	32	21
Totals . . . . .	11,980	11,990	11,021	8,696

\*Year beginning October.

†Partly forecast.

Total U.S. butter production in 1950 was estimated at 1,600,000,000 lb., compared with 1,735,000,000 lb. in the previous year. The production of lard and pork fats increased by nearly 150,000,000 lb. Fats from other animals remained approximately at the previous level of production. Vegetable oilseeds, however, were 14,700,000 tons, 6% below 1949 but third largest on record. The 1950 cottonseed crop was less than two-thirds that of the previous year; soybeans were a record crop; flaxseed production declined 11% compared with 1949, but was 13% more than average. The peanut crop with acreage allocations and marketing quotas in force was larger than in 1949 or the average for the decade. Late in the year butter and flaxseed (but not linseed oil) were removed from the list of surplus commodities available for sale by the Commodity Credit corporation.

Prices of most fats and oils fluctuated more or less quietly at rather low levels prior to the outbreak of the war in Korea, then participated strongly in the upward trend. Butter remained near the support price of about 60 cents wholesale until late in the year; lard ranged between 12 and 19 cents and soybean oil from 10 to 20 cents per pound.

Exports of most sorts of fats and oils from the U.S., largely to western Europe, declined in 1950. For the first nine months of the year the outgo was 1,529,900,000 lb., compared with 1,843,100,000 lb. in the same period in 1949. Imports increased to 895,200,000 lb. in the first nine months of 1950, compared with 762,500,000 lb. in the comparable period of 1949. Copra made up about half the total.

On July 1, 1950, public law 459 became effective, repealing federal annual occupational taxes on manufacturers, wholesalers and retailers of oleomargarine, and also the excise tax of ten cents per pound on coloured and one-fourth cent per pound on other oleomargarine. Restrictions as to packaging and serving in public eating places to assure identification of the product were included. Prohibitions, restrictions or taxes continued in approximately 15 states. Consumption of margarine in the U.S. increased about 7% in 1950 to 6.1 lb. per capita, more than double the pre-World War II rate.

Synthetic detergents continued to make further inroads during 1950 into the amount of fats and oils needed for soaps. The Commodity Credit corporation (CCC) carried over a stock of almost 500,000,000 lb. of linseed; Canada also had a large surplus. The U.S. in November removed lard and tallow from import control.

Although fats and oils on a world-wide basis in 1950 were near prewar production, they were still unevenly distributed. Rationing of fats ceased in western Germany, but high prices restricted use to about half that of prewar. Edible fat rations were substantially increased in the United Kingdom as were soap rations. Denmark discontinued rationing of butter and margarine. The olive oil crop of 700,000 tons was a poor one in much of the Mediterranean area, 40% less than in 1949. Argentina increased flax acreage, and also stepped up exports from a heavy carry-over of linseed. Philippine copra activity expanded substantially after the Korean war began. The privy

council in England upheld the Canadian supreme court decision to the effect that responsibility for regulating the sale and manufacture of margarine in Canada rested with the various provinces, not with the federal government, thus overruling the Dairy Industry Act of 1927. (See also COTTON; PEANUTS; SOYBEANS.) (J. K. R.)

**Vegetables.** The U.S. 1950 crop of 25 vegetables, classed as commercial truck crops for the fresh market (strictly market garden areas and farm gardens not included), was the second largest on record, 8% larger than that of 1949 and 19% above average; the value was smaller by 8% compared with 1949, but 19% above average for 1939-48. Consumption per capita of fresh vegetables in 1950 was estimated at 258 lb., 3% more than in 1949 and 110% of the pre-World War II average. Prices averaged lower than in 1949, particularly for items in over-supply such as cabbages, onions and lettuce.

The 1950 U.S. production of 11 truck crops for commercial processing was 5,300,200 tons, 3% less than in 1949 but 2% above average. Acreage declined to 1,617,940, as compared with 1,736,240 ac. in 1949, and an average of 1,794,400 ac. in the decade 1939-48. Freezing as a processing method increased by 6% compared with 1949. Demand by the armed forces increased substantially.

The 1950 crop of dry edible peas and beans, widely used as a vegetable source of protein, were much smaller in the U.S. and in the world than the abundant crops of 1949.

**Commercial Truck Crops for the Fresh Market.**—The total production of 25 crops was 9,009,200 tons in 1950, valued at \$543,978,000, compared with 8,311,000 tons in 1949 and 7,558,200 tons average for the previous decade. The crops were so abundant that the tonnage produced but not marketed was the largest on record. Cabbage was the leading crop in tonnage with 1,503,700 tons; lettuce was second with 1,295,100 tons; and onions were third with 1,107,000 tons. California was the leading state with 2,629,000 tons; Florida second with 1,085,600 tons; and New York third with 905,200 tons.

Table I.—U.S. Vegetable Production for Fresh Market  
(In thousands)

Crop	Unit	1950	1949	Average 1939-48
Artichokes . . . . .	boxes	700	674	806
Asparagus . . . . .	crates	4,111	3,779	4,502
Beans, lima . . . . .	bu.	1,312	1,345	1,422
Beans, snap . . . . .	bu.	16,611	17,233	17,014
Beets . . . . .	bu.	2,035	1,781	2,160
Cabbage . . . . .	tons	1,504	1,221	1,205
Cantaloupes . . . . .	crates	13,050	12,384	10,475
Carrots . . . . .	bu.	27,777	25,220	23,708
Cauliflower . . . . .	crates	13,130	13,114	10,300
Celery . . . . .	crates	25,186	24,233	19,106
Corn, sweet . . . . .	ears	350,600	341,450	297,494
Cucumbers . . . . .	bu.	6,712	6,911	5,335
Eggplant . . . . .	bu.	1,385	1,447	1,231
Escarole . . . . .	bu.	1,872	1,275	999
Honeyball melons . . . . .	crates	115	137	208
Honeydew melons . . . . .	crates	2,662	2,615	3,180
Kale . . . . .	bu.	840	920	642
Lettuce . . . . .	crates	37,002	33,790	27,680
Onions . . . . .	sacks	44,313	37,865	37,740
Peas, green . . . . .	bu.	2,706	3,046	6,368
Peppers, green . . . . .	bu.	8,831	8,381	5,877
Shallots . . . . .	bu.	459	386	546
Spinach . . . . .	bu.	10,642	11,722	13,922
Tomatoes . . . . .	bu.	31,405	31,885	28,578
Watermelons . . . . .	melons	81,460	78,408	68,923

Acreage for harvest in 1950 was 1,822,780, compared with 1,784,660 ac. in 1949; as compared with the previous decade, acreage was also larger.

The total value of these crops was 8% less than in 1949, but 19% more than average for the decade. Tomatoes, valued at about one-fifth of the total for the 25 crops, provided the leading crop in value, followed by lettuce.

**Commercial Truck Crops for Processing.**—The aggregate production in 1950 of 11 truck crops for commercial processing, including crops for canning, freezing, pickling and other process-

ing, exclusive of dehydration, was 5,300,200 tons, compared with 5,441,300 tons in 1949, and 5,183,200 tons average for 1939-48. California produced more than one-fifth of the total, or 1,144,200 tons, and New York (464,200 tons) displaced Wisconsin as the second state. Tomatoes (2,763,300 tons) accounted for more than one-half of the total, sweet corn for about one-fifth. New record high yields per acre were made by lima beans, cabbage (for sauerkraut) and tomatoes; cucumbers made the lowest yield since 1939. Harvested acreage of asparagus, beets and pimientos set new high records; sweet corn acreage was the lowest since 1940.

The estimated value of the crop was \$204,701,000, compared with \$207,752,000 in 1949 and \$163,892,000 average for the decade 1939-48. Tomatoes were the largest contributor—\$69,039,000. Smaller amounts of the 1950 crops were canned (97% of the 1949 pack), but somewhat larger amounts were frozen; storage stocks of frozen vegetables in October were 18% larger than a year earlier.

Table II.—U.S. Production of 11 Vegetables for Processing  
(In tons)

Crop	1950	1949	Average 1939-48
Asparagus . . . . .	108,400	111,200	91,300
Beans, lima . . . . .	78,900	91,800	39,300
Beans, snap . . . . .	247,800	246,800	186,000
Beets . . . . .	170,300	149,200	118,600
Cabbage . . . . .	246,400	170,500	170,800
Corn, sweet . . . . .	950,600	1,406,300	1,075,500
Cucumbers . . . . .	176,600	284,300	189,800
Peas, green . . . . .	433,200	347,300	387,600
Pimientos . . . . .	45,000	23,800	12,900
Spinach . . . . .	79,700	94,400	80,200
Tomatoes . . . . .	2,763,300	2,518,700	2,381,200

The U.S. dry edible bean crop of 1950 was a small one of 15,128,000 100-lb. bags (cleaned basis), 24% smaller than the record crop of 19,890,000 bags in 1949 and smaller than the decade average of 16,110,000 bags. California was the leading producer (4,138,000 bags), and Michigan with 3,312,000 bags dropped to second place (5,502,000 bags in 1949). The crop was valued at \$109,011,000, against \$131,143,000 a year earlier. Acreage declined sharply to 1,493,000 from 1,838,000 in 1949, a result of rainy weather as well as a lower official acreage goal. Price support was available at 75% of parity, or \$6.30 per hundredweight average for all types. Domestic consumption was estimated to have increased about 25% to 8.9 lb. per capita in 1950. Good progress was made in disposing of government stocks, partly by export to Yugoslavia.

World edible dry bean production for the 1950-51 season was estimated at 109,000,000 bags, 5% less than in the previous year but 2% more than average in the pre-World War II period. The major decreases were in North America, a result of excess rain, and in eastern Europe, because of drought.

The dry pea crop of 1950 in the U.S. of 2,979,000 bags (uncleaned) was small compared with 1949 and very small compared with the 5,800,000-bag average of the previous decade. World production of 16,679,000 bags (excluding China) was 11% less than the previous year, but 7% above the prewar average. World trade dropped to 3,600,000 bags in 1949, from 4,300,000 bags in 1948 and 4,500,000 bags before World War II.

Although exports of vegetables, either in fresh or processed form, were a comparatively small part of the U.S. crop, exports of fresh vegetables in 1949-50 were sharply higher, 452,000,000 lb., compared with 307,000,000 lb. in the previous year, largely because of the rescinding by Canada on Oct. 1, 1949, of import restrictions on fresh vegetables. (See also CORN; HORTICULTURE; POTATOES.) (J. K. R.)

**Venereal Diseases.** In the United States, the downward trend in total numbers of reported cases of syphilis and gonorrhoea continued during 1950; mor-

tality rates from syphilis and admission rates to mental hospitals were lower than in previous years. There was also continuing evidence in 1950 that the incidence of syphilis might be decreasing in the United States. First advanced in 1949, this encouraging view of the progress of syphilis control was based on a combination of factors observed in studying reports from health departments. The most important of these factors were a consistent reduction in the number of reported cases of early infectious syphilis; decreases in the discovery rate of early latent syphilis; increased efforts by health departments to find cases of syphilis; and no evidence of a decline in the quality of syphilis morbidity reporting.

Nevertheless, syphilis was still considered a major public health problem in the United States. Deaths from this disease still exceeded 10,000 annually. Admissions to mental institutions for conditions resulting from syphilis were estimated at 6,000 for 1949, the latest year for which such an estimate was available. Thousands of new syphilitic infections were occurring, and, according to estimates, less than 50% of the cases were coming under medical care during the early stages of the disease, when treatment is most effective. Moreover, undiscovered cases of congenital syphilis in children ten years of age or less were estimated to number 100,000.

**Mortality.**—In the continental United States, the general mortality rate from syphilis had declined each year since 1936. This rate, which was 15.9 per 100,000 population in the calendar year 1938, was estimated at 7.6 in 1949 (employing the fifth revision of the *International List of Joint Causes of Death*). According to the *International Statistical Classification of Diseases, Injuries, and Causes of Death*, revised in 1948, the mortality rate of syphilis in the United States was 5.5 per 100,000 population in 1949. The infant mortality rate from syphilis decreased from .63 per 1,000 live births in 1938 to .12 in the calendar year 1948, less than one-sixth the rate of 1933.

**Morbidity.**—Reported cases of syphilis in the United States and territories (excluding the armed services) tentatively numbered 240,000 in 1950, as compared with 576,000 in 1943. During the same period the number of reported cases of late and late latent syphilis decreased from 257,000 in 1943 to a tentative 116,000 in 1950. For civilians as well as for the combined civilian and armed forces population in the continental United States, reported cases of primary and secondary syphilis showed marked decreases. For civilians, the 1950 total was 32,250, as compared with 54,268 for the preceding year.

Among civilians in the United States and territories, reported cases of congenital syphilis tentatively numbered 15,000 in 1950. This figure represented a substantial decrease from 1941, when 18,000 cases were reported. Over the preceding six years, however, the level of reported cases had remained substantially constant.

In 1941 cases of gonorrhoea reported among civilians in the United States and territories began an upward trend. After the peak year of 1947, however, when 410,000 cases were reported, annual declines were recorded, the tentative figure for 1950 being 308,000 cases.

**Mental Disability.**—The rate of first admissions to mental hospitals in the continental United States (excluding Veterans' administration facilities) for psychoses caused by syphilis was 3.7 per 100,000 population in 1948, the latest year for which data were available. This rate was 6.3 in 1938. In 1948 the first admissions to state mental institutions of patients with psychoses caused by syphilis was 6.2 per 100 first admissions for all psychoses. A decade earlier, this rate was 10.3.

**Activities of Health Departments.**—In 1950 diagnostic observations completed in public clinics located in the United States and territories numbered 2,717,000, as a result of which 368,000

cases of venereal disease were diagnosed. Almost half the syphilis cases diagnosed in clinics were referred to rapid treatment centres or other inpatient facilities for treatment. Ninety-eight per cent of the gonorrhoea cases diagnosed in clinics were treated in the clinics.

A total of 483,000 epidemiological investigations were made by staff members of health departments to find cases of venereal disease and bring them to treatment. Seventy per cent of these investigations were completed on contacts of known cases of venereal disease, and 30% on other persons. This latter group included those brought to the attention of health departments because of positive results in premarital, prenatal or mass blood testing.

Although the proportion of referrals to inpatient treatment centres was large in 1950, admissions to rapid treatment centres continued to decline, reflecting the reduction in reported cases of syphilis. Thus, in 1950, the number of patients treated in these centres was 18.7% below the 1949 figure. Of all patients admitted to rapid treatment centres 72% were syphilis cases; 2% were gonorrhoea cases; and 2% were other venereal disease cases. The remainder were patients admitted for examination and observation.

During the year, 59 special case-finding projects were conducted by state health departments, with federal assistance. Within the 32-state area covered by these projects were 17,000 communities with a total population of approximately 68,000,000. Case-finding techniques employed in these projects included dissemination of information on venereal disease through such media as radio, newspapers and motion pictures; investigation of contacts of persons diagnosed as having a venereal disease; and mass blood testing of both selected groups and entire populations.

**Treatment.**—In its evaluation of treatment schedules for early infectious syphilis, the public health service of the Federal Security Agency emphasized procaine penicillin G with 2% aluminum monostearate added to delay absorption. Brief ambulatory treatment schedules employing this preparation were available for use by private physicians and clinics. It was generally accepted as the drug of choice for all stages of syphilis, and was widely used in treating gonorrhoea.

Because of the sustained level of congenital syphilis reporting, interest increased in 1950 in the treatment of syphilis in pregnant women and in children with congenital infections. Studies were made of the necessity of re-treating pregnant women who had responded satisfactorily to therapy before pregnancy. Emphasis was also placed on determining the amount and type of penicillin most effective against congenital syphilis.

Research centres reported promising results from the use of antibiotics other than penicillin in the treatment of chancroid, lymphogranuloma venereum and granuloma inguinale. Antibiotics studied included aureomycin, streptomycin, chloramphenicol and terramycin. (See also BACTERIOLOGY.)

**BIBLIOGRAPHY.**—*Report on the Third Session of the Expert Committee on Venereal Infections*, World Health Organization, Technical Report Series, no. 13 (Geneva, 1950); Federal Security Agency, Public Health Service, *Annual Report* (1950). (T. J. B.)

**Venezuela.** A republic on the north coast of South America, Venezuela lies between Colombia, British Guiana, Brazil and the Caribbean sea. Area: 352,143 sq.mi.; pop. (1949 est.): 4,697,000. The census of Nov. 26, 1950 was expected to show a population of about 6,000,000, with 10% living in the capital, Caracas, and more than 275,000 in Maracaibo, 120,000 in Valencia and Barquisimeto each, 50,000 in Ciudad Bolívar, Puerto La Cruz, and San Cristóbal each, and 40,000 in Maracay. The chief executive of the nation continued throughout 1950 to be the military junta (or commission) the official name of which.

as of Nov. 27, became simply the governing junta. It was composed of three lieutenant colonels, Carlos Delgado Chalbaud, Marcos Pérez Jiménez, and Luis Llovera Páez, until the death of the first named on Nov. 13. He was replaced as member and chairman of the commission on Nov. 27 by a civilian jurist, Germán Suárez Flámerich.

**History.**—The outstanding political event of 1950 was the assassination of the president of the junta on Nov. 13. Col. Delgado Chalbaud was attacked by 18 men, who apparently intended to kidnap him, but the plan miscarried and the president was killed. An exhaustive police investigation was undertaken, a final report on which had not appeared when the year ended.

No disorder occurred in the republic, and after a fortnight of emergency regulation, civil rights were restored. On Nov. 24, the creation of two new ministries, justice and mines and petroleum, was announced, as well as plans for an election in 1951; on Nov. 27, the cabinet was reorganized.

Of importance, too, in 1950 was the suppression of the Communist party, which had survived its offshoot, Acción Democrática, by 18 months. This occurred when 47 Communist-affiliate oil workers' unions were dissolved in consequence of an illegal strike.

Employment remained at a high level throughout the year. Immigration, supervised by the Agrarian institute, brought some 20,000 Europeans to Venezuela.

Oil production continued to increase, and the average for the year was about 1,500,000 bbl. daily. A new refinery was put in operation in October by the Sinclair company. The steel companies made progress with their comprehensive plans for developing the large deposits of iron ore of high quality south of the Orinoco; shipments to the United States of the Bethlehem Steel Co. were to begin early in 1951.

(C. ME.)

**Education.**—In Oct. 1949 there were more than 5,300 primary schools with 464,697 pupils enrolled. In May 1950 secondary and special schools, public and private, numbered 137, with an enrolment of 21,723; the 27 normal schools had 3,068 students. In Oct. 1949 the Central university had 4,210 students; Los Andes, 738 and Zulia, 664. Education was allotted 7.55% of the 1949-50 budget.

**Finance.**—The monetary unit is the bolivar, valued at \$0.2985 U.S. currency, controlled and free selling rates, during 1950. Actual government expenditure in the fiscal year ending June 30, 1950 was 1,984,600,000 bolivares; revenue was 1,889,000,000 bolivares. Cash funds in the treasury on June 30, 1950, amounted to 282,900,000 bolivares. There was no external debt. The domestic debt on Dec. 31, 1949, was 15,100,000 bolivares. Currency in circulation (Aug. 31, 1950): 708,000,000 bolivares; government deposits: 88,000,000 bolivares; gold reserve of the Central bank and treasury: \$373,000,000.

**Trade and Communications.**—Exports in 1949 totalled 3,360,387.618 bolivares; imports were 2,241,011,274 bolivares. Chief exports were crude petroleum and petroleum products (97%), coffee (1%) and cacao (1%). Chief imports were machinery and equipment (32%), metals and manufactures (20%) and foodstuffs and beverages (17%). Chief suppliers were the U.S. (74%) and the United Kingdom (8%). Major customers were the Netherlands Antilles (56%) (petroleum for refining) and the U.S. (29%).

Railway equipment remained obsolete and in need of repair; trackage totalled 700 mi. in 1950. The highway system included 3,750 mi. of all-weather roads and 1,600 mi. of unimproved, dry-weather roads. According to *Lloyd's Register of Shipping*, the merchant marine had 79 steamers and motorships (100 tons and over), aggregating 136,700 gross tons, on June 30, 1949.

**Agriculture.**—Agriculture still failed to meet the basic foodstuff needs of the people. Output of coffee, the chief export crop, totalled 480,000 bags of 132 lb. each in 1949-50; exports in 1949 were about 367,000 bags. Exports of cacao (1949) were 15,000 short tons. Sugar production (1949) was about 39,250 short tons; maize 320,000 tons; rice 11,000 tons and tobacco 3,100 tons. There were about 3,000,000 cattle and 1,500,000 goats. Fish production in 1949 included 37,500 tons of fresh fish and 11,500 tons of salted fish.

**Manufactures.**—Production figures in 1949 included cement 330,385 short tons; soap 12,685 tons; cigarettes 1,882,378,000 units; electric energy 408,613,000 kw.hr.; natural gas 14,065,788 cu.m. Textile mills supplied about one-third of domestic needs. The cost-of-living index (food, fuel and soap) stood at 202 in July 1950 (1937=100).

**Mineral Production.**—Petroleum continued to be the dominant factor in the economy. Production in 1949 fell slightly to 482,315,973 bbl. (1948: 490,015,593 bbl.). Crude petroleum exports dropped to 422,842,809 bbl.; exports of refined products rose to 37,272,471 bbl. Refinery output by the 11 refineries and topping plants in operation in 1949 totalled 53,066,648 bbl. Two additional refineries went into operation in 1950 and two more were scheduled for completion early in 1951. Production of other minerals in 1949 included 61,177 oz. of gold and diamonds totalling 56,655 carats. In July 1950, Iron Mines Co. of Venezuela, a Bethlehem Steel Corp. subsidiary, made the first rail shipments of iron ore from its

concession in the El Pao area south of the Orinoco to the river port of Palau; ocean shipments were scheduled to begin in the spring of 1951. During the year Orinoco Mining Co., a U.S. Steel Corp. subsidiary, continued preliminary development of its rich concession south of Ciudad Bolívar.

(J. W. Mw.)

LEE E. EMERSON, Republican, elected governor of Vermont, Nov. 7, 1950

**Vermont.** A north Atlantic States of America, the only one of the New England states without a sea coast, Vermont is popularly known as the "Green Mountain state"; it was admitted to the union in 1791. Area: 9,609 sq.mi., of which 331 sq.mi. are water. Population (1940) 359,231 (including 235,992 rural, 123,239 urban); 328,740 native white, including 71,180 of foreign and mixed parentage; 384 Negro; 41 of other races. The official 1950 census determination placed the population of the state at 377,-

747, a 5.2% increase since 1940.

Montpelier is the capital city, with a population (1950 census, preliminary) of 8,585. The chief cities are Burlington (33,039) and Rutland (17,647).

**History.**—The general assembly did not meet in 1950. The chief officers of the state during 1950 were: Harold J. Arthur, governor (succeeding Ernest W. Gibson, who resigned in January to become federal district judge of Vermont); George H. Amidon, state treasurer; Howard E. Armstrong, secretary of state; David V. Anderson, auditor of accounts; Clifton G. Parker, attorney general.

Elected in Nov. 1950 to take office in Jan. 1951 were the following: George D. Aiken, U.S. senator; Winstan L. Prouty, representative in congress; Lee E. Emerson, governor; Joseph B. Johnson, lieutenant governor; George H. Amidon, state treasurer; Howard E. Armstrong, secretary of state; David V. Anderson, auditor of accounts; Clifton G. Parker, attorney general.

**Education.**—There were 801 elementary schools in the state in 1949-50, with a teaching staff of 1,868 and enrolment of 45,450. There were 93 public high schools with a teaching staff of 734 and enrolment of 15,759. The total current expense for public elementary and secondary schools was \$10,801,229.02, of which the state paid \$2,833,800.37. The state superintendent of schools was the commissioner of education, A. John Holden.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Relief in general was administered by the overseer of the poor in each town. Approximately 6,899 persons a month received old-age assistance from state funds amounting to \$2,935,787 for the year 1950. Dependent children receiving aid from state funds averaged 2,783 representing payment of \$668,188 to 1,027 mothers' aid recipients a month. Blind assistance funds to the amount of \$88,050 for the year were distributed to about 190 persons a month. Aid to adult crippled persons amounted to \$35,016.76 for the year, distributed to approximately 188 persons a month. Unemployment compensation payments made under the state law numbered 154,355 and amounted to \$2,829,604 in 1950; 5,535 readjustment allowance payments under the G.I. Bill of Rights amounting to \$108,489 were paid for unemployment and 2 payments totalling \$200 were made to self-employed veterans. The three state correctional institutions, during the fiscal year ending June 30, 1950, had an average of 428 inmates; their total expenses were \$544,974.44.

**Communications.**—The total mileage of the public highway system (state, state-aid and town highways) as of June 30, 1950, was 13,970.27, of which 1,820.73 mi. were in the state system and 2,772.88 mi. were in the state-aid system. Total expenditures during the fiscal year ending June 30, 1950, amounted to \$11,445,814.18, of which \$7,770,607.13 was for state highways and \$2,227,512.47 for state-aid highways. There were 944.76 mi. of railways in the state in the year ending Dec. 31, 1950; airports in the state numbered 20, seaplane landing areas 5 and airways 2, with a total mileage of 144. Telephone subscribers as of Dec. 31, 1950, were estimated at 80,200.

**Banking and Finance.**—The number of state and national banks as of June 30, 1950, was 78, of which 39 were state banks with total deposits of \$205,960,265.66 and assets of \$230,813,306.27. There were eight co-operative building, savings and loan associations, with total assets of \$4,000,313.77.

Total receipts of the state as of June 30, 1950, were \$39,458,425.58;

disbursements \$36,350,593.06; unappropriated surplus \$319,147.68; obligations outstanding \$6,291,000.

**Agriculture.**—The total acreage of harvested crops in the state in 1950, according to the U.S. bureau of agricultural economics, was 1,131,000 compared with 1,145,000 in 1949. The maple sugar season, fairly long and cool, was favourable to a good yield per tree. Because of the small number of trees tapped, the total production, though large, was less than the ten-year average. Dry weather during May, June and early July did considerable damage to the first cutting of hay, but did not hinder other crops to any great extent. The season was generally favourable for apple production except for slight damage from dry weather. Potato production, because of a decrease in acreage planted, was smaller than in 1949 despite a record high yield per acre. Growing conditions were good for seed potatoes and, though small, the crop was reported as exceptionally good for the state.

The value of the 1950 crop production was estimated at \$59,656,000 compared with \$57,713,000 in 1949.

Table I.—Leading Agricultural Products of Vermont

Crop	1950	1949	Average 1939-48
Corn, all, bu. . . . .	3,060,000	2,565,000	2,436,000
Hay, all, tons . . . . .	1,397,000	1,357,000	1,402,000
Oats, bu. . . . .	1,295,000	1,178,000	1,500,000
Potatoes, late, bu. . . . .	1,092,000	1,128,000	1,479,000
Apples, commercial, bu. . . . .	972,000	1,089,000	670,000
Maple syrup, gal. . . . .	786,000	554,000	829,000

**Manufacturing.**—The total value of products of manufacturing, quarrying, mining and processing industries as reported to the department of industrial relations for the fiscal year ending June 30, 1950, was \$293,397,755 as compared with \$293,713,170 in 1949; 35,303 persons were employed in these industries, as compared with 35,424 in 1949.

Table II.—Principal Manufacturing and Processing Industries of Vermont

Industry	Value of products 1950	1949
Machines, machine tools and allied industries . . . . .	\$60,780,700	\$63,061,400
Woollen, cotton and knit goods . . . . .	47,606,280	51,571,000
Woodworking, furniture and lumber, etc. . . . .	41,070,720	36,906,150
Granite, marble and other stone industries . . . . .	28,271,610	26,531,000
Paper and paper products . . . . .	27,963,600	26,435,650
Dairy products . . . . .	17,115,000	16,500,000

**Mineral Production.**—According to the director of research and planning, very little accurate information was obtainable regarding Vermont's mineral production, except as reported to the department of industrial relations. Chief minerals were granite, marble, lime, talc, slate, asbestos and copper.

(C. E. Fe.)

**Veterans' Administration (U.S.).** By Nov. 1, 1950, living U.S. veterans of all wars numbered 19,003,000, of whom 15,336,000 had served in World War II. Veterans with their families made up about one-third of the nation's total population.

Following are the major services administered by the Veterans' administration for veterans, their dependents and beneficiaries.

**Education and Training.**—More than half of all World War II veterans had trained at government expense under the G.I. bill and public law 16 (for the disabled) by Nov. 1, 1950.

Of the total, 2,300,000 veterans had studied in colleges and universities; 3,200,000 had trained in schools below the college level; 1,600,000 had taken on-the-job training, and 660,000 had enrolled in on-farm training courses.

Veterans' 1950 fall enrolments under the two laws ran about 20% less than that for the fall of 1949. On Nov. 1, 1950, veterans attending school and training on jobs and farms numbered 1,819,000. The total a year before was 2,319,000.

In July 1950 congress amended the G.I. bill in several ways. Chiefly, minimum standards were established that many schools operating for profit must meet in order to train veterans. Also, veterans were permitted to make a first major change of course merely by applying for it. In the past, veterans changing fields of study had to justify the change and get a prior VA approval.

Under the G.I. bill, veterans discharged before July 25, 1947, must start training by July 25, 1951, in order to continue afterward. Those discharged after the 1947 date have four years from time of discharge in which to begin. For most, the G.I. bill program ends July 25, 1956.

Under public law 16, disabled veterans may begin training at any time, so long as they can complete their courses by the 1956 date.

**Loans.**—A second major G.I. bill provision calls for the guarantee or insurance of loans made mainly by private lenders to World War II veterans who desire to buy or build homes, purchase farms or farm equipment or go into business.

By Nov. 1, 1950, VA had approved a total of 2,347,000 G.I. loans amounting to nearly \$13,000,000,000. About 90% of the loans, or 2,163,000, were for homes.

The Housing act of April 20, 1950, increased the amount of VA's guarantee on home loans from 50% to 60% of the loan, and the maximum guarantee from \$4,000 to \$7,500.

The act also extended home-loan eligibility to unmarried widows of veterans who died in service or from service-connected causes after discharge, authorized VA to make direct 4% loans of up to \$10,000 in certain areas of the country and authorized VA, in certain circumstances, to restore the loan guarantee rights of veterans who already had used their entitlement.

The last provision applies only on veterans' property later taken from them through condemnation, or which was destroyed by fire or other natural hazards, or which they had to give up for reasons such as illness or change in employment.

Under the Defense Production act of 1950, new down-payment restrictions were placed on G.I. loans on Oct. 12, 1950. Down payments range from 5% on a \$5,000 loan to 45% on a loan of \$24,250 or more.

**Readjustment Allowances.**—A third major G.I. bill benefit—readjustment allowances for unemployment or self-employment—ended for most World War II veterans on July 25, 1949. By then, more than 8,000,000 veterans had been on VA's rolls, and

NUMBER OF VETERANS remaining in VA and non-VA hospitals on Dec. 31 from 1919 to 1950 by types of disability, as compiled by the Veterans' administration

PARAPLEGIC VETERAN riding his wheel chair along suspended cables during a rehearsal for *On Stage Everybody*, a 1950 film short made as a public service in Hollywood, Calif., by patients of the Birmingham Veterans Administration hospital, Van Nuys, Calif.

had obtained more than \$3,500,000,000 in allowances.

**Medical and Hospital Benefits.**—On Nov. 1, 1950, VA was operating a network of 146 hospitals for the treatment of ill and disabled veterans. Beds in civil, state and other federal hospitals were also being used for veterans on a contract or agreement basis.

A \$750,000,000 VA hospital-construction program was under way at the close of the year. It would result in 66 modern new hospitals with a total of 37,000 beds. By Nov. 1, 1950, 27 of the hospitals had been completed, 31 were under construction and the remaining 8 were in the planning stage.

As of Nov. 1, a total of 97,000 patients were in VA hospitals, and another 7,500 in non-VA hospitals. More than half of all the patients were neuropsychiatric cases, about 14% were tuberculosis cases and the remainder were general medical and surgical cases.

**Insurance.**—National Service life insurance, in amounts of not less than \$1,000 or more than \$10,000 in multiples of \$500, is available to members of the armed forces and to World War II veterans.

During the previous ten years, VA had written more than 20,000,000 of these insurance contracts having a face value of more than \$158,000,000,000. On Oct. 1, 1950, policies in force numbered 5,652,000 and had a total value of \$36,000,000,000.

During 1950, approximately 16,000,000 present and former National Service life insurance holders shared in a special \$2,800,000,000 dividend paid by VA. The dividend covered the time insurance was held in force from the date the policy was taken out up to its anniversary date in 1948.

**Pension and Compensation.**—Wartime rates of compensation for service-connected disabilities range from \$15 to \$150 a month, depending on the degree of disability, plus statutory

awards for certain disabilities which may bring total payments to a maximum of \$360 a month. Peacetime rates are 80% of these figures.

The monthly rate for pensions—paid to veterans of either World War who become permanently and totally disabled for reasons not traceable to service—is \$60, which is increased to \$72 after 10 years or when the veteran reaches age 65.

On Nov. 1, 1950, a total of 2,358,213 disabled veterans of all wars were on VA's compensation and pension rolls. At the same time, 1,004,720 dependents of deceased veterans were drawing death compensation and pension payments.

Living veterans on VA rolls on Nov. 1, 1950 included: Civil War, 13; Indian wars, 442; Spanish-American War, 89,908; World War I, 538,779; Regular Establishment, 55,439, and World War II, 1,637,626.

## Veterans' Organizations. United States.

—In 1950 all the major veterans' organizations of the United States were amending their constitutions in order to make the veterans of the Korean war eligible for membership. The American Legion, the Veterans of Foreign Wars, the American Veterans of World War II (Amvets) and the Disabled American Veterans, all of whom operate under congressional charters, petitioned congress to amend their charters to allow veterans of the Korean war to become members.

**American Legion.**—In 1950 the Legion had a membership of about 3,000,000. At its convention in Los Angeles, Calif., it selected Erle V. Cocke, Jr., of Georgia, a World War II veteran, as its national commander. The program for 1950–51 adopted at the convention placed great emphasis on national preparedness. While it also urged increased veterans' benefits, this was a secondary issue. During 1950 the Legion took the lead in organizing the All American Conference against Communism. Ninety national organizations were invited to the organizing conference.

**Veterans of Foreign Wars.**—This organization, with 1,100,000 members, was the second largest veterans' group. At the 1950 national convention in Chicago, Ill., Charles C. Ralls of Seattle, Wash., was elected national commander. The convention received nation-wide publicity when a communication from Gen. Douglas MacArthur dealing with Formosa was withdrawn at the last moment. The program adopted at the convention urged strong defense measures, increased veterans' benefits and anti-Communist legislation and included heavy attacks on the policy of the departments of defense and state.

The V.F.W. also had a nation-wide program of community projects.

**Disabled American Veterans.**—The Disabled American Veterans had in 1950 a membership of 150,000. At the national convention, held in San Francisco, Calif., Boniface Maile of Grosse Pointe, Mich., was elected national commander. The organization continued its policy of being primarily concerned with veterans' benefits, the sole exception being emphatic action by the convention in favour of increased national defense.

**American Veterans of World War II (Amvets).**—Under the leadership of Harold Russell, handless star of the motion picture *The Best Years of Our Lives*, membership of Amvets increased during 1950 to 100,000. As a result, the 1950 convention of Amvets at Cleveland, O., amended the organization's constitution to permit Russell to be the first and only commander to serve two terms. He was re-elected by an overwhelming majority. The convention adopted a platform which included support of the United Nations, a 100-group air force and a 3,000,000-man army, opposition to a federal bonus and opposition to

discrimination in housing, education and employment.

Amvets took a special interest in the problem of civil defense during 1950 and instituted a program which would provide bloodtype "dog tags" for every person.

**American Veterans Committee.**—The membership of this organization dropped to about 20,000 during 1950, but it nevertheless achieved financial stability. No convention was held during the year, and the organization continued under the chairmanship of Michael Straight. The over-all program called for support of the United Nations, the European Recovery program and the North Atlantic treaty; a full civil rights program; and legislation to aid housing, education and health facilities.

**Other Organizations.**—In addition to the above, other veterans' groups with memberships of more than 10,000 that carried on continuing activity included the Air Forces association, the Catholic War Veterans, the Jewish War Veterans, the Army and Navy union, the Military Order of the Purple Heart, the Marine Corps association and the Regular Veterans association.

One of the most interesting developments in 1950 was the organization in Paris of the International Federation of War Veterans Organizations. It was formed by representatives of 30 veterans' associations in eight countries representing 10,000,000 veterans. The countries that participated were Denmark, Italy, Belgium, France, Finland, Turkey, Yugoslavia and the United States. Observers were present from Greece, the Netherlands, the Union of South Africa, Brazil and Norway. The organization endorsed the United Nations action in Korea, attacked aggression and urged the establishment of a real peace. Elliot Newcomb resigned as executive director of Amvets to assume the duties of secretary-general of the new organization. The president of the association was Albert Morel of France.

(R. A. B.)

**Canada.**—The largest Canadian veterans' group, the Canadian Legion, celebrated its 25th anniversary during 1950 by holding its annual meeting in Winnipeg, Man., and dedicating a plaque in the Marlborough hotel on the scene of the Legion's founding. The first World War II veteran Legion president, Group Capt. Alfred Watts, was elected. The main project of the jubilee year was a children's program, to give full guidance and ample opportunities to children of veterans killed overseas. In the annual convention the Legion voted for immediate conscription of Canada's manpower for armed service anywhere in the world under the United Nations; formation of a nonpolitical advisory committee to consult with the defense minister and chiefs of staff on total preparedness; higher pay and allowances and war service pensions for armed forces members; and protection against war profiteering. Those resolutions were presented to the federal government, as well as resolutions asking for continued rent controls, the curbing of subversive activities, stepped-up education in citizenship and more low-rent housing for civilians and faster housing construction for service personnel.

The Canadian Legion and the Royal Canadian Air Force association both turned down efforts to abolish rank within their organizations. The Canadian Women's Army Corps association undertook to preserve the *esprit de corps* of the wartime body.

(C. Cy.)

**Veterinary Medicine.** Classical application of veterinary science, to insure maximum food production continued to be outwardly expressed by mounting interest in veterinary education and research during 1950.

**Prostration of Newborns.**—The prostration of newborn mules and foals characterized by a congenital anaemia of high mortality was found to respond promptly to early exsanguination and concurrent transfusion of an equal quantity of adult blood. Cures were spectacular and the research carried out in

1948 and 1949 disclosed that the malady was comparable to the haemolytic anaemia of babies caused by Rh incompatibility. Adult mules, asses or horses were chosen for donors. The results obtained from transfusion alone had less virtue than did the dual procedure.

**Fowl Pests.**—Improved methods of diagnosis clarified the confusion created by the clinical similarity of true fowl pest and pseudo fowl pest (Newcastle disease or avian pneumoencephalitis) the two viral infections which had long menaced poultry production around the world. The reliability of vaccination was sketchy until the specific agent of each was actually identified and separate vaccines, or a dependable bivalent vaccine, could be produced thereby.

The differentiation of Newcastle virus (once thought to be confined to Great Britain and the United States) from that of true fowl pest disclosed that the former had a wide geographic distribution.

**Control of Rabies.**—The United Nations reported that of 1,300,000 persons bitten by dogs from 1928 to 1946, 4,023 (.31%) died of rabies, notwithstanding that certain rabies-free countries had long demonstrated the feasibility of complete eradication. There were no cases of rabies reported in Great Britain, Sweden, Norway, Denmark, Australia, New Zealand, Venezuela, Hawaii and Puerto Rico, but in all the rest of the world the incidence either increased or remained static. In the United States, where rabies is not reportable or centrally controlled, there were 8,916 cases with 27 human deaths in 1947. The Pan-American Rabies conference held in Mexico and an interstate meeting convened in New York city in 1949 publicized the well-known steps required to control the disease.

**Equine Sleeping Sickness.**—As of May 31, 1950, the U.S. bureau of animal industry reported the details of the explosive outbreak of encephalitis (sleeping sickness) among horses and mules in Louisiana during the summer of 1949. Particular importance was attached to the high morbidity and mortality. There were 1,525 cases concentrated in a few parishes of that state compared with a total of 4,023 in 37 other states during the same period, and the mortality was 60% in contrast to the general average of 10% to 30% of the previous 14 years. The Louisiana epizootic of 1949 was pointed out as a warning to vaccinate horses and mules against that disease regularly every spring.

**Artificial Insemination of Cattle.**—World-wide resort to artificial insemination in dairy cattle production continued to increase in 1950. The number of cows thus fecundated ran into many millions. There was, however, no corresponding mass popularity of that method of breeding in any of the other domestic mammals. Sheep in certain parts of the U.S.S.R. and Australia were cited as exceptions. With improved methods of diluting and preserving, the semen of 1 bull is capable of fertilizing 2,000 to 3,000 cows a year.

**Transfer of Ova in Cattle Breeding.**—Experimental work carried out on cattle at the University of Minnesota, Minneapolis, and on sheep at Texas A. & M. college, College Station, aroused new interest in the prospect of producing a large number of calves annually from purebred mothers by transferring their ova into the uterus of ordinary cows—grades or even scrubs—on the logical assumption that the offspring will retain the original blood lines. Fertilized ova taken from the Fallopian tube or unfertilized ova aspirated from ovarian follicles were used. Although, reportedly, no mature foetus had yet been produced in cows, early stage development of transferred ova and a lamb produced that way at the Texas college led the Foundation of Applied Research to convene the National Egg-Transfer Breeding conference at San Antonio, Tex., April 14, 1949, for the purpose of developing the idea of producing upward of 50

calves annually from prolific cows.

**Fractures in Small Animals.**—The fixation of fractures in dogs and other small animals by arranging a strong, noncorrosive, nonelectrolytic steel pin centrally into the medullary canal of each segment to hold them securely in apposition was fully described in the veterinary journals of Great Britain and the United States during 1950. Holding the segments with a silver plate screwed to the surface of the bone, the external pinning of Stader and of Ehmer, and the cumbersome Thomas splint were largely replaced by medullary fixation. The popularity of this somewhat older method was due largely to the fact that it prevents infection by the free use of antibiotics and sulfonamides in the wound before closure.

**Tuberculin.**—Maurice Vallée of l'École Vétérinaire Nationale d'Alfort was credited with the discovery of a new combination of techniques employed in the preparation of tuberculin and named the improved product "la tuberculine activée d'Henri Vallée." Ever since Koch's lymph (tuberculin) was first used in the 1890s to ferret out subclinical tuberculosis in cattle, its reliability was subjected to critical studies. Some cases escaped its allergic action entirely while others reacted in the absence of recognizable lesions post mortem. Pronounced tuberculosis cases which did not react at all to Koch's lymph but which were diagnosed positively by other methods were particularly disquieting. In the face of these discrepancies, owners and livestock sanitary services were loathe to vouch for its value as a diagnostic agent.

The first improvement came in 1909 when Henri Vallée added mascerated tubercle bacilli and permitted the traces of porphyried glass to remain in the preparation. This technique stabilized tuberculin without altering its specific action on the tuberculous animal. The 1950 tuberculin of Vallée differed only in the preparation complex: culturing, sterilizing, centrifuging, separating (the microbe), cryolysis, and especially the use of defatted cow's milk as a growth factor in the culture medium.

**Animal Tuberculosis of Human Origin.**—Because critical investigations carried out in Sweden, Norway, Denmark and France in recent years had proved that human beings affected with open, pulmonary tuberculosis could transmit their infection to the cows they milked and cared for, the importance of typing Koch's bacillus wherever found was emphasized in veterinary literature. It had long been known that the three types of *Mycobacterium tuberculosis*—human, bovine and avian—are somewhat interchangeable among the mammalian species. Dogs are particularly receptive to the human type, cats to the bovine type and swine to both the bovine and avian types; but that the bovine species was menaced by the human being suffering from pulmonary tuberculosis of bovine origin was not heretofore regarded as a factor to account for in bovine tuberculosis eradication.

**Research in Canine Medicine.**—Neglect of scientific research on diseases of the dog came to an end in 1950 when the New York State Veterinary college, Cornell university, established a fully equipped laboratory devoted exclusively to that purpose.

**Viêt-Nam:** see INDOCHINA.

**Virginia.** One of the 13 original states of the United States, Virginia was admitted to the union on June 26, 1788; it is known as the "Old Dominion" and as the "Mother of Presidents." Southernmost among the middle Atlantic states, Virginia has an area of 40,815 sq.mi., including 916 sq.mi. of water. The population according to the 1950 census was 3,318,680, a 23.9% increase since 1940. The principal urban areas, with preliminary 1950 census figures, include the capital, Richmond (229,906 in August, 1950, and 193,042 in 1940), Norfolk (188,601 and 144,332), Arlington county (135,240 and 57,040), Roanoke (91,089 and 69,287) and Portsmouth (71,294 and 50,745).

**History.**—During 1950 the general assembly approved an unprecedented program for distribution of \$45,000,000 in surplus state funds as grants-in-aid to the localities for needed school construction. The legislature also repealed rent control in Virginia, provided for a continued program of governmental reorganization, broadened a plan of medical scholarships in rural areas and provided for women's jury service. Though it rejected many recommendations for modernization of the state's tax structure, the assembly did provide for compulsory reassessment of real estate at six-year intervals (real estate is segregated for local taxation) and attempted otherwise to stimulate local responsibility. Legislation also was enacted permitting state seizure of coal mines during labour disputes, establishing a state debt commission and requiring compulsory prenatal examination of women for venereal disease. The assembly killed a proposal for a veterans' bonus, refused to consider a sales tax and declined to repeal the laws requiring racial segregation on common carriers. In August the nine incumbent members of the house of representatives were renominated, and in November they were elected to office against scant opposition. John Stewart Battle succeeded William M. Tuck as governor; his term would expire in Jan. 1954. L. Preston Collins was lieutenant governor. D. J. Howard was superintendent of public instruction.

**Education.**—In 1949-50, elementary school enrolment was 458,708, with a teaching staff of 12,336; secondary school enrolment was 148,490, with a teaching staff of 5,505. The teaching staff also included 1,214 instructors in vocational education and 2,319 principals and head teachers.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ended June 30, 1950, 10,910 persons received \$1,344,106 in general relief; 23,046 received \$4,777,328 in old-age assistance; 10,511 families with 30,226 dependent children, \$4,023,548; 5,286 under the foster care program \$792,645; and 1,757 blind, \$511,056. In 1950, 571,614 checks representing nearly 687,647 weekly payments were written for civilian unemployment compensation, amounting to \$10,627,472. This was more than \$3,000,000 less than such compensation in 1949. Also, in 1950, 21,630 checks representing 26,678 payments for war veterans' readjustment allowances were written for \$525,944.

The average daily population of six penal institutions for adults was 5,114, and of four industrial schools for juveniles was 624 at the end of the fiscal year in June 1950.

**Communications.**—On Jan. 1, 1950, there were 8,799.8 mi. of highway in the state's primary system; on July 1, 1950, there were 39,046 mi. in the secondary system. During the year ended June 30, 1950, the state spent \$56,377,840 on its highways, 5% more than the previous year's expenditures. The total railroad mileage was 4,076.45 on Jan. 1, 1950. There were 556,358 telephones in Virginia on Nov. 30, 1950.

**Banking and Finance.**—On June 30, 1950, Virginia had 182 state banks with 56 branches and 132 national banks with 35 branches. On June 30, 1950, deposits in national banks were \$1,064,938,000 and assets \$1,159,847,000. On June 30, 1950, deposits in state banks totalled \$759,914,000 and assets \$833,610,000. Resources on Dec. 31, 1949, of 15 industrial loan associations were \$11,722,000; of 55 building and loan associations \$58,217,000; of 28 credit unions, \$2,027,055.

For the fiscal year ended June 30, 1950, the state treasurer received revenues of \$313,815,884, about 7.5% more than in the previous year; expenditures were \$361,261,949. The gross debt on June 30, was \$12,754,657; there was no net debt, because a sinking fund of \$14,300,430 left an excess of \$1,545,773. The fiscal year ended with a cash general fund surplus of \$49,723,363, plus an invested surplus of \$33,484,800.

**Agriculture.**—The 1950 crop year was an exceptionally favourable one for most Virginia farmers. Corn production achieved an average yield of 49 bu. per acre, highest on record. Soybeans also established new record yields. Apple production in commercial counties increased 48% over the preceding year. Though the acreage planted to potatoes was the second lowest since 1890, the yield of 171 bu. per acre was second largest of record. Production of oats was the largest since 1893, and of barley, the second

highest of record. A disastrous boll weevil infestation reduced the 1950 cotton crop to 5,000 bales, the smallest harvested in 50 years. The peach crop also encountered adverse conditions, when early freezes killed back the crop to less than half the 1949 level. Total acreage in principal crops was estimated at 3,744,000 ac., a fraction below the acreage of 1949. Total value of crops, including fruit crops, was placed at \$317,655,000, 19% above the corresponding 1949 value of \$266,741,000. The five leading crops in value were corn, \$87,573,000; tobacco, \$86,818,000; hay, \$46,413,000; peanuts, \$28,320,000; and apples, \$17,436,000.

Table I.—Leading Agricultural Products of Virginia

Crop	1950	1949	Average 1939-48
Corn, bu. . . . .	54,733,000	53,580,000	38,031,000
Wheat, bu. . . . .	7,862,000	8,732,000	7,998,000
Oats, bu. . . . .	5,200,000	4,650,000	3,437,000
Rye, bu. . . . .	390,000	375,000	499,000
Barley, bu. . . . .	2,898,000	2,700,000	2,147,000
Buckwheat, bu. . . . .	111,000	105,000	119,000
Tobacco, all types, lb. . . . .	165,220,000	136,972,000	132,659,000
Peanuts, lb. . . . .	221,250,000	195,940,000	186,333,000

**Manufacturing.**—The value of products manufactured in Virginia was estimated by the state department of labour and industry, on the basis of reports from 1,726 plants, at \$2,532,009,000 in the year ended Dec. 31, 1949. Wage earners in production received \$344,949,000; total salaries were placed at \$99,701,000. The average factory production employment in 1949 was 153,000.

Table II.—Principal Industries of Virginia

Industry	Value of products	
	1949	1948
Tobacco products . . . . .	\$748,982,000	\$888,677,000
Food and kindred products . . . . .	315,993,000	378,638,000
Textiles and their products . . . . .	325,195,000	414,195,000
Lumber and wood products . . . . .	59,347,000	109,232,000
Paper and printing . . . . .	116,363,000	141,182,000
Chemical products . . . . .	439,003,000	428,433,000
Primary metals . . . . .	26,435,000	36,295,000
Fabricated metals . . . . .	39,338,000	52,123,000
Leather and its products . . . . .	27,111,000	41,803,000

**Mineral Production.**—The production value of raw mineral resources in the year ending Dec. 31, 1949, was placed at \$116,410,000, a decline of 18.8% from the preceding year. Coal production was valued at \$82,366,000 in 1949, when 14,584,000 short tons were produced. Petroleum production increased in 1949 to 43,000 bbl. Principal ores mined during 1950 were zinc (valued at \$3,265,000 in 1949), titanium and manganese.

(J. J. Kr.)

**Virgin Islands.** The Virgin Islands have the status of an organized but unincorporated territory of the United States, located 1,400 mi. S.E. of New York city and 40 mi. E. of Puerto Rico. The three largest islands, with a total area of 133 sq.mi., are St. Croix (pop. 12,096, preliminary census of 1950); St. Thomas (13,811) and St. John (747). The chief cities are Charlotte Amalie, the capital on St. Thomas (11,463), Christiansted (4,110) and Frederiksted (1,925) on St. Croix.

Morris F. de Castro was inaugurated as governor on March 24, 1950. He was the first Virgin Islander to hold the position.

**History.**—The \$10,000,000 federal public works program was considerably advanced during 1950. The salt-water fire protection and sanitary sewer facilities and intercepting sewer in Charlotte Amalie, Christiansted and Frederiksted were substantially completed. The potable water facilities for St. Thomas and St. Croix were nearing completion. The airstrips at the Alexander Hamilton field in St. Croix and at the newly renamed Harry S. Truman airport in St. Thomas were resurfaced. A contract was awarded for extensive water-front improvement in St. Thomas, and work was to begin during the next fiscal year. Contracts were also let for telephone communication facilities in St. Thomas and St. Croix.

The new abattoir at St. Thomas was in operation by private enterprise through a lease negotiated with the municipality of St. Thomas and St. John.

**Education.**—Enrolment in the public schools of the Virgin Islands during 1950 totalled 4,604 as compared with 4,401 in 1949. Of this number, 2,030 students were enrolled in the elementary schools and 889 in high

school in St. Thomas, while in St. Croix, 1,241 were enrolled in the elementary schools and 444 in high school. Expenditures for public education in the Virgin Islands totalled \$535,590, of which \$114,147 was made available by the federal government. The average annual cost of education per pupil in the public schools was \$72.21. This did not include the daily school lunch service. The average monthly salary per teacher in St. Thomas was \$127.50; in St. Croix \$115.58.

**Finance.**—Budgeted expenditures of the municipality of St. Thomas and St. John during the fiscal year 1950 amounted to \$1,230,888. A total of \$886,071 was raised through local taxation, and \$279,200 was allocated from the federal deficit appropriation. Transfers and contributions from other funds, and temporary loans, made up the difference. The municipality ended the fiscal year with a deficit of approximately \$40,000 chiefly because of a substantial reduction in the yield from trade taxes, customs dues and fees from steamer tickets, which were less than the estimated income from these sources. In 1940 the actual revenue collections in the municipality of St. Thomas and St. John amounted to \$227,798, while in 1950 a total of \$886,071 was collected, an increase of 288.97% in the ten-year period. However, during the same period public expenditures increased 309.30%.

In the municipality of St. Croix, a total of \$355,118 was raised from local taxes. The allocation of \$465,800 from the federal deficit appropriation enabled the municipality to meet its total budgeted expenditures of \$825,100. The actual revenue collections of the municipality of St. Croix in 1940 amounted to \$175,944, while in 1950 the collections were \$355,118, or an increase of 101.84% for the ten-year period. Public expenditures increased 178.15% during the same period.

**Trade and Communication.**—Although the value of goods imported into the Virgin Islands during the calendar year 1949, \$9,967,225, showed a slight increase over the value of imports in 1948, \$9,465,562, there was a marked increase in the value of exports in 1949, \$2,501,056, as compared with \$1,698,037 for 1948. Machinery and vehicles accounted for \$1,093,221 of the total imports.

During the fiscal year 1950, a total of 335 commercial ships with a gross tonnage of 1,794,697 entered the port of St. Thomas, as compared with 298 ships and a gross tonnage of 1,603,374 in 1949.

**Agriculture and Industry.**—A total of 99,482 tons of sugar cane was harvested by the Virgin Islands corporation during 1950, compared with 45,252 tons in 1949. About 10,752 tons of sugar were produced, compared with 4,579 tons in 1949. In addition, 548,087 gal. of molasses were produced, as against 287,066 gal. in 1949. A total of 634,000 proof gallons of alcoholic beverages was exported from St. Thomas as compared with 386,915 proof gallons in 1949. In St. Croix 27,943 proof gallons of alcoholic beverages were exported as against 57,333 proof gallons in the preceding year.

**Vishinsky, Andrei Y.** (1883— ), soviet government official, was born at Odessa. He studied law at the University of Kiev and started his political activity in 1902 by joining the menshevist wing of the Social Democrats. When the bolsheviks took power in 1917, he deserted the mensheviks, served in the Red army for a year and joined the Communist party in 1920. Appointed attorney general of the Russian Socialist Federal Soviet republic in 1923, he became professor of jurisprudence at Moscow university two years later. He was appointed people's commissar for justice in 1927, All-Union deputy public prosecutor in 1933 and was public prosecutor from 1935 to 1939 during the period of the ruthless liquidation of the anti-Stalinist opposition inside the All-Union Communist party. On March 31, 1940, Vishinsky was appointed deputy chairman of the council of people's commissars and on Sept. 7, 1940, deputy people's commissar of foreign affairs. He brought about the setting up of a Communist government in Latvia in June 1940, the severing of U.S.S.R.—Polish diplomatic relations in April 1943, and the setting up of a Communist-controlled government in Rumania in March 1945. From the Potsdam conference onward he attended virtually all the important inter-Allied and United Nations meetings. On March 4, 1949, he succeeded Vyacheslav M. Molotov as minister of foreign affairs. He took part as chief soviet delegate at the 5th general assembly of the U.N. at Flushing Meadow, N.Y., and on Sept. 20, 1950, submitted a three-point peace plan aimed at reducing the existing armed forces of the five great powers of the world by one-third.

**Vital Statistics:** see BIRTH STATISTICS; CENSUS DATA, U.S.; DEATH STATISTICS; INFANT MORTALITY; MARRIAGE AND DIVORCE; SUICIDE STATISTICS.

**Vitamins.** During 1950 another as yet unidentified nutrient, presumably another vitamin, was found as a result of studies of bacterial growth. A strain of *Leuconostoc citrovorum* was found to require an unidentified factor supplied by refined liver extract such as the type used in the treatment of pernicious anaemia. H. Sauberlich and Carl A. Baumann found that there was a relationship of this unidentified factor to folic acid, since large amounts of folic acid produced growth in the absence of refined liver extract. This unknown factor was referred to as the *Leuconostoc citrovorum* factor, sometimes abbreviated CF. A relationship of CF to folic acid was also suggested by the observation that CF competitively overcame inhibition of *Leuconostoc citrovorum* by aminopterin, an antivitamin related to folic acid in structure. Sauberlich further observed that rats on a folic acid-deficient diet excreted little CF in the urine, whereas administration of folic acid with the diet, or by subcutaneous or intraperitoneal injection, resulted in large increases in the excretion of CF. A similar result was obtained in man, and these observations suggested an actual conversion of folic acid to CF *in vivo*.

C. A. Nichol and A. D. Welch investigated the possibility of a conversion of folic acid to CF *in vitro* by liver slices. Weanling rats were held on a folic acid-free diet containing succinylsulfathiazole for five weeks, at which time an acute folic acid deficiency was indicated by rapid losses in body weight and severe diarrhoea. Liver slices from such deficient animals were incubated for two hours with shaking in Krebs-Ringer phosphate solution with the following additions: (1) none, (2) folic acid, (3) ascorbic acid and (4) folic acid and ascorbic acid. Following incubation, contents of all vessels were homogenized, heated, filtered and the filtrates assayed for CF with *Leuconostoc citrovorum*. Liver slices from rats on a complete diet were compared with those from the deficient animals. The findings were as follows: (1) Livers from folic acid-deficient animals were grossly deficient in CF as compared with normal livers (from 36 to 147 units of CF per gram of liver in the deficient livers as compared with 1,710 to 2,880 in livers of normal animals). (2) Incubation with folic acid (100 micrograms) increased the CF content of both deficient and normal livers to approximately the same high levels. This increase averaged almost 100% for the normal livers, and from 2,000% to more than 10,000% for the deficient livers. (3) Incubation with ascorbic acid alone approximately doubled the CF content of both control and deficient livers. (4) Incubation with folic acid and ascorbic acid resulted in much larger increases in CF than when either supplement was employed alone. In view of the previous demonstration of a close relationship between CF and folic acid and results to be cited below, the conclusion appeared inescapable that an enzymatic conversion of some of the added folic acid to CF had occurred, and that this conversion was aided by ascorbic acid. Although readily demonstrable in liver slices, this conversion did not occur in homogenates. The evidence supported the view that CF is a derivative of folic acid, that it is more active than folic acid for some organisms and that it can be formed *in vivo* from folic acid by some organisms by a process that is favoured by ascorbic acid.

Studies of the interrelationship of dietary components led to continued important advances in knowledge of fundamental biochemistry and improvements in applied nutrition. A. E. Schaefer, W. D. Salmon, D. R. Strength and D. H. Copeland showed that the nutritional requirements for folic acid, vitamin B<sub>12</sub> and choline are mutually interdependent in both rats and chicks under certain experimental conditions. Their experiments were conducted using a basal diet composed of extracted peanut meal, casein, cystine, sucrose, cod-liver oil, lard, salts and the usual vitamins except B<sub>12</sub> and folic acid. This diet provided 0.3% methi-

onine and only 0.007% choline. When the basal diet was supplemented with 0.04% choline chloride or 0.128% methionine and fed to weanling rats, 100% of the animals developed renal haemorrhage within two weeks. Addition of 2, 10 or 100 mg. of folic acid per kilogram of the choline-supplemented diet reduced the incidence of renal haemorrhage to 75%, 42% and 50% respectively, while 30 to 150 micrograms of vitamin B<sub>12</sub> per kilogram of ration reduced the incidence 50%. However, 10 mg. of folic acid with 30 micrograms of vitamin B<sub>12</sub> completely prevented the renal lesions. Vitamin B<sub>12</sub> and folic acid were without effect unless choline or methionine (presumably) were added to the ration. Both folic acid and B<sub>12</sub> were effective in preventing death, in lessening the severity of renal haemorrhage, when it occurred, and in promoting growth. Vitamin B<sub>12</sub> and folic acid together promoted slightly better growth than either alone.

When day-old chicks were fed the basal diet supplemented with 0.6% choline chloride, rather poor growth occurred. Thirty micrograms of vitamin B<sub>12</sub> or 2 mg. of folic acid per kilogram of ration caused growth increments of 67 g. to 70 g. per chick in four weeks. Increasing the B<sub>12</sub> to 150 micrograms or the folic acid to 100 mg. produced only little better growth. However, 30 micrograms of B<sub>12</sub> plus 2 mg. of folic acid caused a growth increase of 126 g. per chick.

When chicks were fed the basal diet supplemented with only 0.10% choline chloride, similar growth responses to folic acid and B<sub>12</sub> were observed except that 2 mg. of folic acid were only slightly effective whereas 100 mg. of this vitamin had a marked effect. Again B<sub>12</sub> and folic acid together produced the best growth. As little as 5 micrograms of B<sub>12</sub> per kilogram of ration produced a marked effect when 100 mg. of folic acid were in the ration. On the other hand, only 0.2 mg. of folic acid was required to produce marked growth improvement when optimal B<sub>12</sub> was present.

Perosis occurred in a large percentage of the chicks not receiving folic acid or B<sub>12</sub>. Two milligrams per kilogram of folic acid provided definite but incomplete protection, while 100 mg. gave complete protection against perosis. Large amounts of B<sub>12</sub> gave incomplete protection. Small amounts of B<sub>12</sub> plus small amounts of folic acid gave complete protection. If the diet contained no added choline, perosis occurred in all chicks even though the diet was supplemented with folic acid, B<sub>12</sub> and methionine.

These experiments certainly seemed to demonstrate an interrelation between folic acid, B<sub>12</sub> and choline. In both the rat and chick experiments it was to be noted that neither B<sub>12</sub> nor folic acid had these effects unless a certain amount of choline, or in some instances methionine, was added to the diet. If a minimal amount of choline was in the diet, the change caused by these vitamins was similar, at least in many instances, to that which could have been produced by adding more choline. Thus, it might be stated that B<sub>12</sub> or folic acid "spared" choline. Also it should be noted that neither folic acid nor B<sub>12</sub> alone had a complete effect although both together did give a complete effect. Thus, it might be visualized that B<sub>12</sub> and folic acid can each spare a certain amount of choline and when used together can spare a larger amount sufficient to prevent completely the abnormal phenomena being observed, indicating that the effects of these two vitamins are additive and that B<sub>12</sub> is not acting, by substituting for folic acid or vice versa, at least in so far as the choline-sparing action is concerned. It was not likely, nor was it claimed, that the only effect of folic acid and B<sub>12</sub> in these animals was to spare choline. In some of the experiments the effect produced by folic acid and B<sub>12</sub> was considerably greater than that recorded with the largest amount of choline alone. It might indicate that folic acid and B<sub>12</sub> have interrelations which do not concern choline.

Experimental production of pyridoxine deficiency in man has been difficult to demonstrate. John F. Mueller and Richard W. Vilter actually produced pyridoxine deficiency. Eight patients were given a "standard vitamin B-complex-poor" diet which furnished approximately 3,000 cal., 42 g. of protein, 27 g. of fat, 0.42 mg. of thiamine, 4.2 mg. of niacin, 0.60 mg. of riboflavin and 0.5 mg. of pyridoxine. The patients had a number of chronic illnesses. One group was given desoxypyridoxine, 60 mg. intramuscularly daily, another 100 mg., later 125 mg. and finally 150 mg. of the substance. One patient was also given 6 g. of succinylsulfathiazole daily by mouth. When signs suggestive of pyridoxine deficiency occurred, a vitamin B-complex mixture was given intramuscularly daily: thiamine 25 mg., niacinamide 50 mg. and riboflavin 10 mg. Finally, in many instances, 100 to 200 mg. of pyridoxine were administered.

The following external lesions, presumably due to pyridoxine deficiency, appeared in some of the patients: superficial scaling; oily, reddened skin lesions, especially around the eyes, nose and mouth; fissures at the angles of the mouth and lateral canthi of the eyes. Sore, swollen, red tongues and buccal mucous membranes likewise appeared in some. One of the patients receiving 100 mg. of desoxypyridoxine daily developed extensive skin lesions and in addition nausea, vomiting, extreme weakness and dizziness. These lesions appeared either before B-complex vitamins were administered or during administration of them and were cleared (within 48 to 72 hours) only following administration of pyridoxine itself. The lesions usually appeared about three weeks after beginning the deficient diet and administration of desoxypyridoxine.

Anaemia developed only in the patient to whom the succinylsulfathiazole was given in addition to the low-pyridoxine diet and the desoxypyridoxine. At its height, there were 12 g. of haemoglobin per 100 ml., 3,000,000 erythrocytes per cu.mm. and a haematocrit of 36%. The anaemia was thus mildly macrocytic. Leukopenia was not observed, although a mild lymphocytopenia was noted in seven patients. At the height of the skin eruption, two patients developed eosinophilia of 22% and 9%, respectively. These experiments showed definitely that abnormalities occur in man by feeding a pyridoxine-deficient diet and in addition administering the antimetabolite, desoxypyridoxine. (See also CHEMISTRY; FISHERIES; FLOUR; MEDICINE; NUTRITION, EXPERIMENTAL.)

(M. F. T.; F. J. Se.)

**Vocational Rehabilitation, Office of.** This office, a constituent unit of the Federal Security agency, administers grants-in-aid and supplies leadership and technical assistance for the state-federal vocational rehabilitation program, a public service to prepare handicapped civilians for or to keep them in jobs commensurate with their fullest capabilities.

The program is operated by 86 vocational rehabilitation agencies in the 48 states, Hawaii and Puerto Rico. The District of Columbia Rehabilitation service is operated directly under the federal office. In 35 states, separate agencies are responsible for rehabilitating the blind. In other states, rehabilitation of the blind and the generally disabled is the responsibility of a single agency.

Various combinations of the following services are provided, according to the disability and need of each individual. Those numbered 1, 2, 5, 8 and 9 are furnished without charge and the others are paid for from public funds to the extent of the individual's inability to pay: (1) medical examination to determine eligibility and extent of disability, to discover hidden disabilities and to ascertain work capacity; (2) individual counsel and guidance, including interest and aptitude tests, to help the disabled person choose and attain a job objective within his physical limitations but commensurate with his best potential abilities; (3) medical, surgical and psychiatric treatment and hospital care to reduce or remove the disability; (4) artificial appliances such as limbs, braces and hearing aids to improve work ability; (5) training in school, on the job or by tutor to fit the individual for the right job; (6) maintenance and transportation during physical restoration and training; (7) occupational tools, equipment and licences to give the handicapped person a fair start; (8) placement on the right job; and (9) a follow-up to make sure the rehabilitant and employer are mutually satisfied or to effect necessary adjustment.

Any person of or near working age who has a physical or mental disablement which constitutes a substantial vocational handicap is eligible. Through 1950, nearly 550,000 persons had been rehabilitated since the first vocational rehabilitation act was adopted in 1920.

During the fiscal year ending June 30, 1950, 59,597 persons were rehabilitated into self-supporting jobs and another 11,946 persons had been placed in jobs and were awaiting a postrehabilitation check at the year's end. In addition, 13,375 persons were ready for jobs on June 30 and the active rolls listed 115,620 persons in earlier stages of rehabilitation.

According to preliminary tabulations for 1950, two-thirds of the rehabilitants were men and 48% had one or more dependents. Approximately 75% were unemployed when services were started and nearly 11% had never worked before. Orthopaedic disabilities were the most common, being the primary handicap of 43% of the rehabilitants. Of these, 13% were amputees and 30% suffered from other impairments of the extremities or bones.

Visual disabilities accounted for 12%; aural, 9%; tuberculous, 8%; mental, 6%; cardiac, 4%; and all other defects, including ulcers, hernia, speech and asthma, 18%.

The jobs in which rehabilitants were placed fell into the following categories: professional, semiprofessional and managerial, 10%; clerical, sales, service, agriculture, skilled and semiskilled, 73%; unskilled, 7%; and family workers and housewives, 10%.

The annual rate of earnings of the rehabilitants when services were started was estimated at \$17,000,000, mostly in temporary, unsafe or otherwise unsuitable jobs. The annual rate of earnings for the first year after rehabilitation was estimated at \$93,000,000, on which federal income taxes were estimated at \$5,500,000. Within four years, the 1950 rehabilitants would pay in income taxes as much as the entire 1950 federal expenditure for the rehabilitation program, which was \$20,900,000. At the same time, they would also be paying state taxes. State expenditures totalled \$9,000,000 in 1950. During their working lives, the rehabilitants would pay in taxes several times the total cost of their rehabilitation.

The number of men and women throughout the country who were disabled to the extent of needing rehabilitation services was estimated at between 1,500,000 and 2,000,000 in 1950. Every year as a result of chronic illness, accidents and congenital defects about 250,000 persons were becoming disabled to a degree requiring rehabilitation services. (See also MEDICAL REHABILITATION OF THE DISABLED; VETERANS' ADMINISTRATION [U.S.])  
(M. E. Sr.)

**Wages and Hours.** In Sept. 1950 pay rolls in manufacturing industries in the United States reached more than four times the dollar level of 1939 pay rolls. The 1950 figure was 20.4% more than that for Sept. 1949. Manufacturing employment rose 9.1%, while total employers' disbursements, including salaries and wages, for Sept. 1950 were \$12,525,000,000, which was 12.3% more than for the same month in 1949.

Real wages continued upward reaching a postwar index peak of 145.5, based upon 1939 averages. Average real wages for the first nine months of 1950 surpassed the 1949 figures by 5.9%, as shown by Table I.

Table I.—U.S. Real Wage Indexes

Source: Computed from data in *Monthly Labor Review*, United States Bureau of Labor Statistics.

In no industry did average weekly earnings or average hourly earnings decline. Data in Table II indicate that average weekly earnings exceeded \$50 in 80.6% of the recorded industries. In 1949, 69% of the industries fell into this category. In 61.3% of the industries, average weekly earnings were more than \$60 in 1950 as against 28.1% in the preceding year. This strengthening of wages was accounted for by an average increase of two hours in the manufacturing work week and by increases in hourly rates of pay.

The highest average "take-home pay" was \$75.74, in the building construction industry, followed closely by that of auto work-

TRUCK DRIVERS bound for a coal mine at Somerset, O., asking state troopers for protection in March 1950 during a strike by soft-coal miners

ers, who received \$75.24. In 1949, the petroleum and coal products industry reflected the highest weekly earnings. Lowest weekly payments were made to hotel employees (\$33.80), not including tips, board, room or uniforms. Department store and mail-order house clerks were second lowest with \$42.17. Both by dollar and index measurements average weekly earnings increased more rapidly over 1949 figures in durable goods industries than in nondurables. For manufacturing as a whole, "take-home pay" increased 10.3% over 1949.

The greatest increase in weekly earnings occurred in the anthracite coal-mining industry (52.8%). Bituminous coal miners were second (41%), followed by iron and steel workers (20.3%). The coal industry increases were attributable principally to a 43% increase over 1949 in hours worked per week. Coal miners still had the shortest work week in 1950, however, and telegraph workers the longest. The telegraph industry also experienced the smallest increase in average weekly earnings in 1950—0.5%.

Greatest hourly wage increases occurred in the tobacco industry (10%) and in anthracite coal mining (8%). The average rate of increase in industrial hourly wages was 4.6% in 1950, compared with 1.8% in 1949 and 9.1% in 1948. Dollarwise, the highest average hourly rates were in building construction (\$2.025)

Table III.—Rise in Hourly U.S. Earnings Rates  
(August rates)

and bituminous coal mining (\$2.001), and the lowest (77 cents) in the hotel industry.

Five-year shifts in rates of hourly earnings in selected industries are shown in Table III. The net increase for all manufacturing industries was 42.8%, compared with 37.6% measured retrospectively from 1949. The greatest increase was 69.4% in the lumber industry. It appears significant that even the weakest improvement, the increase of 34% in the transportation equipment hourly rates, was not far beneath the average for all manufacturing.

The Sept. 1950 average hourly rate for common labour (in road building) was \$1.20 compared with \$1.17 in 1949 and 47 cents in 1941. Farm wages continued a decline to 70 cents per hour (not including board and room) in 1950, as against 74 cents in 1949 and 78 cents in 1948.

Throughout 1950 the general trend in hourly and weekly earnings was upward. While the parallel increase in hours worked per week somewhat enhanced the total wage result, earnings moved ahead more rapidly than prices, producing a substantial net increase in real wages.

(D. J. H.)

**Great Britain.**—In Great Britain, the policy of wage restraint, hitherto accepted by the Trades Union congress, had been breaking down, and was definitely repudiated by the congress, against the wish of the general council, in Sept. 1950. Compulsory arbitration, however, remained in force and was not yet seriously challenged: so that the congress decision meant in effect that each union became free to formulate such claims as it pleased and to negotiate on them with employers, but that, if negotiations broke down, the matter went to arbitration without official strike action.

The latest figures of average earnings and hours in British manufacturing industries related to April 1950. At that date, for the industries covered, average weekly earnings were as follows: men (over 21) 145s. 9d., youths and boys 61s. 5d., women (over 18) 80s. 6d., girls 51s. 10d. The average hours worked were, for men 47, for youths and boys 44.2, for women 41.9 and for girls 42.5. The figure for women was reduced on account of a number of married women who worked less than full time. These earnings represented the following percentage increases over those of previous periods.

Table IV.—Percentage Increases of Earnings in Great Britain  
(Oct. 1938 = 100)

	April 1950	Oct. 1949	Oct. 1948	Oct. 1947	Oct. 1946	July 1945
Men (over 21) . .	111	107	100	86	75	76
Youths and boys .	136	130	125	99	78	74
Women (over 18) .	148	142	129	114	101	94
Girls . . . . .	180	179	167	136	109	90

Hours worked showed little change for adult men, as compared either with 1938 or with the years after the end of World War II. In comparison with 1938, the average hours worked by women had fallen from 43.5 to 41.9, for girls from 44.6 to 42.5 and for youths and boys from 46.2 to 44.2. These figures included overtime.

Earnings for men only by industry in April 1950 ranged from 166s. in the metal trades to 141s. in leather and clothing, 137s. in transport (excluding railways) and 117s. in government industrial establishments. For women the highest average was 91s. in the vehicle trades and the lowest 73s. in government establishments. For textiles, the women's average was 83s. and for clothing 82s. For coal mining, which was not covered by the main return, the average weekly earnings for adult men were 187s., and for regular dock workers 170s. No figure was available for railway workers.

All these figures grouped skilled and less skilled workers together, and referred to earnings and not to rates of wages. The official index figure for wage rates (June 1947 = 100) was 110 in Aug. 1950.

The aggregate national wages bill for 1949 was estimated in the White Paper on national income at £4,280,000,000, as against £4,050,000,000 in 1948. The corresponding figures for salaries were £2,250,000,000 and £2,140,000,000. The total national income was put at £11,201,000,000 in 1949 and at £10,703,000,000 in 1948. **War Claims Commission.** The Rules of Land Warfare, adopted at The Hague in 1907 and sanctioned by the great majority of nations, provide for the immunity of nonbelligerent citizens from detention while in the jurisdiction of any enemy government. The sanctity and rights of individuals were further guaranteed when the civilized nations, with few exceptions, agreed by the terms of the Geneva convention of 1929 that the food ration of prisoners of war should be equal in quantity and quality to that of the detaining troops at base camps.

The United States government, after hearing a formidable array of evidence, determined that mistreatment of U.S. prisoners of war and civilian internees during World War II was almost universal; and that these violations of international law were not occasioned by the fortunes of war, but were the deliberate policies of enemy governments. The congress of the United States embarked on a program of redress by enacting the War Claims act of 1948 (public law 896, 80th congress), as amended, and that legislation created the War Claims commission.

The War Claims act sought to ameliorate some of the more critical suffering arising from the war by providing immediate payment for some of the more compelling types of war claims. The law enabled the War Claims commission to pay \$1 per day to each regularly enrolled member of the armed forces of the United States for each day he was detained by the enemy on insufficient rations; to pay certain U.S. civilians who were interned in specified areas by the Japanese government a maximum of \$60 per month for the period of their detention; and to pay Philippine religious organizations affiliated with religious orders in the United States on a dollar for dollar reimbursable basis for the value of food, medical supplies, clothing and other relief services rendered to Americans in the Philippines during the Japanese occupation.

The War Claims commission was first activated on Sept. 14, 1949, following confirmation by the United States senate of the three commissioners nominated by Pres. Harry S. Truman to head the administration of the war claims program. The members of the commission were Daniel F. Cleary of Illinois, chairman, Georgia L. Lusk of New Mexico and Myron Wiener of New York. The first claims were paid on Feb. 14, 1950.

The statistics for the aggregate of all 28,697 claims paid as of Dec. 1, 1950 were as follows: 27,107 military prisoner of war claims were settled, amounting to \$14,733,352.64 in disbursements. The average payment to prisoners of war was \$1,133.67 for detention in the Pacific area, and \$337.17 for the European theatre. Settlements were made with 1,556 living former civilian internees for a total of \$2,981,271.72, while survivors of 34 deceased internees were paid \$42,851.49. Civilian internee payments averaged slightly less than \$2,000. The complex claims of religious organizations were under study for adjudication at the end of the year.

Before the commission finished its assignment (scheduled by

law for March 1, 1954), it would have paid a few hundred dollars to each of more than 200,000 former prisoners of war, both U.S. and Filipino, or to their survivors; and it would have compensated about 10,000 civilian internees and 100 religious organizations. None of the funds was coming out of the general fund of the United States treasury. The War Claims act provided that the proceeds of assets of enemy aliens seized by the department of justice should be converted into a war claims fund to pay for the benefits and administrative expenses of these categories of war claims.

The intent of the congress of the United States to secure a comprehensive view of the total problem of war claims was clearly stated in section 8 of the War Claims act, marking the first time that a congress had sought an over-all picture of war claims before attempting to legislate for their settlement. In keeping with the section 8 directive, the commission submitted a report to the president and the congress concerning personal injury and property damage claims of U.S. nationals arising out of World War II, and for which no compensation was provided by law.

The report was a limited survey of the types and categories of World War II claims, and a review of existing means for satisfying them. Included were recommendations for appropriate legislative action and suggestions for administrative methods for re-enforcing the recommendations. The commission recommended giving priority to legislation which would authorize the satisfaction of personal injury and death benefit claims. It also urged that authority be granted to receive and adjudicate claims for real or personal property losses, while evidence was available, although there was no immediate prospect for payment of such claims.

The lingering aftereffects of malnutrition and maltreatment in enemy prison camps could not be fully appraised at the close of 1950, but the commission collected case studies and medical opinions which indicated that no prisoner of war had entirely avoided permanent physical or mental injury or both. (D. F. Cy.)

**Washington.** A state in the extreme northwest United States, popularly known as the "Evergreen state," Washington was admitted to the union Nov. 11, 1889. Total area: 68,192 sq.mi., of which 66,977 sq.mi. are land; pop. (1940): 1,736,191; native 1,525,812; foreign-born 210,379. The 1950 U.S. census determination, as of April 1, placed the state's population at 2,378,963, an increase of 37% over 1940. In 1950 the urban population was 1,271,538 or 53.8% of the total and represented an increase in urban population of 38.5% since 1940. Capital: Olympia, 15,711. The population of the three largest cities in 1950 (preliminary census figures) and the percentages of increase over 1940 were, respectively: Seattle, 462,440 (25.6%); Spokane, 160,484 (31.5%); Tacoma, 142,975 (30.7%).

**History.**—In 1950 the electorate of Washington cast the largest vote for any off-year election in the history of the state; the 800,573 votes represented 65.73% of the 1,217,942 registered voters.

Since the renomination of the Democratic incumbent U.S. senator, Warren G. Magnuson, was not contested, interest in the state primary centred upon the Republican slate. W. Walter Williams of Seattle won the G.O.P. nomination over four other contestants with a vote of 83,871 which represented a plurality; whereas his closest opponent, Al Canwell of Spokane, received 63,214 votes. In the November election Magnuson received 397,719 votes which exceeded Williams' 342,464 votes by 55,255. The incumbent delegation of the state in the U.S. house of representatives, consisting of four Republicans and two Democrats, was re-

elected. The Democrats retained control of the state legislature, the senate by a count of 54 to 45 and the house by 25 to 21.

With respect to six initiative and referendum measures and two proposed amendments to the state constitution, the most spirited contest involved two rival social security measures. Initiative 178, which had the support of Gov. Arthur B. Langlie and his administration, was designed to eliminate costly features in the existing law, which had been adopted as initiative 172 in 1948. The rival measure, initiative 176, was sponsored by the Washington Pension union. Initiative 178 received 394,261 votes as against 296,290 for initiative 176. Two referendum measures, number 7 and number 8, which provided bond issues of \$40,000,000 for state aid to the common schools and \$20,000,000 for construction of buildings for state institutions, respectively, passed. By a narrow margin of 0.33% of the vote, referendum number 9, which authorized \$20,000,000 in bonds to provide buildings for the institutions of higher learning, was lost. Referendum number 28 to establish a compulsory state disability insurance was defeated, as was house joint resolution number 10, a constitutional amendment to allow school districts to increase their bonded indebtedness. The electorate accepted the constitutional amendment, senate joint resolution 10, which permits Canadians to own land in the state.

The chief state officers for 1951 were: governor, Arthur B. Langlie; lieutenant governor, Victor A. Meyers; secretary of state, Earl S. Coe; treasurer, Tom Martin; auditor, Cliff Yelle; attorney general, Smith Troy; state superintendent of public instruction, Pearl Wanamaker (elected on nonpartisan basis); state commissioner of public lands, Jack Taylor; state insurance commissioner, William A. Sullivan; chief justice of the state supreme court, E. W. Schwellenbach.

**Education.**—During the school year 1949-50 total enrolment in public schools was 436,014 and average daily attendance 360,848. The total certified personnel numbered 16,082 and the average salary was \$3,443.04. Total current operating expenses were \$90,952,291.30. A total of 1,538 schools were maintained in 591 districts. The combined enrolment for the fall term of 1950 at the University of Washington, the State College of Washington and the three colleges of education was 24,312. Nine junior colleges, integrated with the secondary school program of the state but operated with state funds, had a total enrolment of 5,030 students.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the period Nov. 1949 through Oct. 1950, inclusive, public assistance in the state, including federal direct expenditures and state aid, cost \$107,916,673.47. An average of 161,476 persons received assistance to the total amount of \$103,887,148.93. An average of 36,174 persons received a total of \$12,858,515.44 in general assistance. A total of \$17,273,544.34 was spent on health care. An average of 78,001 old persons received a total of \$55,921,322.78. An average of 46,371 children were assisted to the total amount of \$17,089,592.47. An average of 929 blind persons received a total of \$743,763.90.

On Nov. 1, 1950, ten state charitable institutions had a total population of 10,659 and four correctional institutions had a total of 2,503 inmates. The total appropriation for both programs for the fiscal biennium of April 1, 1949, to March 31, 1951, was \$21,065,300.

**Communications.**—Railroad mileage for the state was 5,218 in 1947. On Jan. 1, 1949, there were 164 airports in Washington of which 102 were in class I. The total mileage of highways in Washington in 1950 was 46,383.71; the total mileage of federal aid highways on the state highway system was 5,897.59; the total mileage of primary and secondary state highways 6,437.32; and the total mileage of rural highways was 39,946.39. For the period Jan. 1, 1949, to Dec. 31, 1949, \$22,181,508 was spent for construction and \$8,206,195 for maintenance.

**Banking and Finance.**—In 1950 the state board of equalization placed the value of taxable real and personal property at \$3,890,583,286 and equalized it for purposes of taxation at \$1,945,291,643. On March 31, 1950, the bonded indebtedness was \$2,260,000; outstanding warrants amounted to a total of \$12,570,195.66; and the treasurer's cash balance stood at \$53,289,165.44. For the year ending March 31, 1950, total receipts were \$327,798,989.37 and disbursements were \$367,720,223.51; cash transfers were \$90,278,139.12.

On June 30, 1950, 121 banks in the state reported a total capital of \$46,750,000; capital surpluses and undivided profits at \$119,945,000; deposits of \$2,087,838,000; and total assets of \$2,232,616,000.

**Agriculture.**—In 1945 the state had 79,887 farms whose acreage totalled 16,719,870 and, of these, 4,147,000 were in 1949 devoted to 52 crops. The total value of Washington crops produced and livestock and livestock products marketed in 1950 was \$615,741,000. Field crops, including seeds, brought \$247,819,000; fruit, nut and berry crops, \$110,114,000; vegetable crops, \$217,753,000; livestock and livestock products, \$215,839,000; and specialty crops, \$20,216,000.

**Manufacturing and Trade.**—In 1947 there were 3,410 manufacturing es-

establishments employing a total of 144,324 persons, who were paid a total of \$438,000,000. The value added by manufacture was \$874,036,000.

Table I.—Leading Field and Fruit Crops of Washington

Crop	1950	1949	Average, 1939-48
Wheat, bu. . . . .	67,582,000	57,511,000	60,302,000
Apples, bu. . . . .	34,592,000	31,820,000	27,764,000
Hay, all, tons . . . . .	1,737,000	1,571,000	1,790,000

were employed, 672,500 in manufacturing.

The output of lumber in 1949 was 3,435,000,000 bd.ft. (estimated); pulp production 1,629,000 tons (estimated); and plywood production for the Pacific northwest was 1,983,000,000 sq.ft. (estimated).

In 1949 commercial fisheries reported a total production of 181,831,000 lb., the wholesale value of which was estimated at \$102,352,140, of which fishermen were paid \$30,941,256.

Table III.—Production of Leading Minerals of Washington

	Amount, 1948	Value, 1948

Mineral Production.—Mineral production for the year ending Dec. 31, 1948, amounted to \$50,498,000, of which metals accounted for \$11,171,715 and nonmetals \$39,326,285.

(H. J. DE.)

**Washington,** DISTRICT OF COLUMBIA, national capital of the United States, was shown by the 1950 U.S. census (preliminary figures) to have a population of 802,178, with 1,457,601 in the metropolitan district, a growth larger in the suburbs than in the city.

The sesquicentennial of the occupation of the federal city as the nation's capital was celebrated during the year. The National Capital Park and Planning commission presented an exhibit designed by Oscar Stonorov at the Corcoran Gallery of Art, showing the progress of planning in the federal city and its environs. The Corcoran gallery also presented an American procession of historic pictures. At the Mellon National Gallery of Art a room was devoted to pictures of those whose work was primarily concerned with the founding of Washington. Included was a picture of the Washington family by Savage, with Gen. and Mrs. George Washington seated on the terrace at Mount Vernon looking at a map of the proposed capital as designed by Maj. Pierre Charles l'Enfant.

The Sesquicentennial commission made possible the building of an amphitheatre in Rock Creek park where Paul Green's pageant, "The Faith of Our Fathers," was shown.

As a part of its Sesquicentennial Citizens Conference on Planning, the American Planning and Civic association collaborated with the American Institute of Architects and other professional groups to present a program on the federal city. On this occasion citations for service were conferred on former Sen. Arthur Capper and former Rep. Louis Cramton, both of

whom had been instrumental in securing legislation of benefit to the nation's capital.

In 1950 there appeared the volume on *Washington, Present and Future, a Summary of the Comprehensive Plan for the National Capital and Its Environs*, issued by the National Capital Park and Planning commission. The plan contemplated the development of regional highway and park systems, with adequate extension of school and recreational facilities, and the redevelopment of slum areas. Recommendations based on social and economic needs for dispersal of federal centres of employment throughout the region were later reinforced by defense considerations.

Under the Capper-Cramton act of 1930 progress was made in the district and near-by Maryland in purchasing parks, parkways and playgrounds. Northern Virginia organized a regional park commission to take advantage of the legislation authorizing purchase of similar areas in the metropolitan district south of the Potomac.

## Wealth and Income, Distribution of. *The Survey of Consumer*

*Finances* in the United States, published by the board of governors of the federal reserve system in 1950, supplied information on the distribution of income in 1949 and liquid assets in early 1950. Four previous surveys had made similar information available for the period 1945-48. The surveys were based on small field canvasses of consumer spending units, defined as all persons living in the same dwelling and related by blood, marriage or adoption who pooled their incomes for their major items of expense.

Survey data on the percentage distribution of spending units according to size of holdings of liquid assets—U.S. government bonds, savings accounts and checking accounts—are provided in Table I. The 1950 data showed a continuation of the major trends that had been in evidence in previous years. The average

liquid asset holdings of spending units declined further and were only a little more than half their 1947 level. Furthermore, there was a continued increase in the percentage of spending units having no liquid assets. About 16,000,000 spending units, or 31% of the total, were in this category in early 1950. On the other hand, it should be noted that the average asset holdings of all the groups with assets increased in 1950 for the first time since 1947.

Table II summarizes data provided by the surveys on the distributions of spending units and total money income according to size of income. While these data had shown a significant upward shift in the income distribution since the end of World War II, there was a small decline in 1949 reflecting the minor economic recession of that year. The postwar expansion of total money income resulted in a shifting of many consumers to

higher income levels. This shifting pervaded the entire income distribution. It was found that when the nation's spending units were ranked into tenths by size of income there were only slight changes from 1945 to 1949 in the proportionate share of total money income received by each tenth.

A longer-term comparison of changes in the distribution of income is afforded by Table III. This shows for two prewar years

Table III.—Percentage of Money Received by Each Fifth of Families and Single Persons

and the full-employment year 1948 the percentage of money income going to each fifth of the total number of families and single persons, ranging from those with the lowest incomes to those with the highest.

From 1935-36 to 1948 there was a redistribution of income in the United States away from the highest income bracket. The second, third and fourth income brackets significantly improved their relative positions, whereas the percentage of total money income received by the highest bracket declined from 53 to 47.

**State Distribution of Income.**—In 1949, the latest year for which department of commerce estimates of state income payments were available in 1950, the flow of income to individuals declined in 34 states. In seven states total income was stable from 1948 to 1949. In the remaining seven states and the District of Columbia there were further advances over the record highs established in 1948.

For the continental United States as a whole, the moderate downward adjustment in economic activity in 1949 was reflected in a 2% decline in aggregate individual incomes—from \$202,000,000,000 to \$198,000,000,000. By far the best regional showing was made by the southwest, where income payments increased 5%. Aggregate income held up at the previous year's level in the far west but declined in the other five regions. (See Table IV.) The declines varied from 1% in the middle east to 7% in the northwest.

The most important aspect of the 1948-49 changes in state income payments was the marked differences between movements in total income and nonfarm income. The general decline in farm income, which amounted to 22% nationally, had a large influence on geographic changes in total income from 1948 to 1949. Aggregate income from nonfarm sources, however, was well maintained. It was approximately stable on a nation-wide basis, actually increased in four regions and declined only 1% in the three other regions.

Per capita income payments (total income divided by total population) were \$1,330 in 1949 for the nation as a whole, 4% less than in the previous year. Although there was wide dis-

parity among the states and regions in per capita income in 1949, as shown by the data in Table IV, the relative differences had narrowed appreciably over two decades.

The percentage by which regional per capita income exceeded the national average dropped in New England from 23 in 1929 to 5 in 1949, in the middle east from 36 to 18 and in the far west from 27 to 21. On the other hand, the three regions with comparatively low average income levels all improved their per capita incomes in relation to the nation's. From 1929 to 1949, average income in the southwest rose from 68% to 88% of that for the country as a whole and in the southeast from 51% to 66%. The margin of the northwest's per capita income below the national average was reduced from 21 in 1929 to only 4 in 1949. In both 1929 and 1949 the per capita income of the large central region was 6% above the United States average. (See also INCOME AND PRODUCT, U.S.)

(M. GT.)

**Great Britain.**—The White Paper on national income published in 1950 gave the distribution of incomes in the United Kingdom for 1948. The official estimates had to be supplemented by an estimate in the number of incomes in the lowest income category, which was made with reference to the estimated total number of income recipients. As in previous years, details were

still insufficient for the lowest group, which comprised one-half of the income recipients.

The tendency already discernible in previous years, a shift from the lower to higher income groups, continued. The number of incomes of less than £250 decreased in comparison with 1947 by 1,000,000, and there was a corresponding increase spread over all the higher groups (it was particularly noticeable in the middle ranges of income). The distribution of incomes after

Table V.—Distribution of Incomes in the United Kingdom, 1948

taxes on income showed little change compared with the previous year. The rate of income taxes was negligible on incomes of less than £500 but rose to about 80% on incomes of more than £10,000. The distribution of incomes was further modified by indirect taxes which, on the whole, fell more heavily on the lower income groups. Compared with 1947, the total of indirect taxes on consumption rose, but this rise was partly offset by a rise in subsidies.

Tax liabilities as a percentage of personal income, including direct and indirect taxes but deducting subsidies, rose in 1948 to a postwar peak of 28% but afterward fell a little. (See also BUDGET, NATIONAL.) (T. BAR.)

**Weather:** see METEOROLOGY.

**West Africa, British:** see BRITISH WEST AFRICA.

**Western European Union:** see EUROPEAN UNION.

**Western Samoa:** see NEW ZEALAND; TRUST TERRITORIES.

**West Indies, British:** see BAHAMAS; BARBADOS; JAMAICA; LEEWARD ISLANDS; TRINIDAD AND TOBAGO; WINDWARD ISLANDS.

**West Virginia.** The 35th state to enter the Union, West Virginia was admitted conditionally on Dec. 31, 1862, and proclaimed a separate state on April 20, 1863, effective 60 days later. It has an area of 24,282 sq.mi., of which about 148 sq.mi. are water surface. The 1950 U.S. census gave the state a population of 2,005,552, or 5.4% more than in 1940. Charleston, population 72,818, is the capital. Other cities in the order of their size are Huntington, 86,160; Wheeling, 58,447; Clarksburg, 31,817; Parkersburg, 29,510; Fairmont, 29,273; Morgantown, 25,446; Weirton, 24,143; Bluefield, 21,341; Beckley, 19,255; South Charleston, 16,627; Martinsburg, 15,566; and Moundsville, 14,759 (cities, 1950 prelim.).

**History.**—As a result of the 1950 election the state legislature was composed of 9 Republicans and 23 Democrats in the senate and 27 Republicans and 67 Democrats in the house of delegates. At the same time William C. Marland, Democrat, was elected attorney general and William H. Ansel, Jr., Democrat, was elected state treasurer, each of them to fill vacancies to which they held executive appointments. In addition to those elected in 1950 the other state officers, all Democrats, were: governor, Okey L. Patteson; secretary of state, D. Pitt O'Brien; auditor, Edgar B. Sims; superintendent of free schools, W. W. Trent; and commissioner of agriculture, J. Blaine McLaughlin.

An amendment to liberalize the state constitution to permit any county of the state, with the approval of 60% of its participating voters in an election, to issue bonds for school building purposes, was approved in 1950, as was also a proposition authorizing a state bond issue of \$90,000,000 to pay bonuses to resident veterans of World War I and World War II. A constitutional amendment to authorize an increase in the salary of a state legislator from \$500 to \$1,000 annually was defeated.

**Education.**—In 1949–50 the total net enrolment of the 4,022 elementary schools was 300,202. For the 380 high schools (junior and senior) it was 138,296. There were 10,342 elementary and 5,550 secondary teachers. Total receipts for the public free school program were \$69,078,916.82, of which \$21,781,107.20 (net) was from collections on general property for local taxing units; \$36,945,515.48 was state aid for the regular program; and \$5,955,612.26 was state aid to county school building programs. Other state funds included: \$37,718.19, aid to crippled children; \$108,834.50, aid to the school lunch program; and \$466,090.95, aid for vocational education. There were nine state-supported institutions of higher learning which had a total enrolment in the first semester of 1949–50 of 8,396, of whom 2,894 were veterans, and a total teaching staff of 439.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In the year ending June 30, 1950, the total expenditures of the state department of health were \$2,583,000, of which \$406,000 was federal funds. The regular expenditures of the department of public assistance totalled \$23,323,406.41, of which \$7,843,591 was for old age assistance; \$343,685, aid to the blind; and \$9,940,271 was aid to dependent children. General relief items and the respective total expenditures were: crippled children, \$477,241.54; medical and hospitalization aid, \$1,133,594.45; correction of vision and prevention of blindness, \$19,682.40; child welfare, \$60,286.74; general assistance, \$1,375,101.75; and boarding care, \$625,940.21. A total of \$1,504,062.32 was spent for personal service, current expense and equipment. Of the total expenditures \$12,850,109.18 was federal funds.

**Communication and Transportation.**—The Kanawha county airport was completed at a total cost of about \$8,300,000; there were in the state 43 licensed airports, 7 licensed seaplane bases and 29 air station operators. The total assessed valuation of the air and bus lines was, however, only \$11,825,000, whereas that of the steam railway companies was \$311,777,300. The mileage of steam railways tended to be stationary at a total of about 7,500, including double tracks and sidings. There were 33,328.61 mi. of improved state roads, of which 28,411.27 were secondary.

**Banking and Finance.**—On June 30, 1950, deposits in 106 state banking and trust companies totalled \$438,030,962.35, and those in the 74 national banks, \$498,742,540.67. Resources of 21 federal savings and loan associations were \$46,157,414.44; of 16 state building and loan associations \$14,080,937; and of 26 industrial loan companies \$18,452,675.68. Total loans of 122 small loan companies were \$19,537,575.66, and 27 state-chartered credit unions had total resources of \$843,238.34.

State receipts for 1949–50 totalled \$243,254,060.13, and the disbursements were \$245,908,820.39. The cash balance in the state treasury on June 30, 1949, was \$49,503,232.44 which left a cash balance as of June 30, 1950, of \$46,848,472.18. The unencumbered balance in the state fund general revenue, as of that date, was, however, only \$13,695,387.77. The net state bonded indebtedness was \$62,214,393.63.

**Agriculture.**—The total gross farm income for 1949 was \$168,937,000. Of this total \$1,918,000 was government payments, \$41,324,000 was from crops and \$125,695,000 was from livestock and livestock products sold and traded. The estimated value of products consumed on farms where produced was \$52,631,000, which left a net cash income of \$116,306,000, or \$9,932,000 less than for 1948.

#### Principal Agricultural Products of West Virginia

Crop	1950	1949	Average, 1939–48
Corn, bu. . . . .	9,287,000	\$11,748,000	11,945,000
Wheat, bu. . . . .	1,221,000	1,424,000	1,588,000
Oats, bu. . . . .	1,568,000	1,530,000	1,752,000
Buckwheat, bu. . . . .	100,000	114,000	189,000
Hay (all), tons . . . . .	1,050,000	1,024,000	961,000
Apples (commercial), bu. . . . .	4,260,000	3,720,000	3,844,000
Potatoes (Irish), bu. . . . .	1,980,000	2,090,000	3,015,000
Barley, bu. . . . .	392,000	390,000	262,000
Tobacco, lb. . . . .	4,160,000	4,384,000	3,024,000

**Industry.**—In 1949–50 industry and business employed 502,681 persons, not including about 83,000 in agriculture, 35,000 in professional services, 23,000 in domestic service, and 8,000 in finance, insurance and real estate. Those employed in industry and business earned an average of \$2,547, or 11.5% less than in 1948–49, and a grand total of \$1,280,219,000, or \$208,944,000 less than in the previous year. In the order of the largest number of persons employed, the largest industrial groups, together with the total wages for each for 1949–50, were: coal mining and coke making 124,330—\$348,950,000; commercial, wholesale and retail 94,595—\$185,217,000; iron, steel and metals 36,550—\$126,609,000; transportation 21,624—\$56,958,000; public agencies, buildings and institutions 21,380—\$41,392,000; chemicals and allied products 19,314—\$73,818,000; building erection and repairs 18,548—\$50,636,000; glass and glassware manufacturing 18,415—\$52,409,000; automobiles and trucks 17,704—\$45,375,000; personal services, not professional or domestic, 15,502—\$26,384,000; lumber and lumber products 12,993—\$22,920,000; clay, stone and allied products 12,982—\$31,507,000; clothing and textile manufacturing 12,412—\$29,702,000; public utilities 12,323—\$35,174,000; food and bev-

rage production and manufacturing 11,346—\$20,026,000; construction, not building, 11,335—\$29,322,000; trucking, express and storage 9,834—\$26,768,000; and oil and gas 8,365—\$21,828,000.

**Mineral Production.**—The production of crude oil, with a total of 2,839,000 bbl. in 1949, was 152,000 bbl. more than in 1948. The 181,310,000,000 cu.ft. of natural gas produced in 1949 was 39,820,000,000 cu.ft. less than in 1948. Coal production, at 122,914,540 tons, was off 45,675,493 as compared with 1948, a loss generally attributed to strikes, and the production of coke, 106,203 tons, was less than half the total for 1948.

(C. H. A.)

**Whaling:** see FISHERIES.

**Wheat.** The U.S. wheat crop of 1950, which amounted to 1,026,755,000 bu., was the seventh consecutive crop of more than 1,000,000,000 bu. The harvested acreage of 61,714,000 ac. (out of 71,396,000 ac. planted) was considerably less than the 76,559,000 harvested acres of 1949. The yield of 16.6 bu. per acre compared with 14.9 bu. per acre in 1949, and 18 bu. per acre (on 73,017,000 harvested acres) in 1948, and an average yield for 1939-48 of 17.0 bu. per acre. Kansas, North Dakota and Montana were the leading producers. (See Table I.)

The 1950 winter wheat crop of 750,666,000 bu. was moderately small compared with the outturn of years since 1943 (895,101,000 bu. in 1949) but near average for the decade. Only 52,887,000 ac. were seeded in the fall of 1949; of that acreage 17.2% was abandoned and 43,816,000 ac. harvested, a reduction of 21% from the 55,129,000 ac. harvested in 1949. The lesser acreage was in line with government acreage allocations, in addition to which drought and green bugs took a heavy toll, especially in Texas. Yields averaged 17.1 bu. per acre, well above the 16.2 bu. per acre of 1949.

Spring wheat production, mostly in the northern Great Plains, was estimated at 276,089,000 bu., 12% more than the 246,087,000 bu. of 1949. Harvested acreage of 17,925,000 was considerably smaller (16%) than the 21,430,000 ac. of 1949, partly because of the reduction in official acreage allotments and partly because of the very late, wet, cool planting season. Yields were generally favourable at 15.4 bu. per acre compared with 11.5 bu. per acre in 1949 and 15.7 bu. per acre average for the previous decade.

Table I.—U.S. Wheat Production by Leading States  
(In thousands of bushels)

State	1950	1949	Average, 1939-48
Kansas . . . . .	178,060	164,208	188,577
North Dakota . . . . .	120,724	112,909	134,228
Montana . . . . .	93,958	64,080	67,048
Nebraska . . . . .	84,788	54,408	61,736
Washington . . . . .	67,582	57,511	60,302
Ohio . . . . .	46,596	60,002	44,400
Oklahoma . . . . .	43,614	88,725	71,156
Colorado . . . . .	39,924	49,551	32,247
Idaho . . . . .	37,350	38,106	29,648
South Dakota . . . . .	33,978	34,276	39,747
Indiana . . . . .	31,798	39,150	28,258
Michigan . . . . .	29,666	35,019	21,659
Illinois . . . . .	27,538	46,856	28,174
Missouri . . . . .	24,516	35,028	22,358
Oregon . . . . .	23,693	23,203	21,906
Texas . . . . .	22,712	100,398	56,350
Pennsylvania . . . . .	19,184	21,114	18,158
Minnesota . . . . .	15,410	19,971	22,109
California . . . . .	13,671	11,470	11,037
New York . . . . .	12,585	11,760	7,856

Of the total spring wheat, 36,064,000 bu. were of the durum type. Yields averaged 13.2 bu. per acre, compared with 11.0 bu. per acre in 1949. Acreage of 2,729,000 was 23% smaller than in 1949; black stem rust and frost both damaged the crop moderately.

In regard to classes of wheat, the notable change for 1950 was a sharp decline in both hard red and soft red winter wheats. A crop of 471,079,000 bu. of hard red winter wheat was produced, as compared with 570,232,000 bu. in 1949. Soft red winter wheat fell to 165,931,000 bu. from 214,418,000 bu. in 1949. Hard red spring wheat increased to 207,304,000 bu., as compared with 176,899,000 bu. in the previous year. Pacific northwest white wheat increased to 145,646,000 bu., thus leading to a difficult storage problem in that area.

U.S. exports of wheat and flour (in wheat equivalent) in 1949-50 were 298,300,000 bu., compared with an all-time record of 502,100,000 bu. in 1948-49 and less than 100,000,000 bu. average before World War II. Of that amount, about 195,000,000 bu. went to Economic Cooperation administration participants, and another 64,000,000 bu. to the far east, largely Japan.

The wheat situation at the end of 1950 in summary was: carry-over stocks of 420,018,000 bu. plus the 1950 harvest of 1,026,755,000 bu. provided a total supply of 1,446,773,000 bu. (compared with 1,448,955,000 bu. total supply the year before). Domestic requirements during 1950-51 were estimated at about 725,000,000 bu., including food, seed and feed. Thus, 722,000,000 bu. appeared to be available for export and carry-over, and exports were forecast at not more than 265,000,000 bu. It was expected that year-end stocks on July 1, 1951, would be at least 450,000,000 bu. Commodity Credit corporation holdings on July 1, 1950, accounted for 361,200,000 bu. of the total 420,000,000 bu. carry-over.

Wheat prices to producers fluctuated near the price support loan level of \$1.99 per bushel, rising from \$1.92 in January to \$2.04 per bushel in May, then dropping to \$1.91 in October and recovering to \$2.03 in December. The season average price to producers for the 1950 crop was estimated at \$1.98 per bushel (compared with \$1.88 for the 1949 crop). A government loan of not less than \$1.99 per bushel at the farm on the 1951 crop was announced.

The world wheat crop of 1950 was estimated at 6,405,000,000 bu., compared with 6,270,000,000 bu. in 1949 and an average of slightly more than 6,000,000,000 bu. in 1935-39 (See Table II). Production in North America, though 37% more than the pre-World War II average, fell below earlier expectation, largely because of a decline in Canadian production as a result of unseasonable frost.

The wheat harvest of the Soviet Union was estimated as the best since World War II, although at 1,110,000,000 bu. it was 130,000,000 bu. below the prewar average. Asia's total harvest of 1,630,000,000 bu. exceeded that of 1949, the increase being accounted for principally by Turkey and India.

Preliminary forecasts based largely on acreage and weather suggested an Argentinian crop of about 230,000,000 bu. and an

\*Revised estimates by the U.S. Department of Agriculture on basis of incomplete reports from several countries with adjustments for year of harvest, and including allowance for missing data and forecasts for crops being harvested.

Australian outturn of 190,000,000 bu., the latter comparing with 218,106,000 bu. in 1949.

World exports of wheat and flour in 1949-50 were about 820,000,000 bu., compared with 958,000,000 bu. in 1948-49. The pre-World War II rate was about 560,000,000 bu. Carry-over stocks on July 1, 1950, in the four major exporting countries were 783,000,000 bu., 18% more than in 1949 and 71% larger than the pre-war average.

The International Wheat agreement in its first full year of operation included 44 participating countries and 432,000,000 bu. of the 820,000,000 bu. of wheat moving in world trade. U.S. sales under the agreement were about 163,000,000 bu. against an ad-

justed quota of 197,000,000 bu. The U.S. export quota in 1950-51 was about 230,000,000 bu., and as of December more than 100,000,000 bu. had moved under the agreement. Germany was admitted as an importing member, whereas consideration of Japan's application was postponed.

At the end of 1950 indications were that the planted acreage for the winter wheat crop to be harvested in the U.S. in 1951 would be approximately 6% more than in 1949. Favourable conditions of sown acreage suggested a winter wheat crop of 899,096,000 bu., which, with approximately 250,000,000 bu. of spring wheat, would give a preliminary estimate for the 1951 crop of 1,150,000,000 bu. (See also FLOUR; FOOD SUPPLY OF THE WORLD.)

FILMS of 1950.—*Turn the Soil* (Australian News and Information Bureau). (J. K. R.)

**Wholesale Trade:** see BUSINESS REVIEW.

**Wildlife Conservation.** Approximately one out of every seven inhabitants of the United States fished or hunted or did both in 1950, according to the 1951 annual report of the secretary of the interior. No index to the national numerical total of nonhunting or nonfishing recreationists dependent on an abundant wildlife was available. Reports of hunting licences sold by the states and tabulated by the federal fish and wildlife service, however, showed that a total of 12,626,539 such licences was issued in the 48 states during the fiscal year ended June 30, 1950. In addition, the service reported the sale during this period of 1,954,734 federal migratory bird hunting stamps, the so-called duck stamps required of all wildfowl hunters over 16 years of age.

Preservation of wildlife in the face of this hunting pressure and in the face of the continually increasing number of projects for the use of wildlife habitat for other purposes remained one of the important concerns of U.S. conservationists in 1950.

National interest in waterfowl was particularly high, as these birds are outstanding among the game birds given federal protection in accordance with international agreements for the conservation of migratory birds. The 1950 annual estimate by the fish and wildlife service, based on a January "inventory" but completed and announced in April, indicated a decrease of nearly one-fourth in the waterfowl populations of the continent. The increases hoped for when the liberalized shooting regulations were adopted in 1949 had not materialized. Nevertheless, the year's hunting rules adopted by Secretary of the Interior Oscar Chapman in August provided seasons of the same length as in 1949 in the Atlantic and central fly way states and increased the length of the season in the Pacific fly way states, shortening the season in only one of the country's four fly ways; namely, in the Mississippi fly way, where it was cut from 40 to 35 days.

A new official list of 522 migratory birds protected by federal law, announced in May, included 65 species never before listed, which investigations had proved to be migratory under the terms of treaties with Great Britain and/or Mexico. The additions included such conspicuous birds as the cardinal, road runner and fork-tailed flycatcher.

In addition to providing legal protection for migratory birds, the federal government maintained a system of 282 national wildlife refuges, as well as sanctuary areas within the national park system. Wildlife conservation was also among the objectives in the multiple-purpose administration of the national forests. Under the terms of the federal aid for Wildlife Restoration act the sum of \$8,673,517 from the federal excise tax on the manufacturing of sporting arms and ammunition was apportioned to the 48 states in Sept. 1950 for state projects. The states were required by the act to contribute 25% of the cost of their programs and to obtain federal approval of the proposed projects.

THREE ALBINOS in a herd of deer photographed by Staber W. Reese of the Wisconsin conservation department. Reese waited six days for his picture, believed to be the first ever made of multiple albinos, which occur about once in 40,000 births

Special efforts were made by conservationists to provide sanctuaries for forms threatened with extinction. Creation of a 1,300-ac. sanctuary containing all the North American area in which ivory-billed woodpeckers had been observed since 1947 was announced in October by the Florida game and fresh-water fish commission and the National Audubon society.

**BIBLIOGRAPHY.**—The principal source of wildlife information in the United States is the fish and wildlife service, U.S. department of the interior, Washington 25, D.C., which has lists of federal publications, including a list of officials and organizations concerned with wildlife conservation, and *Wildlife Review*, a periodical listing books, articles in journals and other publications and including critical notations. Scientific periodicals are notably *Journal of Wildlife Management*, *Journal of Mammalogy* and *The Auk: A Quarterly Journal of Ornithology*, published respectively by the Wildlife Society, the American Society of Mammalogists and the American Ornithologists' Union. (See also NATIONAL PARKS AND MONUMENTS.) (H. Z.)

**Canada.**—Full federal scientific investigation of wildlife ten-year cycles reached the discussion stages in 1950. When delegates of the federal-provincial wildlife conference urged federal authorities to control aircraft for hunting, department of transport officials pointed out that aerial hunting could be regulated by the Aeronautics act if conservation authorities wanted to use it. The federal government introduced regulations to preserve seals as a food supply for Eskimos and caribou for Indians.

The fisheries research board undertook tattooing of Hudson bay belugas (porpoise) to learn the extent and direction of migrations; management of trout streams in Prince Edward Island to produce larger fish; and clearance of 150 streams in British Columbia to increase salmon.

Ducks Unlimited (Canada) authorized 58 conservation projects, mostly concerned with slough deepening, in the prairie provinces.

Saskatchewan opened 13 new game preserves; Ontario commenced air patrol of game fishing in the St. Lawrence river, placed 250,000,000 whitefish fry in Ontario commercial waters, opened a guiding school and made sportsmen responsible for using licensed guides; Quebec restricted moose hunting and made Canada's first confiscation of an aeroplane used for illegal fishing; New Brunswick announced that 1,000,000 deer had been killed in the 1900-50 period and that annual kills of 20,000 could be maintained; Nova Scotia declared that the annual kill of 1.5 deer per square mile (about 30,000 per year) was inadequate to prevent overgrazing, and urged tourists to hunt. (C. Cy.)

**Other Countries.**—In India attempts were made to call a halt to the destruction of wildlife caused by the political changes and upheaval of recent years. A census of the only remaining Asiatic lions, carried out in Kathiawar, showed a total of at least 220 and indicated that these animals were not decreasing in number. The animals in the greatest danger of extinction in the whole of Asia being the three species of Asiatic rhinoceros, steps were taken to continue the protection of the great Indian rhinoceros in Nepal and in the Kasiranga reserve in Assam. Little information was obtained on the other two Asiatic rhinoceroses.

The government of Ceylon established a wild life department for improvements in nature reserves and for the acquisition of private land in the Katagamuwa sanctuary.

It was perhaps in Africa that the increase of human population and the spread of agriculture most threatened wild places, and it was generally realized that the only hope of preserving even a remnant of the vast herds of antelopes which had once roamed the plains lay in the provision of large national parks. In Kenya four national parks and four national reserves of faunal importance were established. In Tanganyika the boundaries of the Serengeti National park were agreed upon, to provide sanctuary for the largest remaining assemblage of African wild animals. The game laws of Tanganyika were revised and many significant changes made to the advantage of wild nature. In Northern Rhodesia the Kafue National park was proclaimed, covering more than 8,000 sq.mi. Southern Rhodesia started to establish a national parks department, but the policy of game slaughter in tsetse fly control operations was continued. Strenuous efforts were made by the Wild Life Protection society of South Africa to save indigenous animals from overexploitation. In particular, in February the exportation of all kinds of land tortoises from Cape Province was prohibited by proclamation. The status of the Cape mountain zebra also received particular attention; the total number still surviving was estimated to be fewer than 100.

Australia faced a special task in the protection of its wildlife; not only the acts of man but also the ravages of his imported animals, the rabbit, the cat and the fox, had to be counteracted. In New South Wales a fauna protection panel was set up to administer the Fauna Protection act. Immediate steps were taken for the preservation of the koala.

New Zealand made special efforts to preserve its unique native birds, particularly the recently rediscovered takahe or notornis, the kakapo or owl parrot and the brown duck or red teal. (C. L. BE.)

**Wilson, Charles Edward** (1886— ), U.S. industrialist and government official. was born on Nov. 18 in New York, N.Y. He began working in the shipping department of the General Electric company in New York at the age of 13, meanwhile continuing his education in night school. He moved up through the organization, successively serving in the accounting, production, engineering, manufacturing and marketing departments. From 1930 to 1937 he was manager of the company's merchandising department and a vice-president. From 1937 to 1939 he served as executive vice-president having been also elected to the board of directors in 1937. On Jan. 1, 1940, he became president of the company.

He supervised General Electric's rapid expansion during the World War II production emergency, until Sept. 1942 when he became vice-chairman of the War Production board, the top industrial and economic control agency of the World War II emergency government organization. In Feb. 1943 he became executive vice-chairman of the WPB, serving in that capacity until Feb. 1944.

The need for rapid rearmament following the outbreak of war in Korea in 1950 impelled Pres. H. S. Truman to set up a new over-all defense production agency; Wilson agreed to head it. On Dec. 16 the president signed an executive order creating the new Office of Defense Mobilization, and on Dec. 21 Wilson was sworn in as its director.

**Windward Islands.** The British Windward Islands (in the Caribbean sea) comprise the four islands of Dominica, St. Lucia, St. Vincent and Grenada—each ranking as a separate colony for internal administration—together with the Grenadines, which lie between St. Vincent and Grenada and are associated partly with the one and partly with the other. Total area: 821 sq.mi. Total pop. (1949 est.): 268,000. Governor (1950): Sir Robert Arundell.

**History.**—Details of important changes in the constitutions of the four colonies were announced on July 24, 1950. The most important of them was that the franchise should be based on universal adult suffrage. The three elected members of the executive council were to be chosen by vote of the whole legislative council; and the legislative council would be empowered to remove from the executive council, by a two-thirds majority vote, any member thus selected. The constitutional status of the executive council as advisory to the governor would remain unchanged; and the governor himself would continue to retain reserve powers. The first elections under the new constitution were to be held in 1951. Grenada was the first of the British West Indian colonies to accept the report of the Standing Closer Association committee proposing a federal government for these colonies. By the end of the year the three other Windward Island colonies had also done so.

Dominica, the least developed of the islands, was the scene of special activity during 1950, with the Colonial Development corporation carrying out operations in connection with the citrus industry and road development being pushed forward with the aid of colonial development funds. The work of rebuilding Castries, the capital of St. Lucia, which was almost wholly destroyed by fire in 1948, went steadily ahead.

**Finance and Trade.**—Currency: British West Indian dollar, valued at 58.33 cents U.S. (\$4.80 = £1 sterling).

#### Windward Islands

Dominica	Grenada	St. Lucia	St. Vincent
B.W.I. \$1,181,767	B.W.I. \$2,504,800	B.W.I. \$1,905,902	B.W.I. \$1,337,922

†Including re-exports.

PARISIANS SAMPLING FREE WINE in the Montmartre where *clairet*, a wine of the Bordeaux region, was reintroduced to Paris in the spring of 1950. *Clairer* could be drunk after only 12 months of aging

Principal exports: arrowroot, bananas, citrus products, cocoa, copra, cotton (sea-island), mace, nutmegs and sugar. (P. H.-My.)

**Wines.** France once again was the largest producer of wine in 1950. The total production of famous growth (*Appellation contrôlée*) wines amounted to 175,000,000 gal. against a total of 118,500,000 gal. in 1949. The famous growths of Burgundy and Rhône produced 24,400,000 gal. against 16,900,000 the previous year, the quality being good, almost equal to the 1949 wines, and Bordeaux 84,000,000 gal. of excellent quality against the 1949 yield of 59,000,000. Champagne production was large but of only fair quality. During 1950 government control helped to stabilize wine prices which started falling in 1949. Algerian production was close to the ten-year high of 1949.

World Production of Wine  
(Millions of gallons)

	5,186.2	4,450.0		

\*Estimate. Countries like the United States, marked "No variation" in the above table, produce uniform wines from year to year because of stable climatic conditions and methods of production used.

In Spain, the Jerez district produced a below-normal 8,120,000 gal. of good quality sherry against the very small 5,560,000 of the previous year. Of the Portuguese wines, port wine, controlled to world demand, was held to 4,675,000 gal.

United States production was well ahead of 1949 and approximately equal to that of 1948. About 90% of the production was from California. The combination of a short crop and a marketing order for grape stabilization which shunted grapes into raisins resulted in price increases of 100% to 150%. (J. WE.)

**Wisconsin.** One of the north central states of the United States, Wisconsin, popularly called the "Badger state," entered the union as the 30th state in 1848. Area: 56,154 sq.mi. of which 1,439 sq.mi. are water. The population by the federal census as of April 1, 1950, was 3,434,575, an increase of

WALTER J. KOHLER, JR., Republican, elected governor of Wisconsin, Nov. 7, 1950

9.5% over the federal census figures of 1940. Capital, Madison (1950 census, preliminary figures, 95,594). Milwaukee is the largest city with an estimated population of 632,651. Other large cities are Racine (70,749), Kenosha (54,360), Green Bay (52,443) and La Crosse (47,396).

**History.**—The renovation of the state's public welfare program inaugurated by the 1949 legislature was substantially completed in 1950. A new director, John Tramburg, was appointed, additional specialists and staff for the welfare institutions were hired and a substantial construction program was begun.

In the November elections, the Republicans carried the entire slate of state officers and picked up one additional seat in congress. The final totals for state offices were: for governor, Walter J. Kohler, Jr., (Rep.) 605,649, Carl W. Thompson (Dem.) 525,319, M. Michael Essin (People's Progressive) 3,735, William O. Hart (Soc.) 3,384; for lieutenant governor, George M. Smith (Rep. incumbent) 617,668, Eugene R. Clifford (Dem.) 480,696, Rudolph Beyer (Soc.) 4,272; for secretary of state, Fred R. Zimmerman (Rep. incumbent) 689,356, Nels Justeson (Dem.) 408,790, Linton Jahr (P. Prog.) 3,658, Fred Dahir (Soc.) 3,705; for state treasurer, Warren R. Smith (Rep. incumbent) 652,093, Paul L. McGettigan (Dem.) 428,339, Bertha Kurki (P. Prog.) 4,110, Marguerite Habelman (Soc.) 4,380; for attorney general, Vernon W. Thomson (Rep.) 615,309, Henry Reuss (Dem.) 470,057, Frank G. Stoll (P. Prog.) 3,893, Anna Mae Davis (Soc.) 4,075.

Members of congress re-elected were: Sen. Alexander Wiley (Rep.); Congressmen Lawrence H. Smith (Rep., 1st district), Glenn R. Davis (Rep., 2nd district), Gardner R. Withrow (Rep., 3rd district), Clement J. Zablocki (Dem., 4th district), Reid F. Murray (Rep., 7th district), John W. Byrnes (Rep., 8th district), Merlin Hull (Rep., 9th district), Alvin E. O'Konski (Rep., 10th district).

Charles J. Kersten (Rep.) defeated Andrew J. Biemiller (Dem.) in the 5th district. William K. Van Pelt (Rep.) succeeded Frank B. Keefe (Rep.) in the 6th.

George F. Watson was superintendent of public instruction; Oscar M. Fritz was chief justice of the supreme court.

**Education.**—There were 5,679 elementary schools and approximately 450 secondary schools, 24 county normal schools and 9 teachers' colleges in 1949-50. Enrolment in the elementary schools was 356,973; in the secondary schools it totalled 140,701; and in county normal schools 867. Elementary schools employed 14,240 teachers, while secondary schools had 6,674 and the county normal schools had 98. The teachers' colleges had 595 faculty members teaching 9,977 college and 2,260 training school students. State aid for education in the fiscal year 1948-49 amounted to \$11,448,023. Total expenditures in all elementary and secondary schools were \$102,906,770.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The number of cases receiving public assistance as of June 30, 1950, was as follows: general relief 8,238; old-age assistance 52,840; aid to the blind 1,406; aid to the totally and permanently disabled 700; dependent children in their own or a relative's home 9,357; dependent children in foster homes 1,420—a total of 65,543 households. Expenditures for public assistance in the year ending June 30, 1950, were: general relief \$6,435,102; old-age assistance \$29,634,130; aid to blind \$819,601; aid to the totally and permanently disabled \$494,408; aid to dependent children in their own or a relative's home \$10,169,079; aid to dependent children in foster homes \$659,757—making a grand total of \$48,212,077. Civilian unemployment benefit payments during the calendar year 1950 were \$13,061,617 as against \$19,626,899 in 1949 and \$4,895,635 in 1948. The contributions on pay rolls for 1949 totalled \$12,009,761 as compared with \$10,788,433 for 1948 and \$16,292,966 in 1947. Wisconsin's 12 charitable, mental and correctional institutions during the year ending June 30, 1950, were operated at a cost of \$10,151,262. The average daily popula-

tion for June 1950 was 9,991.

**Communications.**—Public highways as of Jan. 1, 1950, totalled 94,364 mi. divided as follows: 85,595 (towns), 2,487 (villages) and 6,282 (cities). Expenditures by the highway commission for the fiscal year 1949-50 were \$70,345,273. The total railway mileage (steam and electric) as of Dec. 31, 1949, was 6,649.73 with 68.41 mi. of trolley coach route (trackless).

There were 936,282 telephones, and on Aug. 1, 1950, there were 167 airports and 14 seaplane bases.

**Banking and Finance.**—At the end of 1949 there were 95 national banks and 461 state banks (an increase of one). National banks had deposits of \$1,425,443,000 and assets of \$1,519,399,000. Deposits in state banks totalled \$1,544,112,069, and their assets were \$1,653,260,791. The 534 credit unions (11 less than in 1948) listed assets of \$35,620,734 (an increase of \$5,000,000). Assets of the 113 savings and loan associations totalled \$224,413,858 (an increase of more than \$23,000,000).

State receipts for the fiscal year ending June 30, 1950, were \$200,992,188; disbursements \$207,387,333. Taxes collected by the state and returned to local subdivisions totalled \$50,444,117; agency collections returned to counties were \$3,004,915; state aids amounted to \$62,263,258.

**Agriculture.**—Total acreage harvested in 1950 was 10,157,600; in 1949 it was 10,215,300. Cash receipts in 1949 amounted to \$952,428,000, consisting of \$123,952,000 from crops and \$828,476,000 from livestock. Wisconsin's crop production in 1949 was good and continued so through 1950. The state's hay crop for 1950 was the largest in five years. Barley and potatoes set new records, but the corn crop was less than the record set in 1949 and only slightly above the state's ten-year average.

Table I.—Leading Agricultural Products of Wisconsin

	1950	1949	Average, 1939-48
Corn (bu.) . . . . .	104,304,000	129,800,000	103,589,000
Oats (bu.) . . . . .	141,814,000	119,884,000	108,370,000
Canning peas (lb.) . . . . .	257,460,000	220,420,000	238,140,000
All tame hay (tons) . . . . .	6,945,000	6,178,000	6,690,000
All clover and timothy (tons) . . . . .	2,562,000	2,280,000	4,072,000
Alfalfa (tons) . . . . .	4,000,000	3,554,000	2,216,000

**Manufacturing.**—The total value of Wisconsin manufactured products in 1947 was \$2,260,574,000, an increase of approximately 230% over the 1939 value. Most important industries in value of manufactured products were machinery (except electrical), fabricated metal products, motor vehicles, malt and malt liquors and primary metal industries. In 1949 the estimated average number of wage earners in Wisconsin manufacturing establishments was 312,900 as compared with 337,100 in 1948, and 339,700 in 1947; while the average estimated weekly pay roll had decreased from \$19,200,000 in 1948 to \$17,837,000 in 1949.

Table II.—Value of Mineral Products of Wisconsin

Mineral	1949	1948
Stone . . . . .	\$13,636,000	\$12,581,046
Iron ore . . . . .	6,325,987*	5,743,606*
Zinc . . . . .	1,313,160	2,091,824
Sand and gravel . . . . .	10,456,561	11,370,089

\*Estimated.

**Mineral Production.**—In 1949 the value of all mineral production in Wisconsin was \$35,878,000 as compared with \$37,108,000 in 1948 and \$34,491,000 in 1947. (C. L. L.)

**Woman's Christian Temperance Union, National:** see SOCIETIES AND ASSOCIATIONS.

**Women's Clubs, General Federation of:** see SOCIETIES AND ASSOCIATIONS.

**Wool.** In 1950 world wool production was estimated to have increased about 2% over 1949, but the total was far below world consumption. The improvement in production was accounted for by increases of about 63,000,000 lb. in apparel types and 20,000,000 lb. in carpet types. United States and Argentina were probably the only major wool-producing nations in the world to show declines in both sheep numbers and wool produc-

World Wool Production

Country	(greasy shorn pounds)	
	1950	1949
Australia . . . . .	1,129,000,000	1,045,500,000

Source: Computed by the New York Wool Exchange from data released by the U.S. Department of Commerce and the International Wool Secretariat.

tion during 1950. Australian wool production improved, although Australia lost many thousands of sheep because of floods in the lowlands.

The principal wool-producing countries and the amount of wool produced by each are shown in the table.

For the fifth successive year consumption of wools exceeded production. The use of apparel and carpet wools in 1950 accounted for about 4,476,000,000 lb., or about 16% more than was produced. The release of preliminary statistics during the year made it apparent that most, if not all, of the increased consumption was attributed to the broadening use of apparel wools. The consumption of that type of wool alone appeared to have exceeded production by about 600,000,000 lb., or almost 20%. It was estimated, however, that the visible supply of apparel wools was almost 5,000,000,000 lb. Therefore, consumption of about 3,628,000,000 lb. still left a carry-over of nearly 1,400,000,000 lb., compared with about 2,000,000,000 lb. at the end of 1949. The excess of demand over supply was instrumental in the liquidation of most of the wartime accumulation of wools held by the United Kingdom Wool Disposals, Ltd., and by the Commodity Credit corporation of the United States. By 1950 these agencies were no longer important factors as sources of wool supply.

Even during the first six months, when the world was relatively peaceful, consumer demand for wool garments caused wool to be used at a much faster rate than it was produced. In early summer, after the outbreak of hostilities in Korea, the demand for apparel wools was greatly increased. So great was this world-wide demand for wool that buyers contracted for 1951 clips; *i.e.*, shorn wools, many months before it would be shorn. Although depleted wool stocks were reported in all major wool-growing countries, supply was adequate for all demand.

Argentina alone accounted for about 510,000,000 lb. of wool by means of export and local consumption, compared with only 292,000,000 lb. in 1949. It was estimated that the United States imported about 700,000,000 lb. of wool in 1950, or more than twice the 300,000,000 lb. imported in 1949. The re-entry of the U.S.S.R. as a large wool buyer in Australia, together with the rebirth of the Japanese wool-importing industry, made still further inroads into world wool stocks.

In recent years the major wool-producing countries had been enlarging their own wool-processing and -manufacturing facilities. This was particularly true in Australia, South Africa and Argentina. These three countries before World War II processed a combined total of about 157,000,000 lb. of wool annually. In 1950 it was estimated that they processed about 430,000,000 lb. A large part of this increased use of wools by these three countries was for broadening their export of wool manufactures or semimanufactures, and not for local consumption.

Wool prices in the United States started the year well above the government support level, and they rose progressively throughout the 12 months. As a result, all United States grown wools moved directly to consuming markets, rather than to the government purchasing agency. From a price of \$1.57 per clean pound in Boston for fine wools in January, a gradual rise occurred during the first half of the year to \$1.78. The final six months, however, showed record-breaking prices, as the same wools sold around the close of the year at \$2.70, a net rise of \$1.13 per pound, or 72% for the year.

Using Australian wools as a pattern for foreign wools, prices of fine Australian wools, duty paid in Boston, American yield, sold at \$1.63 per pound in January. At the end of the Australian auctions in June these same wools sold at \$2.12. When the auctions resumed in September, initial sales were up as much as 45% from the end of June, and much higher prices prevailed before the end of the year.

Toward the close of 1950 Australian fine wools were quoted

in Boston at more than \$3.10 per clean pound, a price never before reached in the history of the wool industry, and a net rise of over \$1.47, or 90%, during the year. (See also TEXTILE INDUSTRY.)

FILMS OF 1950.—*Goddess of Merchants* (British Information Services); *Shearing at Big Billabong* (Australian News and Information Bureau). (S. L. L.)

**Words and Meanings, New.** English adds many new words to its vocabulary every year, some destined to live long, others to die soon. The words listed below, pertaining largely to 1949–50, are but a small residue of those collected by the committee preparing this article.

Several groups of the coinages below may be commented upon briefly. As usual, scientific and technological advances were well represented among the new words and meanings: witness “auto-tronic elevator,” “berkelium,” “californium,” “Coxsackie virus,” “nerve gas,” “radio star,” “shaped charge,” “subminiaturization,” “terramycin,” “Vidicon” and “Viomycin.” New terms like “Antifa,” “Baltic Wall,” “defactoist,” “deviationism,” “integration,” “Rok,” “third force” and “Uniscan” reflected the international scene. The U.S. scene was represented by a number of interesting coinages in fields from national politics to fashions: for example, “air coach,” “bopera,” “Braford,” “charactonym,” “guilt by association,” “guitar look,” “mambo,” “McCarthyism,” “re-examinist,” “space opera” and “theatre-in-the-round.”

Americans also talked about “colorcasts,” “dot,” “field” and “line sequential systems,” and were interested in whether or not their television sets were “compatible.”

The words listed below became prominent or were seemingly used for the first time during 1949 and 1950. Dates within the parentheses following a word or definition indicate the first recorded use of the new word or meaning in the files of the committee.

A preceding hyphen means that the word or meaning is suspected of being older than the date given. If no date is given, the first record on file is 1950.

**ACE.** Adrenal cortex extract, said to be effective in checking alcoholism.

**Aggressor Republic.** A mythical totalitarian enemy which United States forces had been fighting in practice exercises since 1946.

**air coach.** An air liner with inexpensive accommodations. (–1948)

**air-to-air missile.** A type of guided missile launched from one plane in flight toward another also in flight. (1949)

**air-to-surface missile.** An aerial bomb or torpedo launched from a plane and guided from it. (–1950)

**Anglico.** Acronym of Air and Naval Gunfire Liaison company.

**Antifa, n.** General term for German underground resistance (*antifascist*) organizations. (1949)

**apartheid, n.** The doctrine of “apartness, separateness” of the South African Nationalist party, holding that the various South African racial groups should intermingle only in business and as master and servant. (–1949)

**arena staging, arena theatre.** A theatre-in-the-round (*q.v.*).

**autotronic elevator.** An automatic, electronically operated elevator capable of moving at a rate of 700 ft. a minute. (–1949)

**Baltic Wall.** Russian defenses along the Baltic seacoast.

**berkelium, n.** Suggested name for the synthetic element no. 97, produced by the University of California's 60-in. cyclotron. Named after Berkeley, Calif., it bears the symbol Bk.

**bird, n.** Nickname for a 1,400-lb. air-borne magnetometer. (1948)

**Boogie-Woogie boat.** An experimental boat of the royal air force started, reversed and steered by different musical tones originating in a mother ship.

**bopera, (bop + opera), n.** A night club, restaurant or the like specializing in bop music. (1948)

**Braford, n.** Cattle crossbred from Brahman and Hereford. (1947)

**Bumper missile, rocket.** A rocket with a booster which continues it on its way after its initial supply of fuel has been consumed.

**californium, (california + ium), n.** Synthetic radioactive element no. 98,

artificially created at the University of California by the bombardment of curium, element no. 96.

**captive audience.** An audience that has no choice but to listen to a broadcast.

**catastrophic coverage.** Health insurance designed to meet costly, unforeseen illnesses.

**central staging.** See *theatre-in-the-round*.

**characteronym** (Gr. *charakter* "mark, stamp" + *onym* "name"), *n.* A name denoting a character's occupation or outstanding trait. (1949)

**Cinca.** Commander-In-Chief-Alaska.

**Cinerama.** A type of motion picture projected onto a screen with an arc that covers a field of vision about 146° wide and 55½° high. Trade-mark.

**colorcast, n.** A broadcast of colour television.

**color conditioning.** The use of colours to which people react favourably. (1947)

**compatibility, n.** *Television.* The condition existing when colour television can be seen on existing sets in black and white without the installation of an adapter. (1949) **compatible, adj.** (1949)

**Contoura, n.** Trade-mark of a small camera designed to photograph curved surfaces such as those on a book page. (1949)

**Coxsackie virus.** Any of a group of mysterious filterable viruses, the first of which was isolated in a patient in Coxsackie, N.Y., causing symptoms ranging from those of a light cold to poliomyelitis.

**death sand.** Radioactivated dust which, spread over enemy territory, would serve as an invisible deadly weapon.

**defactoist, n.** One who recognizes a *de facto* government.

**demoth(ball), v.** To remove the preservative plastic covering from (a ship, plane, other vehicle, large piece of equipment).

**deviationism, n.** Nonconformity to the Communist line. (1948) **deviationist, n.** (1942)

**dianetics, (modification of *dianoetic*), n.** A system of psychotherapy claiming to relieve psychosomatic ills through working on the submind.

**disciplined fabric.** Cotton cloth treated to resist creasing and shrinking.

**DO.** Symbol for a defense order with a high priority.

**DOCA.** Short for desoxycorticosteroneacetate, an adrenal hormone used in the treatment of arthritis.

**dot sequential system.** A system of colour television. (1949)

**Eager Beaver.** Nickname of a 2½-ton Reo truck with a waterproofed engine that enables the vehicle to operate in water as deep as seven feet.

**electrohyetograph, n.** A machine which can predict whether a prospective mother's labour will be normal or abnormal and whether given symptoms are true or false labour pains.

**eye, n.** *Fig.* A football scout. (1949)

**femineered, adj.** Designed by a woman.

**field sequential system.** A system of colour television. (1949)

**fire fight.** Close rifle fighting.

**flame out, v. i.** Of a jet plane, to exhaust its supply of fuel. (1948)

**flying banana.** Nickname of the U.S. navy HRP-1 elongated helicopter. (1949)

**Fritalux, n.** The projected economic union of France, Italy, Belgium, the Netherlands and Luxembourg (1949)

**fusion bomb.** A bomb in which atomic nuclei would be caused to combine with a release of energy; contrasted with fission, in which a large nucleus breaks into parts having a total mass less than the original nucleus. Fission takes place with a heavy element like uranium 235, fusion with a light element like hydrogen.

**glamourlovely, n.** A beautiful, buxom girl. (1949)

**glide path.** The path of descent of an aeroplane as marked out by a radio beam. (1946)

**guilt by association.** The presumption that one shares the guilt of one's associates. (-1950)

**guitar look.** A style of women's contour with narrow waist and wide hips and bust.

**H-bomb.** Short for hydrogen bomb.

**heliport.** A helicopter airport. (-1949)

**Hell bomb.** The hydrogen bomb.

**integration, n.** *Specif.* Economic co-operation among western European countries, the aim of the Marshall plan. (1949)

**K-day.** The day of the beginning of hostilities in Korea.

**line sequential system.** A system of colour television. (1949)

**litter-bug.** One who throws wastepaper about. (1947)

**loon, n.** A guided missile of the U.S. navy, equipped with a ramjet engine, capable of travelling at about 300 m.p.h. for approximately 100 mi., and carrying about 3,000 lb. of test instruments. (1947)

**mambo, n.** A rumbalike dance. (1948)

**McCarthyism, (after Sen. Joseph R. McCarthy), n.** Repeated accusation of Communist connections.

**Mighty Mouse.** Nickname of the first successful air-to-air rocket.

**multi(ple)-stage rocket.** A rocket with multiple sources of power supply consumed in series. (1949)

**nerve gas.** An insidious, almost colourless and odourless gas which works on the nervous system, causing convulsions and eventual death. (1940)

**NPA.** National Production Authority.

**OMPA.** Short for octomethyl pyrophosphoramidate, a drug helpful in the treatment of myasthenia gravis, a disease of the muscles.

**para-rescue team.** A team of rescuers who drop by parachute from one or more planes.

**parathion, n.** A powerful and widely usable insecticide. (1948)

**phantom order.** A tentative order, to be filled only in an emergency such as war. (1948)

**pickle-barrel, n.** The L-17, a light, four-seated observation aeroplane.

**Plumericin, n.** Tentative name of a fungicide and test-tube antibiotic.

**Portrex, Operation.** A combined operation of the army, navy and air force of the United States held at Vieques Island in the Caribbean sea, designed to test defensive strength.

**Queuetopia, (queue + utopia), n.** A coinage of Winston Churchill's to describe the utopia of the Socialists, a salient characteristic of which is assumed to be queues.

**radiological warfare.** Warfare carried on with radioactive material. Also **radioactive warfare; RW.**

**radio star.** A star whose luminosity is so low that its existence is known only through short-wave radio emanations.

**railplane, n.** A fast-travelling rail car, running on two rails, one above from which it hangs, and one below.

**rat pack. California.** A group of teen-aged boys and girls who roam about at night victimizing people.

**re-examinist, n.** One who wishes to re-examine, specifically, the foreign policy of the U.S. state department.

**Rok, n. 1.** The Republic of Korea; also used attributively, as, "a Rok division." **2.** A South Korean soldier.

**RW.** See **radiological warfare.**

**Sation, (L. satis, "enough" + nation), n.** A people who are self-sufficient. (1949)

**scare buying.** Abnormal purchases during war scares; hoarding. (1944) **scare item, scare order.**

**scintillation counter.** A highly sensitive device for detecting radioactive materials which employs a number of synthetic crystals. (1949)

**shaped charge.** A charge making use of the Morse principle, whereby the impact of a shell throws forward a thin stream of hot particles which, travelling at a high velocity, cut a path through the object struck for the shell to follow. (1948)

**slope-line system.** A fog-landing system for airports employing on either side of the landing strip rows of lights which decrease in height and thus form a "slope-line" for the descending plane. (1948)

**Smerish, n.** A contraction of *Smyri Shpionam* (Death to the Spies), a top-secret counterintelligence corps of the soviet N.K.V.D.

**spaceman, n.** One who travels in space, as in a spaceship.

**space opera.** Trade term for a science-fiction novel centred about interplanetary travel. (1949)

**stutter play. Football.** A play (vaguely similar to a stutter) consisting of a series of fakes or deceptive moves and thus disguising for a brief while its true aim. (1947)

**subminiaturization, n.** The technique of making even smaller devices, such as radio tubes, that are already small. **subminiature, n.** (1949)

**super-bazooka, n.** A 15-lb., 3.5-in. recoilless rocket launcher which throws an 8.5-lb. rocket into armour as thick as 11 in. (1945)

**superbomb, n. Specif.** A bomb employing hydrogen or tritium or both.

**surface-to-air missile.** A type of guided anti-aircraft missile. (1949)

**surface-to-surface missile.** A type of guided missile for use on land and water between installations and targets that are relatively stationary. (1949)

**"Sweetbriar", Exercise.** The practice manoeuvre conducted jointly by U.S. and Canadian forces in the Yukon in February.

**swing team. Football.** The odd team in a professional league of teams.

**syntopicon, n.** A collection of topics; coined by Mortimer J. Adler of The University of Chicago to describe listing of topics discussed in *Great Books of the Western World*.

**tanker (plane).** An aeroplane used to refuel another plane while both are in flight. (1948)

**terramycin, n.** An antibiotic derived from an earth (L. *terra*) mould (Gr. *myc-*), which may be effective against virus pneumonia, influenza, typhus fever

and certain other diseases. The antibiotic is produced by *Streptomyces rimosus*, a new actinomycete. (—1950)

**theatre-in-the-round.** An experimental, circular theatre with the stage in the centre and the audience completely surrounding the stage. (1948) Also **arena staging, arena theatre, central staging.**

**third force.** A phrase borrowed from European politics to describe a group acting as a buffer between the Communists and another party of opposing beliefs; *specifically*, the non-Communist left; also a movement calling for a third power standing between the U.S.S.R. and the U.S. (1947)

**Titotataria, (Tito + totalitarian), n.** The region subject to the Tito form of totalitarianism. **titotatarian, n.**

**total diplomacy.** The participation or agreement of all persons in a nation in the diplomacy of that nation.

**triton bomb.** The hydrogen bomb, an important ingredient of which is tritium (the nucleus of an atom of tritium is called triton).

**two-stage rocket.** A rocket with one booster (*see bumper rocket*).

**umbrella (backfield).** *Football.* A defensive backfield so distributed behind the line as to suggest the shape of a raised umbrella; as, "a four-man umbrella."

**uncan, v.t.** To demoth (*q.v.*). (1946)

**Uniscan, n.** Proposed economic union between the United Kingdom and the Scandinavian countries. (1949)

**varitrons, n. pl.** Particles reported by Russian scientists: so called from the variations in their mass. (1948)

**Vidicon, (video + iconoscope), n.** A small, 1 by 6 in. television pickup tube. Trade-mark.

**Viomycin, n.** Trade name of an antibiotic derived from a soil mould, found to be effective against tuberculosis in the laboratory.

**Vosnian, n.** An artificial language of about 1,000 words derived in part from Estonian, Czech, Hungarian and Finnish for the British-made motion picture *State Secret*. (I. W. R.)

**World Bank:** *see* INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT.

**World Commerce:** *see* INTERNATIONAL TRADE.

**World Council of Christian Education:** *see* RELIGIOUS EDUCATION.

**World Council of Churches:** *see* CHRISTIAN UNITY; RELIGION.

**World Federation of Trade Unions:** *see* LABOUR UNIONS.

**World Government:** *see* INTERNATIONAL LAW.

**World Health Organization:** *see* CHILD WELFARE; UNITED NATIONS.

**Wrestling.** A strong band of grapplers representing the Iowa State Teachers college of Cedar Falls captured two of the sport's major team awards in 1950 by winning both the national Amateur Athletic union and National Collegiate Athletic association championships.

In the 60th annual A.A.U. tourney held at Hofstra college at Hempstead, L.I., N.Y., the Panthers amassed 44 points and won five of the ten individual titles in retaining their team laurels. Meet champions were: John Harrison, Iowa Teachers, 115 lb.; Arnold Plaza, Purdue, 121; Richard Hauser, Cornell College, Mt. Vernon, Ia., 128; Lowell Lange, Cornell of Iowa, 136; Keith Young, Iowa Teachers, 145; Bill Nelson, Iowa Teachers, 155; Bill Smith, Iowa Teachers, 165; C. S. Smith, Baltimore Y.M.C.A., 175; Dave Whinfrey, Rutgers, 191, and Fred Stoeker, Iowa Teachers, heavyweight.

Four Iowa Teachers carried home individual titles from the National Collegiate A.A. tournament, in which Young, Nelson and Bill Smith triumphed again. The N.C.A.A. title winners were Anthony Gazoni, Waynesburg College, Waynesburg, Pa., 121; Joe Patacsil, Purdue, 128; Lange 136; Young 145; Nelson 155; Bill Smith 165; Joe Scarpello, Iowa, 175, and Dick Hutton, Oklahoma A. and M., heavyweight.

National Y.M.C.A. honours were annexed by the Toledo, O., team. Newton Copple, 145-pounder from Lincoln, Neb., won the outstanding competitor award in that tournament.

(T. V. H.)

FRANK A. BARRETT, Republican, elected governor of Wyoming, Nov. 7, 1950

**Wyoming.** A Rocky mountain state of the United States, Wyoming was admitted to the union on July 10, 1890, as the 44th state. Having been a leader in extending rights to women, it is known as the "Equality state."

The land area is 97,914 sq. mi.; water area, 408 sq. mi. The 1940 census, which gave a total population of 250,742, listed rural inhabitants at 157,165 and urban at 93,577; 229,818 native white; 950 Negro; and 17,107 foreign-born. The 1950 census placed Wyoming's population at 290,529, a 15.9% increase since 1940.

The capital of Wyoming is Cheyenne, with a population (1950 census preliminary report) of 31,807. Other cities having a population of 10,000 or more are: Casper, 23,557; Laramie, 15,497; Sheridan, 11,402; and Rock Springs, 10,785.

**History.**—State officials during 1950 were: governor, A. G. Crane; auditor, Everett T. Copenhaver; treasurer, C. J. Rogers; and superintendent of public instruction, Edna B. Stolt. Justices of the state supreme court were Fred H. Blume, Ralph Kimball and William A. Riner.

The state house of representatives, elected in Nov. 1948, was evenly divided (28–28) between Democrats and Republicans, and the state senate was predominantly Republican (18 Republicans and 9 Democrats).

State officials elected in Nov. 1950 to hold office for the ensuing four years were: governor, Frank A. Barrett; secretary of state, C. J. Rogers; state auditor, Everett T. Copenhaver; treasurer, J. R. Mitchell; and superintendent of public instruction, Edna B. Stolt. The state house of representatives elected in Nov. 1950 was made up of 17 Democrats and 39 Republicans, and the state senate consisted of 10 Democrats and 17 Republicans.

**Education.**—In 1949–50 there were 600 elementary and rural schools in Wyoming with 1,152 elementary teachers and 527 rural teachers, and a total enrolment of 59,585. There were 86 accredited high schools, with 870 teachers and an enrolment of 13,581.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Funds spent on public welfare during the year ending Sept. 30, 1950, were as follows: old-age assistance \$2,800,180; aid to dependent children \$653,575; aid to the blind \$62,150; general welfare \$370,220.89; child welfare \$30,657; general welfare health \$342,840.12.

There were three correctional institutions with 467 inmates and appropriations as follows: state penitentiary at Rawlins, 374 inmates, appropriation \$358,150; girls' school at Sheridan, 45 inmates, appropriation \$156,750, capital outlay \$27,740; boys' school at Worland, 48 inmates, appropriation \$142,500, capital outlay \$87,400.

**Communications.**—During 1950 the Wyoming highway department let approximately 97 contracts for a total expenditure of \$7,251,565 of which 13 contracts, for an amount of \$418,731, were for special maintenance work and 15 contracts amounting to \$218,822 were state-county co-operative projects. This work was spread over a total mileage of 471.51. The highway system in Wyoming at the end of the year consisted of 4,618 mi., of which 1,281 mi. were secondary routes. The 1950 maintenance budget, which covered the period ending April 1, 1951, was set at \$3,093,000. Railroad mileage remained stationary at 1,912 mi.

**Banking and Finance.**—On June 30, 1950, there were 29 state banks with deposits of \$71,416,892.21. There were 24 national banks with deposits of \$167,284,090.65. Total state receipts for the fiscal year ending Sept. 30, 1950, were \$42,773,987.04. Total disbursements for the same period were \$40,647,291.22. The bonded debt for the state on Sept. 30, 1950 was \$770,000.

**Agriculture.**—Crop production in Wyoming during 1950 was slightly less than in the previous year. Farm products were valued at an estimated \$57,369,000. Wyoming livestock on the farm was valued at \$167,481,000 during the year 1950. (*See tables on page 744.*)

**Mineral Production.**—Mineral production in Wyoming for 1949 was estimated as follows: bituminous coal, 5,972,640 tons, estimated value

Table I.—Leading Agriculture Products of Wyoming

	1950	1949	Average 1939-48
Corn, bu.	1,156,000	1,085,000	1,402,000
Winter wheat, bu.	5,130,000	5,638,000	3,180,000
Spring wheat, bu.	1,088,000	1,312,000	1,317,000
Oats, bu.	5,184,000	3,982,000	4,030,000
Barley, bu.	4,564,000	4,727,000	3,605,000
All hay, tons	1,150,000	1,283,000	1,233,000
Dry, edible beans, cwt.	932,000	1,215,000	1,072,000
Sugar beets, tons	457,000	406,000	430,000
Potatoes, bu.	2,152,000	1,870,000	2,204,000

Table II.—Number and Value of Livestock in Wyoming

	Number on Farms, 1950	Value
Cattle	1,001,000	\$124,124,000
Hogs and pigs	85,000	2,014,000
Stock sheep	1,980,000	36,630,000
Sheep and lambs on feed	83,000	1,494,000
Horses	80,000	2,000,000
Mules	1,000	34,000
Chickens	831,000	1,055,000
Turkeys	21,000	130,000
Total		\$167,481,000

\$47,780,000; oil, 47,467,000 bbl.; bentonite, 40,000 tons. The trona report for 1950 was confidential.

**Employment.**—The total labour force in Wyoming as estimated for June 1950 was about 116,000 workers, of whom about 59,185 were covered by unemployment compensation. Of the total labour force, approximately 28,000 to 30,000 persons were employed in agriculture, 9,378 in mining, 8,524 in contract construction, 6,599 in manufacturing, 12,793 in all types of transportation, 2,400 in utilities and communications, 3,250 in wholesale trade, 14,487 in retail trade, 1,821 in finance and real estate, 8,204 in the services, 1,952 in professions, 14,600 in all types of government and an estimated 2,000 to 3,000 in miscellaneous. (A. G. Cr.)

**X-Ray and Radiology.** Among improvements in X-ray apparatus and technique achieved during 1950, two were especially worthy of mention. Photoelectric timing had been made practical in 1941 by the work of R. H. Morgan and P. C. Hodges which resulted in the Morgan photoelectric timer; it established its value in photofluorography and had much to do with the success of mass chest surveys for the control of pulmonary tuberculosis. A number of modifications and improvements in the construction of the timer were made, especially with a view to its use in direct roentgenography as well as in photofluorography. Hodges and associates reported on its further improvement during 1950, and A. M. McNabb and associates described the uses of the phototimer adapted to direct roentgenography.

The other notable advance in apparatus and technique was the development of electronic intensification of the image on the fluorescent screen. It not only increased the screen brightness 500 times or more but made it possible to make fluoroscopic examinations in a lighted room.

The therapeutic use of radioactive isotopes received considerable attention at the sixth International Congress of Radiology, held at London in July 1950, and many papers on their use appeared during the year. The principal applications in medicine had been the use of radioactive phosphorus in chronic leukemias and polycythaemia vera and radioactive iodine in hyperthyroidism and thyroid carcinoma.

Research confirmed the view that radioactive phosphorus is the best treatment for polycythaemia vera and that its action in the leukemias is not essentially different from or more valuable than the X-ray.

Numerous reports on the use of radioactive iodine ( $I-131$ ) in the diagnosis and treatment of hyperthyroidism appeared. Those of S. C. Werner *et al.* and of R. A. Shipley *et al.* constituted a satisfactory summary of knowledge in this field. Radioactive iodine used as a tracer to determine the presence of thyrotoxicosis had become of real diagnostic value in both diffuse and nodular goitre; its accuracy was believed to be greater than that of basal metabolism.

The remission rate of 80%-90% in the treatment of hyperthyroidism was essentially the same as that reported in previous years by X-ray treatment. It was generally agreed that radia-

tion is the treatment of choice in toxic goitre recurring after operation, and in the patient who has complications and is unsuited to surgery.

Radioactive iodine had also been found of value in the diagnosis, localization and treatment of metastatic lesions from cancer of the thyroid gland. To obtain the best results in treatment of the distant metastases it is necessary first to resort to either irradiation or surgical thyroidectomy in order that the radioactive iodine may be deposited in the metastases rather than in the thyroid gland itself.

"Radiological defense" against atomic explosions was the subject of much research and discussion in 1950. The potential damages to persons from an atomic explosion are of several different types:

1. Primary shock or blast damage; the best protections are underground shelters and reinforced concrete buildings.
2. Secondary shock, caused by the impact of flying objects or propulsion of the body against solid objects. Here again underground shelters are the best protection but if one is in a building or in the open he is best protected when lying flat on the ground or floor and away from windows.
3. Flash burns—injuries caused by direct exposure to the visible and near-visible radiation which emanates from the point of detonation of the bomb. The best protection against this is light-coloured clothing.
4. Flame burns—injuries arising from fires started in buildings or inflammable material. The best protection is fireproof

DEMONSTRATION OF AN X-RAY "barbecue" technique developed at the Massachusetts Institute of Technology. The patient was rotated so that the X-rays always hit the tumour but the point where they entered the body changed constantly to avoid radiation burns on healthy tissue

buildings and complete organization of fire-fighting equipment and personnel so located that they will not be wiped out by the explosion itself.

5. Damage by nuclear radiation. This may be due to "prompt" or "immediate" radiation or to delayed radiation. Immediate radiation damage is due to the large amounts of gamma rays and neutrons which emanate within a fraction of a second after the detonation. Protection against these hazards can be provided only by massive construction such as would be represented by 3 in. to 12 in. of steel, 6 in. of cement or 6 in. of water, and is therefore feasible only for the most vital installations. Underground shelters and distance are the best protection for human beings.

In addition to the dangers from immediate radiation are those due to delayed radiation which is the result of decay of fission products produced by the nuclear explosion and which may spread over an area of five square miles or more and may persist for varying long periods after the explosion. In addition to the above radiation hazards, there is additional danger from nuclear radiation when radioactive materials find their way into the body by inhalation, ingestion, etc. This will take place only if one is within the base surge of the explosion, in the mushroom cloud or working in an area over which the base surge has passed.

Many plans were being made in 1950 for protection against all these dangers. The Armed Forces Special Weapons project published three volumes on radiological defense available to the armed services and to the civilian defense personnel. (See also ATOMIC ENERGY; EAR, NOSE AND THROAT, DISEASES OF; TUBERCULOSIS.)

FILMS OF 1950.—*Moving X-Rays* (Almanac Films, Inc.).

(A. C. CH.)

**Yachting.** The biennial ocean race from Newport, R.I., to Bermuda, with a record fleet of 54 starters including 6 British entries, was a feature of 1950, an active year of yacht racing. The first yacht to finish was John Nicholas Brown's 73-ft. yawl "Bolero," in 75 hr. 32 min. 9 sec. Winner of the Bermuda trophy and the Class A prize was the yawl "Argyll," owned by William T. Moore of Oyster Bay, N.Y., which saved her time on "Bolero" and the other larger boats in Class A, leaving "Bolero" second in that class and the U.S. Naval academy yawl "Royono" third. In Class B the winner was H. Irving Pratt's cruising yawl "Merry Maiden" of Oyster Bay, N.Y., while in Class C Gifford B. Pinchot's 38-ft. yawl "Loki" took first place.

Though beaten by "Argyll" on corrected time in the Bermuda race, "Bolero," which was built in 1949, proved an outstanding yacht in the American season. Besides showing the way to Bermuda and winning the Storm Trysail club's Block Island race in May, she won the historic King's and Astor cups, and two port-to-port runs on the New York Yacht club cruise in August, the annual meeting of the country's biggest racing yachts.

The new light-displacement type yachts, of which four British and three American entries in the Bermuda race were ex-

PART OF A FLEET of small sailing craft at the start of the Class A division of the open ocean race from Newport, R.I., to Hamilton, Ber., in June 1950

amples, enjoyed none of the outstanding success in American racing which many had predicted, until September when the 40-ft. sloop "Dirigo," owned by a Bath, Me., syndicate and sailed by her designer, Roger McAleer, cleaned up spectacularly in a fast fleet in the Stamford-Vineyard race.

The Florida ocean-racing circuit was well attended during the winter, when Kennon Jewett's ketch "Malabar XIII" winning the Cat Cay race; the sloop "Blitzen" of Detroit, owned by Ernest Grates and Murray Knapp, winning the Miami-Nassau; and Walter S. Gubelmann's yawl "Windigo" of Oyster Bay, N.Y., winning the St. Petersburg-Havana race and the Florida Governor's cup for the best collective scoring in the whole Florida series. On the Great Lakes, the over-all winners of the Mackinac races were Wendell Anderson's 72-ft. yawl "Escapade" in the Port Huron-Mackinac, and Nicholas J. Gieb's small ketch "Fleetwood" in the Chicago-Mackinac, while George Ford's yawl "Venture III" took the Rochester Yacht Club race around Lake Ontario. Among west coast winners were Heber Erickson's sloop "Scandia" in the Newport (Calif.) to Ensenada (Mex.) race, with 133 starters, and J. F. Eddy's yawl "Dorade," famous two decades before as the winner of a transatlantic race, which won the Tri-Island series of long distance races in Puget sound.

Six-metre sloops raced in Sweden for the Scandinavian Gold cup, won by a Swedish yacht, "Trickson VI," sailed by her designer, Arvid Lauren. Dragon class sloops raced for their own Gold cup in Denmark, the winner being "Pan," sailed by Thor Thorvaldsen of Norway.

The small one-design and restricted classes carried an in-

creasing share of national and international competition. A feature was the triumph of two brothers, Robert and Howard Lippincott of Riverton, N.J., the former winning the Star class international championship in "Sea Robin" and the latter the Comet class world title in "Cirrus III." Other champions included Snipe class (U.S. championship), won by "Ghoul," Clark King, Newport, Calif.; Lightning class (international), won by "Jinks," H. R. Krauss, Toledo, O.; Thistle class (international), won by "White Shadow," Frank Marquardt, Alexandria, Va.; 110 class (international), won by "Hot Breath," Les and Don Harlander, Oakland, Calif.; Moth class (international), won by Gene Willey, Elizabeth City, N.C.; 210 class (international), won by "Challenge," Morton Bromfield, Boston, Mass.; National class (U.S.), won by O. W. Pendergast, Leland, Mich.; Bantam class (U.S.), won by Bernard E. Hiller, Cleveland, O.; Flattie class (international), won by "Stormy," Austin Peeples, Los Angeles, Calif.; L-16 class (U.S.), won by "Can't Wait," Don McClave, Greenwich, Conn.; Penguin class (U.S.), won by Runyon Colie, Jr., Mantoloking, N.J.; 14-ft. dinghy (international), Open class won by "Oops," Richard Stephens, Stockton, Calif., and one-design class by "Green Dream," Richard Serrell, Balboa, Calif.; Raven class (U.S.), won by "Pipper," Lloyd E. Steele, Larchmont, N.Y.; Wood Pussy class (U.S.), won by R. W. Ayer, Cold Spring Harbor, N.Y.

The women's national sailing championship was won by the American Yacht club crew, of Rye, N.Y., headed by Mrs. Allegra Knapp Mertz; and the North American junior championship by the Pleon Yacht club crew, of Marblehead, Mass., headed by Stephen Smithwick. (W. H. TR.)

**Yeast.** During 1950 the established usefulness of yeasts as convenient tools for biological experimentation was reflected in a number of published studies. Among this fundamental research using yeast as the experimental organism were studies of the mechanism of action of the antibiotics streptomycin and antimycin A, significant progress in understanding of the intermediate energy metabolism of the living cell and several advances in knowledge of the basic cell constituent nucleic acid, including establishment of the shape, size and weight of the yeast nucleic acid molecule.

A definitive report with photomicrographs showed that the yeast cell possesses a nucleus organized similarly to that of other fungi; previously the existence of a nucleus in yeast cells had been questioned. A giant yeast double the normal size was produced by exposure to X-rays. Heparin (an impure liver phosphatide having anticoagulant and bacteriostatic properties) was found not to inhibit yeasts in concentrations that are strongly inhibitory to bacteria, possibly because of relative impermeability of the yeast cell membrane.

A new analytical method was developed for forecasting the effects upon yeast growth of raw materials used in brewing. The yeast enzyme, alcohol dehydrogenase (which produces reversible oxidation of alcohol to acetaldehyde), was shown to be useful in analytical chemistry. Another advance in the analytical applications of yeast was a microbiological method for determining sulphur, based on a new study of the abilities of various yeasts to utilize organic and inorganic sulphur-containing compounds as sulphur sources for growth.

The proceedings of the 1948 symposium on food and fodder yeasts were published during 1950. Other advances in yeast technology included intensive investigations of the physiology of *Rhodotorula gracilis*, a yeast capable of producing large amounts of fat, and of *Ashbya gossypii*, a filamentous yeast that produces high concentrations of riboflavin (vitamin B<sub>2</sub>).

An unusually large number of yeast patents were granted during 1950. The patent covering the industrial fermentation for

producing riboflavin using the yeast *Ashbya gossypii* was issued by the British patent office, and a patent on the freezing of bakers' yeast was also granted there. Yeast patents granted in the United States during the year covered an improved yeast propagating tank; a prepared baking mix containing active dry yeast coated with shortening; meat, fish or fowl loaves or patties held together with autolyzed or hydrolyzed yeast; an egg white substitute made from yeast proteins; a process for producing the antibiotic streptomycin on a substrate containing whole yeast; and sorption on yeast of sugars from dilute raw materials and removal of sugars and yeast together for subsequent fermentation.

Although primarily useful to mankind, yeasts like other generally beneficial classes of microorganisms on occasion cause spoilage. Thus during 1950 certain types of spoilage of salad dressings and French dressings were discovered to be caused by fermentation by a yeast. The troublesome scums on cucumber pickle brines sometimes caused by yeasts were intensively studied, and were found to involve yeasts of four different genera, all having unusually high salt tolerance and relative adaptability as to their requirements of carbon sources for growth. Sorbic acid was found to be a useful preventive of yeast scum formation on pickle brines.

(F. W. N.)

**Yemen.** An independent state in the southwestern tip of the Arabian peninsula, Yemen lies between Saudi Arabia north, the British Aden protectorate southeast and the Red sea west. Area: c. 31,000 sq.mi. Pop. (1949 est.): 1,600,000. Language: Arabic. Religion: Moslem. Capital: San'a (pop. est. 25,000). Ruler: Sayf al-Islam Ahmad ibn Yahya.

**History.**—During 1950 Anglo-Yemeni relations passed from the recriminatory stage which prevailed in 1949 to friendly negotiations for a wide settlement of the outstanding disputes which had arisen in 1949, mainly on account of the absence of an agreed delimited frontier between the Yemen and the Aden protectorate. In Aug. 1949 armed bands from the Yemen had prevented the building of a customs house, the site of which, according to the British view, was inside the Aden frontier. In September these bands had erected a fort, also inside the Aden frontier, and when they refused to dismantle it and withdraw, they had been bombed by the royal air force. There was also the more general problem of the establishment of proper diplomatic relations between the two countries. They had been conducted through the British governor of Aden, as the imam of the Yemen had consistently refused to admit foreign representatives to his capital, San'a.

The negotiations between the two countries were opened in London on Aug. 29, 1950. Discussions ended on Oct. 12 when a joint statement was issued that the delegations had agreed to submit to their governments proposals providing a sound basis for strengthening the friendly relations between the two countries.

In the sphere of Arab league policy the Yemeni government associated itself with the resolution qualifying Jordan's annexation of Arab Palestine (June 12). In February the United States announced the resumption of diplomatic relations with the Yemen which had been broken off in 1948 when the imam of the Yemen was assassinated. (O. M. T.)

**Foreign Trade.**—Imports from the U.K. (1949) £1,750; exports to the U.K. (1949) £210. Principal exports: coffee, food grains, hides and raisins.

**Finance.**—Monetary unit: Maria Theresa dollar, called the riyal, nominally = R. 1 (Indian) with an exchange rate of 4.775 riyals to the U.S. dollar.

**Yoshida, Shigeru** (1878– ), Japanese statesman, was born on Sept. 22 in Tokyo. He was educated at the Tokyo Imperial university, and graduated in law in 1906. He held many minor diplomatic posts in the far east and Europe and was second secretary at the Japanese embassy in Washington, D.C. (1916–17). He was minister to Sweden, Norway and Denmark in 1928; vice-foreign minister, 1928–30; ambassador to Italy, 1930–32; and ambassador to London, 1936–39. Yoshida was arrested in June 1945 allegedly for heading a “defeatist” peace faction. He was freed after Japan’s surrender at the end of World War II and became foreign minister in the Kijuro Shidehara cabinet, Oct. 6, 1945. On May 16, 1946, he was named successor to Shidehara as premier and his cabinet was sworn in May 22, 1946.

On Feb. 11, 1950, Premier Yoshida’s Democratic Liberal party absorbed the Democratic party to form a single conservative party with a comfortable majority over the combined opposition. In an election, June 4, of about half the members of the house of councillors, the upper house of the Japanese parliament, candidates supporting him dominated the election. On June 27, a few days after the outbreak of war in Korea, his

cabinet resigned to permit reorganization of the government to meet the crisis. On June 28 he installed a new cabinet strongly favourable to the U.S. occupation policy.

**Yugoslavia.** A federal people’s republic of southeastern Europe. Yugoslavia is bounded north by Austria, north and northeast by Hungary and Rumania, east by Bulgaria, south by Greece and west by Albania, the Adriatic sea and Italy. Area: (1940) 95,983 sq.mi.; (1947, incl. newly acquired territory of the Julian march, Zara and the islands) 98,826 sq.mi. Federal republics (pop., 1948 census):

	Population	Capital
Serbia (with the autonomous province of Vojvodina and the autonomous Albanian region of Kosovo-Metohija) . . . . .	6,523,224	Belgrade (388,246)
Croatia . . . . .	3,749,039	Zagreb (290,417)
Slovenia . . . . .	1,389,084	Ljubljana (120,944)
Bosnia and Hercegovina . . . . .	2,561,961	Sarajevo (118,158)
Crnagora (Montenegro) . . . . .	376,573	Titograd (12,206)
Macedonia . . . . .	1,152,054	Skopje (91,557)
Total . . . . .	15,751,935	

**MARSHAL TITO** joining the street dancing in Kola, Yugo., during his visit there prior to the legislative elections of March 26, 1950. Voters were offered a single slate of candidates, and registered their votes by dropping pink rubber balls in the ballot boxes

By mid-1949 the total population was estimated at 16,040,000. Other towns (pop., 1948 census): Subotica (112,551); Novi Sad (77,127); Rijeka, formerly Fiume (72,130). Languages: Serbo-Croat, Slovene and Macedonian; Albanian, Hungarian and Italian spoken by minorities. Religions (1931 census): Greek Orthodox 48.7%, Roman Catholic 37.5%, Moslem 11.2%. Chairman of the presidium of the people's assembly (*Skupština*): Dr. Ivan Ribar; prime minister: Marshal Josip Broz (Tito) (q.v.).

**History.**—During 1950 Yugoslavia's relations with the western powers improved, while the hostility of the Cominform group remained implacable. The effects of the Cominform blockade were felt in Yugoslavia's economic life, but the danger of direct attack from neighbouring countries or from soviet forces seemed less acute. There was little sign of Cominform-sponsored disaffection inside the country.

The continued feud with the Cominform led to no significant political changes within Yugoslavia. On March 26 elections took place to the federal parliament. As in 1945, there was one list of candidates, and majorities averaged more than 90% from a poll of 93%. The only exception of importance was the town of Subotica, on the Hungarian border, where the government list received little more than half the votes cast. This town and its surroundings had a predominantly Hungarian population, and it was probable that most of the opposition was the result of discontent with the political regime in general and the position of the Hungarian minority in particular.

During the year there appeared to have been some relaxation of police pressure on opinion. Removal of the compulsion to adulate all things Russian and permission to say a kindly word about western countries represented a significant measure of mental liberation. Criticism of abuses of power by the bureaucracy was also allowed. A satirical writer named Branko Ćopić won great popularity by his attacks on the exponents of policy and even on policy itself, but was sharply warned by Marshal Tito himself not to exceed decent limits. A commission was appointed in the summer, under the leadership of the party's principal Marxist theorist, Moša Pijade, to consider a reform of the judiciary. Among changes anticipated by optimistic observers were a reduction in the powers of the procurator's department (which functioned on exactly the same lines as the department of the same name in the Soviet Union); an increase in the authority of professional judges at the expense of the ignorant and politically prejudiced "people's judges"; and the abolition of the power of "administrative arrest," held by the security police and exempt from control by the courts. Public discussion of these questions was allowed by the authorities. Official support was also granted to attacks on abuse of power by bureaucrats. Some of the privileges of the bureaucrats, including the right to purchase better quality goods in special shops, were abolished. Extravagance on official occasions was denounced from the highest quarter. Marshal Tito himself, in a speech to women in Zagreb on Oct. 28, deplored the tendency of the people's authorities to make any visit by a senior official an excuse to give themselves a feast. In the opinion of the marshal, such occasions justified a glass of *slivovica*, but to kill a pig was too much.

The pace of collectivization of agriculture was slackened during the year. At the end of May the number of collective farms was just over 7,000, while at the beginning of the year it had already been more than 6,500. The average size of each collective farm had however greatly increased. At the beginning of the year the average number of families to a collective farm had been 50, in September it was nearly 200. The "Socialist sector in agriculture" in September covered 25% of the arable land of the country. There was evidence during the year that the authorities were trying to minimize hardship to the peasants. In particular, there was much less action against the *kulaki* (richer

peasants) than in neighbouring countries. Nevertheless, the authorities were forced at times to complain of the peasants' attitude. In a speech at Užice in February Tito stressed the need for a maize surplus to export, in order that raw materials and equipment essential to the industrialization plans might be imported. Yet the peasants were delivering too little to the state. There were more pigs, cattle and sheep in Yugoslavia than in 1939, yet far less meat was reaching the markets. Tito attributed these supply difficulties to the actions of "speculators." A month later, Edvard Kardelj, vice-premier, complained of speculators who evaded the government's purchasing agents. The result of these evasions was, Kardelj admitted, that the agents demanded excessive quotas from the "honest peasants" who had already delivered all that was required of them. Such injustices were, however, inevitable, he argued, until the speculators were checked. The remedy was for the peasants themselves to denounce such people to the authorities.

Whether through the action of these speculators, or because the mass of peasants wanted to eat their crops rather than sell them for money with which there was little to buy, or simply because of the drought, the harvest of 1950 was extremely bad. The government was obliged to decree, on Sept. 26, the stoppage of all maize exports, to reduce the bread ration by 10%, and to reduce drastically the compulsory delivery quotas (by 54% in Serbia, 64% in Croatia and 88% in Bosnia and Hercegovina). In the following months the food situation became so serious, and the fall in exports threatened to have such bad effects on the economy as a whole, that foreign aid became essential. The U.S. Export-Import bank granted Yugoslavia a loan of \$15,000,000, and the western German republic a credit of \$30,000,000, both in August. In mid-November a British credit of £3,000,000 was approved, and on Nov. 21 Pres. Harry S. Truman announced a grant of food supplies for the Yugoslav army to the value of \$16,000,000. But all this was much less than the Yugoslav government had asked for.

Official statements during the year on the progress of the five-year plan continued to claim high percentage achievements of the proposed targets. Western observers, however, were convinced that reality fell far short of these claims. The authorities continued to complain of absenteeism by factory workers, which in the first six months of the year was as high as 19% in Serbia. One reason was the frequent failure of the authorities to provide living accommodation in new industrial centres. On June 28 a new law limited the rights of factory managers and gave greater powers to works councils elected by the workers. The councils, however, were dominated by the Communist party. At the same time there was some tendency to replace managers earlier appointed for political reasons by technical experts. It seemed probable that the aim of the reform was to combine greater efficiency on the technical side with the maintenance of party political control now exercised not through the manager but through the works council. Another change was increasing decentralization of ministries, especially of economic ministries. The federal government transferred wide powers to republican ministries. Here again it would be wrong to take the change at its face value. As long as republican governments remained subordinate to, not co-ordinate with, the federal government, and as long as the hierarchy of the Communist party remained rigidly centralized throughout the country, it was unlikely that decentralization would be very effective. (See also ALBANIA; TRIESTE, THE FREE TERRITORY OF.)

(H. S.-W.)

**Education.**—Schools (1947-48): elementary 12,052, pupils 1,616,002, teachers 23,889; secondary 942, pupils 310,185; technical and art 1,219, pupils 117,369; teachers' training colleges 53, students 16,145; universities 5, students (1948-49) 54,421; other institutions of higher education 17, students 2,798.

**Finance and Banking.**—Budget: (1949 est.) balanced at 161,746,000,000 dinars; (1950 est.) balanced at 173,746,000,000 dinars. Currency circu-

lation (May 1950): 44,450,000,000 dinars. Bank deposits (May 1950): 40,710,000,000 dinars. Monetary unit: dinar, with an official exchange rate of 50 dinars to the U.S. dollar.

**Foreign Trade.**—(1949) Imports 14,570,000,000 dinars; exports 9,610,000,000 dinars. Main sources of imports: Italy 8.6%; U.S. 7.2%; Austria 7%. Main destinations of exports: U.K. 23.3%; Austria 8.7%; Italy 8.2%. Main imports: textile manufactures, textile raw materials and machinery. Main exports: cereals, timber, ores.

**Transport and Communications.**—Roads (1940) 20,906 mi. Licensed motor vehicles (Dec. 1949): cars 12,000; commercial 20,000. Railways (1949): 6,926 mi. Shipping (July 1949): merchant vessels more than 100 gross tons 101; total tonnage 209,530. Telephones (1948) 66,495. Radio receiving sets (1949) 230,000.

**Agriculture.**—Main crops (metric tons): wheat (1950) 2,300,000; rye (1950) 245,000; maize (1949) 4,150,000; barley (1948) 353,000; oats (1948) 345,000; potatoes (1949) 1,939,000; sugar, raw value (1949) 97,000; dry beans (1949) 145,000; hemp fibre (1949) 84,500; tobacco (1948) 28,000. Livestock: cattle (Dec. 1949) 5,238,000; sheep and goats (Dec. 1949) 10,810,000; horses used in agriculture (Jan. 1949) 1,062,000; chickens (Dec. 1949) 19,136,000.

**Industry.**—Coal and lignite (1949 est.) 11,703,000 metric tons; electricity (1949) 2,200,000,000 kw.hr. Raw materials (metric tons): bauxite (1944) 152,000; copper ore (1947) 30,000; lead (1947) 50,000; zinc ore (1947) 30,000.

**BIBLIOGRAPHY.**—M. Bartos, "Yugoslavia, Struggle for Equality," *Foreign Affairs* (April 7, 1950); L. Dalmaz, *Le Communisme Yougoslave* (Paris, 1950); G. E. R. Gedy, "Tito Versus Stalin," *The Contemporary Review* (London, Jan. 1950); Fitzroy Maclean, "Tito: A Study," *Foreign Affairs* (Jan. 1950); H. Seton-Watson, "Titoism," *The Fortnightly* (London, Feb. 1950); J. Yindrich, *Tito v. Stalin* (London, 1950); K. Zilliacus, "Yugoslavia and the West," *The Contemporary Review* (July 1950).

**FILMS OF 1950.**—*New Yugoslavia: Year Three of the Plan* (Yugoslav Information Center).

**Yukon Territory.** The most northwesterly political division of Canada, the Yukon was created in 1898. Area: 207,076 sq.mi. Pop.: (1941) 4,914; (1950 est.) 8,000. Capital: Dawson, pop. (1941) 1,043.

**History.**—Increased defense preparations during 1950 drew attention to the Yukon, one of the important points in arctic strategy. In February Canadian and U.S. forces co-operated in Operation "Sweetbriar" to test North American defenses against invasion. Scene of the mock battle was on the Alaska highway near the Donjeck river, 170 mi. south of Dawson. A plebiscite was held during the year in which the vote was 1,007 to 90 to legalize the sale of hard liquor over bars. Previously, the Yukon was dry except for beer beverage rooms. The city of Dawson got its first local government since 1919, when the Ottawa-appointed commissioner was replaced with an elected mayor and three-man council. The federal department of agriculture continued its agricultural station on the Alaska highway 100 mi. west of Whitehorse, where grain, poultry and dual-purpose cattle were tested for northern farming.

**Education.**—In the 1948-49 school year ending June 30, the superintendent of education for the Yukon, R. Hulland, reported that there were 10 schools, 23 teachers, a total enrolment of 652 and an average daily attendance of 503. In the same school year 273 Yukon Indians attended day and residential school classes.

**Finance.**—Total revenue raised in the territory during the 1949-50 fiscal year was \$1,593,620. Expenditure for the period was \$4,932,150, with the deficit provided by the federal government.

**Transportation.**—On Oct. 5 the all-weather, \$5,500,000, 243-mi. of highway from Mayo to the Alaska highway at a point 10 mi. from Whitehorse was opened. In 1949 river traffic moved 22,696 tons of freight, including ore, and 8,713 passengers. The federal government maintained ten overnight camps along the Alaska highway. In 1949, 6,417 automobiles and trucks drove past counters at Tok Junction.

**Furs.**—In 1949 a total number of 151,969 fur pelts was exported, compared with 131,227 in 1948 and 55,777 in 1947.

**Minerals.**—Spectacular results were reported in 1950 from the formerly discontinued United Keno mine at Mayo, reopened in 1946. By Oct. 1950 it was listed as the world's second largest producer of lead and silver, with production of \$80-per-ton ore totalling \$9,200,000. Milling capacity at the mine was enlarged from 250 to 350 tons of ore daily.

Mineral production during 1949 included: 81,970 fine oz. gold, 1,562,730 fine oz. silver, 5,356,405 lb. lead, 847,246 lb. zinc and 3,156 tons coal. (C. Cy.)

**Zanzibar:** see BRITISH EAST AFRICA.

**Zinc.** World production of zinc in 1949 increased 7% over 1948, to a level 10% above that of 1939, and less than 2% under the World War II peak of 1943, as is indicated by the data in Table I. The German output was greatly reduced, and

Table I.—World Production of Zinc

Total . . . . .	1,820	1,790	1,400	1,550	1,760	1,865	1,995

Poland had not yet regained its prewar status. Of the other important producers, only France, Great Britain and Spain were producing at their prewar rates. However, these losses were more than offset by advances outside Europe.

**United States.**—Mine output dropped 6% in 1949, but smelter output gained 4%. Though recoveries from imported ores declined 7%, those from domestic ores rose 10%. The salient features of the industry in the United States, as reported by the U.S. bureau of mines, are shown in Table II.

Table II.—Data of Zinc Industry in the U.S.

	(In thousands of short tons)						
	1939	1944	1945	1946	1947	1948	1949

Stocks. . . . .	?	298.5	328.6	269.2	149.3	116.7	175.1
Producers'. . . . .	86.3	233.7	256.2	176.2	68.6	20.8	94.2
Consumers'. . . . .	?	64.8	72.4	93.0	80.8	95.9	80.9
Consumption. . . . .	626.0	888.6	852.3	801.2	786.4	817.7	711.8

Imports advanced slightly and consumption dropped, leaving a substantial balance to add to stocks—the first increase since 1945. Mine production improved in the first half of 1950, and in spite of later declines totalled 500,202 tons through October.

**Canada.**—Primary zinc output rose from 234,164 in 1948 to 288,873 tons in 1949 and 203,821 tons through Aug. 1950. The recoveries of refined zinc were being cut by increased exports of ore. Smelter output for eight months of 1950 dropped to 134,582 tons, against 206,045 tons in 1949 and 196,575 tons in 1948.

(G. A. Ro.)

**Zonta International:** see SOCIETIES AND ASSOCIATIONS.

**Zoology.** The American Society of Zoologists met jointly with the American Association for the Advancement of Science in Cleveland, O., Dec. 27-30, 1950. There were 241 papers scheduled for this meeting compared with 270 in 1949. The \$1,000 prize of the association for the best paper went to Harvard zoologist Carrol M. Williams for the studies that he and his assistants carried out on the enzyme systems of larval and pupal stages of the *Cecropia* moth. Williams found that the enzymes concerned with cellular respiration (the cytochrome system) were greatly reduced during the change from larva to pupa. During the period of pupal dormancy and low metabolism a different enzyme system controlled cellular respiration. Apparently the metamorphosis hormone, responsible for the change from pupa to adult, acted to bring about a rapid synthesis of the enzymes of the cytochrome system and a consequent termination of dormancy and an increased metabolism.

**Behaviour.**—The notable studies by K. von Frisch were made available in English in his *Bees: Their Vision, Chemical Senses and Language* (1950). C. S. Ford and F. A. Beach in their *Patterns of Sexual Behavior* (1950) analyzed sexual patterns in contemporary human cultures and in some of the higher animals in an attempt to determine the contributions of cultural and physio-

logical factors to sexual activities.

E. T. Nielsen and H. Greve reported on the swarming habits of mosquitoes in Denmark. The swarms, made up exclusively of males, rose at sunset and at dawn. They were kept compact by the peculiar flight patterns of the individual mosquitoes: Each mosquito flew a circular course 20 cm. to 50 cm. in diameter and reversed its direction after each circuit. Reversal occurred at the point in the circumference of the flight circle that intersected the line of the prevailing wind. The authors suggested that swarming brought about a redistribution of the males and hence enlarged the interbreeding population.

**Experimental Zoology.**—R. E. Billingham and P. B. Medawar continued their studies of the spread of pigment from the spots in spotted guinea pigs and from minute disorganized grafts of pigment cells in white guinea pigs. The mode of spread led them to conclude that the pigment granules passed from pigmented to nonpigmented cells infectively. This concept implied that in the "infected" cells the pigment granules increased in number much as do virus particles. They made a further observation of much interest: When a small piece of skin from the original donor was grafted to any region of a host animal with one or more pigment grafts, the grafted pigment rapidly disappeared, presumably as a result of the action of specific antibodies produced by the host in response to the antigens of the grafted skin.

**Ecology.**—G. Thorson reviewed the knowledge of larval and reproductive ecology of marine bottom-dwelling invertebrates. Despite great differences in the numbers of eggs produced by different species, animal populations on the floor of the sea generally remain qualitatively constant from year to year. In the tropics 80% to 85% of the larvae of bottom dwellers are temporary surface feeders and are thus exposed to enormous risks. Currents may carry the larvae from the coastal shallows to deep water where no suitable bottom exists for their further development; a poor food supply will prolong the larval phase and the risk, as will a low temperature. The largest wastage is caused by predators: other surface-feeding larvae, coelenterates, echinoderms, barnacles, molluscs, copepods and plankton-feeding fishes (pilchard, sprat and herring). A single mollusc (*Mytilus*), for example, in filtering 1.4 l. of water per hour may destroy 100,000 molluscan larvae in a day.

The proportion of surface-feeding larvae is inversely related to latitude, declining to 55% to 65% in boreal seas and to 5% in the arctic and antarctic. The remainder of the larvae develop from large yolk-filled eggs—they have a self-contained food supply. This shift in relative numbers of surface feeders is correlated with the fact that any surface-feeding larvae in high latitudes must complete their development during the few weeks of the year when the minute plants (phytoplankton)—the fundamental producers of food—are available.

**Embryology.**—Jean Brachet's important book, *Embryologie Chimique*, was translated by L. G. Barth (*Chemical Embryology*, 1950). S. Hörstadius ably marshalled the scattered experimental and descriptive knowledge of one of the most versatile embryonic tissues in his monograph *The Neural Crest* (Oxford, 1950). C. R. Moore, in a comprehensive review of the role of endocrine glands in development, emphasized that there was as yet no conclusive proof that male and female sex hormones control the direction of development of the accessory reproductive organs. Paul Weiss continued to extend his concept of molecular ecology in an effort to bridge the "gap between chemical action and physical structure." He found a specially favourable example in the developing eye and lens of the embryonic chick. Here the future lens tissue came into intimate contact with the eyeball (future retina) for a short time. During and after this contact the future lens cells elongated and become reoriented as the first step in lens

differentiation. Weiss interpreted the results on the basis of molecular contact and orientation.

A. Lwoff considered differentiation in a group of unicellular animals in a monograph, *Problems of Morphogenesis in Ciliates* (1950). The measurement of growth and form was broadly treated by 13 specialists in a discussion led by S. Zuckermann.

**Morphology and Taxonomy.**—Libbie H. Hyman continued her monumental series of publications in *Invertebrates: Volume II. Platyhelminthes and Rhynchocoela* (1950). W. Demerec edited a work of importance to biologists in several fields, *Biology of Drosophila* (1949), and W. S. Creighton produced a systematic treatise on the ants of North America.

**General.**—Joseph Wood Krutch edited an anthology, *Great American Nature Writing* (1950). Paul B. Sears in *Charles Darwin, the Naturalist as a Cultural Force* (1950) ranged over the history of biological ideas from the Greeks to the moderns and showed the effect of the Darwinian revolution on all phases of human thought.

C. L. Prosser, D. W. Bishop, F. Brown, Jr., T. L. Jahn and V. J. Wulff assembled a large amount of fundamental information in their *Comparative Animal Physiology* (1950). Biologists would find the numerous extensive tables and the bibliography of nearly 3,600 references of much value. (See also ENDOCRINOLOGY; GENETICS; MARINE BIOLOGY; PALAEOLOGY.)

**BIBLIOGRAPHY.**—R. E. Billingham and P. B. Medawar, *Heredity*, 4 (1950); W. S. Creighton, *Bulletin of the Museum of Comparative Zoology at Harvard*, 104 (1950); C. R. Moore, *The Journal of Clinical Endocrinology*, 10 (1950); E. T. Nielsen and H. Greve, *Bulletin of Entomological Research*, 41 (1950); M. Singer, *Anatomical Record*, 108 (1950); G. Thorson, *Biological Reviews*, 25 (1950); P. Weiss, *Quarterly Review of Biology*, 25 (1950); C. M. Williams, *Anatomical Record*, 108 (1950); S. Zuckermann, *Proceedings of the Royal Society, Series B*, 137 (1950). (G. P. DuS.)

**Zoological Parks.**—*Africa.*—The National Zoological garden of Egypt received in 1950 a pair of great Indian rhinoceros from the sanctuary in Assam.

*Australia.*—Since commonwealth regulations prohibit the importation of native-born ruminants, swine and monkeys of Africa, Asia and South America, the Australian zoos secured these forms from American collections where they were bred and born. The exhibits in the several smaller zoos of the country had been very much enlarged, the management and support of these having been taken over by zoological societies.

*Europe.*—At no time in the past had the collections and park lands of the zoos on the continent and in Great Britain been of such high standard and diversity. In these countries zoos differ more, one from another, than they do elsewhere in the world because specific achievement is sought along special lines: research and veterinary medicine in some institutions, for example, and animal behaviour studies in others. The sending out of expeditions not only to accumulate animals, but to study them in the wild with the intention of making better provision for them in captivity, is a specialty of others. How these facts which had been accumulated by the managements of the many zoos could be exploited was the subject of a book by H. Hediger, *Wild Animals in Captivity*.

*North America.*—In the American collections there seemed to be a trend, an aspiration, to show fewer animals more carefully and gainfully. The only exotic collection of great interest was that taken in western South America by Charles Cordier and exhibited at the New York Zoological park.

**FILMS OF 1950.**—*Anatomy (Anatomy of the Dogfish)*, *Vertebrates (Dogfish as a Vertebrate)* (British Information Services); *Animals in Winter*, *The Beaver*, *Insect Zoo*, *Monarch Butterfly*, *Sunrise Serenades* (Encyclopædia Britannica Films Inc.); *Beauties on the Beach*, *Giant Beetles*, *Miracle of Life*, *Mr. and Mrs. Canary* (Almanac Films, Inc.); *Biography of a Fish* (Sterling Films, Inc.); *Cells and Their Functions* (Athena Films, Inc.); *Know Your Snakes* (Hollywood Film Enterprises, Inc.); *Life Cycle of the Sockeye Salmon* (Paul Hoeffer Productions); *Life in a Pond* (Coronet Instructional Films); *Marsh Marauders* (National Film Board of Canada); *The Newt*, *The Rabbit's Development* (International Film Bureau). (Ro. B.)

# INDEX

The black type entries are article headings and cross references. These black type article entries do not show page notations because they are to be found in their alphabetical position in the body of the book, but they show the dates of the issues of the *Book of the Year* in which the articles appear. For example "Bhutan" 51, 50, 49" indicates that the article "Bhutan" is to be found in the 1951 *Book of the Year*, the 1950 *Book of the Year* and the 1949 *Book of the Year*. The reference "Horses: see Livestock 51, 50. See Horses 49, 48, 47" indicates that information on "Horses" is to be found in the article "Livestock" in the 1951 *Book of the Year*, the 1950 *Book of the Year* and under the heading "Horses" in the 1949 *Book of the Year*, the 1948 *Book of the Year* and the 1947 *Book of the Year*. All black type entries without dates indicate that the same entries appear in all the last five issues. Examples, not Advertising 51, 50, 49, 48, 47, but Advertising; not Abyssinia: see Ethiopia 51, 50, 49, 48, 47, but Abyssinia: see Ethiopia.

The light type headings which are indented under black type article headings and cross references refer to articles elsewhere in the text (of this issue only) related to the entry listed in black type. The light type headings which are not indented refer to information in the text not given a special article. Those which show page references refer to this issue only. Those which refer to the article *Obituaries* are followed by the date of issue in which the obituary appears.

All headings whether consisting of a single word or more are treated for the purpose of alphabetization as single complete headings. Names beginning with "Mc" and "Mac" are alphabetized as "Mac"; "St." is treated as "Saint." All references below show the exact quarter of the page by means of the letters *a*, *b*, *c*, and *d*, signifying respectively the upper and lower halves of the first column and the upper and lower halves of the second column.
